Lucie Delarue-Madrus was represented by *Poèmes misquons pour les enfants*. Léon Paul Fargue's renown has grown with his collections of verses—*Épaves*, *Espaces*, *Sous la Lampe*—a very skillful word wizard to express our complex modern minds. Somewhat as a surprise came a volume of verses from the pen of Francis Carco—*La Bohème et mon cœur*—the man who had shown interest so far only in the study of the repulsive inhabitants of the slums of Paris. Roger Allard collected and published, as *Poésies légères*, 1911–1927, his alert light poems that had come out in various periodicals. A friend and disciple of Apollinaire, Louis de Gonzague Frick, offered his amusing but not always so easily understood, *Poésies*, he is what is called a *poète macaronique* using for grotesque effects bits of Latin and Greek in his French lines. In fine classical lines, Henri Chabrol expresses very pagan ideas and discards Christian ideals, he calls it *Lyrique du corps*. Two volumes by former Dadaists are Tristan Tzara's *De nos oiseaux* and Paul Eluard's *L'amour et la Poésie*. The latest petite revue of the younger generation is *Orbes* (Kra) with

Jacques-Henry Lèvesque and Olivier de Carné as directors, and with such men as Tzara and Blaise Cendrars as contributors.

PRIZES FOR POETRY Numerous prizes were awarded in poetry, among them the Prix Jean Moreas, to Phileas Lebesgue, for his work in general, the Prix des Vignes de France, to André Mary for his *Poèmes*, 1903–1928, and the Prix des Vikings, proposed by the Scandinavians of Paris to commemorate the effect of Maurice Bédél's widely read Goncourt novel, *Jérôme*, 60 degrés de latitude nord, which was thought to poke fun at Scandinavia. The laureate was Théophile Fétet, for *La Normande traitée*. A commemorative sign was placed on June 21 on the house where the famous American symbolist poet, Stuart Merrill, died.

The year 1929 brought forth an anthology, *Les poètes du 19<sup>e</sup> siècle*, by A. M. Gosses, also a fine panorama of present-day French verse classified according to provinces, which was published by Ch. Dornier, in *Recue de l'Enseignement français hors de France*, August and September. An echo of the quarrel on *La poésie pure* was found in René Vitor's *Essai sur les conditions de la poésie pure*.

THEATRE Much activity was manifested in the domain of the theatre, but no really great play was produced. Two new theatres were founded which inspired much comment. The theatre Saint-Georges, early in the year, with André de Lorde (the author of the clever *Au téléphone*) and which proposes to give short and stirring plays (it is a little like the Grand Guignol). The first play was on Poe, as a representative of the æsthetic element of terror in literature, probably the best play on that stage was *La Fugue*, by H. Duvernois, which did not quite answer the general programme, it is not "terrible" a much beloved husband, in order to spare much sorrow to his wife as he is condemned to die by the doctors, tells her that he does not love her any more, he recovers, however, to find that he has killed her love for him. The other new playhouse is the Théâtre Pigalle, splendidly equipped in every way by the Baron Henri de Rothschild and inaugurated in the late spring with a succession of tableaux of some great episodes in the history of France. Sacha Guitay arranged this show of splendor which had a long run.

Very unusual was the welcome extended to foreign playwrights on the French stage in 1929, so much so that in November an impresario could think of no better advertisement for a new and excellent musical play, *Boulevard et ses filles*, by Vernieu, than to announce that the four contributors "all are French." Not only classics, such as Shakespeare, were given, but moderns such as the Italian, Antonio, the Czech, Molnar, the German, Leonard Frank (an anti-war play, *Karl and Anna*), Englishmen, such as Sheriff (*Journey's End*), and the Americans, Bayard Willer (*Trial of Mary Dugan*) and Rice (*Street Scene*). Among the "reprises" were two Rostand Plays (*Princesse Lointaine* and *L'Aiglon*—a big success for Mme Simone), Berque's *Les Corbeaux*, Lavedan's *Chienne du roi* (Mme Du Barry), and the post-war plays *Une Bourgeoise*, by V. Francien, Ravnal's *Tombeau sous l'Aile de Triomphe*, and Bonnet's *La Prisonnière*.

Among the new plays of 1929 was the dramatization of J. Bédier's famous *Tristan et Iseut*, in collaboration with Louis Artus, strikingly staged. By the same Artus was *Un homme né d'hier*, giving

the psychology of an old "beau", also there were Marcel Achard's *La belle Marnière* and Jean de la Lune, and Gerdely et Spitzer's *L'homme de joie*—all are very clever but without particularly new ideas. In that line of plays—of very delicate psychology—the success of the year was undoubtedly Giraudon's *Amphitryon* 38 (which means that it is about the thirty-eighth play on that mythological but human story of the love of Jupiter for Alcmena, the wife of his host, Amphitryon). Another success was Lenormand's *Une vie secrète* (not written in 1929, however), of course, the author continues his Freudian style; the hero is insane and writes wonderful things, but he is conscious himself that "*c'est parceque je m'ignore que j'écris des chefs-d'œuvre*." Alfred Savoir's *Lui* was written in the same vein: a man who actually believes that he is God on earth, with burlesque and dramatic results, cannot be said to be presented in a very convincing manner. J. J. Bernard's *Le feu reprend mal* is a post-war play about a married couple estranged by the years of separation. Bernard Zimmer's popularity grew constantly after his great success in adapting Aristophanes's *Birds* (1927), he had several plays in 1929, among them *Pauvre Napoléon* (the warrior who becomes sentimental at St. Helena) and *Le Veau gras*, a very clever and amusing modern version of the story of the Prodigal Son. Jacques Sindral (also known as "Fabre-Luce" as a political writer) has tried his hand in two plays which both were only half successes, but stirred discussion. *Double* presents a girl who hesitates between two men of entirely different natures, *Tranfuges* gives a comedy of the usual political game—convictions change with new personal interests.

Ed Schneider's drama, *L'escalation* (see NEW INTERNATIONAL YEAR BOOK for 1928), was represented in Paris in 1929; in it are opposed a mother who wants to live the life of a modern flapper and a daughter who is repulsed by that very thing and looks for an old-time life of devotion to higher things. A woman, Marguerite Duterme, in *Les égales*, tried to give a counterpart to the much discussed *Captive*, by Bourdet. Stève Pasteur took up the problem of the soul of a business man (a revival of the famous Mirabeau's *Les affaires sont les affaires*), while Edmond Fleg, in *Le marchand de Paris*, gave the very kind-hearted rich man—and the interesting thing about the performance was that the veteran actor Le Bargy who had had in Mirabeau's Isidore Lechat one of his most famous parts, tried to surpass himself in playing this part of the anti-Lechat.

H. Kistemaekers had a not very convincing melodrama in *L'Instinct*, H. Jeanson wrote a family play of keen psychological analysis, *Amis comme avant*, Crommelynck (the author of the curious *Le cocu magnifique* of some years past) offered in 1929 a play, *Carine, ou la jeune fille folle*, with a very unpleasant theme. Carine is genuine, innocent, good to the core, but when she discovers gradually all sorts of rascality going on in the world around her, she lets herself be carried away by the general indifference to moral standards. The year ended with a play by one of the authors whose products are most eagerly awaited, M. Bourdet. After his great success with the very gay satire on the literary prizes, *Vient de Paraître*, he returns to a thoroughly repulsive subject, but which *per se* this time does not lend itself to the highly dramatic treatment of

*The Captive*, in *Le sexe Facile*—ironical title—we are introduced to the so-called ultra-modern women, that is to say, women making love boldly to men, instead of the old way of men making love to women.

Some of the best comedies of 1929 bordered on the farce, for which the French are immittable. Jacques Natanson in *Je t'attendais*, showed a young man married to a middle-aged wife and a middle-aged man married to a young mate, but at the end of the play the matches are rearranged according to the wishes of nature. Marcel Pagnol seems to be on the way to take the place of the late Courteline, Pagnol's recent *Marius* is a capital comedy which takes place in Marseilles, where Marius, the bar waiter, and Fanny, the oyster girl, make love, but finally the appeal of the sea is too much for Marius, who yields to destiny and forsakes Fanny. Much that is favorable has been said of Albert and Germaine Acremant's *Ces dames aux chapeaux verts*, a very proper play in a province town, where a young city girl appears and shocks the village people. Félix Gandéra scored a success in *Il manquait un homme*, as did Yves Mirande in *L'attaché* (Palais Royal farce). Mirabeau's *Déjeuner amoureux* is very witty, and so, of course, is the *Jules, Julien, et Julien* of the veteran humorist, Tr. Bernard. Sacha Guitry presented another of his biographical sketches by rapid tableaux in *Landberg*, and Émile Mas published, *La Comédie Française pendant la guerre* (Figuères).

The Novel Production in the field of the novel was very large, due partly to the fact that the fashion—which, however, seemed on the wane—was to make them very short. First, came novels which fall within that category without any further qualification, and which are important because of their excellence or on account of the man who signed them. Such are H. Bordeaux's *Valombre*, treating in a very dramatic manner an episode which has stirred public opinion: a good deal a school-teacher is accused of killing her illegitimate child and is willing to assume the blame before the court in order to spare the really guilty father. Bazin's 1929 novel—about a family of weavers in Roubaise—*Ros des archers*, is in his usual vein. Jacques Char-donne (the author of *Ephthalame*, which made such a sensation some years ago) offered, *Les Varas*, a similar story of conjugal misunderstanding.

A Gide, in *L'École des femmes*, developed the psychological case of a woman who has been blinded by love, and then opens her eyes to the shallow being whom she has married and hates him in proportion to her former devotion. Edmond Jaloux, in *Latvius*, shows that he has not yet outgrown his gloomy view of life. Jean Gaudement and Camille Gély, in *Plus vras que la vie*, analyze the state of mind of a weakling who can only dream his life with a woman he would love, while Julian Green, who had proved so pessimistically disposed in former novels, is more so than ever in his *Léviathan*, which, however, was not less praised than his former stories (it was awarded, in the English translation, *Dark Journey*, the Harper Prize), his other book, *Les voyageurs sur terre* is a bold attempt at explaining the psychology of the religious soul.

Another gloomy novel—about the class of humble clerks—is André Thérive's *La Chambre ardente*. Valéry Larbaud places the scene of his last novel, *Allen*, in the Bourbonnais. The old

master, Marcel Prévost returns to the domain that had made him so famous, the psychology of love, in *L'Homme vierge*. The same story is told from three different angles in the form of letters by an old beau who had adopted an orphan girl in his house and then seduced her, as a diary, by the son of that man who is utterly shocked, having a "protestant" mind, and as a confession of the girl to the young man, whom she blames because, by his indifference to love, he had thrown her into the arms of the old man, it all ends with an automobile accident probably intended.

Roger Martin-du-Gard continues his remarkable serial story, *Les Thibault*, in vol. vi, entitled "La mort du père," but in a gruesome manner, reminiscent of the worst Zola days. A novel greeted on all sides as being above the average of the 1929 output was Marcel Aylard's *L'Ordre* (3 vols.) the hero, Gilbert Villard, is a fomentor of disorder by his eccentric manners, his absurd and fanciful likes and dislikes—in short, he is possessed by that restless spirit which has been so often pointed out in post-war youth and which Aylard himself had called a modern "mal du siècle." Montheilant showed his versatility in giving his first real love novel, *La petite enfant de Castille*. In his detached way, he portrays his fancy for a silly but charming little Spanish girl (*de cette stupidité sans prétention qui est un charme chez le sexe lequel n'est insupportable que lorsqu'il se croit quel-que-chose*), but he lets her go because he will enjoy more the pleasure of scoffing the opportunity, which he afterward regrets.

Aug. Bailly received the Prix Lasserre for his novel, *Nour*, which takes up the subject so well treated in Maupassant's *Fort comme la mort* and Bourget's *Pantôme*, of the man who falls in love with the daughter of his former love, but the girl remains indifferent. Louis Ed. Le Rat, in *L'Ange, la bête et l'homme* has an "éducation sentimentale" in the manner of Flaubert—he does not insist on "la bête" Jean Casson's *La clef des songes* considers life as a dream, while Léon Bopp, in *Le crime d'Alexis Lenoir*, takes up under present conditions the theme of Bourget's *Disciple*, a young man has killed and makes his confession pretty much in the same way as Grellon, but the theory that led him to kill light heartedly is what he calls "hazardisme" i.e., a sort of Bergsonism in which man creates almost any moral truth he chooses, there being no outside truth.

Em. Rolin won the Prix du Premier Roman with a similar book, *Accusé, t'as-tu?* Henri de Ziegler, in *La Vega*, depicts a sort of village Caliban in the Savoyan Alps, and her victim is a writer who had gone to the place for some work. For readers who prefer a lighter type of book, there is Pierre de Régner's *Colombine ou la grande semaine*, witty, about life in society.

Albéric Cahuet gave us in 1929 one of his clever supposedly historical novels, *La Robe de Porphyre*, in which he claims that possibly the remains of Napoleon are not under the famous cupola in Paris, but in Westminster Abbey.

The peasant novel, so popular for years, was a little less so, but 1929 brought out Maurice Genevoix's *Cyrille*, very realistic C. F. Ramuz, the Swiss author, in his preface to his new edition of *Salutation pay saune* rebukes those who reproach him for using the language of the mountaineers "Je suis Vaudois, j'écris vaudois."

Among the newcomers in the field, but who have been decidedly successful, are Jean Giono, who saw his 1928 novel *La Colline* awarded the Brenano Prize in 1929, when translated under the title, *Hill of Destiny*, and who came very close to receiving the Prix Goncourt for his new peasant-life novel, *Un de Baumugues*, both are dramas among peoples of unsophisticated minds, dramas which are often more powerful for that very reason, the story of *Maïa Chapdelaine* has been mentioned by more than one critic in connection with this young man, also Marcel Aymé, who won great favor with his *La Table aux Cresses*, he is an equally keen observer and writes in a more humorous vein.

There were two important 1929 novels dealing with religion (Georges Bernanos's (author of *Sous le soleil de Satan*) *La joie*, showing a young girl, (hanted de Clergie, who by the purity of her faith conquers all the hypocritical lies of the so-called religious people around her. Some see, in the Abbé Brenmont the original of, the Abbé Cénabre of the novel, and Henri Ghéon's, *Les jeux de l'enfer et du ciel*, 3 vols., which depicts the pilgrimage of a motley crowd to the famous Ars, in the Pyrenees, and which is represented as taking place in the days of the Abbé Vianey, it is an almost complete counterpart of Zola's *Lourdes*, in Zola's book, the believers are few but sincere, while in Ghéon's, the unbelievers are few but sincere, there are some very clever and interesting pictures of varied types of pilgrims.

In France, as elsewhere, war books were popular again in 1929 after so many years of indifference. Probably the most remarkable was Lucien Descaves's *L'Hyondelle sous le toit*, the story of a small town during the years 1914 to 1919. René Jouglet, in *L'Étranger*, took up the subject of international marriages. Jean Variot, in *Résurrection du feu*, depicts a supposed good-for-nothing in Alsace who is spurred to fine action by the war fire, while H. Frémont, in *Après le feu* (preface by Raymond Poincaré), gives a picture of an energetic woman starting life anew in Lorraine, having lost husband and son in the cataclysm. Channing, as are all the books of R. Escholer, is *Mahmodou Fofana*, the war experiences of a Senegalese soldier. There are two volumes of stories, one by Henri Beberly (former winner of the Prix Goncourt), *Tombes sans lauriers*, the other by Galtière Boissier, *Louis de la Riflette*, with *La fleur au fusil*, the first giving the title to the book.

A critical study of the French war books, appeared under the title, *Temoins* (Paris), by Prof. Jean Norton Cru, of Williams College, a severe indictment of both those who admire the heroism of the War and of those who err in the other direction, such as Barbusse and Remarque. Episodes of the war in the Far East are told in Malraux's *Royaume Faïerlu* and in Grandjean's *L'Épopée jaune*—the first indulging in the horrible, the second showing the heroism of missionaries and marines in Japan, a real Book of Martyrs.

Among exotic novels, Pierre Benoit is represented by one of his well-known *romans d'aventures* in *Erronango*, which relates how an agriculturist leaves for an island in the Pacific Ocean to raise cattle, the effect of the climate is to render him insane and amorous hallucinations finish him. More striking even is George Groslier's *Le retour à l'argyle* (Prix de Littérature

Coloniale), the story of a French couple leaving for colonization in Cambodia, the woman cannot adapt herself to the new conditions, the man succeeds, and yields to the influences of climate and surroundings, this process of adaptation being interestingly described Jules Supervielle, in *Le Survant*, acquaints us with various South American customs, and Lucie Delarue Maudsley Amanti takes us into ever-mysterious and fascinating Egypt.

There is a group of 1929 novels whose authors seem to have forgotten that there is a limit to outspokenness. M. Martin's example (at the end of 1928), *Amour Terre inconnue*, was followed by J. Kessel in his *Belle du jour*, but the question is whether this is not pathology instead of literature. Another much-discussed novel, published under the pretense of progressive art, was Marcel Berger's *L'Amour sans amour*, the staging of the *Iccameon*. Pierre Zenda treats modern love in *Charleston*. As to Colette's style, it was long ago taken for granted, her recent novel is *La seconde*.

There are some novels which may claim originality. Duhamel, in the *Club des Lyonnais*, continues the study of his Salavin—that innocent fool who is trying to find an aim to his life—and after having decided to be a saint in the preceding volume, now tries his hand at being a Communist, perhaps, also, J. de Lacitelle's *Amour nuptial*, in which a novel writer marries a wife so good, so wise, that she gives him no inspiration for his books—which puzzles him. Originality in the

is ascribed to her heroine. Mlle Louise Pailleton's story of the woman called *Ratoune* (curious is the attempt of the Brothers Tharaud to revive the atmosphere of the Geneva of Calvin, and their fairly successful way of showing that the adoption of the reform was due in great part to all sorts of insignificant causes having little to do with religion, the novel is called *La chronique des filles ennemies*. Maurice Bedel's idea in *Fascisme*, in 1911 is well expressed in the subtitle, *La mensuratrice cordale*. André Bieton, in his *Nadia*, gives a very typical novel of the dadaistic type, illustration of his manifesto of surrealism which he gave out some years ago and which is now issued in a second edition.

Jean Couteau, considered as eccentric as the surrealists, but who refused to join them, gave this year a striking story called *Les enfants terribles*—depicting the almost insane dispositions of the post-war youths who, having spent themselves, fail to attain any moral balance and commit suicide. Maurice Maugre, in *Lucifer*, reminds us of Huysmans, who 20 years ago showed so much interest in the satanic cults in remote corners of Paris. As a curiosity, 1929 brought out *Roman d'un crime*, a story written by three well-known novelists. André Salmon, who wrote of the crime itself, Geo London, who recounted the courtroom proceedings, and Fernand Rivoire, who described the execution of the sentence of death.

**SHORT STORIES.** Some of the best volumes of short stories include André Savignon (author of the *Filles du pluvier*, crowned by the Goncourt) *Tous les trois*, André Maurois, *Le monde imaginaire*, however, embraces only the stories already published under the title *Merpe*, J. Kessel *La coupe félicé*, J. L. Vandoyeur, *Nuits à l'hôtel Beau-Mont*, Fr. Mauriac *Trois récits* ("Coups de couteau," "Un homme de lettres," "Le démon

de la connaissance"); E. Pérochon, *Le crime étrange de Iase Balzan* (the psychoanalytical manner applied to a girl, three stories in all); Jacques de Lacitelle, *Histoire de Paola Ferraris*, title of the first story, and two Bourget products. *Au service de l'ordre* and *On ne voit pas les cœurs* (four proverbs).

**MISCELLANEOUS.** Although awarded the Grand Prix du Roman by the French Academy in June, *Le Livre des Bêtes qu'on appelle sauvages*, by André Demaison, is really no novel at all, but extremely picturesque narratives of experiences of the author, a colonist in Africa, with wild animals of the region, the name of Kipling has been repeatedly mentioned in connection with that original book. H. de Montherlant has another volume discussing sports, *Farinus*, 3<sup>me</sup> *Olympiade*. Farinus is the name of a young slave mentioned in Seneca's *Letter to Lucius*, and, among other things, the author claims that the theory is unfounded which considers sport rivalry as a means to replace national chauvinism by so-called sport-spirit. Henri Pourrat offered one of his too rare books to speak feelingly of his native province, *Cœur d'Auvergne*. It is quite in keeping with the age of disrespect to treat with little reverence the heroes or events of history. The following books have restated problems in a new way. J. Béraud, *Le 14 Juillet*, O. Aubry, *Napoléon III*, and Delteil, *Il était une fois Napoléon*. A new example of child psychology was given in Tr. Berthe, *Patachon, petit garçon*.

There were numerous books on travel of varied interest which appeared in 1929. Paul Claudel, in *L'oiseau noir dans le soleil levant*, treats various topics of Japanese life and thought. J. Béraud in *Ce que j'ai vu à Rome* is not favorable to Fascism. F. Carco wrote *Printemps d'Espagne*, G. de LaRochehoucauld gave us a charming book in *Constantinople avec Loti*, Jean-Richard Bloch continued relating his travel experiences in *Bananas et Cacaouilles* (Senegal and Canary Islands), and Blaise Cendrars added to his collection another volume about his tramping around the globe, *Plan de l'aiguille*. Much in vogue have been the volumes of a series just started and called *Les grandes légendes*, which include Funck-Brentano's *Ile de la Tortue*, and Aug. Bailly's *Le radeau de la Méduse*.

Another popular genre is that of memoirs in all forms. Much interest was shown in the *Voir intérieures de Barris* (2 vols.), by Duhamel, and which give notes that the great writer had prepared for "Mémoires" of his own hand. Under the title, *Mes Modèles*, the famous old painter, Blanche—who also writes admirably—tells of the famous personages he has known, such as Barrès, Gide, Proust, George Moore, Henry James, Thomas Hardy, etc.

The son of the late Pierre Loti, M. Vian, published 2 vols. of *Journal intime* of his father. Francis Jammes, in *La divine douleur*, tells of his past life. While the Duchesse de Gramont writes very entertainingly of *Au temps des Equipages* (Second Empire), Gyp has alert souvenirs of *Du temps des chevaux et des chevaux, souvenirs du Second Empire*. The Comtesse de Noailles—who is far from the age of Gyp—nevertheless writes *Mémoires* already. Then we have Léon Daudet's amusing *Paras réçu*, Fr. Mauriac's *Mes plus anciens souvenirs*, and many others. One of these books is posthumous, René Schwob's *Moi, jusqu'à* (telling of his conversion).

André Maurois's *Aspects of Biography* (six lectures delivered at the University of Cambridge), was published first in English.

The *vies romanesques*—as the more or less fanciful biographies written after the model set by Maurois are now called—still were tremendously popular in 1929. Among the various kinds of lives (*grandes existences, vies illustres, vies aventureuses, vies amoureuses, etc.*) are those by Henriot, Brethoren, G. Lecomte, *Bayon de Suffren* (born 1729), A. Billy, *Sophie Arnould* (the actress), J. M. Carié, *Louis Stevenson*, L. Bertrand and Casson, *Philippe II*, Rouff, *Chateaubriand*, Boulenger, *Saint-Louis*, Monia et Louvet, Vatel, G. Truc, *Mme de Maintenon*, Hallays, *Regnaud*, Funck-Brentano, *Mutabéau*, R. Fernandez, *Molière*. \*\*\* Th. Renandou, P. Rival, *Renée Margot*, M. Jacot, *Néline de Trave*, J. Genmain, *Geneviève de Brabant*, etc., etc. New collections were formed, such as *Histoires de France*, with contributors of the rank of Funck-Brentano, L. Pailleron, A. Billy (e.g., *La din tragique du Prince imperial*, by Piaviel), the series *Des Histoires Extraordinaires* (e.g., Mont et Livet, *Mystère du chevalier d'Eon*—was the "chevalier" a man or a woman?), the series *Les Grandes Légendes et les sept Péchés Capitulux*, etc.

**HISTORY OF FRENCH LITERATURE.** A formidable array of books in this category greeted us in 1929, including the following: Ch. Langlois, vol. iv (final) of *La Vie en France au Moyen-Âge* (*La spirituelle*), Pierre Champion, 3-vol. ed. of *Les Cent nouvelles Nouvelles* Sixteenth century. Plattard, *Vie de Rabelais* Seventeenth century. M. Lévoy, *Descartes, le philosophe au masque*, Emile Magne, *l'histoire et l'Hôtel de Rambouillet* (Prix Marquette-Gonin), C. Clerc, *Vie tragique de G. de Scudéry*, Lachèvre, *Scarron et sa gaucherie burlesque*, G. Mongrédien, *Athalie*, de Racine Eighteenth century, F. Roches, ed., *Lettres Persanes*, Lacoste, *Bayle nouvelle et critique littéraires*, *Œuvres de Voltaire* (Cité des Lettres, 3 vols.), Treich, *L'esprit de Baumechamps*, Diderot, *Lettres à Sophie Voland*, 2 vols., A. Schinz, *La pensée de Rousseau, essai d'interprétation nouvelle*, M. Couday, Diderot, Romantic period L. Pailleron, *Amberges romantiques*, P. Souday, *Les romantiques à l'Académie Française*, Mannias et de la Taille, *Un débat sur le romantisme*, G. Bauer, *Métamorphoses du Romantisme*, Rouff, *Vie de Chateaubriand*, Eug. Beau de Loménie, *Carrière politique de Chateaubriand*, two books on Mme de Staël, by Jean de la Pange and by Hleum, Bellessort, *Essai sur l'œuvre de Hugo*, Guillet, *Hugo spirituel*, R. de Tint, Baldeus-petgen, *Le Vignay*, Em. Henriot, A. de Musset, H. d'Almeida, *Dumas et les Trois Mousquetaires*, R. Jasinski, *Antics romantiques de Gautier*, *L'Espana de Gautier*.

In addition to the *Œuvres* of P. Trahard, *Mérimée de 1834-53*, *Œuvres des Œuvres de Mérimée*, P. Flottes, *Leconte de Lisle*, Thibaudet, *Amal ou la part du rêve*, L. Delfoux, *Le Naturalisme*, P. Apesteguy, *Vie profonde de Rostand*, Dr. M. de Lérimée, *Promenades avec Huysmans*, Fatiève, *Verhaeren* (posthumous), Roland et Renéeville, *Rimbaud le voyant*, M. Conlon, *Vie et œuvre de Rimbaud*, Bolléy, *Léon Blois*, a new periodical, *Chronique Barréresienne*, N. Ségur, *Anat France anecdotique*, R. Crémieux, *Du côté de chez Marcel Proust*, J. Jacob, M. Proust, J. Larnac, *Collette*, *Vie et œuvres*, Lasserre, *G. Sorel*, R. Lalou, *A. Gide*, P. Humbourg, *G. Duhamel*. Books of 1929 that cover different men and

women are L. Daudet's *Flambeau* (Montaigne, Rabelais, V. Hugo, Baudelaire), Rachilde's *Portraits d'hommes* (Barrès, Gourmont, Samain, Moréas, Blois, etc.); J. Larnac's *Hist de la litt féminine en France*.

**LITERARY EVENTS.** An endless list of Prix littéraires, the details of which may be followed in *Nouvelles Littéraires* (e.g., for the summer list of the French Academy Prizes, issue of July 13, 1929). The Grand Prix de Littérature went to Henri Maasis (now Rédacteur of the *Revue universelle*); the Grand Prix du Roman, to André Demaison (see above), the Prix Broquette-Gonin, to Em. Magne (see above), the Grand Prix de la Société des Gens de lettres, was won by Albert Rillande, the Prix des Vignes de France, by André Mary (see above), the Prix Virieuque (de littérature spiritualiste) was awarded to Lya Berger. Just announced at the close of 1929, the Prix Goncourt went to Marcel Arland, for his *L'Ordre* (with Henri Ghéon as close rival, see above), the Prix Femina was won by Georges Bernanos, with *L'œuvre* (see above), and the Prix Renaudot, by Marcel Aymé, with *La table aux Crevés* (see above).

Marshal Foch and Clémenceau of the French Academy died during 1929 and Marshal Petain was called to replace Foch. The seat of Courteline at the Académie Goncourt was filled by Dorgèles (author of *Les Croux de Bois*), after strong support for Duhamel and Mme Colette. The centenary of Chénier was commemorated Victor Marguerite (author of *La Garconne*) was recalled to the presidency of the Société des Gens de Lettres, and pressure brought to have him reinstated in the Legion of Honor. The works of Théophile Gautier became general property. La Devinière, most probably the birth place of Rabelais, was pronounced public domain, and Les Délices, one of the residences of Voltaire in Geneva, was bought by the city of Geneva to prevent destruction.

**NECROLOGY.** Deaths of the year included, C. V. Langlois, Léon Balzalette, Paul Souday, Maurice Bouchor, and Jean Pichardi.

See also **PHILLOGY, MODERN**.

**FRENCH SOMALI COAST** (so-ma-lé) **COAST**, or **FRENCH SOMALILAND**. A French colony in Africa on the Gulf of Aden between Italian Eritrea and British Somaliland. Estimated area, 5790 square miles, estimated population in 1928, 85,788, including about 550 Europeans. The port of Jibuti is the seat of government. Its population in 1928 was estimated at 911, of whom 540 were European (317 French). After 1922 the Government introduced a public elementary school system at the capital, supplanting the mission school which had been in operation for 20 years. The budget for 1928 balanced at 13,022,000 francs.

French Somali Coast has practically no industries and very little agriculture. The main sources of wealth are commerce, inland trade with Ethiopia, and coast fisheries. The imports in 1927 amounted to 480,642,000 francs and the exports to 513,383,000 francs of which 350,226,000 francs represented re-exports. The chief exports are ivory, coffee, hides, and skins. The chief imports are cotton goods, butter, coal, and sugar. A large share of the exports of Abyssinia pass through the port of Jibuti, which is connected by a railway 485 miles long with Addis Abeba. In 1927, 556 vessels of 2,452,164 tons entered and cleared the port of Jibuti. The colony is under

a governor assisted by an administrative council Governor in 1929, M. Chapon-Baissac (appointed in 1924)

**FRENCH SUDAN.** A French colony encompassing the valley of the Upper Senegal, some two-thirds of the course of the River Niger, and a large part of the Sahara Desert within the sphere of Algeria Bounded on the east by the Territory of the Niger, on the west by Mauritania, the Kalamé River, and French Guinea, on the south by the Upper Volta and the Ivory Coast, and on the north by the territory of Algeria Area, estimated at 360,331 square miles, population, estimated at 2,032,618 in 1927 The capital is Bamako, with 24,041 inhabitants Other important towns and their populations are Kayes, 9873, Timbuktu, 5485, and Sikasso, 9197 All the chief towns have regional or urban schools The active crops include groundnuts, millet, corn, cotton, rice, sesame, indigo, and kauri, also many cattle are raised Native industries are of some importance, including the making of pottery, jewelry, and leather, and weaving The total imports in 1928 amounted to 113,085,000 francs and the total exports to 5,217,000 francs Much of the foreign trade of the French Sudan is carried on through the ports of Senegal, so that the above figures therefore do not accurately reflect the trade importance of the colony The chief imports were cottons, foodstuffs, and metal work, and the chief exports, groundnuts, cattle, rubber, gum, kapok, skins, and wool The budget for 1928 balanced at 54,134,005 francs There is a railway connection with the coast over a line 760 miles in length The government is under the Governor-General of French West Africa (see FRENCH WEST AFRICA) Lieutenant-Governor in 1929, Terrasson de Fongères

**FRENCH WEST AFRICA** An African colonial possession of France, comprising the Atlantic coast colonies of Mauritania, Senegal, French Guinea, and the Ivory Coast, the colony of Dahomey on the Gulf of Guinea, and the interior colonies of French Sudan, Upper Volta, the Territory of the Niger, and Dakar and Dependencies It includes the river basin of the Senegal, nearly all the upper and middle Niger Basin, the basin of a large number of rivers emptying into the Gulf of Guinea, and the southern part of the Sahara region Area, 1,247,191 square miles, population in 1926, 13,541,611, as compared with a total area of all the French protectorates and mandated territories of 10,255,610 square kilometers and a total population of 55,631,184 Official French reports classify the diverse native inhabitants under more than 50 groups Some very extensive areas of this region are practically deserted, while others have a population as high as 60 persons to the square kilometer

The colonies in 1926 had the following populations Senegal, 1,318,287; Guinea, 2,095,988, Ivory Coast, 1,724,545, Dahomey, 979,609, French Sudan, 2,034,982, Upper Volta, 3,240,147, Mauritania, 289,184, Niger, 1,218,717, Dakar and Dependencies, 40,152 The total European population was 15,399, of whom 11,099 were French The natives in general live by farming and stock raising Up to 1928, few useful minerals had been discovered and the output was comparatively small in value In 1927-28 there were 281 preparatory schools, with 16,087 pupils, 147 elementary schools, with 13,704 pupils, 88 urban schools, with 5918 pupils, and eight higher

primary and 12 technical schools. In addition, there were 146 evening schools for adults with 5888 pupils The expenditure on education was 21,226,115 francs

In 1928 the total imports of Senegal, French Guinea, Ivory Coast, Dahomey, and the French Sudan were valued at 1,485,370,000 francs (\$58,227,000), representing an increase over the previous year, and exports were almost stable at 1,184,645,000 francs (\$46,438,000) The individual totals for imports and exports, respectively, for the five colonies were Senegal, 895,536,000 and 700,428,000 francs, Ivory Coast, 235,689,000 and 253,052,000 francs; Dahomey, 134,349,000 and 97,773,000 francs, French Guinea, 106,115,000 and 72,174,000 francs, French Sudan, 113,685,000 and 5,217,000 francs As a large part of the foreign trade of the French Sudan is carried on through ports of Senegal, the above figures do not give a true perspective of the trade importance of the French Sudan Peanuts constituted about 50 per cent of the combined exports of Senegal, Ivory Coast, Dahomey, French Guinea, and French Sudan in 1928 Cocoa beans were the chief item of export from the Ivory Coast Other exports were hardwoods, palm kernels, palm oil, gum, hides, cotton lint, and crude indigo (from French Guinea) The imports included cotton piece goods, foodstuffs, automobiles, machinery, petroleum products, and some tobacco France supplied about 75 per cent of the total imports in 1927 and took about 50 per cent of the exports The budget for 1929 provided for revenues of 801,197,500 and expenditures of 771,879,000 francs

In 1927 there were 1950 miles of railway with 345 additional miles under construction and 14,386 miles of telegraph line Vessels entering and clearing the ports of French West Africa the same year numbered 20,229 of 16,466,259 tons

A governor-general, assisted by a council, is at the head of the administration of all French West Africa The seat of government is at Dakar Each colony is under a lieutenant-governor subordinate to the governor-general Governor-General in 1929, J. Caide, appointed Feb. 20, 1923

**FRIENDLY ISLANDS.** See TONGA

**FRIENDS,** Religious Society of A mystical religious sect which originated in England in the middle of the seventeenth century The founder of the society was George Fox (1624-91) who visited America in 1672 The first Yearly Meeting in the United States was held in Newport, R. I., in 1661 and has been continued under the name of New England Yearly Meeting Others established within the next 40 years were the Baltimore, Philadelphia, New York, and North Carolina Yearly Meetings, they are composed of quarterly and monthly meetings having one or more congregations. In the nineteenth century, other meetings were formed as migration moved westward

**FIVE YEARS' MEETING** In 1902 the largest body of the Religious Society of Friends, known as the Orthodox Group, organized the Five Years' Meeting This society meets as a delegate body every five years and in 1929 consisted of 12 yearly meetings, with a membership of approximately 81,000 Its headquarters are in Richmond, Ind The work of the various departments, such as missions, peace, prohibition and public morals, religious education, is under the direction of executive committees and secretaries of boards

The Five Years' Meeting also maintains seven colleges for higher education: Earlham in Richmond, Ind.; Penn in Oskaloosa, Iowa; Guilford in Guilford, N. C.; Wilmington in Wilmington, Ohio; Whittier in Whittier, Calif.; Nebraska Central in Central City, Nebr.; and Friends University in Wichita, Kans. Haverford College in Haverford, Pa., is maintained by the Philadelphia Yearly Meeting and Pacific College in Newberg, Oreg., by the Oregon Yearly Meeting. The latter society, however, and the Ohio Yearly Meeting are not a part of the Five Years' Meeting. In 1929 the membership of the Oregon Yearly Meeting was 3208 and of the Ohio Yearly Meeting, 5157. *The American Friend*, a weekly religious journal, is published at headquarters, as is also literature for the Bible schools of the Five Years' Meeting.

**LIBERAL BRANCH** This branch was formed in 1827 when more than half of the Friends in the Middle States followed Elias Hicks. The separation centred around the doctrinal issues of the day. The Liberal Branch includes seven Yearly Meetings federated in the Friends' General Conference, which meets in even numbered years and conducts work in religious education, social service, and advancement of Friends' principles. The society emphasizes the freedom of the individual to follow the voice of God in his own soul rather than any individual or church authority. The membership in 1929 was 16,573, and there were 11 publications include the weekly

*Intelligencer*, and a monthly magazine for children, *Scattered Seeds*. The society conducts several secondary schools, and Swarthmore College in Swarthmore, Pa., was founded by it.

An important agency representing all groups in the United States is the American Friends Service Committee, with headquarters at 20 South Twelfth Street, Philadelphia. It was formed in 1917 for war-relief work, and under its auspices approximately 1000 members carried on relief and reconstruction work in various countries of Europe. In Germany alone, it administered food relief to the extent of approximately \$30,000,000 in money and in kind. In 1929 it acted in a similar capacity in administering in cooperation with the Federal Government, the Churches of Christ in America, relief to needy textile workers in the strike area of North Carolina. The committee also united with English Friends in conducting several good-will centres in European countries for the purpose of extending international understanding. The first conference of all Friends in America was held in Oskaloosa, Iowa, in September, 1929. It was called for the purpose of considering the common task confronting American Friends and for the furtherance of good-fellowship.

**FUCHS, EMIL.** An Austro-American painter and sculptor, died suddenly in New York, Jan. 13, 1929. Born in Vienna, Aug. 9, 1866, he studied under Viktor Tilgner, and at the Royal academies in Vienna, and in Berlin. Winning a scholarship in 1890, he lived for five years at Rome. On his return to Germany, he won a gold medal at Munich in 1896 with the group "Mother Love." He then went to London, where, through his sculptures, portraits, and medals for the Royal family,

he became very popular. His work received honorable mention in a Paris competition in 1907. Having first visited the United States in 1905, he received many commissions in that country, painting the portraits of prominent persons, and designing the medals for the Hudson-Fulton Celebration, for the Hispanic and the Numismatic societies, and the J. Pierpont Morgan Memorial Medal. Mr. Fuchs became a naturalized American citizen in 1924. He received the \$1000 prize for the best head of a girl in the Brown and Bigelow Competition, New York, the following year. He is represented in various permanent collections in the United States, such as of the Metropolitan, the Cleveland, and the Brooklyn museums, the New York Public Library, and the Congressional Library, Washington, D. C. Mr. Fuchs wrote, *With Pencil, Brush and Chisel, The Life of an Artist* (1925).

**FUEL.** Estimates of the U. S. Bureau of Mines place the total 1929 production of bituminous coal in the United States at 525,358,000 tons, an increase of 4.9 per cent over the 1928 production. The latest available government statistics indicated the following uses of the bituminous coal mined: railroads, 27.7 per cent, coke ovens, 16 per cent, electric utilities, 7.7 per cent, steel works, 5.4 per cent, general manufacturing plants, 19.5 per cent, gas plants, 1 per cent, coal-mine fuel, 1.1 per cent, other mines and quarries, 0.8 per cent, export, 0.9 per cent, domestic and miscellaneous uses, 19.9 per cent.

Consumption of coal by the railroads in the United States had declined from 173 pounds per 1000 gross ton-miles in 1920 to 125 pounds in 1929. Similarly, due to greater economies in power generation, the consumption by electric utilities decreased from an average of 3.02 pounds per kilowatt-hour in 1920 to 1.69 pounds in 1929. Some of the larger and more efficient plants were regularly turning out a kilowatt-hour on one pound of coal. Thus the continued increase in electrical output of about 10 per cent per year had been accompanied by only a slight increase in the fuel consumed.

The bulk of anthracite was consumed in domestic use, although power plants and industries consumed a considerable tonnage of the smaller sizes and some was used by railroads. Intensive development of the small stoker for heating boilers is diverting more and more of the small-sized anthracite to domestic use. See **COAL**.

Oil production in the United States last year passed all previous records and exceeded a billion barrels, an increase of nearly 12 per cent over 1928. The greatest increases were in California, Texas, and Oklahoma. The production of gasoline through refining and cracking amounted to over half this quantity. That part of the residue that was used as fuel was distributed among stationary power plants, marine boilers, industrial and domestic heating. The number of oil burners installed for domestic heating in 1925 was estimated to be 25 per cent greater than in 1928. See **PETROLEUM**.

Considerable activity centred in the natural-gas fields where long pipe lines of large capacity are under construction, or have recently been completed, to convey the gas from the Texas and Oklahoma fields to Chicago, Denver, and intermediate cities. Other lines extend from Louisiana to St. Louis, Birmingham, and Atlanta, from Southern California to San Francisco, and over certain sections of Wyoming, Montana, and Mis-

mississippi. One of these pipe lines will be nearly 900 miles long and several range from 200 to 500 miles. This was in addition to existing lines in West Virginia, Ohio, and Pennsylvania, some of which showed a greatly curtailed supply. On the other hand, the Texas, Oklahoma, Louisiana, and California fields promise an abundant supply for years to come. It is probable that this gas will find wide application in industrial plants through the Middle West and will thus prove a strong competitor of coal. It may also stage a revival of the gas engine for certain classes of service. The consumption of natural gas in 1929 increased 21 per cent over that of 1928. See GAS, NATURAL.

Distillation of coal is accomplished by two general methods, namely, high-temperature carbonization and low-temperature carbonization. The former, in which practically all the volatile is distilled off, yields a long line of by-products and has become firmly established on a commercial basis. In the latter, upon which is based a number of individual processes, only a portion of the volatile is distilled off and the residual coke has a higher heat value and is more easily ignited. In Europe a large number of low-temperature carbonization plants had been built, mostly on a small scale, with varying degrees of success, depending upon local conditions. In the United States, a considerable number of such plants had been built during the last few years, with one exception, on a small scale. Processing difficulties had been responsible for the shutting down of several. The few that had been technically successful had not yet attained commercial success, due largely to the current price for tar and lack of a consumer market for the coke produced.

The mechanical stoker and pulverized coal still continued as strong competitors in stationary power plants. Neither dominated the field, and there were conditions for which each was best fitted, although pulverized coal was gaining steadily among the larger plants.

As for the marine field, during the year a second Shipping Board vessel, the *West Alsek*, was equipped with individual pulverizing mills for each furnace and had made several successful transatlantic trips. The first large vessel to be equipped for burning pulverized coal was the *Mercer*, which had been operating under these conditions for nearly two years. With 1929 fuel-oil prices, pulverized coal offered little inducement for American ships. However, its practicability had been demonstrated and it would serve as a potential weapon against increased oil prices.

In October a four-day National Fuels Conference was held at Philadelphia, under the auspices of the Fuels Division of the American Society of Mechanical Engineers. Simultaneous sessions covered fuels for power generation, for industrial furnaces, and for domestic use. The attendance was over one thousand.

During 1929 the various companies reporting to the American Gas Association recorded gas utility sales of over 446 billion cubic feet, an increase of nearly 10 per cent. Revenues from gas sales for the year aggregated \$418,831,103 representing a gain of 4.1 per cent. On December 31, the customers of these companies totaled 9,738,670, or approximately 2 per cent more than on the same date of the year previous. During the year most sections of the country continued to report satisfactory progress in gas sales accord-

ing to the American Gas Association. In New England, the year closed with a gain of nearly 6 per cent in gas sales, as compared with an increase of only 1.4 per cent in customers during the same time. A factor contributing materially to this expansion was an increase of 5.8 per cent in gas sales for heating purposes. The growing importance of this new use for the gas industry's product is evident from the data relating to New England, indicating that while house-heating customers were only half of 1 per cent of the total customers, gas used for house-heating purposes represented nearly 7 per cent of the total gas sales for the year in this region.

In the Middle Atlantic States, total sales for the year increased 2.5 per cent, in the East North Central States, 1.1 per cent. In Illinois, Indiana, Michigan, Ohio, and Wisconsin, the increase was 9.1 per cent. In 1929 there was continuation of these trends in production which have characterized the industry at large to an increasing extent during the past few years. The volume of water gas produced by these companies during 1929 was about 8 per cent less than the year previous, while the production of retort coal gas dropped nearly 15 per cent. Marked increases, however, were registered in the quantity of coke-oven gas produced and purchased. The volume of this type of gas produced by the utilities themselves rose some 27 per cent during the year, while coke-oven gas purchased from sources outside the industry, such as iron and steel plants, as well as merchant by-product coke-oven plants producing gas primarily for city distribution, increased some 29 per cent.

**GALLSTONE DISEASE.** This important subject of gall-bladder dyspepsia is discussed by Dr. G. A. Dowling of Seattle in the *Journal of the American Medical Association* for January 5. In over 1000 cases of patients with gall-bladder disease, nearly two-thirds complained of dyspepsia, while only about one-third complained of pain. The number of dyspeptic symptoms was very large, and there was little or nothing to distinguish this from other types of indigestion. It is only when pain also is present that we may suspect the disease in question. The actual cause of the dyspepsia is probably spasm of the pylorus or reverse peristalsis. In cases unaccompanied by the more or less characteristic pain, it is necessary to make some further tests, one of which concerns the acidity of the stomach secretions. In the gall-bladder patient, there is usually diminished acidity, that fact is paradoxically opposed by another, that sodium bicarbonate often relieves the dyspeptic sensations. In about two-thirds of all patients, the stomach acid was diminished or altogether absent. The dyspepsia from this cause can be treated directly and improved even in the presence of the disease by special diet, which comprises small meals; little roughage, elimination of fats, alcohol, and condiments, laxatives, with peppermint, charcoal, and bromides as drug remedies. It is unwise to add acids to the diet.

**EVALUATION OF CHOLECYSTOGRAPHY.** Dr. J. T. Case, well-known radiologist of Battle Creek, stated that many medical men were still out of touch with this new and efficient diagnostic resource. They regard it in the light of a functional efficiency test. If the gall bladder is visible,

it must be healthy and vice versa, but Graham's test is much more than a test of functional efficiency of the gall bladder, for it should give an adequate idea of anatomical changes in the latter. A comparison may be made between this test and the barium meal in radiography of the stomach which is much more than a test of functional efficiency of the stomach, since it reveals many pathological alterations. Cholecystography therefore is of value both in functional and structural regard, and especially when the intravenous injection is practiced is it of value from the functional angle. This method of making the test is also the most trustworthy for the recognition of gallstone bladders. If the gall bladder is normal to the test, it is *prima facie* evidence that the knife is not needed. The greatest liability to error is in the case where there is only slight pathological alteration in the gall bladder, and here an operation may be shown to have been unnecessary, but the chance of this error is small.

**GAMBIA.** A British protectorate and colony in West Africa at the mouth of the Gambia River. Area of Gambia proper, four square miles, population about 10,000. Area of protectorate, 4130 square miles, population in 1921, about 200,000. The capital is Bathurst, on the Island of St. Mary (population, 9227 in 1921). In 1926 there were seven elementary government-aided schools with 1867 pupils enrolled. In 1927 the imports totaled £956,741 and the exports, £999,887. The chief imports were wearing apparel and foodstuffs and the chief exports, groundnuts, hides, and palm kernels. The public revenue in 1927 was £252,419 and the public expenditure, £277,625, including £50,000 for the establishment of a reserve fund. The public debt amounted to £84,171 on Jan. 1, 1928. The tonnage of vessels entered and cleared in the foreign trade in 1927 was 1,284,664 tons, of which 821,614 were British. There are no local railways. The colony is administered by a governor, an executive council, and a nominated legislative council containing an unofficial element. Governor in 1929, Sir Edward B. Denham (appointed August, 1928).

**GANDHI, MAHATMA** See INDIA, under *History*.

**GARBAGE AND REFUSE DISPOSAL.** Motor vehicles for collection and incineration for disposal of garbage and refuse continue to gain in use in most of the progressive countries of the world. In Great Britain and continental Europe, garbage, ashes, paper, rags, bottles, metals, and various other classes of wastes are mixed at the house, collected and disposed of jointly, except that, in some cities of Italy, garbage is handled separately, as noted further on. In the United States, the three-separation plan (garbage, ashes, miscellaneous refuse) is common but not everywhere used. Much garbage is collected by itself and either fed to hogs or treated by the reduction process for the recovery of grease and fertilizing material. The reduction process is generally confined to the larger cities and hog feeding, to the smaller ones. Los Angeles is the only large city that sends its garbage to a hog farm (see 1928 NEW INTERNATIONAL YEAR BOOK, also preceding editions).

There have been no recent accessions to the list of reduction plants. In those American cities which practice incineration, garbage alone or garbage mixed with other refuse may be burned. Ashes also may be put through the furnaces, but

that practice is becoming less usual. When an American city has no incinerator, its garbage may be fed to hogs, reduced, dumped with ashes and refuse, merely to get rid of it or else to fill low land. In a few cases, as at Scarsdale, N. Y., of late, and in some small places in Florida, beginning in 1928, garbage only is subjected to fermentation in tanks, with the aim of reducing it to humus for use as a fertilizer, by the Becarré process, which originated in Italy. Dumps or fills receiving all wastes, including garbage, may be kept in a sanitary condition, provided clean ashes or dirt are used for covering the wastes.

New York City (which resorted to dumping its garbage and refuse at sea some years ago after many years' trial treating the bulk of its garbage alone by the reduction process in a privately-owned plant) is continuing its comprehensive incinerator-building programme. At the close of 1929, the head of New York's new sanitation commission (see SEWERAGE) recommended that the construction of incinerators be accelerated by an appropriation of many additional millions of dollars. San Francisco voters, late in 1929, endorsed the principle of incineration but negatived plans tentatively proposed to provide the necessary furnaces. A threatened court injunction against operating the present old and inadequate incinerator was hanging over the city as a result of a lawsuit brought by near-by property owners on the ground that the old incinerator was a nuisance. The situation at San Francisco was complicated by the fact that the garbage is collected by many licensed scavengers, at the expense of individual householders, the fees also covering disposal. The latter is effected by the scavengers collectively, who use the old municipally-owned incinerator for the purpose. At Minneapolis, two proposals to buy the garbage of the city for feeding to hogs were rejected by the authorities because it was held that the price was too low to warrant a change from incineration in a plant built quite recently. Manchester, England, as a part of a five-year programme, put in use in July, 1929, a new refuse disposal plant of 135-short-ton capacity in eight hours, which separates the refuse into dust,inders of heat value, salable products, and combustible and noncombustible tailings. Paper, rags, rope, and other materials are picked out for sale. It was planned to mix the dust with offal and refuse from an adjacent slaughter house and sell the mixture as "town manure." Combustible material which is not salable goes to an incinerator, heat from which is presumably utilized.

**BIBLIOGRAPHY.** For description of the Manchester plant, consult *Municipal Engineering* (London), Aug. 8, 1929, also, in abstract, *Engineering News-Record* (New York), Dec. 26, 1929. For British refuse and street-cleaning statistics, see annual reports of the Ministry of Health. Of two new British books on garbage and refuse collection and disposal and on street cleaning services (generally combined in England), *Public Cleansing* is a joint production of the James Jackson Study Circle of the Birmingham Corporation Salvage Department, composed of present or former staff heads working under Mr. Jackson, general manager, the other work of importance is *Modern Public Cleansing Practices*, by A. L. Thomson, Cleansing Superintendent of the Metherwell & Winshaw Borough Council, Scotland.

**GAS, ILLUMINATING AND FUEL** During the year 1929 there was a remarkable advance in all divisions of the American gas industry. Not only was there expansion into new fields of usefulness but an extensive development of existing markets. Sales of gas for domestic purposes other than house heating showed a normal increase of somewhat more than 4 per cent, while the use of gas for household heating purposes registered an increase of over 50 per cent, with central house heating and refrigeration showing notable development. The consumption of gas for industrial commercial purposes, such as factories, hotels, restaurants, etc was nearly 12 per cent above 1928 figures. Preliminary estimates of sales by 12 companies in 1929, compiled by the department of the American Gas Association, indicated an 8 per cent increase over 1928, putting sales at a record high figure of 535,000,000 cubic feet. Classified sales of manufactured gas for the year were as follows: 340,000,000 cubic feet for domestic purposes, 27,000,000 for house heating, 165,000,000 for industrial-commercial purposes, and 3,000,000 for miscellaneous uses, a total of 535,000,000 cubic feet, as against a total of 494,000,000 cubic feet in 1928, an overall increase of 8.1 per cent. During 1929 gas service in the manufactured-gas branch of the industry was extended to 360,000 new customers, bringing the total number of customers to 12,200,000 at the close of the year.

During 1929 there was a pronounced increase in the quantities of coke-oven gas produced by the utilities themselves, the output rising from 39,000,000 cubic feet in 1928 to 50,000,000 cubic feet in 1929, a gain of 28 per cent. Furthermore, there was an increase of 30 per cent in the quantity of coke-oven gas purchased from coke and steel companies for distribution by the utilities, amounting to 126,000,000 cubic feet during 1929.

In the natural-gas industry, according to preliminary estimates of the American Gas Association, there was a production of 1,890,000,000 cubic feet in 1929, as against 1,548,000,000 cubic feet in 1928, an increase of 20.5 per cent. This branch of the industry increased its gross operating revenues in 1929 to \$450,000,000, an increase of 23.6 per cent over 1928, which showed gross operating revenues of \$364,000,000. Such activity was largely in the South and West, for it was hardly possible to substitute natural gas for manufactured gas in the East because of the large supply which would be required for such a move and because it would necessitate scrapping efficient by-products gas plants. Natural gas was particularly available for large industrial consumers with a particular need for the high heat content of this type of gas, and it also could be purchased by manufactured-gas utilities to enrich their own manufactured product. Where natural and manufactured gas were available, it was generally considered most economical to distribute both products mixed, as it reduced the expense of manufacturing gas and provided for a financial return on the sale of the natural gas more in line with its high heat content than when this gas was distributed in an unmixed form. In this field, there had occurred the extension of hundreds of miles of great pipe-line systems, so as to bring natural gas from the enor-

mously productive areas of the Southwest and West to hundreds of communities that never had heretofore enjoyed the convenience of this fuel.

During the year, there continued to be marked progress in the adaptation of gas to many new industrial, commercial, and domestic uses, in addition to the revolutionizing of the ceramic industry, brass smelting, baking, refrigeration, central heating, and hotel cooking, which had been under way for several years. Research was being prosecuted in many fields, and the testing of upward of 15,000 appliances was in progress in the laboratory of the American Gas Association in Cleveland, in the interest of the protection of the public and the industry against faulty and inefficient gas-burning appliances. The modernization of scores of manufactured-gas plants had become quite general, and while there recently had been marked progress in refrigerating and heating, there also were important opportunities in other fields. Changes of an engineering character scheduled to come included the piping of gas, steam, and electrical production in single plants, where coal would be completely processed, while the development of a gas-fired turbine for the generation of electricity might make possible the locating of future combination utility plants at the coal or mine mouth and thereby eliminate heavy investment.

According to B. J. Mullaney, president of the American Gas Association, the combined revenues of the manufactured- and natural-gas industries in 1929 amounted to about \$550,000,000, as against \$375,000,000 in 1928. This was a gain of nearly 9 per cent over the previous year which, in turn, showed an increase of nearly 8 per cent over 1927. At the end of the year 1929, the gas industry had a total of over 17,000,000 customers or a gain of almost 1,000,000 customers over 1928. The investment involved in the service of these customers was approximately \$4,750,000,000, and the representatives of the gas industry stated at the business conference called by President Hoover in 1929 that they expected to spend in the neighborhood of \$425,000,000 in the construction of additional facilities for enlarged service and another \$50,000,000 for the maintenance of existing service facilities. It was stated late in 1929 in a survey of the financial status of the industry, made by a leading investment banking house, that in 1930 the production of gas, both manufactured and natural, would exceed 2,000,000,000 cubic feet and that the total investment in the industry would cross the \$5,000,000,000 mark with revenues approaching a total of \$1,000,000,000.

On the technical side, recent years have shown vast developments in the gas industry, especially in the efficiency and economy of transporting gas. To withstand higher pressures, the tensile strength of the pipe has been increased and the life of the pipe lines materially extended through methods of preventing rust and deterioration. Efficiencies and economies have been introduced into every department of production, transportation, and distribution, so that in 1929 the American industry was on a better basis than ever previously. Particularly in connection with natural gas, long trunk lines for transmission had been built, mostly in the Southwest and West, and great producing areas with vast reserves had been developed. Accordingly, natural gas was being transmitted to greater distances than had ever been considered economically prac-

ticable, and during the year much main-trunk-line building was well under way. This was to be followed by expansion of facilities and the extension of small lines from the main trunk lines to the larger communities and later to the smaller centres. During the year, the consolidation of separate lines was well under way, and it was believed that there would follow gradual consolidations, accompanied by physical connections and tie-ins such as had taken place in the electrical and power industry.

Notable among the larger fields in which developments were taking place and from which natural gas was being transmitted to centres hundreds of miles distant were the great Monroe and Richland Parish gas fields in Louisiana, the "Panhandle" and other producing areas in Texas, and the Kettleman Hills in California. See GAS, NATURAL.

**GAS, NATURAL.** In 1928, 1,568,139,000,000 cubic feet was produced and delivered to consumers in the United States according to the U. S. Bureau of Mines. This represented an increase over 1927 of 8 per cent, which compares with an increase in petroleum production during the same period of 0.4 per cent, with an increase in carbon-black manufacture of 25 per cent, and of natural gas-oil of 11 per cent. Deliveries of natural gas to Canada and Mexico declined from 184,000,000 to 160,000,000 cubic feet, which, when deducted from the production, gave 1,567,979,000,000 cubic feet as the total consumption for the year. During 1928 production in Oklahoma fell off, but the State continued to hold first place as a producer ahead of Texas, where a material increase was recorded. Production in Louisiana increased 22 per cent in 1928, which placed that State within striking distance of California in third place. The total number of domestic consumers increased from 3,084,000 in 1927 to 4,366,000 in 1928, an increase of 10 per cent. The most important increases occurred in Colorado, following the completion of the Panhandle-Denver line, in Louisiana, after the opening of the Monroe-New Orleans line, and in Texas, following a general expansion of distributing facilities throughout the State. Michigan made a notable gain in number of consumers, following the development of considerable production near Muskegon. Ohio continued to be the leading State from the standpoint of number of domestic consumers, followed by California and Pennsylvania. All three of these States reported an increase in the number of domestic consumers in 1928, though on a percentage basis they were greatly exceeded in this respect by less important States through which trunk lines were laid during the year.

The total consumption of natural gas by domestic consumers in 1928 amounted to 320,877,000,000 cubic feet, equivalent to 20 per cent of the total consumption. This total represents an increase over 1927 of 8 per cent. For the sixth successive year, the average consumption per domestic consumer was lower in 1928, when it amounted to 73,500 cubic feet, as compared with 74,300 cubic feet the previous year. This decline in average consumption may have been due to more efficient use, but it was probable that, had the new trunk lines been in operation the entire year, the average consumption would have increased. The average price paid for natural gas by domestic consumers continued its slow increase and amounted to 62.0 cents per thousand cubic feet in 1928. This compared with 60.8 cents

in 1927 and 58.4 cents in 1926. On the basis of the consumption and price data given above, the natural-gas bill for the average domestic consumer in 1928 was \$3.79 per month, comparing with \$3.76 per month for 1927 and \$2.82 for 1918.

The total consumption of natural gas for industrial purposes in 1928 amounted to 1,247,102,000,000 cubic feet, an increase over 1927 of 9 per cent. Of this total, 573,698,000,000 cubic feet, or 46 per cent, was used for field purposes, that is, for drilling, pumping, etc.; 175,137,000,000 cubic feet, or 14 per cent, was burned for carbon black, 114,950,000,000 cubic feet, or 9 per cent, was used for fuel in the refining of petroleum, 77,326,408,000 cubic feet, or 6 per cent, was burned as fuel by electric public-utility plants, leaving 308,990,592,000 cubic feet, or 25 per cent, for "other industrial" purposes. In comparison with 1927, these figures represent increases in the amounts of natural gas used for field purposes, for carbon black, for generating electricity, and for miscellaneous purposes, but a decrease in use at refineries.

California was credited with an increase of about 28,000,000,000 cubic feet in field use of natural gas in 1928, this figure exceeding the increase for the country as a whole. The other two major oil-producing States, Texas and Oklahoma, registered but small increases in the field use of natural gas. This slight change in Texas was perhaps surprising in view of the increase in drilling activity, yet considerable of the new wells were located in west Texas, where there is little gas. Drilling activity in Oklahoma fell off, but this factor was compensated by increased use of natural gas for pumping and in the operation of plants.

The use of natural gas at refineries, which had been increasing quite rapidly, declined in 1928. The total used in that year amounted to 114,950,000,000 cubic feet, as against 123,395,000,000 cubic feet in 1927. The largest factor in this decline was the displacement of about 7,500,000,000 cubic feet in Oklahoma by slightly over 1,000,000 barrels of fuel oil. Fuel-oil prices were low in 1928 and some refiners considered it economical to use their surplus in place of gas rather than sell it on a weak market.

The U. S. Geological Survey reports the consumption of natural gas as fuel in the generation of electric power by public-utility plants in 1928 as 77,326,408,000 cubic feet, an increase over 1927 of 14,407,211,000 cubic feet, or 23 per cent. Texas was the leading State from the standpoint of quantity of natural gas used in the manufacture of electricity in 1928, with California second and Louisiana third.

The average price per 1000 cubic feet paid for natural gas for industrial purposes in 1928 was 13.2 cents, as compared with 12.0 cents the previous year and 12.8 cents in 1929. Thus the upward trend in prices in 1928 was sufficient to more than offset the decline of 1927. This increase was due entirely to the increased price of gas for field purposes; in fact, the price of gas for all other purposes except field uses declined from 16.5 cents per M in 1927 to 15.8 cents per M in 1928.

The interstate movement of natural gas increased materially in 1928, when a total of 241,386,000,000 cubic feet was transported between States, as compared with 194,401,000,000 cubic feet in 1927. The movement of natural gas from West Virginia to Ohio continued to rank first in

\* Includes value of natural gas used at refineries. † Included under "Other." ‡ Included with Wyoming.

importance, though some more recently established interstate deliveries, for example from Louisiana to Texas and from Texas to Oklahoma, showed a larger increase in 1928

The year 1928 was an important one from the standpoint of mergers and expansions, and probably more pipe-line work was done than in any previous year. The new trunk lines serve or were to serve territory that a few years before had been considered inaccessible. See GAS, ILLUMINATING AND FUEL.

**GASQUET**, gu'skâ', FRANCIS AIDAN, CARDINAL An English Roman Catholic prelate and historian, died Apr 5, 1929, in Rome. He was born in London, Oct 5, 1846, and was educated at Downside College. From 1878 to 1884, he was superior of the Benedictine Monastery and the College of St Gregory at Downside. Because of ill health, he resigned the priorship and upon the advice of Cardinal Manning, devoted himself to historical research, working for the most part in the British Museum, with visits to the libraries at the Vatican, Milan, and Monte Cassino. As President of the International Commission for the Revision of the Vulgate, to which he was appointed by Pope Pius X, he directed from Rome a group of scholars working in the great libraries of Europe. In 1914 he was created a cardinal by Pope Pius X. After 1918 he was prefect of the Vatican Archives. Cardinal Gasquet was the author of a vast number of historical books, most of them growing out of his researches. Among them are *Henry VIII and the English Monastery* (1888-89, 2d ed, 1906), *Edward VI and the Book of Common Prayer* (1890), *The Last Abbot of Glastonbury* (1895, 2d ed, 1908), *A Sketch of Monastic Constitutional History* (1896), *The Old English Bible and Other Essays* (1897, new ed, 1908), *The Era of the Reformation* (1900), *A Short History of the Catholic Church in England* (1903), *Vita antiquissima B. Gregorii Magni* (1903), *English Monastic Life* (1903), *Collectanea Anglo-Frankomonasticeana* (1904 et seq.), *Henry III and the Church* (1905), *Lord Acton and His Circle* (1906), *Parish Life in Medieval England* (1906), *The Greater Abbots of England* (1908), *The Black Death of 1348 and 1349* (2d ed, 1908), *England under the Old Religion* (1912), *Breaking with the Past* (1914), *Monastic Life in the Middle Ages* (1922), *His Holiness Pope Pius XI* (1922).

**GATES, FREDERICK TAYLOR** An American administrator and philanthropist, died in Phoenix, Ariz., Feb. 6, 1929. Born in Maine, Broome County, N. Y., July 2, 1853, he was graduated from the University of Rochester in 1877, receiving the A. M. degree in 1879. Graduated also from the Rochester Theological Seminary in 1880, he was ordained minister.

in that year and served as pastor of the Central Church, Minneapolis, until 1888. Successful in raising a \$50,000 fund for Pillsbury College, he was made corresponding secretary of the American Baptist Educational Society, and in that capacity persuaded John D. Rockefeller to donate \$600,000 toward the establishment of the Uni-

versity of Chicago. He subsequently became Mr. Rockefeller's representative for benevolent work, giving up his position with the Baptist society in 1893 to devote himself to investigating and managing the Rockefellers' philanthropies, as well as certain business enterprises. At the time of his death, Mr. Gates was chairman of the trustees of the Rockefeller Institute for Medical Research, director of the Rockefeller Foundation, the General Educational Board, the International Health Board, and the Western Maryland Railroad.

**GEOGRAPHICAL SOCIETY, AMERICAN**

The oldest geographical society in the United States, founded in 1852, "to collect and disseminate geographical information by discussion, lectures, and publications, to establish in the chief city of the United States a place where may be obtained accurate information concerning every part of the globe, and to encourage such exploring expeditions as seem likely to result in valuable discoveries in geography and related sciences." Within recent years, the society has taken an active part in the encouragement of exploration, the scientific work of Sir Hubert Wilkins in the Arctic and Antarctic and of Rear Admiral Richard E Byrd in the Antarctic having been carried out under its auspices.

The society's periodical is the *Geographical Review*, a quarterly, in which appear original articles and notes dealing with exploration and geographical research and reviews of the more significant geographical books. The maps, books, and pamphlets issued by the society fall into six series: *Research Series*, comprising specialized monographs, *Special Publications*, having a more general appeal, *Laboratory Series*, devoted primarily to the collections of the society, *Outing Series*, including trampers' guides entitled *The Palisades Interstate Park* and *New York Walk Book*, a map of Hispanic America published in conformity with the International Millionth Map of the World and accompanied by geographical monographs (this map will consist of 100 sheets, of which more than 30 have been completed), and *Oriental Explorations and Studies*, comprising six volumes on the explorations of Prof Alois Musil in northern Arabia.

The society maintains a geographical library and sponsors six regular lectures annually by distinguished explorers or geographers. Contributions to the development of geographical science and exploration are recognized in the society's election to honorary and corresponding memberships and in the bestowal of medals. The David Livingstone Centenary Medal for scientific achievement in the field of geography of the Southern Hemisphere was awarded to Admiral Byrd on Dec. 19, 1929. The president of the society in 1929 was John H. Finley, LL.D., and the director was Isaiah Bowman, Ph.D. Headquarters are at Broadway and 156th Street, New York City.

**GEOGRAPHIC SOCIETY, NATIONAL** An organization founded in Washington, D C, in 1888 for the increase and diffusion of geographic knowledge. During 1929 it achieved the final results that had been the objective of a series of 11 expeditions in the Southwest—eight devoted to the excavation and restoration of Pueblo Bonito in the Chaco Canyon country of New

Mexico, and three to the collection of ancient timbers through whose growth rings it was hoped to fix the age of the civilization in Pueblo Bonito and to determine the dates of the principal events of that civilization. These results, were even more remarkable than had been anticipated. Not only have they enabled the society's experts to fix the major dates of Bonitian times, but they have brought nearly 40 other ruins into the purview of modern chronology. Through them it is now known that Pueblo Bonito was founded in 919, reached its heyday in 1067, and was still occupied in 1127. They also afford a striking picture of the cycle of civilization in the Southwest, showing how long a given area could support a typical community under the primitive conditions of those times.

Furthermore, through the sequence of tree rings, a calendar of events in the Southwest has been provided, turning the American calendar back to the year 700, or nearly eight centuries before Columbus discovered America. These annual rings afford a basis for the most accurate weather chart in existence, covering 1229 years of climatic fluctuations. Each ring from the most recent found in a living tree to the most ancient discovered in a prehistoric beam proclaims whether the year in which it was found was a "fat" or a "lean" year—a year of drought or a year of good rainfall. This research has resulted from two widely variant lines of investigation, that of Neil M. Judd, who was engaged in a study of the American Indian, and that of Dr. Andrew E. Douglass of Steward Observatory, University of Arizona, who was engaged in a study of the relationship between sun spots and tree-ring variations. At a conference on weather cycles Dr. Douglass related his findings, and Mr. Judd declared that they warranted the hope that it an unbroken sequence of rings could be found it would be possible to date the ruins in Pueblo Bonito. The search for ancient beams was then instituted by the three expeditions of the society, and the ring sequence built up and tied together.

While these researches were being carried on in the Southwest, the society was fostering another research in Southwest Africa. For several years the Smithsonian Institution, through Dr. Charles G. Abbot, had been carrying forward a study of solar radiation, the institution maintaining a solar observatory in Chile and another in California at which constant measurements of the sun's radiation were made. To make these results more dependable and to keep them free from atmospheric interferences, it was desirable to have a third station. Thus, the National Geographic Society undertook to build and maintain at Mount Brukkaros, Southwest Africa, under grants aggregating \$65,000. The variations in the amount of solar radiation were found to show a definite conformity with the variations in weather conditions, indicating that the one has a marked influence upon the other. And the work of Dr. Douglass with his tree-ring investigations, therefore, furnished the centuries-long weather records upon which the deductions of solar radiation laws might be tested. Dr. Abbot announced that these researches had gone far enough forward to warrant the statement that, with the aid of these periodicities, it seemed probable that the principal variation of the sun and the behavior of all that hung upon it could be predicted for several seasons in advance. Such a conservative statement means not only that

the world may be on the eve of an era of the successful forecasting of the years of drought and those of abundant rainfall but that long-range forecasting of month-to-month, if not even day-to-day, weather is clearly within the realm of hope.

Dr. Joseph F. Rock also continued his researches in the Chinese provinces bordering on Tibet, where he has been gathering botanical, zoological, ethnographic, and other material for the society for a number of years. On one of his expeditions he brought back to the United States a 317-volume set of Chinese classics printed from wood blocks engraved more than 5000 years ago and kept in the great Buddhist monastery in Choni. The monastery, together with its contents, including these priceless plates, was destroyed during the late invasion of Choni, with the result that the set of classics presented by Dr. Rock and the society to the Library of Congress has been transformed into one of the most important treasures of America's great national library. Dr. Rock also brought back a collection of rhododendrons from inner-Asia which were developed at the Golden Gate Park in San Francisco and which bloomed for the first time in 1929. Dr. Rock's contacts with the peoples with whom his expeditions have had to deal have built up a feeling of cordiality between them and Americans. Upon the return of the Roosevelt-Field Museum expedition into the habitat of the giant panda, Kenmit Roosevelt announced that the relationship with native rulers which Dr. Rock had established had produced in them a friendly and helpful attitude toward American scientific expeditions.

The society continued the work of Ernest G. Holt in the investigation of the lives of migrant birds which winter in Venezuela and spend their summers in the United States. The territory to be covered, as well as the lines of research to be followed, were enlarged. At the invitation of the International Boundary Commission, established by Venezuela and Brazil to fix the boundary between the two countries, the society authorized Mr. Holt to attach himself to the commission for the purpose of making a study of the flora and fauna of the region through which the boundary surveys were to be made. It is a region rich in botanical and zoological material unfamiliar to science, owing to the fact that it lies between hostile Indian tribes that had seldom permitted scientists to reach it.

The Byrd expedition to the Antarctic also was sponsored by the society. In a radiogram just before beginning his flight to the South Pole, Admiral Byrd said: "At a crucial period of our preparations for this expedition the National Geographic Society came to our assistance with encouragement and a substantial grant and so helped in a big way to make our expedition possible. Now, in the midst of the more difficult operations and when there still is a financial deficit back home, the National Geographic comes again to our assistance by duplicating its original grant of \$25,000 and so encouraging greatly every man in camp." The sun compass that was Admiral Byrd's constant guide to both the North and South Poles was invented by Albert H. Bumstead, the cartographer of the National Geographic Society. See *POLAR EXPLORATION*.

During 1929 bulletins dealing with the geographical backgrounds of current events were furnished to more than 600 newspapers, and weekly

bulletins of timely geographical information were sent to about 35,000 school-teachers. The society also supplied material for press associations, and as part of its educational work prepared a weekly ready-to-print service for about 1200 daily and weekly newspapers. Upon request, bulletins relating to the geography of Bible lands and mission fields were sent to about 80 church and Sunday-school periodicals and used by them in schools where Americanization work was in progress. The chief activity of the society in the diffusion of geographical knowledge is carried on through its official publication, the *National Geographic Magazine*. At the end of 1929, there was a membership of 1,300,000, representing every civilized nation. Officers for the year were: President and editor, Gilbert Grosvenor, vice president and associate editor, John Oliver La Gorce, treasurer, John Joy Edson, assistant treasurer, Herbert A. Poole, secretary, O. P. Austin, associate secretary, Georg W. Hutchinson, general counsel, Edwin P. Grosvenor, chairman committee on research, Frederick V. Coville, assistant editors, William Joseph Showalter and Ralph A. Graves, chief of school service, J. R. Hildebrand. Headquarters are in Washington, D. C.

#### GEOGRAPHY. See EXPLORATIONS

**GEOLOGY.** The year 1929 was marked by an effort to correlate the data gathered by an ever-increasing number of workers along various lines. Symposia were held which served to direct research along fruitful lines, as well as to summarize the work that had already been done. The practical aspect of the science was stressed, fundamental concepts were reexamined, and research was carried on along a multitude of lines only a few of which can be mentioned here.

**SOCIETIES.** The Geological Society of America held its forty-first annual meeting in New York City on Dec. 26-29, 1928, and the published records became available in 1929. The feature of the meeting was the symposium on Continental Genesis which was led by Prof. Bailey Willis of Stanford University, the retiring president. His address, "The Earth's Interior and its Surface Expression," presented a picture of an earth that consists of an outer skin of many kinds of igneous rocks, such as granite and basalt, with a thick solid shell of heavier rock, mostly basalt, below, surrounding a dense melastic core, probably composed of iron. The continents are largely made up of the light, acid rock granite and ride high upon the heavier, dark-colored basalt that underlies the ocean floors. The reason for the existence of the continent is found in the formation of great "blisters" of molten rock on asthenolites thirty miles or more beneath the surface. These are formed because of eruptions from the hot core that form and rise along diagonal shearing planes or because of the local concentration of heat escaping from the interior. Once such a "blister" is formed it works its way upwards slowly dissolving rock as it goes and so changing its composition. As the "blister" begins to cool and crystallize, a process of separation into distinct portions or "magmas" of different composition takes place and the crystals formed either float or sink in the molten mass.

The different sorts of rocks erupted at the surface and the formation of continents and ocean basins are explainable in terms of these "blisters." For, when one of them grows so large that it exerts great pressure around its edges, it breaks

through and erupts rock upon the surface. The withdrawal of masses of molten rock from the blister causes a sinking and cracking of the cover over it with consequent eruptions from the central part. If acid portions of the magma erupt from either centre or margin, the material goes to make up continental masses—if basin portions rise to the surface, it will form a sub-oceanic ridge or a part of the ocean floor.

The Society of Economic Geologists held its annual meeting at the same time as the Geological Society. The retiring president, Prof. W. H. Emmons, addressed a joint meeting of the societies on the subject, "The Origin of the Sulphide Ores of the Mississippi Valley." His conception of the genesis of these ores contradicts the generally accepted theory, so his outline is given below.

"The Mississippi Valley region north of the Ouchita Mountains, Arkansas, is an area of sedimentary rocks gently folded and at most places nearly flat-lying. Igneous rocks are rare. This region contains the world's largest lead deposits, the world's largest zinc-lead fluorspar deposits, and the world's largest barite deposits."

"Because igneous rocks are rarely found within the area, nearly all who have investigated the deposits have believed that they were formed by rain water that soaked into the ground, gathered the metals from the country rocks and finally deposited them along fissures and in favorable beds."

"Recent surveys have shown that there is a more definite relation to the larger structural features than was generally supposed. All of the important deposits are in areas of extensive faulting or they lie on the strike of great fault zones that are traced for scores or hundreds of miles."

"The conclusion is inevitable that the deposits show a structural control that indicates ascending waters from deep sources. This conclusion is supported by the occurrence of many of the largest deposits in limestone below shales and of some of the largest deposits in low anticlines below shales. In most of the districts the chief deposits have formed below the first or lowest thick shale series in the region."

"Nearly all of the deposits are arranged in great systems of zones which show the normal sequence. Excluding all ores older than the Paleozoic, the Ozark system shows

- (1) A disc of specularite and pyrite ores with amethyst quartz in which copper, lead and zinc are lacking
- (2) Ores of pyrite and chalcopyrite
- (3) Ores of zinc, lead and barite
- (4) Ores of manganese and fluorspar

"In the Wisconsin district there is a central zone elongated parallel to the La Salle fault which contains copper ore with occurrences of gold and amethyst quartz and on either side of it are ores of zinc and lead without copper in workable amounts."

"In both of these zonal systems the order is the standard order for deposits that are connected genetically with igneous rocks and supports the hypothesis that the ores of the Mississippi Valley are connected with igneous rocks and that the deposits are related to an underlying batholith, evidences of which are the dikes that are found within the area."

The Paleontological Society of America held its twentieth annual meeting in New York on the same dates as the other societies. Professor A. F.

Foerste, retiring president, spoke to a meeting of the combined societies, subject, "Ordovician and Silurian of the Arctic Regions." This address formed part of a symposium on arctic and sub-arctic geology and paleontology intended to indicate what has already been done and to direct attention to problems that require solution. In particular, it pointed out that most of the data regarding the Ordovician and Silurian strata in northerly regions are very disconnected, and stratigraphic studies have been made in a few regions only. This leads to considerable difficulty in the accurate placing of certain formations. The conclusion is drawn that our paleogeographic maps will benefit greatly by a better knowledge of arctic and sub-arctic geology.

The American Association of Petroleum Geologists met at Fort Worth, Texas, on Mar 21-23, 1929. The meeting featured a symposium on the "Stratigraphy of the Permian Basin of Southwestern United States." Various papers on geophysics, aerial photography, tectonics, salt domes, crooked holes, and other subjects connected with oil geology were presented.

The American Institute of Mining and Metallurgical Engineers met in New York during February, 1929. The Mining Geology branch devoted a considerable part of its session to the discussion of geology and engineering as applied to dams and reservoirs. Most dams are intended to be permanent, since their failure at any time involves loss of life and property, but the impounding of large amounts of water changes the level of the water table, alters the underground circulation, and brings into play many hydraulic forces whose results are with difficulty predictable. The responsibility of the geologist, the various factors—geologic and engineering—the necessity of acquiring all the information possible, and the desirability of more quantitative geologic information were stressed in papers by C P Berkeley, Kirk Bryan, O E Meinzer, C Terzaghi, C H Matthes, and others. (These, with discussion, are available in *Technical Publication* no. 215 of the A.I.M.M.E., 1929.)

Another important contribution made at this session dealt with the results of the government potash exploration in Texas and New Mexico (G R Mansfield and W B Lang, A.I.M.M.E. *Technical Publication* no. 212. These tests show that the area from which good results may be expected is confined to about 40,000 square miles in Texas and New Mexico and that sufficient supplies of potash salts exist there, in the Permian beds, to free the United States from the German monopoly if and when the production problems are solved. Only polyhalite had been found in Texas up to the time of this report, but more recent reports indicate the presence of other potassium salts as well. Promising results have already been obtained from studies on the problems of the utilization of polyhalite.

At the same meetings, the Petroleum Division of the A.I.M.M.E. featured a discussion of domestic and foreign petroleum production during 1928 and petroleum economics. These papers are published together with the papers on petroleum engineering and research given at Tulsa, Oklahoma, during the meetings from Oct. 18 and 19, 1928, in the *Transactions of the Petroleum Division*, A.I.M.M.E., 1929.

The fifteenth session of the International Geological Congress was held during August, 1929, in the Union of South Africa with Pretoria

as headquarters. As is usual at these gatherings, most of the time was spent on geological field excursions, so that when the ensuing publications become available, we will have much more first-hand information concerning a country rich in mineral deposits and in unrivaled examples of many geologic phenomena.

**OTHER PUBLICATIONS.** The year witnessed many significant contributions in the field of economic geology, among which the following may be noted. *Annotated Bibliography of Economic Geology* for 1928. This is the first of a series of bibliographies to be published biennially which are of great value for reference since each title is followed by a brief abstract. *Geophysical Prospecting* (A.I.M.M.E., 1929) includes the papers and discussion presented at the New York meeting in February and the Boston meeting in August, 1928, and makes available sound information concerning the geophysical principles now in use. The electric, magnetic, gravity, and seismic methods are discussed in technical language for the specialist. Their value to the foundation engineer is emphasized, as well as their more general use in prospecting for ore and oil. "The Copper Deposits of Michigan," by B. S. Butler, W. S. Burbank, and others (*U. S. Geol. Survey Professional Paper*, 144, 1929). This represents a recent study of the whole of this important copper district, the first monographic report on the region since Livingston's in 1883.

Structural study together with chemical study of the wall rocks leads to the theory that solutions rising from the Duluth Gabbro, which probably underlies the region, deposited the copper. Copper sulphides would normally have been deposited, but the solutions encountered wall rocks high in ferric iron. The iron was reduced, the solutions oxidized, and native copper deposited. The sulphur compounds were changed to sulphates which were carried away. The deposits are peculiar not because they were deposited by solutions of peculiar character but because the solutions moved through wall rocks of unusual character.

"The Mother Lode System of California," by A. Knopf (*U. S. Geol. Survey Professional Paper*, 157, 1929), presents the results of the latest and most comprehensive study of the Mother Lode region of California. The gold was deposited by cavity filling in fissures repeatedly opened by successive movements along tortuous fault zones. The quartz in the fissures was derived largely from the wall rock where the most remarkable feature is the replacement of silica by  $\text{CO}_2$ . The amount of silica in the veins is only a fraction of that liberated by the wall rock. The solutions were of mesothermal type grading occasionally into hypothermal. They probably consisted of water containing gold, silver, lead, zinc,  $\text{H}_2\text{S}$ ,  $\text{As}$ , and  $\text{CO}_2$ . The magma that supplied the gold is unknown.

"The Mining Districts of Nevada," by H. G. Ferguson (*Econ. Geology*, 24, 1929, pp. 115-148), a study of the mining districts of an artificially bounded area, a State, that shows the dependence of the character of the mineralization upon the type, age, and distribution of igneous rocks. The State is so situated that it includes the Sierra Batholith and its satellites on the west, with their characteristic preponderance of gold and silver, and the Rocky Mountain intrusives on the east with their greater accumulation of the base metals. The area associated with the

Tertiary lavas are distinct both in their mineralogy and in the accompanying alterations. This study makes it possible to indicate in a general way which of these individual deposits and types of deposits offers the greatest future chance of development of increased production.

"The Significance of Unsupported Inclusions," S. B. Talmage (*Econ. Geology*, 24, 1929, pp. 601-610). The existence of isolated (rounded or angular) fragments of country rock in a vein has given rise to much speculation and is important in connection with the mode of emplacement of the vein-forming material. One explanation that has been rather generally disregarded is that these inclusions may only appear to be unsupported but be in contact in another plane. This paper shows the results of many experiments that prove this conception to be sound. So, good evidence must be adduced to prove that inclusions are unsupported before they can be regarded as such.

CHROMITE. A number of papers have been published whose thesis is that chromite may be and often is a late magmatic or even a hydrothermal mineral. It has long been recognized that a sufficient concentration of the mineralizers will cause the magmatic sulphides to remain liquid until a period late in the crystallization of the magma. Magnetite has been more recently shown to crystallize in quantity after the rock-forming silicates. Now

garded as characteristically formed by magmatic segregation, is recognized as a late magmatic (the most important deposits) and pneumatolitic mineral as well. The papers referred to are "Is Chromite Always a Magmatic Mineral?" Sampson, "Is Chromite Always a Segregation Product?" Ross, "Discussion," by Stueggwald (*Economic Geology*, 1929, pp. 632-649) and "Origin of Chromite Deposits," by L. W. Fisher (*Economic Geology*, 1929, pp. 721).

Ore Deposits of Magmatic Origin, Their Genes and Natural Classification, by P. Niggli and R. L. Parker, a book which bridges still further the ever closing gap between the study of mineral deposits and that of the igneous rocks, is a revision and enlargement of an earlier work the thesis of which is that "the problems encountered in the study of ore deposits are parts of the wider problems arising in connection with the study of igneous rocks." It shows that the general petrographic theory of magmatic provinces must take into account the provinces of ore deposition, and that these are both intimately related in time and in place to the major deformations of the globe.

PETROLOGY. *The Evolution of the Igneous Rocks*, by N. L. Bowen, which came out late in 1928, is an enlargement of Bowen's earlier paper, *The Later Stages in the Evolution of the Igneous Rocks* that appeared in 1915 and did so much to establish the principle of differentiation by fractional crystallization and filtration. It is an important contribution that cannot be briefly summarized.

"The Crystallization of Basalts," by C. N. Fenner (*Am. Jour. of Sci.*, 1929, pp. 225-253), is important in this connection. Fenner agrees to differentiation crystallization but thinks that other processes, notably gas transfer, must be recognized as well. The series of solid solutions that forms the feldspars is rightfully regarded as important and explains why the residual melt is richer in soda and in potash than the crystals

formed from it; but the pyroxenes also form such a series, and their crystallization results in the progressive enrichment of the liquid in iron. This does not fit in with the conception that the differentiation by crystallization alone of a basaltic or peridotitic magma leads toward a granite.

"The Temperature of Magmas," by F. S. Larsen (*Amer. Mineralogist*, 1929, pp. 81-94). Larsen reviews the evidence that has been accumulating to show that acid magmas crystallize at lower temperatures than basic ones. The same results were obtained from experiments reported on before the Geological Society of America meeting in December, 1928, by Grieg, Shepard, and Merwin. In the typical specimens used, the difference amounted to more than 200° C.

GLACIAL GEOLOGY. "The Stagnation and Disappearance of the Last Ice Sheet," by R. F. Flint (*Geographical Review*, 1929, pp. 256-289), controverts the common notion that the last glacier retreated across New England (the Connecticut region in particular) by melting along a continuous front and marshals the evidence for considering the retreat as due to stagnation or melting in place. The evidence furnished by the glacial and fluvioglacial deposits of this region which, by itself, would never lead to the older conception is the basis upon which the new theory rests.

The same conception was advanced by A. P. Brigham in "Glacial Geology and Geographic Conditions of the Lower Mohawk Valley" (*N. Y. State Mus. Bull. No. 280*, 1929) for a more restricted area. References to such stagnation can be found in the older literature but no one has extended it to so wide an area as R. F. Flint in his article in the *Geographical Review*.

BOOKS AND MAPS. *Geologie Von Peru*, G. Steinmann (Heidelberg, 1929) and others, is an important contribution, since Dr. Steinmann has been at work on the area for fifty years. *Geologie des Chucumatales in Nordperu und seinen Ausläuferlagertstätten*, R. Stappenbeck, presents the geology of the Chucumata Valley from the Pacific to the summit of the western Andes. *Textbook of Geology*, P. M. Mason and Schuchert, pt. 1, revised and rewritten, was edited by Longwell. The most up-to-date textbook of geology. *Geology from Original Sources*, Agar, Flint, Longwell, offers collateral reading in attractive and readable form, of importance to all with a general interest in geology. *An Introduction to Historical Geology*, by W. J. Miller, is a third revised edition of a useful text. *Petroleum and Coal*, W. T. Thom, gives the origin, world distribution, and probable future of these pre-requisites of modern civilization. *Geologic Structures*, Bailey and Robin Willis, is a new edition of a standard text with many additions both in fact and interpretation. *The Structure of Asia*, edited by J. W. Gregory, contains contributions by Prof. Franz Ed. Sness, C. P. Berkey, W. D. West of the Geological Survey of India, and D. I. Mushketov, of the Russian Geological Survey, and gives the latest data about a vast but relatively little-known area. *Geologische Karte der Erde*, Franz Beyerslag, is in four parts, two for each hemisphere with a separate legend in English, German, French, and Spanish. *Evolution and Man*, H. W. Shimer, professor paleontology in the Massachusetts Institute of Technology.

The United States Geological Survey celebrated its fiftieth anniversary in 1929. The Forty-second Annual Meeting of the Geological Society of

America was therefore held in Washington, December 26-28. The Paleontological Society of America held its twenty-first, and the Mineralogical Society of America its tenth, annual meeting at the same time and place. Professor Heinrich Ries of Cornell University, the retiring president of the Geological Society, addressed the meeting on the subject "Some Problems of the Nonmetallic Minerals." Professor A. L. Parsons of Toronto, retiring president of the Mineralogical Society, spoke on "Iridescent Color in Peristerite."

These and the many other papers presented before the societies, a few of whose titles are appended, were to appear in the journals of the societies and the other technical geological journals during the coming year. "Subdivision of Geologic Time," George H. Chadwick; "Geomorphology and the Question of Geologic Time," F. E. Matthes, "Scientific and Practical Value of Triangulation," William Bowie, "Thrust Faulting from the West in the Appalachians of Virginia," Wilbur A. Nelson; "Stress Conditions within the Lithosphere as Revealed by Earthquakes," William H. Hobbs, "Probable Extent of Abyssal Assimilation," F. F. Grout, "The Age of the Appalachian Peninsulars," G. H. Ashley, "Stratigraphy and Threefold Orogeny of the Northern Appalachians," Charles Schuchert, "The Evidence for Pleistocene Mammals," W. B. Scott, "Symposium of Clays," by various members of the Mineralogical Society of America, "Minerals of the System Cu-Fe-S," R. H. Lombard and H. E. Merwin.

**GEOPHYSICS.** See GEOLOGY

**GEORGETOWN UNIVERSITY.** A Roman Catholic institution of higher education for men in Washington, D. C. founded in 1789. In the autumn of 1929, 2567 students were enrolled, with a distribution as follows: Arts and sciences, 965; medical, 519; dental, 147; law, 478; and foreign service, 430. The faculty numbered 378. The Riggs Memorial Library contained 162,476 volumes, the Hirst Library, 9123 volumes, and the individual libraries maintained by the professional schools, many additional volumes. During 1929 a new medical-dental school building and a new dining hall were opened. President, the Rev. W. Coleman Nevils, S. J., Ph. D., D. D.

**GEORGE WASHINGTON UNIVERSITY.** A coeducational institution of higher learning in Washington, D. C. founded in 1821. The enrollment for the first term of the year 1929-30 was 5006, distributed as follows: Columbian College, 2747; graduate school of letters and sciences, 413; school of medicine, 285; law school, 724; school of engineering, 425; school of pharmacy, 61; school of education, 619; school of government, 102; division of library science, 116; division of fine arts, 114. The 1929 summer session had a total enrollment of 1490. The faculty numbered 388. The endowment fund amounted to \$1,450,152, from which the income for the year was \$63,031. The total income from all sources was \$1,067,908. The total number of volumes in the university library, including the law and medical libraries, was 85,540. President, Cloyd Heck Marvin, Ph. D., LL. D.

**GEORGIA.** POPULATION. According to the Fourteenth Census of the United States, the population of the State on Jan. 1, 1920, was 2,895,832. The estimated population on July 1, 1928, was 3,203,000. The capital is Atlanta.

**AGRICULTURE.** The following table gives the acreage, production, and value of the principal crops in 1928 and 1929.

Crop	Year	Acreage	Prod Bu	Value
Cotton	1929	3,782,000	1,845,000 *	\$106,255,000
	1928	3,728,000	1,030,000 *	93,730,000
Corn	1929	3,656,000	50,455,000	44,399,000
	1928	3,620,000	38,010,000	39,910,000
Tobacco	1929	110,000	89,870,000 †	16,806,000
	1928	122,300	84,387,000 †	11,139,000
Hay	1929	710,000	437,000	7,078,000
	1928	811,000	505,000 *	7,827,000
Peanuts	1929	840,000	394,550,000 †	13,415,000
	1928	607,000	340,200,000 †	14,969,000
Sweet potatoes	1929	124,000	11,780,000	9,424,000
	1928	119,000	10,234,000	8,699,000
Peaches	1929	.	2,880,000	3,812,000
	1928	.	10,000,000	8,100,000
Onions	1929	424,000	9,540,000	7,832,000
	1928	265,000	5,300,000	4,505,000
Potatoes	1929	20,000	1,572,000	2,201,000
	1928	22,000	1,682,000	1,934,000
Wheat	1929	85,000	850,000	1,318,000
	1928	94,000	1,084,000	1,727,000

\* Bales † Pounds \* Tons

**MINERAL PRODUCTION.** Clay products and stone furnished more than two-thirds of the value of minerals produced in the State in 1927. The total value of clay products of that year was \$4,879,736, the total for 1926 was \$5,957,486. Stone produced attained the value of \$6,146,613 and the quantity of 849,290 short tons for 1927, for 1926, of \$5,470,561, or 820,570 tons. Coal, coke, and iron production remained secondary. The most important separately reported product after clay and its products and stone, as reported for 1927, was barite, of which the quantity produced was 94,039 short tons and the value \$580,300, for 1926 production was 77,654 tons, or \$532,706. A rather long list of minor products such as asbestos, bauxite, fuller's earth, manganese ore and talc helped raise the total value of mineral production in 1927 to \$16,758,390, as compared with a total value of \$17,479,967 in 1926.

**FINANCE.** State expenditures in the year ended Oct. 31, 1928, as reported by the U. S. Department of Commerce, were for maintenance and operation of governmental departments, \$16,375,806 (of which \$4,897,318 was for local education), for conducting public-service enterprises, \$6005, for interest on debt, \$329,621, for permanent improvements, \$11,545,213, total, \$28,256,705 (of which \$12,979,819 was for highways, \$2,263,631 being for maintenance and \$10,716,188 for construction). Revenues were \$27,998,293. Of these, property and special taxes formed 27.3 per cent, departmental earnings and remuneration for officers' services, 3.8, license sales, 45.6 (including gasoline taxation of \$6,156,169). State debt outstanding totaled \$8,694,067. On a property valuation of \$1,293,332,397 were levied State taxes of \$6,466,662.

**TRANSPORTATION.** The total number of miles of railroad line under operation on Jan. 1, 1929, was 6799.93. There was built, in 1929, no additional mileage.

**MANUFACTURES.** According to the biennial Federal Census of Manufactures published by the Department of Commerce in 1929 and relating to operations of 1927, there were in the State, in 1927, 3175 manufacturing establishments. These employed 154,168 wage earners, whose wages for the year totaled \$108,118,193. Materials and supplies used in production cost

\$360,261,684 Manufactured products attained the combined value of \$609,917,660

**EDUCATION** The funds available for State aid to the public-school system were increased by an estimated \$1,250,000, an increase about equal to the entire previous yearly State aid, through the enactment of an increase of the gasoline tax, devoted to the purpose. In addition to this, taxes on sales and on incomes were enacted to yield further revenue for the promotion of the State's policy of improvement in education. The population of school age was stated, for 1929, at 867,995. There were enrolled in the public schools 714,394 pupils. Of these, 623,508 were in elementary and 90,886 in day and evening high-school grades. The total expenditure for public-school education was \$21,194,169. The yearly salaries of teachers averaged, for men, \$848.32, for women, \$595.41. They were somewhat over twice as high for white as for colored teachers in each group.

**CHARITIES AND CORRECTIONS** A Department of Public Welfare, established in 1919, inspected institutions of child care, jails, and county activities for dealing with delinquents and dependents. It promoted the organization of juvenile courts throughout the State. The chief of the State's charitable and correctional institutions, operating in 1929 were the State Training School for Boys, Confederate Soldiers' Home, State Sanatorium (mental), Training School for Mental Defectives, Academy for the Blind, and School for the Deaf.

**LEGISLATION** The State Legislature convened in regular biennial session at the beginning of July, 1929. Governor Hardman in his message recommended revision of the State's financial system rendered imperative by the accumulation of a deficit of \$3,777,444 from the operations of the State government in 1927 and 1928. The session was devoted largely to furnishing the State with greater revenues. The Boykin statutory income-tax law was enacted, placing on all individuals, firms, and corporations in the State an income tax of one-third that paid the United States Government. The law went into effect on October 1, its expected proceeds were from \$6,000,000 to \$8,000,000 a year. Insurance companies were exempted from payment, on the ground that they met their share through the payment of other specific taxes. Income receipts from the State of Georgia, even though exempt from Federal taxation, were rendered subject to the State tax. Provision was made for an increase of the gasoline tax to 6 cents, with a view to furnishing the money for a common-school equalization fund. The enactment of the Bird-Redwine Law regulated trading in future deliveries of cotton and other commodities, rendering it a felony to operate an establishment for trading in which future deliveries were not contemplated. It was the apparent intent of this legislation that a delivery point for cotton should be established within the State. By statute, the use of steel traps for taking game was prohibited except in the salt marshes of the coast.

**POLITICAL AND OTHER EVENTS** The overcrowding of the Federal prison at Atlanta led to the conclusion of an arrangement between the Federal Superintendent of Prisons and the Georgia Prison Commission whereby about 100 Negro Federal prisoners were transferred in October from Federal to State custody, to do road work in Chatham County. The arrangement was at-

tacked in the United States Senate and on December 16 that body passed a resolution requesting information on the facts. The State authorities acted against betting on dog races in Georgia by bringing suit against greyhound racers at Dixie Lakes, and the system of indirect betting known as profit sharing was declared contrary to the State law.

At Atlanta the Ku Klux Klan erected two new buildings, one a factory for the production of regalia and the other an administrative office building to which the national headquarters of the society were transferred from Washington, according to report, in July. The State Board of Forestry published in May a report in which it proposed as desirable the purchase of the Okefenokee Swamp, a great wooded marsh tract on the southern border of Georgia, by the Federal Government. The trustees of Georgia University moved to replace part-time with whole-time teachers in the University's law school, and a law school building was projected. The Good-year Tire and Rubber Company made preparations to open a 50,000-spindle textile mill at Rockmart. The city council of Atlanta passed, in spite of Mayor Ragdale's veto, a measure to segregate whites and Negroes as to residence.

The city of Atlanta was enlarged by the annexation of the municipalities of East Point, Decatur, Hapeville, and College Park, and certain unincorporated territory, under the terms of a legislative act confirmed by a referendum vote. About 30 square miles of territory were taken in and the population was increased by some 75,000 to an estimated 350,000. It was provided that the annexed municipalities should retain their existing powers, approximately, under a borough system. The mayor of the city proper was also to bear the title of Mayor of Greater Atlanta, and the mayors of all the included communities were to act as a general council in common affairs.

**OFFICERS** Governor, L. G. Hardman, Secretary of State, George H. Carswell, Attorney-General, George M. Napier, Treasurer, W. J. Speer, Auditor, S. J. State, Comptroller-General, W. B. Harrison, Superintendent of Education, M. L. Duggan, Commissioner of Agriculture, Eugene Talmage, Commissioner of Commerce and Labor, H. M. Stanley.

**JUDICIARY** Supreme Court Chief Justice, Richard B. Russell, Associate Justices, Marcus W. Beck, Samuel C. Atkinson, H. Warner Hill, S. Price Gilbert, James K. Hines.

**GEORGIA, UNIVERSITY OF** A State institution of higher education for men and women in Athens, Ga., chartered in 1785 and opened in 1801. The enrollment in the 1929 summer session was 2308 and for the autumn term, 1812. The faculty numbered 116 members. The productive funds of the university amounted to \$425,000, and the income for the year from the State and other sources was \$400,000. The library contained 64,000 volumes. President, Charles M. Snelling, Sc.D.

**GEORGIA (GEORGIAN SOCIALIST SOVIET REPUBLIC)** One of the three Transcaucasian republics established after the Russian Revolution of 1917. After 1918 it was an independent republic, since 1921 it has been known as the Georgian Socialist Soviet Republic. In 1922 it united with Armenia and Azerbaijan to form the Transcaucasian Socialist Federated Soviet Republic, which is affiliated with the

Union of Soviet Socialist Republics (see RUSSIA) Georgia is situated in Transcaucasia between the Black and Caspian seas and is bounded on the north by the Caucasus, on the east by the Republic of Azerbaijan, and on the south and southwest by Armenia and Turkish territory. Georgia embraces the Abkhazian Socialist Soviet Republic, the Ajaristan Autonomous Soviet Republic, and the Autonomous Region of Southern Ossetia. Capital, Tiflis Area, 26,381 square miles, population, according to the census of 1926, 2,600,963. The chief cities with their populations are Tiflis, 204,000, Kutais, 48,196, Sukhum, 61,974, Poti, 13,137, and Samtredi, 13,682. At the end of 1925, there were 211,210 pupils attending the public schools, including 1000 students in the higher educational institutions.

Agriculture engages about 90 per cent of the people. The large estates have been divided among the peasants, the minimum allowance for any one family being about 17 acres. Corn, vine growing, and the raising of fruits are the principal agricultural pursuits. Silk production and bee-keeping are long-established activities. The chief mineral production is that of manganese around Teliatni, where the greatest quantity of this mineral in the world are found. The industry was virtually ruined during the World War, but is gradually resuming its pre-war production. Other mineral deposits are coal, naphtha, copper ore, lead, and iron ore. The territory contains valuable forests. All the basic industries were nationalized by the Soviet Government. The railways, which are all state owned, total 570 miles. Another line from Akhal-Senaki through Sukhum to Tuapse is under construction.

#### GEORGIA SCHOOL OF TECHNOLOGY.

An institution for the scientific and technical education of men in Atlanta, Ga., founded in 1888. The enrollment for the autumn of 1929 was 2383, while that in the summer session was 550. The faculty numbered 160. The endowment amounted to \$200,000, and the income from appropriations and fees, to \$700,000. There were 23,000 volumes in the library. President, Marion Luther Brittain, LL.D.

**GÉRARDY, JEAN.** A famous Belgian 'cellist, died in Spa, July 4, 1929. He was born in the same city, Dec. 6, 1878. At the age of 5, he began to study the 'cello with R. Bellman and during 1885-89 he studied under Massau at the Liège Conservatory, being graduated as winner of the gold medal. While still a student, he appeared in 1888 at Anstrudel in a trio with Ysaÿe and Paderewski, but his official début as soloist took place, with sensational success, in London, in December, 1890. The following year, he won triumphs in Vienna. He interrupted his concert tours for a short time for further study under Gutzmacher in Dresden. From 1893 until his death, excepting the period of the War, he was constantly touring the civilized world. Between 1899 and 1924, he made several triumphal tours of the United States, arousing special interest in 1913-14, when, besides appearing as soloist, he was heard also in the principal cities in a trio with Ysaÿe and Godowsky. Among contemporary 'cellists, he had no superior.

**GERMAN COLONIES.** During the World War, all the overseas possessions of Germany in Africa, the Pacific Ocean, and the Far East were captured by the Allies. In Africa, they included German East Africa, German Southwest Africa, Kamerun, and Togo. All of these were divided

between Great Britain and France, Southwest Africa being annexed to the Union of South Africa. In the Pacific were New Guinea, including Kaiser-Wilhelmsland, Bismarck Archipelago, German Solomon Islands, Nauru, Caroline Islands, Marshall Islands, Mariana or Ladrone Islands (with the exception of Guam), and German Samoa. In the Far East, there was only the German possession of Kiaochow. The total area of the German colonies was estimated at 1,140,117 square miles and the total population was estimated at 13,258,000. See principal titles mentioned above, also TANGANYIKA TERRITORY and KENYA COLONY.

**GERMAN EVANGELICAL SYNOD OF NORTH AMERICA.** See EVANGELICAL SYNOD OF NORTH AMERICA.

**GERMANIC LANGUAGE AND LITERATURE.** See PHILOLOGY, MODERN.

**GERMAN LITERATURE.** If quantity is any indication of a country's literary activity, Germany by 1929 had fully reached the average output of pre-war years. The only startling new feature was the enormous preponderance of fiction over any other literary expression. It is in fiction, too, that the only great success of the year was achieved. It was feared that the reception accorded to Remarque's *Nichts Neues im Westen* all over the world, would unleash a flood of war novels. But Ludwig Renn's *Krieg* and the anonymous *Schlump* seem to be its only direct successors. However, the War still served as a more or less depressing background, but it was post-war conditions that are pictured or alluded to.

**Fiction.** It is appropriate to begin the year's review with Stefan Zweig's *Kleine Chronik*, a slim volume of four short stories, for its exquisite character studies. Jacob Wassermann is becoming alarmingly prolific, his short novel, *Goloven*, and the three short stories entitled *Adam Urban* were being followed by the semi-biographical *Christoph Columbus*. This type of fiction is represented by Rudolf Harig Bartsch's *Der grosse alte Kaiser*, which deals with Schopenhauer, Eduard Stucken's *Im Schatten Shakespears*, Meta Schneider-Weckeling's *Cornelia Goethe*, Hermann Richter's *Von ewiger Liebe*, a Brahms-Schumann story, Kasimir Edschmid's *Lord Byron*, Josef Ponten's *Seine Hochzeitsreise*, dealing with the tragedy of the artist Rethel, Klaus Mann's *Alexander*, Wilhelm von Scholz's *Der Weg nach Ilok*, a story about the Pranciscan opponent of the Hussites, Capistrano, Juliane Kravath's *Die Dräute*, a tribute to Germany's greatest woman poet, Klahnd's posthumous *Borgia and Proin*, Albrecht Schaeffer's *Kaiser Konstantin*, Richard Friedenthal's *Der Eroberer*, a Cortez story, and Wilhelm Matthiesens *Der grosse Gorres*, a book of historical and literary value.

Alexander von Gleichen-Russwurm, historian of society and its conventions, published a book of charming love stories, *Im grünen Salon*. Novels, divers in subject and style, came from Georg Herrmann, *Traume der Ellen Stern*, Max Dreyer, *König Kaudels*, Max Brod, *Zauberreich der Liebe* and *Die Frau nach der man sich sehnt*, Hermann Stehr, *Helene Entlinger* and Nathanel Maechler, Ernst Lissauer, *Die dritte Tafel*, Wilhelm von Scholz, *Das unterbrochene Tagebuch*, Felix Salten, *Simson, das Schicksal eines Erwahlten*, Schalom Asch, *Die Mutter*; Ernst Zahn, *Gewalt über ihnen*, Heinrich Lohenstein, *Die*

*Geisterstadt*, Artur Holtscher, *Es geschah in Moskau*, Max Halbe, *Die Auferstehungsnacht des Dr. Adalbert*, with the dual-souled hero, half Faustus, half Mephisto, Artur Brausewetter, *Der Taus um das Gewissen*, Kurt Münzer, *Jude ans Kreuz*, Schalom Asch, *Chaim Lederer's Ruokkehr*, Alfred Doehlin, *Alexanderplatz*, a story of Berlin's slums, Rudolf Herzog, *Wilde Jugend*, Franz Karl Ginke, *Der Wandervogel*, a mild satire, Richard Skowionnek, *Der Bauer ohne Gott*, and Otto Flake, *Es ist Zeit*, a novel on erotic problems.

Gustav Frenssen broke his long silence with *Der Dummkopf*. Gerhart Hauptmann appeared at the year's end with a two-volume *Roman der Leidenschaft*. Franz Werfel's *Barbara oder die Frommigkeit* deals with the problems before and after the War. Leonhard Frank, the author of the novel and the play, *Karl und Anna*, treats in *Bruder und Schwester*, a tabooed relation with unusual delicacy. The problems of modern youth are the topic of Arnold *Ulitz's Aufbruch der Kinder* and Werner Schindler's *Die junge Saat*. It was a relief to meet books like Paul Fechter's *Die Rückkehr zur Natur*, Felix Salten's *Fünfzehn Hasen*, the story of a rabbit family, and Waldemar Bonsels' new tales of animals and flowers, *Marso im Schloss und Himmelsalk*. A first book of rare promise was Otto Wirz's *Die geduckte Kraft*.

The women writers who contributed to the year's fiction are the veteran Austrian Oskar Schubin, pseudonym Lola Kirschner, *Der Rosenkavalier*, the romance of a famous singer, Ricarda Huch, *Fra Celeste*, Clara Viebig, *Die mit den tausend Kindern*, the story of a school mistress, Helene Bohlau, *Eine zärtliche Seele*, Helene Voigt-Diederichs, *Ring um Rodrich*, the story of three women and one man, Irene Foibes-Mosse, *Kathinka Plusch*, Auguste Sapper, a Swabian novelist of great power, *Der Gaukler*, Cecile Inez Loos, a Swiss writer, author of an admirable story of motherhood, and Clara Ratzka, *Im Zeichen der Jungfrauen*.

DRAMA The year 1929 witnessed no great dramatic success on the German stage. Max Halbe made a futile attempt at regaining his place among Germany's foremost dramatists of twenty odd years previously in *Die Traumgeschichte des Adam Thor*, Ernst Lissauer's *Luther* and Thomas Munzer effectively contrasted the leader of religious revolt with the head of the revolting peasants. Alfred Mombert's *Aglae's Herabkunft*, a dramatic poem rather than poetic drama, is of rich spiritual content. Erich Muhsam's *Sacro* and *Lanzetti* lacked in artistic quality. Arnold Zweig's *Die Umkehr* founded upon the Jewish legend of Banahem, was weak in comparison with *Leopold Gruscha*. Georg Kaiser, credited with having founded the "expressionist" movement, also failed to impress with his *Lederkopfe*, his latest work, however, *Zwei Kravatten*, which he calls a review-play, is admirable for its unusually clever construction. Leonhard Frank was no more fortunate with *Die Ursacher*, in spite of a strong, if not of great interest. Rudolf Presber and Leo Walz, who collaborated on *Marce Antonicette*. Friedrich Nadler presented a new *Toll Eulenspiegel*, with the subtitle *Pandemonium Germanicum quasi comedia*, Elise Jerusalem's *Die Sternung in Sakya* and Helene Hirschmann's new *Kaspar Hauser* were the only works of women dramatists of some importance.

POETRY The lyrical spirit of Germany, which once sang so lustily in rain or sunshine, seemed to have been dampened. Of the older poets, only two published new books. Stefan George, the master of words and their music, *Das neue Reich*, and Hugo Salus, the physician-poet of Austria, who subsequently died, *Die Harfe Gottes*, a book of sensitive, spiritual quality. Hermann Hesse, the novelist, turned to verse in *Trost der Nacht*, and Oscar Loerke evoked a Hellenic mood in *Panmusik*. Paul Zech, who appeared on the literary horizon simultaneously with Franz Werfel, reflects in *Rotes Herz der Erde* his generation's absorption in social problems, while Theodor Kramer's *Die Gaunersinke* is marked by a rugged realism. Two anthologies of labor poetry, *Das proletarische Schicksal*, compiled by Hans Mühle, and *Jungste Arbeiterdichtung*, edited by Karl Brogi, are also distinctly products of the socialist trend of thought in the German Republic, but Heinrich Spiro, true to his ideals, collected a book of ballads, *Deutsche Balladen*. Other volumes of importance were Hermann Stegemann's book of sonnets, *Von Leben zu Leben*, and Hans Benzmann's posthumous *Passion des Schaffenden*.

LITERATURE, ESSAYS, etc. The spirit of modern Germany may be responsible for a slight decrease in histories of literature, which formerly were an important item on the book market. Oskar Walzel's *Die deutsche Literatur von Goethe's Tod bis zur Gegenwart* is a valuable work. Victor Klemperer has traced the development of modern French poetry in *Die moderne französische Lyrik seit 1870*. An interesting work recording the vagaries of censorship in the literature of the world is H. H. Houben's *Die verbotene Literatur von der klassischen Zeit bis zur Gegenwart*. Eduard Engel's *Was bleibt?* is a review of the world's literature from the viewpoint of the imperishable. An interesting period is treated by Hugo Bieber in *Der Kampf um die Tradition*, which is vol. 5 of *Epochen der Literatur* and comprises the half-century, 1830-1880. Hans Heckel's *Geschichte der deutschen Literatur in Schlesien* contains in vol. 1, a history of Silesian history. Ernst Schulz's *Die Weltliteratur* is a stupendous compendium, a guide through 10,000 plays.

Essays of appreciation of contemporaries have always been numerous. Jacob Wassermann, Hermann Hesse, Thomas Mann, Knut Hamsun, Richard Dehmel and Liliencron were thus honored. Heinrich Spiro's *Theodor Fontane*, Dr. Ella Mensch's *Er lebt noch*, dealing with Spielhagen, Kurt Steinberg's *Heinrich Heine, seine geistige Gestalt und seine Welt*, are proof that the predecessors have not been forgotten. Interesting interpretations are the essence of Erich Auerbach's *Dante als Dichter der irdischen Welt*, Hans Burgwieser's *Johann Peter Hebel als Erzähler*, Lothar Kempter's *Holderlin und die Mythologie*, Wolf Dietrich Rasch's *Die Freundschaft des Jean Paul*, Alois M. Nagler's *Hebel und die Musik*, and Gerhart Rechze's *Grillparzer und die Slaven*.

Among the numerous essays on other subjects, the outstanding were Arthur Schnitzler's *Sprüche und Bedenken*, a book of wise reflections, Arnold Zweig's *Herkunft und Zukunft* for its timeliness, Heinrich Spiro's *Schicksal und Anteil, ein Lebensweg in deutscher Verzezeit*, Ernst Weiss's *Das Unverherbare* for its spiritual value; and the work of a newcomer, Herbert Cysarz, *Geschichte*.

*swissenschaft, Kunstwissenschaft, Lebenswissenschaft*, which reconciles with its cumbersome title by its wealth of stimulating reflections. Of lighter calibre are Kurt Aram's *Maße und Mystik*, and a book by the inveterate cynic, Oscar A. H. Schmitz. *Wespennester* Herbert Eulenberg's *Glückliche Frauen* is unique in our time for its sane optimism.

Modern psychology enters into C. E. Jung's *Energetik der Seele*, founded upon Freud, but differing from him in many points, and Wilhelm Lange Eichbaum's *Genie und Irrsinn*, with its title borrowed from Lombroso, is distinctly a psychiatric study. Modern youth's demand for inner liberation is voiced by Frank Thiess in *Erziehung zur Freiheit*. Houston Stewart Chamberlain's essays on *Natur und Leben* are considered valuable.

BIOGRAPHY, MEMOIRS, LETTERS. Indefatigable in her efforts to keep the memory of her great brother alive, Elisabeth Foster Nietzsche has collaborated with his French admirer, Henri Lichtenberger in *Nietzsche und sein Werk*. Willibald Köhler has written a life of the Silesian mystic *Angelus Silesius*, Walter Kuchler wrote of *Moltke*, and Dr. Ernst Elster paid tribute to the poet's centenary in *O E. Leaning*. The memory of a great German actor of the nineteenth century was honored by Julius Bab in his *Albert Bassermann*. Of timely international interest is Rheinbaben's life of *Stiesemann, der Mensch und Staatsmann*. Otto Flake's *Ulrich von Hutten* presents that fifteenth-century champion of freedom whose ideals were thoroughly modern.

Stefan Zweig wrote a most interesting life of *Joseph Fouché* with the sub-title, "portrait of a politician." Richard Count du Moulin-Eckart was the author of the first authentic biography of that remarkable woman *Cosima Wagner, ein Lebens und Charakterbild*. Dagobert von Mikusch wrote a life of *Gott Mustafa Kemal*. Hermann Stegemann's *Erinnerungen aus meinem Leben und aus meiner Zeit* were of literary and historical interest. Hugo von Hofmannsthal's *Buch der Freunde*, containing new notes from a diary, is full of impressions and reminiscences of his contemporaries. Friedrich Wolters's *Stefan George und die Blätter für die Kunst* is of documentary importance for the student of modern German literature. Interesting volumes of letters are those of *Theodor Mommsen* and *Paul Heyse*, *Hans Thoma* and *Henry Thode*, and *Friedrich Hebbel* and *Caroline Flachsland*. Unique in spirit and form are the letters of Malwida von Meysenbug and the artist Ludwig Ruhl, published under the title, *Marchenfrau und Malerskizzen*. Of the greatest historical interest is Friedrich Kirchner's *Napoleon* and his *Fürstenbriefe an Napoleon*, a volume of letters from European sovereigns to Napoleon; these are authoritative works of importance.

HISTORY. Students of French history and the French Revolution welcomed Friedrich Kirchner's *Die französische Revolution*. Friedrich von Oppeln-Bronikowski presented a picture of papal life in the Cinquecento in *Schlüssel und Schwert*. Levin Schücking's *Die Familie im Puritanismus* traces the relations between social life and literature in England from the sixteenth to the eighteenth century. Alexander von Glerchen-Russwurm's *Weltgeschichte in Sprüchen und Querschnitten* is a unique book of historical commentary. Herbert Eulenberg wrote the history of the last Bavarian dynasty, *Die letzten Wittels-*

*bacher*. Ricarda Huch's *Der grosse Krieg* is a history of the Thirty Years' War. Heinrich Mann wrote an epilogue to the Great War of our time in *Steben Jahre 1921-28*.

ART, MUSIC, ETC. A monumental work among art publications is *Die Kunst Japans*, comprising a history of Japanese painting, sculpture, architecture, the industrial arts, poetry, drama, dance, and music by Tsuneyoshi Tszudsumi, a Japanese writing in German. A sumptuous souvenir of the China Exhibition in Berlin, 1920, is the volume *Chinesische Kunst*, a collection of phototypes with an introduction by Dr. Otto Kneimmel. Karl Scheffler's *Die Europäische Kunst im 19. Jahrhundert* is a two-volume work with more than 400 illustrations. Interesting to admirers of his work is *Hans Thoma's aus achtzig Lebensjahren 1839-1920*. Among books on music, Dr. Karl Storck's *Das Opernbuch* does for German music students what H. Krehbiel's work on the same subject did for the American. Hans Wichmann's book on *Grétry* and music on the French stage deserves mention. Travel books are always numerous on the German book market. Among the outstanding new publications of this kind were Wilhelm Dibelius's *England*, Josef Ponten's *Europäische Reisebilder*, Ricarda Huch's *Neue Städtebilder im alten Reich*, and of general interest E. G. Kolbenheyer's book on *Kaislsbad, Kampfer Quell*. Erwin Rieger's *Evangel Oesterreich* and Alfred Keri's *All-gier trieb nach Älger* strike individual notes.

TRANSLATIONS. The Germans have always been eager to present to their readers foreign authors, though their choice, especially of American books, was not representative of the highest standards. Among American authors recently thus favored are Dos Passos, Theodore Dreiser (from *Nixes Carrie to Dreiser Looks at Russia*), Isadora Duncan, Zane Grey (eight works), Hemingway, Fannie Hurst, Sinclair Lewis, Will, Judge Landsey, Anita Loos, Saunders, etc.

NECROLOGY. A large number of writers of the older generation died during the year 1929 and are discussed either under their own names or in the NECROLOGY. Among them were Mathilde von Eschstruth, who under the pseudonym Eschen, wrote popular fiction mostly of religious character, died February 1, Hugo Salus, a most sympathetic figure among the Austrian poets about the turn of the century, who died February 4, Hans Ludwig Rossegger, second son of Peter Rossegger, the popular Austrian novelist, who continued his father's tradition, who died February 17, Artur Schnitz, a distinguished critic, writer on literature and music, who died February 17, Helene Stockl, popular writer of juveniles, who died February 16, Carl Muthesius, an authority on Goethe, died February 22, Eugen Wolff, author of books on Luther, Kleist, and other topics, died February 25, Wilhelm von Bode, Germany's greatest authority on art, holder of many prominent positions and recipient of great honors, died March 1, Eduard Schure, a distinguished writer on music and literature, died April 12, Friedrich Laenhard, popular novelist and poet, for some years in charge of the Goethe Archiv in Weimar, died April 30, Hugo von Hofmannsthal, poet and dramatist, an exceptional individuality among Germany's writers, and best known as the librettist of many operas by Richard Strauss, died July 15, Josef Petzold, professor of philosophy at the Technical High School in Berlin, author of an Introduction to

Empiric Philosophy and founder of the society for empiric philosophy, died August 4, Theodor von Wundt, noted Alpinist and writer on Alpinism, died August 17; John Brinkmann, by profession a teacher, but well known as a reader of Low German poetry and translator of plays for the Low German stage, died September 3, Wilhelm von Wymetal, a distinguished dramatic critic, died September 6, Paul Rosenhayn, popular author of detective stories, died September 12; Ewald Sylvester, a pseudonym for Karl Heide, Swiss author of the lyric volume, *Das flammende Kreuz*, the novel, *Nora Gyllensecc*, and the plays *Flucht und Ballplatz*, died September 12.

**GERMAN NEW GUINEA.** This name was applied to all the German territories in the western Pacific (see GERMAN COLONIES). They were distributed by the Treaty of Versailles as follows: Those north of the Equator, viz., the Caroline, Marshall, Pelew, and Ladrone islands, to Japan, under mandate, those south of the Equator, viz., the Bismarck Archipelago, the German Solomon Islands, and former German possessions on the Island of New Guinea, to Australia, under mandate of the League of Nations. All German possessions grouped under the name of German New Guinea were formerly administered from Rabaul, the capital, in the north-eastern part of New Guinea.

**GERMANTOWN, BATTLE OF, ANNIVERSARY.** See CELEBRATIONS.

**GERMANY.** A federal republic of central Europe, constituted after the abdication of Emperor William II on Nov. 9, 1918, and organized under the constitution of July 31, 1919, by the National Assembly at Weimar, elected in January of that year, formerly the German Empire. It is bounded on the north by the Baltic Sea, Denmark, and the North Sea, on the west by the North Sea, the Netherlands, Belgium, Luxembourg, and France, on the east by Lithuania, Czechoslovakia, and Poland, and on the south by Switzerland, Austria, and Czechoslovakia. The German Empire consisted of 25 Federal States and the Imperial Reichsland, the Federal Republic consists of 18 republics. Capital, Berlin.

**AREA AND POPULATION.** At the census of Oct.

8, 1919, the area of the Republic, including the Saar Valley, was 182,213 square miles and the population, 59,852,682, of whom 28,496,419 were males and 31,356,263 females. The accompanying table from the *Statesman's Year Book* for 1920 gives area and population according to the census of June 16, 1925.

The estimated population in 1928 was 63,751,000, excluding the Saar Basin. From 1923 to 1927, the average number of births per year was 1,248,774 and of deaths, 770,656, leaving an annual excess of 479,119 births. The surplus of births dropped from 547,808 in 1925 to 402,949 in 1927. Dr. Heiman Schumacher of the University of Berlin said in 1929 that Germany had experienced a greater decline in the birth rate since the World War than any other nation and was faced with the probability that the excess of births would soon disappear. Emigration in 1927 totaled 61,379, of whom 47,151 went to the United States. Cities having more than 500,000 inhabitants at the census of 1925 were: Berlin (city and suburbs), 4,024,165, Hamburg, 1,079,700, 222, Munich, 680,704, Leipzig, 619,137, and Breslau, 557,139.

**EDUCATION.** Primary instruction is compulsory throughout Germany between the ages of 6 and 14. In 1926-27 there were 52,320 public elementary schools, with 180,273 teachers (137,124 men and 43,149 women), and 6,620,779 pupils (3,340,804 boys and 3,288,975 girls). Private elementary schools in 1922 numbered 675, with 35,584 pupils (14,086 boys and 20,598 girls). Secondary schools in 1922 included, for boys, 515 Gymnasias, with 10,051 teachers and 152,367 pupils. Real gymnasias 322, with 6678 teachers and 115,615 pupils. Oberrealschulen and Realschulen, 506, with 9404 teachers and 184,175 pupils, for girls, high schools, 824, with 14,852 teachers and 299,285 pupils. There are 10 fully equipped technical schools, with the power of granting degrees. These had a teaching staff of 1293 and a student body of 20,927 in 1927.

In 1927 there were 23 universities with a total of 5175 professors and 72,139 students. The student enrollment was as follows: Berlin, 9173, Bonn, 4305, Breslau, 3034, Cologne, 5122, Frankfurt, 1416, Frankfurt, 3211, Freiburg, 1187, Göttingen, 3022, Greifswald, 1235, Halle, 1816, Hamburg, 2228, Heidelberg, 2860, Jena, 2270, Kiel, 2081, Königsberg, 1913, Leipzig, 4710, Marburg, 2767, Munich, 7384, Münster, 2899, Rostock, 1109, Tübingen, 2800, Würzburg, 2247. The students were divided among the various faculties as follows: Theology, 4367, jurisprudence, 27,675, medicine and dentistry, 11,855, philosophy, 14,000, mathematics, natural sciences, etc., 12,857, auxiliary science, 785. In addition, there are a number of veterinary, mining, agricultural, afforestation, art, and music academies.

**AGRICULTURE.** There were in Germany in 1928, according to official estimates, 51,556,972 acres of arable land, 20,165,876 acres of grass, meadows, and pasture, and 204,575 acres of vineyards. The harvest in 1928 was the most plentiful since 1914, but agriculture remained relatively depressed due to lower prices received for the crop and to a national farm indebtedness estimated at 11,400,000,000 marks (\$2,715,000,000). The area and production of the chief crops in 1928 are shown in the accompanying table. About 61 per cent of the cultivated area produces grain and legumes, while 21 per cent produces potatoes,

States of the Empire	Area English sq miles	Population June 16, 1925	Pop per sq mile 1925
Prussia *	112,628	38,120,173	338

\* Excluding the Saar.

\* The figures for the population of the Saar District, in which the census of 1925 could not be taken, are estimates.

sugar beets, and cattle turnips. The average size of individual farms in Germany (leaving out of consideration the very smallest) is 28.65 acres, as compared with 144.8 acres in the United States. The small farms predominate in the west and south German states, while large estates prevail in the northeast. Livestock on Dec. 1, 1928, totaled 3,710,500 horses, 18,386,200 cattle, 3,625,600 sheep, 20,072,300 swine, and 2,885,100 goats.

#### AREA AND PRODUCTION OF GERMAN CROPS, 1928

Crop	Area <sup>a</sup>	Production <sup>b</sup>
Wheat	4,269	141,608

**FOREST AND FOREST PRODUCTS** The forested area of Germany occupies about 31,587,209 acres, of which 9,465,708 are under foliage trees, such as oak, hick, ash, etc., and 22,120,446 acres are devoted to such as the pine, larch, and fir. The forests are exploited under the supervision of the state in accordance with the most scientific methods, the industry being one of great importance. In 1928 the production of paper and paper products in Germany broke all records, the output consisting of 2,302,207 short tons of paper, 479,477 tons of board, 1,266,195 tons of chemical pulp, and 914,844 tons of mechanical pulp. The leading paper-producing country in Europe, Germany in 1928 exported products of this nature valued at \$103,689,000, as compared with exports of \$94,614,000 in 1927.

**MINING** Prussia supplies the great bulk of the minerals raised in Germany, the chief mining areas being in the districts of Westphalia, Rhineland Prussia, and Silesia (coal and iron), Central Germany (brown coal), the Harz (iron and copper ore), and the Westerwald (iron ore). In 1925 there were 2042 mines in Germany, employing 808,593 persons. The number of blast furnaces in 1927 was 191. Lignite production exceeded that of black coal for the first time in 1928 and coke production reached a record figure despite a lock-out in the iron and steel industry toward the end of the year. The output of the principal minerals in metric tons in 1927 and 1928 is shown in the

#### MINERAL PRODUCTION OF GERMANY, 1913, 1927, 1928

		1913	1927	1928

accompanying table. In 1929 it was estimated that in the Ruhr district alone coal reserves within 1000 meters of the surface totaled 28,500,000,000 tons, those within a 1500-meter depth, 75,000,000,000 tons, and those within the limit of coal occurrence, about 250,000,000,000 tons. With an annual output of 100,000,000 tons, the 1000-meter reserves would last about 280 years.

In 1929 the coal output increased 8 per cent to 163,400,000 tons, the coke output 13.9 per cent to 38,500,000 tons, and the lignite output 5.4 per cent to 175,000,000 tons, the highest figure since the World War. Coal exports in 1929 totaled 26,796,000 tons, or 11 per cent more than in 1928.

Domestic consumption of coal in 1928 was the largest ever recorded, amounting to 157,400,000 metric tons of coal and lignite, or 2.4 per cent more than in 1927. The increased domestic consumption, however, was accompanied by lower exports and by increased imports of British coal. Slackening in production toward the end of 1928 and the modernization of mining methods led to a decline in the number of workmen employed in the Ruhr coal mines from 398,000 in January to 365,000 in December, 1928. The number of persons employed exclusively in mining in 1925 was 629,492, as compared with 495,279 within the present boundaries of Germany in 1907, the primary horse power directly applied in mining operations was 1,416,750 in 1925 and 1,104,673 in 1907, the horse power of electric motors was 1,672,915 in 1925 and 214,903 in 1907.

**FISHERIES** The North Sea fisheries yielded 214,086,508 kilos of fish in 1927.

**INDUSTRY** A noticeable decline from the high level of industrial activity in 1927 commenced toward the latter part of 1928, the slump being particularly apparent in industries producing for home consumption. The first serious labor difficulties since 1924 resulted in strikes or lockouts in shipbuilding, iron and steel, and other industries in 1928 and a general increase in the wage level. The unemployed increased from 647,000 on July 31, 1928, to 1,830,000 at the end of the year and the number of short time workers more than doubled. The unemployed in October, 1929, numbered 949,000 or 266,300 more than in October, 1928.

Production figures of some of the leading industries in 1927 and 1928 with comparative figures for 1913 are given in the accompanying table.

#### INDUSTRIAL PRODUCTION OF GERMANY

		1913	1927	1928
Pig iron	1000 metric tons	10,916	13,089	11,804
Crude steel	do	11,768	16,164	14,517
Rolling mill products	do	9,520	11,945	11,563
Rayon	metric tons	1,500	16,000	24,000
Cotton consumption <sup>a</sup>	million lb	1,031	985	770
Vessels launched	gross tons	465,226	289,622	746,416

<sup>a</sup> Includes hatters <sup>b</sup> Estimate

An increased foreign demand for iron and steel products during 1928 ameliorated somewhat the effect upon the industry of a sharp decline in domestic orders due to generally unsatisfactory economic conditions. Railway orders, building activity, and the buying power of the farmers were considerably curtailed. The lockout in the Ruhr from November 1 to early in December was a leading factor in the decreased production. The output of pig iron and crude steel was 11 per cent lower than in 1927 and all groups except crucible and electro-steel castings showed losses.

The report of the United Steel Works, commonly known as the German Steel Trust, for the business year ending Sept 30, 1929, showed total sales of 1,431,700,000 reichsmarks, or practically the same as in the previous year. Domestic sales, however, fell from 953,500,000 reichsmarks in 1927-28 to 903,300,000 reichsmarks, while export sales rose from 478,200,000 reichsmarks in 1927-28 to 528,300,000 reichsmarks. The report covered the third year of operation of the Steel Trust, which comprised six of Germany's foremost coal and iron-ore concerns, produced one-sixth of the national output of coal, and employed about 180,000 workers. It was by far the country's largest producer of pig iron, raw steel, rolling-mill products, and coke. The trust's coal production in 1928-29 rose to a new peak of 27,241,000 metric tons (26,453,000 tons in 1927-28), and coke production to 9,604,000 tons (9,518,000 tons in 1927-28). The output of pig iron, however, dropped from 6,518,000 tons in 1927-28 to 6,007,000 tons, and of raw steel, from 6,934,000 tons in 1927-28 to 6,420,000 tons. The production and sales of the Steel Trust are considered a reliable index of the German iron and steel industry as a whole. In 1929 Germany's total steel output was 16,245,921 tons, as against 14,517,013 tons in 1928 and 13,232,647 tons (deducting the Alsace-Lorraine output) in 1913.

The machinery industry, which increased its foreign sales by 22 per cent and domestic sales by 16 per cent in 1928, was depressed in 1929 and was operating at 68 per cent of capacity in November of that year. Automobile production doubled between 1926 and 1928 and in the latter year exports of cars increased by two-thirds over 1927. Cars on German roads increased by 29 per cent in 1928, but even then Germany had only one automobile to every 134 people of her population, as compared to one car for every 38 people in Great Britain and one for every five people in the United States. The chemical industry remained prosperous in 1928 and 1929, potash production in 1928 reaching the record level of 1,421,000 metric tons. The value of textile production dropped about 9 per cent in 1928. Moderate improvement in the industry was reported in November, 1929, although 11.1 per cent of textile trade-union members were unemployed and 26.3 per cent on short time in September. Cotton spindles in 1928 totaled 11,153,000, as compared with 10,800,000 in 1927 and 11,186,000 in 1913.

The total number of workers employed exclusively in manufacturing in 1925 was 10,091,132, as compared with 7,794,545 within the present boundaries of Germany in 1907. During 1928 the average weekly wages for skilled workers advanced from 49.82 marks (\$11.87) to 52.34 marks, while those of unskilled workers rose from 37.43 marks to 40.50 marks. About 941,400,000 marks (\$224,000,000) were spent on unemployment relief. Strikes and lockouts resulted in the loss of 10,450,000 work days. In the majority of cases, the Government settled the disputes by more or less compulsory arbitration in which the workers generally secured their demands. Unemployment increased in 1929, the number out of work on December 30 totaling about 2,000,000.

Germany ranked second to the United States in the production of electrical power in 1928, producing an estimated total of 27,870,000,000 kilowatt-hours, or 11.1 per cent of the world production, according to statistics of the Central Association of the German Electrotechnical In-

dustry. Total production for 1927 was 25,135,000,000 kilowatt-hours, for 1926, 21,218,000,000, and for 1914, about 7,000,000,000. In 1928, 14,146,000,000 kilowatt-hours represented the output of public plants and 13,725,000,000, the output of private plants. Of the total, 76.4 per cent was generated by solid fuel, 12.8 per cent by water power, and 9.2 per cent, by oil and wind power.

COMMERCE The value of German domestic exports increased by 14 per cent to \$2,930,000,000 in 1928, continuing the expansion which has been continuous since 1923, while imports for consumption, which increased by nearly \$1,000,000,000 in 1927, fell in 1928 to \$3,334,000,000, as compared with \$3,381,000,000 in the previous year. The unfavorable balance of trade was \$404,000,000 in 1928 and \$815,000,000 in 1927. The heavy gain in exports was attributed not so much to increased productivity of German industry as to increased attention to export sales to offset the depression in the domestic market.

The cotton- and wool-textile and leather industries in particular were obliged to seek markets abroad for products normally consumed at home, also, generally improved conditions in other European countries stimulated sales abroad. German exports, on an average, increased by 1,000,000,000 marks a year between 1925 and 1928. Taking into account the change in the value of money, however, exports in 1928 were only 80 per cent of those in 1913, while Germany's share in international trade fell from 13.8 per cent in 1913 to 9.6 per cent in 1927. Over 78 per cent of the total gain in exports in 1928 was attributed to greater sales of finished goods, the largest individual gain being in iron and steel products. Textiles, leather and leather goods, furs and fur goods, paper and paper goods, chemicals, ceramics and glass, copper articles, machinery electrical products, automobiles, motor cycles and bicycles, and toys followed in the order named. The large domestic crops were reflected in shipments of wheat and rye over three times as large as in 1927.

While imports of raw materials were substantially larger than in 1927, with the exception of raw cotton, iron ore, and rubber, these gains were more than offset by radical reductions in the imports of corn, rye, wheat, barley, and oats. Depressed economic conditions contributed substantially to the import decrease. In 1929 the rectification of the unfavorable import balance continued, with exports increasing and imports declining during the first nine months of the year. Of the total value of imports for consumption in 1928, 28.9 per cent represented foodstuffs, beverages, and live animals, 48.3 per cent, raw materials and semi-manufactures, 16.4 per cent, manufactured goods, and 6.4 per cent, bullion and specie. Of the domestic exports, foodstuffs, beverages, and live animals constituted 5.4 per cent, raw materials and semi-manufactures, 22.4 per cent, manufactured goods, 7.2 per cent, and specie and bullion, 0.3 per cent.

Much of the raw-material imports came from the United States, which continued to rank first as a source of German imports, furnishing 14.5 per cent of the total, and from Argentina, which was in second place. Great Britain ranked third as a supplier of imports and first as a purchaser of German exports. The Netherlands and the United States, in the order named, followed Great Britain as Germany's leading customers.

Gains were registered in shipments to all continents except Australia. Germany imported goods from the United States to the value of \$483,554,000 in 1928 (\$492,645,000 in 1927) and exported goods to that country valued at \$189,908,000 (\$184,425,000 in 1927).

Of Germany's visible trade deficit of 1,700,000,000 marks, 1,200,000,000 marks was accounted for by trade with the United States. The tendency toward the establishment of branch factories in Germany by American manufacturers and of similar branches in the United States by German firms continued in 1928 and 1929. Because of their lack of capital, however, the operations of German concerns in the United States were carried on usually in cooperation with American manufacturers or financial groups. Expenditures in Germany by foreign tourists, the largest number of whom are Americans, and the earnings of the merchant marine are two of the most important sources of "invisible" revenue which helped to offset partially the visible trade deficit in 1928. In 1929 exports totaled 13,482,000,000 marks, including 799,000,000 of deliveries in kind, and imports 13,435,000,000 marks. The total trade was the highest since 1924. Imports from the United States declined sharply to \$410,258,652, while exports to that country increased to \$254,673,542.

**FINANCE** The closed accounts for the Government's financial operations for the fiscal year ending Mar. 31, 1928, as given by the Agent General for Reparation Payments, showed receipts of 9,020,000,000 reichsmarks (\$2,148,564,000) and expenditures of 9,316,000,000 reichsmarks (\$2,219,071,000), leaving a deficit of 296,000,000 reichsmarks instead of a surplus of 162,000,000 reichsmarks, as estimated in the budget. Ordinary revenue for the year was about 40,000,000 marks under estimates and receipts from loans under the extraordinary budget were much less than expected. Expenditures also were below estimates, the chief reductions occurring in the debt service, general financial administration, internal war charges, and nonrecurrent expenditure.

The figures of the Agent General for Reparations, however, varied from those presented by Chancellor Hermann Muller on Dec. 12, 1929, in revealing to the Reichstag that the Reich faced a deficit of 1,700,000,000 marks (about \$404,600,000) at the end of 1929. The deficit, he said, represented the accumulated budgetary shortages of several years, including 150,000,000 marks for 1927-28, and about 300,000,000 marks for 1928-29. The 1929-30 extraordinary budget contributed an additional 800,000,000-mark shortage and 450,000,000 marks were required to meet pay rolls and other expenses during December.

The budget for 1928-29 provided for ordinary receipts of 9,528,571,000, and extraordinary receipts of 146,295,000, reichsmarks, for ordinary expenditures of 9,528,571,000, and for extraordinary expenditures of 142,595,000 reichsmarks. Chief items of ordinary receipts in reichsmarks were income tax, 2,900,000,000, business turnover tax, 1,050,000, property, corporation income, transport, and other recurrent taxes, 2,085,000,000, customs, 1,200,000,000, consumption taxes, 1,602,000,000; all other, 691,571,000. In the list of ordinary expenditures, the chief items were debt service, 484,936,000, national defense, 700,633,000, pensions, 1,780,397,000; labor department, 706,844,000, allotments to states and local governments, 3,217,817,000, pay-

ments under the London Agreement, 1,227,500,000, all other, 1,410,444,000.

Features of the Reich's budget are the relatively small costs of general administration, most of which falls to the state and municipal governments, the small cost of national defense, enforced by the restrictions of the Versailles Treaty, the smallness of normal current outlays for debt service, due to the greatly reduced revaluation of the debts incurred previous to and during the World War which were virtually wiped out by inflation, the large expenditures for social welfare, chiefly due to subsidies for social insurance and relief for the unemployed, and the relatively enormous war burden, including pensions, reparation payments, etc. In addition to payments under the London Agreement, reparation payments by the railway administration and industries amounted to 960,000,000 reichsmarks in the 1928-29 budget, 880,000,000 in 1927-28, and 759,675,000 in 1926-27.

The programme of financial reform presented by Chancellor Muller and adopted by the Reichstag Dec. 14, 1929, included an increase of one-half of 1 per cent in the premium charges for unemployment insurance, expected to yield 140,000,000 marks annually, and added imposts on tobacco products, expected to produce 220,000,000 marks. Other reform measures were to be introduced early in 1930, including a tax on beer. Funds to meet the cash deficit at the end of 1929 were advanced by the Reichsbank, after Dr. Hjalmar Schacht, president of that institution, had refused his sanction to a \$100,000,000 American loan. His demand for the establishment of a 450,000,000-mark sinking fund to be applied on the floating debt and the postponement of proposed tax reductions was accepted by the Government.

The public debt on Mar. 31, 1928, totaled 7,890,569,000 reichsmarks (\$1,879,534,000), of which 5,747,834,000 represented internal government bonds, 20,589,000, internal Treasury notes and bonds, 981,940,000, internal bank loans, 901,718,000, foreign loans, and 238,488,000 marks, miscellaneous loans. On the same date in 1927, the public debt amounted to 8,072,881,000 reichsmarks (\$1,922,960,000). It was estimated that during the first four years of the Dawes Plan (from 1925 to 1928, inclusive), the German federal, state, and municipal governments and private concerns borrowed more than 6,000,000,000 gold marks abroad on long-term loans. Inasmuch as imports had greatly exceeded exports, this enormous borrowing was necessary to enable Germany to meet her cash reparation payments. The Federal debt at the end of 1929 totaled 7,994,000,000 marks, as against 7,771,000,000 marks at the end of 1928.

The discount rate of the Reichsbank remained unchanged at 7 per cent during 1928. Currency in circulation at the end of the year totaled 6,615,000,000 reichsmarks, or an increase of 300,000,000 marks during the year. Gold held by the Reichsbank increased from 1,865,000,000 to 2,729,000,000 marks during the year. Public and private borrowings abroad during 1928 were estimated at 1,570,000,000 marks, or approximately the same as in 1927, but actually a greater amount of long-term foreign capital was secured through considerable purchases of domestic bond issues for foreign account during the first half of the year. The United States supplied 69 per cent of the total new capital. Most of the loans

were obtained by electric power and light works, agriculture, mining concerns, and states and municipalities. The Reichsmark and mark, it should be noted, have the same value. See REPARATIONS, also under *History*, below, for effects of Young Plan on German finances.

**COMMUNICATIONS** All of the railways of Germany except 1950 miles of privately owned line (in 1928) are owned by the State, although managed and administered by the German Railways Company. Passenger and freight traffic continued to expand in 1928, as indicated by the accompanying table. While handicapped by lack of capital,

GERMAN STATE RAILWAYS IN 1927 AND 1928

Item		1927	1928
Length of line	miles	33,272	33,347
Locomotives	number	24,495	24,542
Passenger cars	do	61,764	62,447
Freight cars	do	674,297	672,756
Freight train miles	thousands	116,101	156,585
Passengers carried	millions	1,909	2,006
Passenger miles	do	28,302	30,140
Freight	1000 metric tons	434,063	432,300
Freight ton miles	millions	40,119	41,222
Gross receipts*	million marks	5,049	5,154
Passenger service	do	1,380	1,443
Freight service	do	1,226	1,276
Gross receipts, equivalent (\$1,000,000)		1,197	1,230

\* Including miscellaneous receipts not shown separately.

The German railroads have made notable progress and the system is one of the finest in Europe. Loads carried by freight trains reached 2000 tons on important lines in 1928, as compared with 800 tons before the World War. Tracks, freight terminals and yards, bridges, and cars all have been improved. Combination air-and-rail service was inaugurated by the Deutsche Luft Hansa early in 1929. In 1929 passenger traffic on the German state railroads declined 0.6 per cent and the passenger receipts declined 0.8 per cent, although the train-mileage for the year was 4 per cent greater than in 1928. Gross revenues in 1929 were estimated at \$1,278,000,000, or \$50,218,000 more than in 1928, and operating expenses at \$1,061,000,000, leaving an estimated net income of \$217,000,000. From the beginning of the Dawes Plan in 1924 to Aug 31, 1929, the total of reparation annuities levied on the German railroads amounted to \$900,830,000.

The total length of State and provincial highways in Germany in 1929 was approximately 37,260 miles, and of county roads about 74,520 miles. The number of motor vehicles in the country was 531,000 in 1928 and 152,000 in 1923. Motor cycles in 1928 numbered 465,000 and in 1924, 131,000.

On July 1, 1929, the German merchant marine totaled 4,025,000 gross tons (2080 vessels) of 3,777,251 gross tons on July 1, 1928), or about 76 per cent of the pre-war tonnage. Whereas 234 owners shared the 5,300,000 tons of pre-war shipping, the 1929 tonnage was distributed among 182 owners, evidencing the tendency toward mergers and consolidation of resources. The average dividend earned in 1928 was 7.4 per cent (7.5 per cent in 1927 and 6.2 per cent in 1926). It is of interest to note that none of the large joint-stock ship companies paid dividends out of their post-war earnings before 1926. Faced by unusually severe competition, due to the fact that the world shipping tonnage rose from 45,505,000 to 66,408,000 tons between 1913 and 1929, while the volume of sea-borne freight traffic increased only about 3 per cent, German shipping exhibited

a remarkable development as a result of the technical excellence of the new merchant fleet and increased managerial efficiency. An illustration of the strength of Germany's bid for a larger share of world traffic was the performance of the liner *Bremen* in establishing a new transatlantic record of 4 days, 17 hours, and 42 minutes, from Cherbourg to New York on her maiden voyage in July, 1929. See SHIPPING, MERCHANT.

The sea-borne traffic at the more important German ports in 1928 was 4.3 per cent greater than in 1927 and 29 per cent greater than in 1925. The total tonnage entering German ports in 1928 was 12,444,000 tons, of which 29,409,000 tons represented imports of foreign goods, and the tonnage cleared was 16,366,000, of which 13,356,000 tons went to foreign countries. The remainder represented coastwise trade. Tonnage exports comprised only 45.5 per cent of the tonnage imports. About 54 per cent of the total goods traffic passed in or out of Hamburg, with Bremen, the second port in importance, handling 10 per cent of the total. The other leading ports were Stettin, Emden, Harburg, Lubeck, and Altona.

Closely linked with the development of Germany's shipping industry was the programme of waterways development adopted by the Reichstag in 1927 and the cooperation between railways and waterways in promoting cheap transportation to the seaports. In 1929 the country had 7635 miles of waterways, including minor lakes and rivers and 1383 miles of canals. The German inland fleet totaled 25,000 vessels of 7,000,000 tons in 1929 and moved 107,600,000 tons of freight in the preceding year. Modernization of the Hohenzollern, Oder-Spree, and other canals was completed in 1929 and work was going forward on a new canal linking the Rhine to the Elbe and the Oder, a second connecting the Rhine, the Main, and the Danube, and a third canalizing the Neckar from Heidelberg to Heilbronn, a distance of 71 miles.

Airplanes of the Deutsche Luft Hansa, which does practically all of the civil aviation business in Germany, flew 6,306,906 miles in 1928 and carried 111,000 passengers, 485 tons of mail, and 1900 tons of goods. A triumph of German aviation was the completion of a round-the-world flight in 21 days by the *Graf Zeppelin* on Aug 29, 1929. On August 4, the same airship completed a second voyage from Germany to Lakehurst, N. J. See AERONAUTICS.

The Federal government owns the telegraph and telephone systems. Gross receipts of the telegraph system, which had 561,183 miles of wire in 1926, were \$24,406,000 in 1927, receipts of the telephone system, with 10,608 miles of wire and 3,077,706 (1929) instruments, were \$158,432,000 in 1927. The Federal Post Office reported net profits of 235,800,000 marks for the fiscal year ending Mar 31 1929.

For ARMY AND NAVY, see under MILITARY PROGRESS AND NAVAL PROGRESS.

**GOVERNMENT** Under the constitution of the Republic adopted July 31, 1919, and promulgated Aug 11, 1919, executive power is vested in the President elected by the people for seven years, and in a ministry appointed by him and responsible to the Reichstag, or Parliament. Legislative power is vested in the Reichstag, consisting of 493 members, who are elected by universal, equal, direct, secret franchise of male and female voters, on the principle of propor-

tional representation, and in a federal council, the Reichsrat, consisting of 68 members (Prussia, 27, Bavaria, 11, Saxony, 7, Wurttemberg, 4, Baden, 3, other states, 16). The consent of the Reichsrat is required to all bills before their introduction into the Reichstag, but the latter body may pass a bill over the heads of the former by a two-thirds vote. The composition of the Reichstag elected May 20, 1928, was as follows: Socialists, 153, German National People's party, 73, Centre party, 62, German People's party, 45, (German Democratic party), 25, Bavarian People's party, 16, Communists, 54, Middle Classes party, 23, minor parties, 39, total, 490.

The President in 1929 was Paul von Hindenburg, elected April 26, 1925, assumed office, May 12, 1925. The cabinet appointed June 29, 1928, was composed as follows: Chancellor, Hermann Muller (Socialist), Minister of Justice, Erich Koch-Weser (German Democratic party), Foreign Affairs, Dr. Gustav Stresemann (German People's party), Home Affairs and Minister for the Occupied Provinces, Karl Severing (Socialist), Finance, Dr. Rudolf Hilferding (Socialist), Defense, Lieutenant-General Wilhelm Groener, Labor, Rudolf Wissel (Socialist), Food and Agriculture, Hermann Robert Dietrich (German Democratic party), Posts and Transport, Dr. Schnetzler (Bavarian People's party), Economic Affairs, Dr. Julius Curtius (German People's party).

#### HISTORY

The question of financial reform came to the fore as the dominant domestic political issue in 1929 and threatened to involve a drastic reorganization of the German political system. Because of it, Chancellor Hermann Muller's Coalition cabinet was repeatedly on the verge of collapse during the year and, on December 21, Dr. Rudolph Hilferding, the Socialist Minister of Finance, was forced to resign.

The industrial, business, and Middle Class parties were aligned against the Social Democrats and other parties of the Left in the parliamentary clashes over the question. These two elements had long been at odds on fundamental questions of taxation, government ownership and operation, the size of appropriations for social insurance, and other welfare measures. In 1929, however, the increasing difficulties of the country's financial situation and the prospect that about 700,000,000 reichsmarks would be saved annually by the reduction of the Dawes Plan annuities proposed in the Young Plan precipitated a struggle for the control of the anticipated surplus. The industrialists and other conservatives demanded that the surplus be used to remedy Germany's crying need for additional capital, while the Social Democrats and their radical allies wished to distribute it among the working classes through the extension of existing forms of social insurance.

Some basis for an understanding of the politico-economic events revolving around this issue during the year has been given under *Industry, Commerce, and Finance*. These figures indicated a slackening of Germany's remarkable industrial and commercial development and the increasing difficulties of the financial problem. The realities of the situation seem somewhat obscure. The annual report issued January 1 by S. Parker Gilbert, Agent General for Reparations Pay-

ments, announced that Germany was then on a stable financial basis and well able to meet payments under the Dawes Plan. Other foreign observers expressed alarm at Germany's growing strength in world trade, but a more pessimistic picture was drawn by German economists and publicists later in the year. It was difficult to determine how much, if any, of this gloom was injected in the hope of securing a lighter reparations burden, or of obtaining concessions to industry on the part of the Government.

Dr. Gustav Stolper, editor-in-chief of the Berlin financial weekly, *Der Deutsche Volkskurier*, voiced the opinion that Germany was in a more difficult position on the eve of the signing of the Young Plan than at any time in its history. Writing in a special German Industrial Review section of the New York *Journal of Commerce* issued December 17, he pointed out that the Reich budget again had a deficit of several hundred million reichsmarks, that the cities were burdened with a floating debt of several billions, whose funding at that time was impossible, that agriculture was unable to place the smallest mortgage upon the most valuable properties, that current credits were obtainable only at 14 or 15 per cent, and that industry was being pressed by the banks to repay loans, while the banks themselves were carrying a short-term foreign indebtedness higher than ever before.

In another analysis of Germany's economic condition, Dr. Herman Schumacher, professor of political economy at the University of Berlin, advanced the opinion that the period of industrial and economic recovery was approaching its end with Germany in a far from healthy condition. The decline of economic elasticity, unrest among the laboring classes, insecurity of marketing conditions, the serious lack of capital, and the compulsion to irrational and often wasteful export, by the uncertainty of the domestic market, were some of the factors which, he said, obstructed the nation's further recovery. In support of his pessimistic view of the situation Dr. Schumacher pointed out that in 1927 only 368,796 persons in Germany had incomes exceeding 8000 marks, or \$2000, and that, since the end of 1927, the list of bankrupts had more and more tended to include reputable firms with long and honorable histories. Before the War, creditors received an average of two-thirds of their claims upon bankrupts, in 1928, 10.8 per cent of non-privileged claims were satisfied. Germany's problems, he said, were not those of a marvelous development, as in the United States, but problems of an economic contraction never before experienced.

While the Socialists sought further means of raising money by direct taxation and foreign borrowing to meet the growing problem of unemployment relief, the Conservatives demanded that taxes be reduced, foreign borrowing dispensed with as much as possible, and expenditures for social insurance and other Social Democratic schemes curtailed to allow the country to accumulate the necessary capital for the maintenance of industrial stability. As the problem of excessive expenditures was laid principally at the doors of the municipalities and the 17 German states—each with its independent institutions, ministry, parliament, courts, and universities—drastic constitutional reforms were proposed to eliminate waste due to the duplica-

tion of governmental machinery. Most of the states are noncontiguous parcels of land accumulated by the various German dynasties through the centuries without regard to economic boundaries or the modern status of the Reich.

A preliminary step in this direction was taken November 19, when a subcommittee of the Conference of Federated States recommended that Prussia be amalgamated with the Reich as the first move toward a "unitarian state." It was believed that if the subcommittee's recommendation was accepted, the other states would follow Prussia's lead. Only in Bavaria did pronounced opposition to the plan appear. The struggle over financial reform commenced with the reassembling of the Reichstag on January 24 for the purpose of debating the new budget bill. The Finance Minister, being both a Social Democrat and a member of a Coalition cabinet including conservative parties, was obliged to take a middle course. He proposed to raise only part of the 600,000,000-mark deficit by direct taxation. His budget provided for increases in beer, spirits, property, and inheritance taxes, the reduction of subventions out of the Federal tax yield to the states and municipalities, and additional contributions from the posts and telegraphs.

Chancellor Müller experienced difficulty in forming a Coalition ministry of the Socialists, Democrats, Centrists, and People's parties with sufficient strength to insure passage of the budget bill. The Centrists held out for three seats in the cabinet, while the People's party wavered between support and opposition to the cabinet because the budget made no provision for tax reduction. The resulting parliamentary crisis continued throughout the month of February and fear of the establishment of a dictatorship was openly expressed by former Chancellor Wirth, Chancellor Müller, and other leading figures. Dr. Gustav Meisemann, the Foreign Minister, deplored the resultant loss of moral support to the German representatives then negotiating for the revision of the Dawes Plan in Paris, but his party rejected his plea for immediate adherence to the Coalition. The cabinet crisis subsided during March, but (on April 9) the Socialists refused to vote the government a second installment on Germany's new 9000-ton cruiser and the crash of the government again appeared imminent with the reparations negotiations still under way. The debate on the cruiser budget was delayed until June, and (on April 13) the ministry was strengthened by the official appointment of three Centrist ministers.

In the meantime, the Government continued to negotiate loans from banks and other sources to meet its operating expenses. An effort to raise an internal loan of 300,000,000 marks met with only partial success, about 177,000,000 marks being underwritten. The agreement upon the revised Young Plan at The Hague Conference, through which Germany secured considerable financial advantages, lent further much-needed strength to the cabinet (see REPARATIONS). The Young Plan also provided for the final liberation of the Rhineland from allied military occupation by June 30, 1930, and for the termination of foreign supervision of Germany's railways, banks, and taxation system. With these accomplishments to its credit, the cabinet survived a heated debate over a draft unemployment-insurance law, which was attacked by the Socialist and Left parties as not going far enough

and by the Middle Classes and Right parties as unduly increasing the already heavy burden of taxation.

The death of Dr. Stresemann on October 3, following distinguished service in numerous cabinets as Foreign Minister of the Reich, caused another shift in the cabinet. Dr. Julius Curtius, Minister of Economic Affairs, was appointed to fill Dr. Stresemann's post and Prof. Paul Moldenhauer became Minister of Economics. On October 21, the Government granted the Swedish Match Company and the International Match Corporation a 50-year monopoly of the German match business in return for a 50-year 6 per cent loan of 500,000,000 marks. This and similar measures did not still the widespread criticism of Dr. Hilferding's financial policies.

On November 18, the Cologne Chamber of Commerce and Industry, predicting the end of Germany's ability to continue the practice of borrowing and consuming the nation's own reserves, demanded administrative reforms and sweeping retrenchment in all branches of government service. On December 2, the powerful Association of German Industrialists issued a memorandum calling for similar reforms to avert financial chaos. Another memorandum, which further injured the prestige of the cabinet, was made public a few days later, by Dr. Hjalmar Schacht, president of the Reichsbank, in which he criticized changes made in the Young Plan at The Hague Reparations Conference and attacked the cabinet for agreeing to them.

Chancellor Müller, in presenting the Government's proposals for meeting the situation to the Reichstag on December 12, admitted that the exchequer would show deficit of 1,700,000 marks by the end of the year. Startled by the Chancellor's gloomy picture of the Government's financial condition, the Coalition parties composed their differences for the time being and the Reichstag approved the cabinet's programme of financial reform (on December 14) by a vote of 222 to 156. The vote was 80 less than the Coalition's normal strength, however, and gave further proof of the ministry's weakness.

Dr. Hilferding had planned to raise a \$100,000,000 loan in the United States to meet payroll and other expenses due at the end of the year, but Dr. Schacht refused to give his sanction to a foreign loan unless the Government amended its programme of reforms to include the creation of a sinking fund. The Reichstag was forced to capitulate and Dr. Schacht then organized a group of Berlin and Prussian provincial banks which advanced the Government a credit of 350,000,000 marks (\$84,000,000) to run until October, 1930, at 7½ per cent. The collapse of Dr. Hilferding's financial proposals through the intervention of the president of the Reichsbank, left the former with no alternative than to resign, which he did on December 21. On the same day, the Reichstag passed a bill creating the required amortization fund of 450,000,000 marks, a bill increasing the tax on tobacco, and a measure increasing the duty on feed barley from 2 to 5 marks for 1930. The Reichstag then adjourned to Jan. 21, 1930.

In line with these developments came the announcement (December 20) that the Province of Brandenburg had intervened to prevent the further collapse of the credit of Greater Berlin. The city council, which had just voted 5,750,000 marks (\$1,380,000) for Christmas bonuses

to the city's unemployed and needy, was informed that no further expenditures could be made until all short-term credits had been liquidated and a recently floated loan of 60,000,000 marks was cancelled by the establishment of a monthly sinking fund of 5,000,000 marks.

**YOUNG PLAN REFERENDUM** The political career of Alfred Hugenberg, wealthy industrialist, newspaper publisher, moving-picture magnate, and Nationalist leader, was believed to have received its death blow on Sunday, December 22, when his largely self-sponsored referendum against the acceptance of the Young Plan proved a complete failure. About 6,000,000 votes were cast in support of his measure, whereas 21,000,000, or more than half the electorate, was required for its adoption. Hugenberg's proposal, called the "liberty law," demanded the repudiation of the Young Plan, and called upon the German Government to start negotiations for the cancellation of the "war guilt" clause of the Versailles Treaty, and to abrogate the clauses of the Versailles Treaty providing for allied military occupation of the Rhineland. A fourth paragraph provided for the summary punishment of any German government official signing agreements with any foreign power which would impose upon Germany burdens and obligations based on her acknowledgment of war guilt. The latter measure, if passed, would have made all the members of the cabinet and even President Hindenburg liable to punishment.

The measure was denounced by President Hindenburg and many leading Germans but with the aid of his newspapers, theatres, and other means of propaganda, Hugenberg secured 4,135,300 signatures to the petition for the referendum, or 8000 more than the minimum required. The Reichstag on November 30 rejected the measure by a vote of 312 to 80. Under the constitution, it was then submitted to a national referendum. When Dr. Hugenberg attempted to discipline several members of his own party for failing to support the bill in the Reichstag, six Nationalist deputies, including Count Westarp, leader of the party's Reichstag delegation withdrew from the party (December 1). The measure failed of ratification at the referendum held December 22.

**OTHER EVENTS** The Steel Helmet, or Nationalist militia organization, came into prominence during the parliamentary crisis of February and March. Threats made by its two leaders, Heri Seldte and Colonel Duerstberg, against the Republic, caused President Hindenburg to mention them as to the purposes.

in which he had accepted an honorary membership. In October, during the Nationalist campaign against the Young Plan, the activities of the organization caused the Prussian Minister of the Interior to issue a decree dissolving its units in the Rhineland, the Ruhr, and Westphalia. Previously, the Ministers of Internal Affairs of the Federated German States had determined upon concerted action against Nationalist propaganda.

The Communists were equally active. The May Day disorders in Berlin were the bloodiest since the revolution, continuing for three days during which 20 persons were killed, nearly 100 wounded, and 117 persons arrested, of whom 45 were sentenced to short terms of imprisonment. In Prussia and Bavaria, the police then instituted measures to suppress the Communist

military organization, called the Red Front Fighters.

June 28, the tenth anniversary of the signing of the Treaty of Versailles, was observed as a "day of mourning" throughout Germany, the protests being directed mainly at that clause of the treaty which placed upon Germany the responsibility for the World War. The failure of the Reichstag on June 27 to renew the law for the defense of the Republic opened the way for the return to Germany of former Kaiser Wilhelm, should he desire it, as a private citizen. Spokesmen for Wilhelm indicated that he would return only when the German people "repented and beckoned him." The enthusiasm with which the tenth anniversary of the proclamation of the republican Constitution of Weimar was celebrated on August 11 throughout Germany indicated that there was little prospect of Wilhelm's return under the conditions imposed. To strengthen the Republic against the attacks of both Nationalists and Communists, the new defense bill adopted by the Reichstag on November 28 provided for greatly increased penalties for insults, slander, and attempts on the lives of government officials.

Other events of importance in German history during the year were the ratification of the Kellogg-Briand Peace Pact by the Reichstag on February 6, the submission by German delegates to the League of Nations in April of proposals for the abolition of airplanes and poison gases in war, the inauguration of the *Entente* with France for the return of the *Alsace-Lorraine* (see FRANCE, under *History*), and the evacuation of the second zone of Allied military occupation of the Rhineland on November 30. The withdrawal of French troops from Coblenz and of the Belgians from Aix-la-Chapelle was the signal for tumultuous celebrations of joy throughout the newly freed Rhine districts. At Coblenz, the flag of the German Republic was unfurled for the first time over the historic citadel of Ehrenbreitstein, while bonfires blazed on hilltops and for miles along the shores of the Rhine. British troops had withdrawn from the Rhine earlier in the month. Complete evacuation of the occupied area was to take place before June 30, 1930, under an agreement between the late Foreign Ministers, Briand and Aristide Briand. Dr. Hugenberg's effort to secure the rejection of the Young Plan, however, resulted in an announcement by Premier Tardieu before the French Chamber of Deputies that the evacuation would not be completed until after the ratification of the Young Plan by Germany.

On November 18, the Reichstag appropriated 6,000,000 marks (\$1,440,000) for the relief of Russian peasant emigrants of German origin, who were living under privation in camps near Moscow and in Germany awaiting an opportunity to settle in Canada or Brazil.

Partly due to the so-called Sklarek bribery scandal in which several Socialist members of the Berlin City Council were implicated, the Communists gained 9 additional seats at the expense of the Social Democrats in the municipal election of November 17. With the newly elected members, they occupied 56 seats in the council. The representation of Adolf Hitler's Fascist party was increased at the expense of Dr. Hugenberg's Nationalists. Similar tendencies were noted in Frankfurt-on-the-Main and other large cities, except in the industrial towns of

**BIBLIOGRAPHY** The development of Germany was shown in several notable books published during 1929. These include *The Recovery of Germany*, by James W. Angell (1929), *The New German Republic*, by Elmer Luehr, New York (1929), *State and Sovereignty in Modern Germany*, by Rupert Emeison, New Haven (1929).

**GIBRALTAR.** A possession of Great Britain on a small peninsula, comprising the Rock of Gibraltar, on the southwest coast of Spain, commanding the entrance to the Mediterranean Sea. Area, 1½ square miles, population, at the census of 1921, 20,638, of whom 2932 were military and 546, naval men. The civil population on Jan. 1, 1928, was estimated at 16,120, excluding about 1213 aliens. The inhabitants are chiefly descendants of Spanish and Italian settlers, and in religion are Roman Catholics. Education is compulsory between the ages of 5 and 14. In 1927-28 there were 13 government-aided elementary schools with 2836 pupils. There were also five secondary schools. The revenue in 1927 was £160,031, and the expenditure, £180,114. There was no public debt. Trade is mainly transit. Vessels entered in 1927, 4429, of 6,624,204 tons, cleared, 2265, of 5,499,871 tons. Cables connect with the Continent, with eastern Mediterranean ports, and with England. Gibraltar is under a governor who is also commander-in-chief. He is assisted by an executive council which was established in 1922. Governor in 1929, General Sir Alexander J. Godley, appointed October, 1928.

**GIBSON, MAJ.-GEN. SIR JOHN MORISON** Canadian official and administrator, died in Hamilton, Ontario, June 3, 1929. He was born Jan. 1, 1842, in Ontario, Canada, and was graduated from the University of Toronto in 1863, afterward taking a law course. On becoming actively identified with the Liberal party, he abandoned the law practice begun in 1867. He was Provincial Secretary of Ontario, 1889-96, Commissioner of Crownlands, 1896-99, Attorney General, 1899-1905, and, from 1908 to 1914, Lieutenant-Governor of Ontario. Sir John Gibson was also actively interested in military training and himself rose to the rank of major-general in the Canadian Militia. In business and charitable institutions, he held important offices. He was knighted in 1912.

**GIRL SCOUTS.** A nonsectarian organization for girls started in Savannah, Ga., in 1912, and incorporated under the laws of the District of Columbia in June, 1915. The plan for Girl Scouting is not a copy of the Boy Scout programme, although both organizations were founded by Sir Robert Baden-Powell, but it is rather a development of the Girl Guide movement, changed and adapted to meet the needs of American girls. The purpose of the organization is to help girls to realize the ideals of womanhood, as a preparation for their responsibilities in the home and service to the community. It aims to give girls, through natural, wholesome pleasures, those habits of mind, and body which will make them useful, responsible women, to develop initiative, self-control, self-reliance, and service to others. When a girl

becomes a scout, she makes the following promise. "On my honor, I will try. To do my duty to God and my country, to help other people at all times; to obey the scout laws."

The unit of the organization is the troop, which is composed of one or more patrols, with six to eight girl scouts in each patrol. The activities of the troop are developed through the patrol system, under a patrol leader who is appointed from the group. The girls advance by a merit system which was developed by Sir Robert Baden-Powell.

The total active membership of the organization as of Oct. 31, 1929, was 200,201. There are 41 summer national training schools for Girl Scout leaders and young women who are interested in training for volunteer leadership. During 1928, 913 young women attended these schools. There were also 38 Girl Scout leaders' training courses given by members of the national staff in 36 colleges and other institutions of higher education during 1928, with an enrollment of 1219 students. These courses are a continuation of the work which was started as a five-year experiment under an appropriation from the Laura Spelman Rockefeller Memorial, the present work is made possible by a grant from the Julius Rosenwald Fund. There were 529 other courses given in 1928 in which 9380 young women received training as volunteer Girl Scout leaders.

The World Association for Girl Guiding and Girl Scouting included 27 countries in 1929, while Girl Guide companies or Girl Scout troops were organized in many other countries. The official organ for girls is *The American Girl Magazine*, and for leaders, *The Girl Scout Leader*, each a monthly publication. The budget for the year 1930 totaled \$1,292,550. The 1929 national convention was held November 5-9, in New Orleans. The officers elected for 1930 were: Mrs. Herbert Hoover, honorary president; Mrs. William H. Hoffman, president; Mrs. Arthur O. Choate, first vice president; Mrs. Vance C. McCormick, second vice president; Mrs. Frederick Edey, third vice president; Mrs. A. Clifford Shinkle, fourth vice president; Mrs. William Merrill Chester, fifth vice president; Mrs. Owen D. Young, sixth vice president; Mrs. Barrett Wendell, seventh vice president; Mrs. Herbert H. Lehman, eighth vice president; Mrs. Nicholas F. Brady, chairman of the board of directors; Mrs. Edgar Rickard, treasurer; Mrs. Julius H. Barnes, controller; Mrs. Jane Deeter Rippin, secretary; Mrs. Chauncey Belknap, counsel. The national headquarters are at 670 Lexington Avenue, New York City.

**GOITRE.** Statistics collected during the World War were of value in respect to a consideration of the distribution of endemic goitre inasmuch as they dealt with 2,500,000 men of age for military service. Great differences were seen in the percentages of goitre incidence varying from as low as 0.25 per cent to as high as 26.9 per cent. Aside from the preceding, there have been many reports on the incidence of goitre in school children, some of them since the War. Olesen published figures in *the Public Health*

Report, No 44, June 21, which, as might be expected, show a marked parallelism with those in the recruits. Without going into the geographic distribution of the disease by States, it is of interest to note that the largest group of patients comes from sparsely settled communities having more than three people to the square mile, with the next largest comes from the mountainous regions. Rarest in the incidence are the agricultural and maritime sections of the country. Urban and rural regions in general were on a par with each other. These figures may show that wholesale prophylaxis is not invariably easy to carry out and must be individualized for each community. It would, for example, be difficult to apply it to the members of the group which inhabit the sparsely settled sections. In other cases, it would be possible to overdo the prophylaxis.

**GOLD.** The U S Bureau of the Mint, with the cooperation of the U S Bureau of Mines,

Total	350,720	11,275,660	223,088,577
Total for world	611,964	19,074,638	406,710,864

\* Estimate based on United States imports of ore and bullion

† Estimate based on other years' production

‡ Amount exported.

§ 1927 figures

dictated a reduction of \$2,175,200 in the output of gold as compared with 1928. The year of largest output, 1915, produced \$101,035,700 gold. As will be seen from the table, California led in gold production with a valuation of \$8,306,500,

Alaska being a close second with \$7,783,300 South Dakota was third with \$6,379,700 and Utah fourth with \$5,029,800.

As far as statistics available at the end of 1929 indicated, the gold production of the world was practically unchanged in 1929, as compared with 1928. The failure of the gold mines to produce sufficient of the precious metal to meet the rapidly expanding monetary demands of the world had created a fairly serious situation. One suggested remedy was the restriction of the amount of gold allowed to be used in the arts, thus turning a larger percentage into government channels. The accompanying table indicates production by the several important countries in 1928 and 1929.

Country	1928	1929
United States	2,194,295	2,128,027
Transvaal	10,354,264	10,414,066
Canada	1,891,050	1,914,920
Mexico	699,102	680,000
South America	416,734	530,000
Rhodesia	576,000	560,000
Western Australia	393,000	480,000
Others	3,150,193	3,050,000
Total	19,652,711	19,674,638

Although many digges had been sung for the Witwatersrand, the great gold-producing centre of the Transvaal in South Africa, the area continued to set a new record each successive year. This process would not continue indefinitely, but with the development of three new mines in the eastern section—which should be producing in 1931—a serious decline within the next decade appeared unlikely. The United States, on the other hand, would probably lose its rank of second to Canada within three or four years. The rapid advance in the standards of living in the United States, without a corresponding increase in the return to the gold miner, was the cause of the decline. The percentage of gold produced by copper and lead mines as a by-product had been increasing, so that the United States gold-mining industry had been reduced far more than statistics would indicate. Canada has gone ahead rapidly in the last few years, too rapidly according to some. In 1929 the gold production was coming largely from two districts, Porcupine and Kirkland Lake, both in Ontario. Possibilities of expansion much beyond their present output hardly could be expected at these two camps and the hope for developing a large gold production from Canada must rest with recent discoveries in other areas. A 10 per cent increase over the present rate within the next two or three years could be safely predicted, however.

The principal chances of a large increase apparently must rest in Oceania, where a gold field of magnitude had been discovered in New Guinea and a large mine, Wiluna Gold, was being equipped for production in Western Australia. Transportation facilities were the greatest handicap to the development of the New Guinea field, which was described by Leslie Urquhart, prominent English financier and mining magnate as the most important discovery since the Witwatersrand.

**For Movement of Gold,** see FINANCIAL REVIEW **GOLDBERGER**, JOSEPH. American public-health official and research worker, died in Washington, D. C., Jan. 17, 1929. He was born in Austria-Hungary, July 16, 1874, and came to New York with his parents when he was 6 years old. He was educated at the College of the City

of New York and received his medical training at the Bellevue Hospital Medical College, after which he was resident physician at Bellevue Hospital, 1895-97. Following two years of private practice in Wilkes-Barre, Pa., he was commissioned assistant surgeon in the U. S. Public Health Service, becoming surgeon in 1912. At first, he was assigned to immigrant stations, but in 1904 he was transferred to the Hygienic Laboratory in Washington, for special research work. Dr. Goldberger made important investigations in connection with the study of typhoid, scarlet fever, yellow fever, dengue fever, measles, typhus fever, cholera media, diphtheria carriers, and influenza. His greatest contribution, however, and the one with which his name is internationally associated, was the discovery of the cause, cure, and prevention of pellagra. By experiments conducted in the rural districts on the South, where the diet was restricted, he learned that lack of fresh proteins caused pellagra, and that milk and fresh meat would furnish the necessary vitamin preventive and cure, which he called P-P. Continuing his researches, he discovered a cheaper source of this vitamin in fresh or dried yeast. This discovery was believed to have saved hundreds of lives during the Mississippi floods of 1927, when the Red Cross sent supplies of yeast to the people of that devastated region. Dr. Goldberger often risked his life in the course of his experiments.

**GOLD COAST.** A colony on the Gulf of Guinea in Africa belonging to Great Britain, bounded by the French Ivory Coast on the west, the French Sudan on the north, Togoland on the east, and extending on the south for 334 miles along the Gulf of Guinea, comprising, in addition to the colony proper, Ashanti and the Northern Territories. The area of the three divisions is estimated at 80,000 square miles, population at the census of 1921, 2,078,043, of whom 2165 were Europeans. The capital and chief town is Accra, with a population of 38,000. Other large towns are Cape Coast (15,000), Sekondi (16,000), and Keta (10,000). In 1927 there were 22 government schools and 234 assisted schools, which are under the control of various missions. The average attendance during 1927 at the primary and secondary schools was 29,640. There were also a large number of unassisted primary schools supported by the religious denominations, and University College for secondary education at Achimota.

Among the staple products, which also comprise the chief exports, are cocoa, palm oil, kola nuts, palm kernels, lumber, india rubber, manganese, gold, and diamonds. The imports in 1927-28 were valued at £13,770,542, the exports, at £14,350,355. The total value of the mineral products exported during the fiscal year ended Mar. 31, 1927, was £1,938,870—£803,369 for gold bullion, £715,382 for manganese ore, and £420,119 for diamonds. Revenue for the year ending Mar. 31, 1928, totaled £5,217,039, and expenditure, £4,714,047, both figures representing substantial increases over the figures for the previous year. The public debt on Mar. 31, 1928, was £11,791,000. In 1929 there were 394 miles of railway open to traffic and another hundred miles was under construction. Main roads extended for 1530 miles and secondary roads for 3157 miles in the Gold Coast, Ashanti, and the Northern Territories. Telegraph and telephone systems connected the principal towns. A total of 4,890-

400 tons of shipping, 2,835,491 tons of which were British, entered and cleared the ports during 1927. The Harbor of Takovadi, which was opened in March, 1928, offered the only complete shelter for ships of over 30 feet draught between Sierra Leone and Nigeria.

Ashanti, annexed by Great Britain in 1901, is under the Governor of the Gold Coast, although it has its own local laws and ordinances. The population at the census of 1921 was 407,000 of whom 400 were Europeans. Kumasi, with 20,000 inhabitants, is the chief town. In 1927 there were 1067 pupils in the government schools and 3210 in the mission schools. The forests in the western part are rich in mahogany, cedar, and other valuable woods, and in trees that yield rubber, oil and gum copal, and fruits. The cultivation of cacao and rubber in plantations is being extended. There is considerable gold mining. The local receipts in 1927-28 were £159,646, and local expenditures, including railway, posts, and telegraphs, were £377,863.

The Northern Territories, constituted a British protectorate in 1901, also are under the Governor of the Gold Coast but locally administered by a high commissioner, with his headquarters at Tamale. Area, 35,000 square miles, population at the census of 1921, 527,914, of whom only 49 were Europeans. Navajo is the chief town with a population of about 15,000. The chief crops are yams, millet, maize, rice, Guinea corn, and tobacco. Local revenue in 1927-28, £22,286, expenditure, £111,868. Governor of the Gold Coast in 1929, Sir Alexander R. Slater, (Chief Commissioner of Ashanti, John Maxwell, (Chief Commissioner of Northern Territories, Maj. A. H. C. Walker-Leigh.

**GOLDER, FRANK ALFRED** An American historian, educator, and director of the Hoover War Library, died at Palo Alto, Calif., Jan. 7, 1929. Born in Russia, Aug. 11, 1877, he was brought to the United States when 3 years old. After being graduated from Harvard in 1903, he studied in Paris and Berlin, and returning to Harvard, received the Ph.D. degree in 1909. He taught history at the University of Missouri (1908-09), at Boston University (1909), the University of Chicago (1910), and at the State College of Washington (1910-14). He next did research work in the Russian archives under the auspices of the Carnegie Institution. Returning to the State College of Washington in 1915, he remained with that institution until 1920, also continuing his investigations in Russia for the Carnegie Institution and the American Geographical Society in 1917. He served on Colonel House's staff of inquiry (1917-19), and did special work in Europe for the American Relief Administration (1920-23). Appointed assistant professor of history at Stanford University in 1921, he was made professor and director of the Hoover War Library in 1924, making valuable contributions to that collection until his death. Dr. Golder wrote extensively on relations between Russia and America including the following: *Russian Expansion on the Pacific* (1914); *Guide to the Materials for American History in the Russian Archives* (1917); *Bernad's Voyages* (1922); *John Paul Jones* (1927), and, with L. Hutchinson, *On the Trail of the Russian Famine* (1927).

**GOLF** Besides the fact that each of the major tournaments of 1929 brought to light some thrilling event, the 1929 season was remarkable for the reason that two of the biggest United

States tourneys were played on the Pacific coast. The Amateur and the Professional Golfers of America tests were both contested in California. The greatest happening of the golf season in all likelihood was the elimination of Robert Tyre Jones of Atlanta in the first round of the Amateur championship at Pebble Beach, Del Monte, California, in September by Johnny Goodman, an Omaha unknown. It was over the 18-hole round after Jones had flashed some unbeatable rounds in the preliminary play and had shattered the course mark on two occasions. After Jones left the field, the glamour departed and the semifinals found four elderly golfers—as the game grew—fighting for Jones's title. Harrison Johnston, Milwaukee player, defeated Dr. Willing of Portland, Oregon, in the final match and grasped the honors.

Three months before, however, Jones was at the top of his game and defeated a fine international field of amateurs and professionals in the National Open at the Winged Foot Golf Club, Mamaroneck, N. Y., in June. In the early rounds, Jones looked like a certain winner, but a heavy downpour on the day before the last round worked havoc with his game and he was forced to sink a long putt on the final green to tie the professional, Abe Espinosa, for the title. The play-off on the following day was the scene of one of the greatest debacles in the history of the game. Jones smothered his opponent and in thirty-six holes finished with a margin of twenty-three strokes.

Glenna Collett, defended her women's title at Detroit by playing some remarkable golf on three occasions when she seemed destined for defeat. Leo Diegel, Agua Caliente professional, was another who repeated his conquests for the second year, retaining both his P. G. A. honors and his California Open laurels. The British amateur, which had fallen to an American golfer only once, was won by a native, the giant Cyril Tolley, while Walter Hagen took the British open for the second consecutive year. Maunice J. McCarthy, Jr., Georgetown University golfer, did not defend his intercollegiate crown and this tourney, played at the same time in June as the National Open at Deal, N. J., went to T. Aycock of Yale. Princeton University garnered ten honors. McCarthy was victorious in the Metropolitan Championship, while Miss Maureen O'Connell captured the women's metropolitan honors. Other tournament winners were C. Kaufman, Public Links Championship, Aubrey Boomer, French Open, Eddie Hield, Canadian Amateur. In the Ryder Cup matches with England at Muirfield, the British downed the United States professionals, 7 to 5.

**GOOD, JAMES WILLIAM** An American lawyer, former Congressman, and Secretary of War in President Hoover's cabinet, died in Washington, D. C., Nov. 18, 1929. He was born near Cedar Rapids, Iowa, on Sept. 24, 1866, and was graduated in 1892 from Coe College and in 1893 from the law department of the University of Michigan. Admitted to the bar the same year, he began the practice of law in Indianapolis, Ind. He returned to Cedar Rapids becoming city attorney (1906-08), and was elected in 1909 to the Sixty-first Congress as a Republican Representative from the fifth district of Iowa serving until 1921. While in Congress, he was actively identified with the budget system, as one of its principal organizers. He was chairman of the appropriation com-

mittee of the House. During the War, he offered a resolution which effected the rise in a soldier's pay from \$15 to \$30 a month, but vigorously opposed the soldiers'-bonus bill after the War. He resigned from the House to resume law practice in Chicago as a member of the firm Good, Bobb & Wescott. In March, 1929, he became Secretary of War in President Hoover's cabinet. In the few months he served in that capacity, he began a study of the military organization of the United States with a view to reducing expenses.

**GORDON, THE REV. GEORGE ANGELO**, American Congregational clergyman, died Oct. 25, 1929, in Brookline, Mass. He was born in Aberdeenshire, Scotland, Jan. 2, 1853, and after a common-school education in Innes, came to the United States in 1871. He was graduated from the Bangor Theological Seminary in 1877, was ordained in the Congregational ministry in that year, and was pastor in Temple, Me., 1877-78. He then entered Harvard, where he was graduated in 1881. After serving as pastor from 1881 to 1883 in Greenwich, Conn., he accepted a call to the Old South Church of Boston, where he served with distinction until his retirement in 1927. In addition to his work as pastor, Dr. Gordon was university preacher at Harvard (1886-90 and 1906-09) and at Yale (1888-1916), Ingersoll lecturer at Harvard (1896), lecturer at Lowell Institute (1900), Laman Beecher lecturer (1901), and Nathaniel W. Taylor lecturer at Yale (1908), and overseer at Harvard University 1897-1916 and after 1925. Among his best-known books are *The Witness to Immortality* (1893), *The Christ of Today* (1895), *Immortality and the New Theology* (1897), *The New Epoch for Faith* (1901), *Ultimate Conceptions of Faith* (1904), *Through Man to God* (1906), *Religion and Miracle* (1909, rev. ed., 1910), *Revelation and the Ideal* (1913), *Aspects of the Infinite Mystery* (1916), *Humanism in New England Theology* (1920), *My Education and Religion* (1925).

#### GORDON BENNETT CUP COMPETITION

This annual international competition for acrobats on freely flying balloons is described under **AEROBATICS**.

**GORBITZ, OTTO**, A German dramatic baritone, died in Hamburg Apr. 13, 1929. He was born in Berlin, June 8, 1873. He received his entire musical education from his mother, Olga Nielitz, and made his debut as Matteo in Ambel's *Fra Diavolo* at the Hoftheater in Neu-Strelitz (Oct. 1, 1895). At the conclusion of a three-year contract there, he was two years at the Stadttheater in Breslau, and from 1900-03 he was engaged at the Stadttheater in Hamburg. During 1903-16 he was one of the principal baritones at the Metropolitan Opera House, where he made his American debut as Klingsohr in the first American production of *Parasfal* (Dec. 24, 1903). During the thirteen years of his engagement he sang this rôle no less than 57 times. Scarcely less famous was his impersonation of Beckmesser in *Die Meistersinger*. His voice, of large volume and sympathetic quality, had an unusual range of two and a half octaves, while his histrionic powers were of the first order. At the American premières he created the rôles of Moriccio in d'Albert's *Tiefeland* (1908), Kezal in Smetana's *Verkaufte Braut* (1909), Spielmann in Humperdinck's *Königskinder* (1910), Lampe in Blech's *Ierssegelt* (1912), and Ochs von Lerchenau in Strauss's *Der Rosenkavalier* (1913).

**GOTO, COUNT SHIMPEI**, Japanese statesman, died Apr. 13, 1929, in Kyoto, Japan. He was born in 1856 in Iwate-Ken, Japan, and studied medicine, going to Munich for research. He was appointed chief of the Nagoya Hospital, where he remained until 1878. In the War with China (1894-95), he was Sanitary Commissioner of the forces, winning recognition because of his success in preventing the spread of disease among returned soldiers. He was appointed director of the Civil Administration Bureau in Formosa in 1898, a position which he filled so successfully as to be made a baron in recognition of his services. He was elected the first president of the South Manchurian Railway in 1906. He became Minister of Communication in 1908 and also Deputy-President of the Colonial Bureau. In 1920 he was elected Mayor of Tokyo, where he conducted a campaign against what he considered to be the evils of the city's administration. In 1922 he was created viscount and in 1926, a count. Count Goto's independence in the conduct of his affairs as statesman brought him severe criticism, as well as admiration.

**GOUCHER COLLEGE**, A nonsectarian college for women in Baltimore, Md., founded in 1885. The enrollment for the first semester of the year 1929-30 was 930, distributed as follows: First-year students, 261, second-year, 240, third-year, 219, fourth-year, 206, graduate, 1. The faculty had 103 members. The endowment funds of the college amounted to \$2,390,647. The library contained 49,363 volumes. Acting President, Hans Froehlicher, Ph.D., elected after the death of Dr. William W. Guth.

**GOVIN, GŌDŌH, SIR LOMFR**, Canadian lawyer and statesman, died May 28, 1929, in Grondines, Province of Quebec, where he was born of French parents on Mar. 19, 1861. He was educated at Sorel and Lewis colleges and Laval University, and in 1884 he was admitted to the bar of Quebec. From 1897 to 1908, he was a member of the Provincial Parliament for Montreal, during which time, in 1898, he was also a member of the Public Instruction Council and, in 1900, an alderman of the City of Montreal. He was Minister of Colonization and Public Works in the Province of Quebec also in 1900. From 1905 to 1920, he was Prime Minister and Attorney-General of Quebec, and during 1921-24 he was Minister of Justice in Quebec, resigning because of ill health. In January, of 1929, he was made Lieutenant-Governor of Quebec. He was made an officer of the Legion of Honor in 1907. He was knighted in 1908 during the Quebec Tercentenary Celebration, and was created Knight Commander of St. Michael and St. George in 1913.

**GRÄDENER, grä'de-nē, HERMANN**, An Austrian composer, died in Vienna, September 17. He was born in Kiel, May 8, 1844. He received his musical education practically from his father, musical director at the University of Kiel, but also attended the Vienna Conservatory for a short time. In 1864 he joined the orchestra of the Vienna Hofoper as violinist, and for 35 years was professor of composition at the Vienna Conservatory. Among his pupils were Franz Schreker, Erich Königold and Oscar Strauss. His compositions are distinguished for solid workmanship and rare perfection of form. Besides a great deal of chamber music, he wrote a symphony in C minor, a concerto for piano, one for cello and one for violin, an important choral work with orchestra, *Der Spielmann*.

**GRAFLY, CHARLES.** An American sculptor, died May 5, 1929. He was born in Philadelphia Pa., Dec. 3, 1862, and after studying at the Pennsylvania Academy of Fine Arts and in Paris under Chapu and Dampé, he returned to Philadelphia and established a studio. In 1892 he became an instructor in sculpture at the Pennsylvania Academy of Fine Arts, and in 1917 instructor at the School of the Boston Museum of Fine Arts. His busts, life-sized figures, and ideal figures and groups usually in bronze, are well known, particularly his "Fountain of Man" and the "Symbol of Life." Those in public collections or as memorials include "Mauvais Présage," in the Detroit Museum, "Vulture of War," and "Truth," in the St. Louis Museum; "England" and "France," on the New York Customhouse, a bust of Dædalus and a nude, "In Much Learning," Pennsylvania Academy, and the General Reynolds Smith Memorial, Philadelphia. In recognition of his work, which is characterized by restraint and suaveness, he received numerous medals of award and honors from many societies.

**GRAHAM LAND.** See FALKLAND ISLANDS.  
**GRAIN** See AGRICULTURE, RYE; WHEAT.

**GRAM, (GREGERS) WINTHER WULFBERG** Norwegian jurist and statesman, died Aug. 1, 1929, in Oslo. He was born in Moss, Norway, was educated at Christiania (now Oslo) and Paris, and began the practice of law from 1876 to 1882, he was a Norwegian member of the International Tribunal in Egypt and the following year was Governor of Nordlands Amt. During 1884-89 he was justice of the Supreme Court, to which he returned in 1891. He was Minister of State at Stockholm in 1889-91 and from 1893 to 1898. In 1892-93 he was a member of the international court of arbitration which met in Paris to settle the Bering Sea controversy between Great Britain and the United States. He was appointed a member for Norway to the Court of Arbitration at The Hague in 1910, serving until 1906, and again serving from 1912 to 1918. He was referee (1903) in a case of arbitration between Germany, France, and England on one side, and Japan on the other in regard to taxes for legation houses at Tokyo, and in 1909 he was appointed to the court of arbitration between Norway and Sweden for the settlement of reindeer questions. He became a member of the Institut de Droit International in 1904. In 1915 he was again an umpire, this time in a dispute between the United States and Italy; and in 1919 he was chief arbitrator of the commission on Moroccan claims. He was a member of the organization committee of the Permanent Court of International Justice of the League of Nations.

**GRAND ARMY OF THE REPUBLIC, THE.** A patriotic order formed in 1866 in Decatur Ill., among a number of former soldiers who had served in the Civil War. The first post (No. 1) was organized in Springfield, Ill., receiving its charter from Dr. B. F. Stephenson who had been active in securing the formation of the organization and who became the Department Commander of the States. The purpose of the society is to "enjoy a companionship made sacred by common sufferings and sacrifices," its corner stones, "Fraternity, Charity, and Loyalty," demand the care and protection of sick and helpless comrades and their widows and orphans; the upholding of

all comrades in their worthy endeavors, and loyalty to the flag and laws of the Republic. Auxiliary orders are the Woman's Relief Corps, Ladies of the G. A. R., Sons and Daughters of Union Veterans, and their auxiliaries. In 1929 there were 24,662 active local posts with a membership of 32,592.

The sixty-third national encampment was held in Portland, Me., in September, 1929, while Cincinnati, Ohio, was chosen for the 1930 encampment. Delegates to the national encampment are chosen by the department encampments and those to the department encampments, held in June, by the posts. The officers elected for 1929-30 were: Commander-in-chief, Edwin J. Foster, Worcester, Mass.; senior vice commander-in-chief, Charles E. Nason, Portland, Me.; junior vice commander-in-chief, James W. Shields, Boise, Idaho; surgeon-general, Edward C. Cowan, Crawfordsville, Ind.; chaplain-in-chief, the Rev. J. King Gibson, Dayton, Ohio; trustee of the permanent fund, Louis F. Aronsberg, East Millsboro, Pa.; quartermaster-general, Cola D. R. Stowits, Buffalo, N. Y.; and adjutant-general, Wilfred A. Wetherbee, Boston, Mass. National headquarters are Room 27, State House, Boston.

**GRAPEFRUIT.** See HORTICULTURE.

**GRAPE, See HORTICULTURE**

**GRAPHITE** During 1928 the natural graphite sold or used by producers in the United States amounted to 5611 short tons valued at \$297,093, being divided between amorphous graphite, 2094 tons valued at \$43,320, and crystalline graphite, 2617 tons valued at \$253,773. The States producing crystalline graphite in 1928, in the order of their importance, were Texas, Alabama, New Jersey, and Georgia, while Rhode Island, Michigan, and Nevada produced amorphous graphite. Natural graphite is used chiefly in the manufacture of foundry facings, pigments and paints, crucibles, pencils and crayons, commutator brushes, stove polish, lubricants, retorts, and batteries. The United States also has an important industry in the manufacture of artificial graphite which since 1920 has exceeded annually the output of domestic natural amorphous and crystalline graphite. In 1927, the last year for which figures were available from the Acheson Graphite Company, which manufactures the artificial material at its Niagara Falls, New York, plant, 12,257,239 pounds were produced, although in 1923 the output had amounted to 26,701,015 pounds.

In addition to the natural production and the artificial material the United States in 1928 imported 17,842 short tons valued at \$801,559. This material came largely from Madagascar, Ceylon, Italy, and Japan, although the original source of the material was difficult to ascertain on account of various transshipments. In 1928 Czechoslovakia, with 32,332 metric tons, was the world's leading producer of natural graphite, followed by Austria with 24,226 tons, Chosen (Korea) with 22,830 tons, Germany with 17,404 tons, Ceylon with 14,576 tons, and Madagascar with 13,897 tons.

In 1929 there were few developments of note in the graphite industry, although there was an increased demand for the product. American operators with a production of from 15 to 19 per cent of the domestic supply were asking for an increased tariff, while graphite consumers advocated lower duties. In 1929 Alabama was regarded as the leading graphite producing State,

while Ceylon, Madagascar, Mexico, Chosen, and Canada were again the principal producing countries. In 1929 Madagascar was believed to have shipped about 7000 tons to England, 2500 to 3000 tons to the United States, 1500 to 2000 tons to both France and Germany, and 1000 tons to Italy. In Mexico production continued normal, while in Canada the Black Diamond Graphite Company, the principal producer, was idle during most of the year on account of flooded mines. Graphite was reported discovered in Namaqualand, South Africa. Imports of graphite into the United States in 1929 amounted to 23,961 tons valued at \$1,065,186.

**GRAVITATION.** See **PHYSICS**.

**GRAVITATIONAL CONSTANT.** See **PHYSICS**.

**GREAT BRITAIN.** UNITED KINGDOM OF GREAT BRITAIN AND NORTHERN IRELAND. A constitutional monarchy comprising England, Scotland, Wales, Northern Ireland, the Channel Islands, and the Isle of Man, capital, London, ruling sovereign in 1929, George V. The term Great Britain literally applies only to the island including England, Scotland, and Wales, but is often extended to include the other units of the United Kingdom. The British Empire comprises the United Kingdom, India, the dominions of Australia, Canada, Irish Free State, Newfoundland, New Zealand, and South Africa, and the various colonies, protectorates, dependencies, and other territories subject to the ultimate control of the British Parliament.

**AREA AND POPULATION.** The area of England, Scotland, Wales, the Isle of Man, and of the Channel Islands is 89,041 square miles, the area of Ireland, 32,580 square miles. (See **IRELAND**, **NORTHERN**, and **IRISH FREE STATE**.) The estimated population of England, Scotland, and Wales in 1928 was 44,375,000. For details of the census of 1921, see **NEW INTERNATIONAL YEAR BOOK** for 1923 and preceding years. The accompanying table from the *Statesman's Year Book* for 1929 gives a comparison of the estimated population (exclusive of army, navy, and merchant seamen abroad).

Year (30 June)	England and Wales	Scotland	Total of Great Britain
1914	46,960,684	4,747,167	41,707,851
1923	38,403,000	4,901,100	43,304,100
1924	38,716,000	4,881,677	41,627,677
1925	38,890,000	4,893,032	43,783,032
1926	39,087,000	4,897,000	43,964,000
1927	39,290,000	4,895,000	44,185,000
1928*	39,482,000	4,893,000	44,375,000

\* Provisional figures.

The movement of population in England and Wales in 1928 was Births, 660,207; deaths, 460,100; net increase, 302,810. For Scotland, the corresponding figures were 96,815; 65,263, and 32,955. In 1928 the number of British subjects emigrating to countries outside of Europe totaled 136,831 and the number of persons of British nationality who immigrated to Great Britain from non-European countries was 59,105. British emigrants in 1928 went mainly to British North America, 54,709, Australia, 28,714, the United States, 22,235, British South Africa, 7095; India and Ceylon, 6502, New Zealand, 4975. In 1927 the total British emigration was 153,505. The net migration in 1928 was 77,727 and in 1927, 97,790.

The British birth rate in 1929 fell to its lowest level, amounting to only 16.3 per 1000 inhabit-

ants, or 0.3 less than in 1927, when the previous low record was established. In the same year, the death rate rose to 13.4 per 1000, or 1.7 per 1000 above the 1928 rate.

The population classified as urban totaled 30,035,417 in 1921, or 79.3 per cent of the total. In spite of a loss of more than 1,000,000 men in the World War and of steady emigration, the population in 1928 was 2,661,000 greater than in 1914 and 405,000 greater than in 1926. The birth rate, which was 16.7 per thousand in England and Wales in 1928, has fallen steadily since the peak of 36.3 per thousand in 1876. The birth rate for the United Kingdom in 1927 of 17.1 per thousand was lower than that of France. The population of Scotland has shown a decrease since 1926. In 1928 the natural increase in the population of England and Wales was only 5 per thousand. Sir Charles Newman, chief medical officer of the Ministry of Health, estimated that the country was within sight of a stationary population. The density of the population in England, 701 to the square mile, is the highest in Europe.

Greater London, the largest city in the world, had a population in 1921 of 7,480,201 on the 443,449 acres covered by the metropolitan and city police districts. Registration London which coincides with the administrative county and nearly coincides with the London parliamentary boroughs, had a population of 4,484,523, with an area of 74,850 acres. The estimated population of Greater London in 1928 was 7,849,000. Birmingham, the second city of England, had a population in 1921 of 919,441 (estimated, 1928, 968,600). Liverpool continued to stand third, with 802,940 in 1921 (estimated, 1928, 872,900), and Manchester, fourth with 730,307 in 1921 (estimated 1928, 755,900). Other large cities with their populations are Sheffield, 490,639 in 1921 (estimated in 1928, 515,400), Leeds, 458,232 in 1921 (estimated in 1928, 476,500), Bristol, 376,975 in 1921 (estimated in 1928, 390,400). Glasgow is the largest city in Scotland with a population of 1,034,174 in 1921 (estimated in June, 1928, 1,061,900), Edinburgh is next with 420,264 in 1921 (estimated in June, 1928, 429,000). The chief city of Wales is Cardiff, which had a population of 200,184 in 1921 and an estimated population of 226,800 in the summer of 1928. The census of 1921 did not include Ireland. For the populations of Australia, Canada, India, and other British possessions, see articles under those titles.

**EDUCATION.** Elementary instruction is free and compulsory between the ages of 5 and 14. In 1929 the Labor government announced its intention of increasing the compulsory age limit to 15 years. In England and Wales in 1927-28, there were 21,332 schools, including public elementary, special, and certified efficient. The number of public elementary schools on Mar. 31, 1927, was 20,684 with 5,570,206 pupils on the registers and 165,010 teachers. There were also 576 special schools for the blind and deaf and for mentally and physically defective children, as well as 59 poor-law schools, 26 nursery schools, and 272 play centres. The number of secondary schools on the grant list in 1928 was 1329, with 377,540 pupils and 20,102 full-time teachers. In Scotland, there were 2903 primary schools with an accommodation of 865,674 pupils in 1926-27, the average number on the registers was 664,958 and the average attendance, 590,-

107. There were 18,673 certificated primary school-teachers and 50 assistant teachers. In 1926-27 there were four training centres and three training colleges with 2515 students. In 1927 there were 251 secondary schools with a total accommodation of 182,982 and an average register of 151,277. The accompanying table from the *Statesman's Year Book* for 1928 gives an estimate of the number of students and members of the teaching staff in the Universities of Great Britain in 1927-28

## BRITISH UNIVERSITIES

Universities	Number of professors, etc	Number of students
England		
Oxford	228 <sup>a</sup>	4,417 <sup>b</sup>
Cambridge	346	5,475 <sup>b</sup>
Durham (1831)	260	1,285 <sup>c</sup>

Totals of above	4,839	47,527

<sup>a</sup> Chancellors, 22<sup>b</sup> university professors and readers, and 1,000<sup>c</sup> teachers

<sup>d</sup> Undergraduates

<sup>e</sup> Internal students. In addition, there are external students, i.e., matriculated students who have not taken a degree nor been registered as internal students. The number of these is not ascertainable but is probably greater than 9000

<sup>f</sup> Includes evening students

<sup>g</sup> Excluding college tutors

At most of the universities and university colleges, women students are admitted on equal terms with men. There are, however, several colleges exclusively for female students: Bedford (62 teachers, etc., 600 students), Royal Holloway (35 teachers, 200 students), and Westfield (16 teachers, etc., 147 students), in London, Newnham (11 teachers, etc., 277 students) and Girton (11 teachers, etc., 263 students), in Cambridge, Lady Margaret Hall (8 teachers, etc., 131 students), in Oxford. (10 teachers, etc., 156 students), St Hugh's College (9 tutors, 150 students), St Hilda's College (11 teachers, 108 students), in Oxford. The Society of Oxford Home Students numbered 235 students in 1928. Women were first admitted to membership in Oxford University, and to take degrees, in October, 1920.

**AGRICULTURE** There were 14,258,000 acres of arable land, or 24 per cent of the total area of the United Kingdom, including Northern Ireland, under cultivation in 1928, in addition to 33,613,000 acres of permanent grass and pasture, and 301,000 acres of orchards, shrubs, and bushes. Crops were above the average in both yield and quality in 1928, although there was a further decrease in the acreage sown and market prices were not satisfactory. The wheat acreage in 1928 was 15 per cent less than in 1927, while the barley area showed 11 per cent increase for the year. The barley and oats crops were considerably larger than in 1927, as were the sugar beet and potato crops. The wheat yield was smaller. The acreage and production of the principal crops in the United Kingdom, including Northern Ireland, in 1927 and 1928, are shown in the accompanying table

## UNITED KINGDOM CROP AREAS AND PRODUCTION

Crop	Area <sup>a</sup>		Production <sup>b</sup>

Pigs	2,601,514	2,971,033	196,613	195,504

During recent years, the Government has sought to aid agriculture to recover from its depressed condition. In 1928 Parliament passed the Agricultural Produce Grading and Marketing Act, exempted farm lands from local taxation, and adopted an agricultural-credits act through which short term credits became available to agriculture in 1928, and long term credits in January, 1929.

**FISHERIES** The quantity and value of the British fish catch for 1927 and 1928 are given in the accompanying table

## BRITISH FISH CATCH, 1927 AND 1928

	1927	1928 <sup>a</sup>

Value of shellfish	523,854	527,267

<sup>a</sup> Provisional figures

**MINING AND MANUFACTURING** The coal industry plunged deeper into its long standing depression in 1928, which was the worst year on record, with the exception of 1920. The total output amounted to 237,800,000 tons, or 5 per cent less than in 1927, while exports were 50,035,000 tons, showing a decrease of 2 per cent in quantity and of 15 per cent in value, as compared with the previous year. The number of miners employed decreased by 70,000 to less than 900,000 during the year. Immediately after the World War, 1,300,000 miners, or one-fiftieth of the working population, were employed in the coal industry. Some slight improvement was recorded in 1929.

Efforts to reorganize the industry on a profitable basis and to stabilize production and shipments through restriction of the number of mines operating were reflected in numerous financial mergers in 1928. One company acquired control of between 80 and 85 per cent of the

country's anthracite output and a number of large units were established in the bituminous industry. Marketing agreements in some of the coal-producing regions involved restriction of output, price fixing, and the subsidizing of exports. The outputs of the principal mining and manufacturing industries in 1920, 1927, and 1928, are shown in the accompanying table.

# BRITISH MINE AND FACTORY PRODUCTION, 1928-28

Product	1926	1927	1928
Coal 1000 long tons	126,279	251,232	237,768

Cotton deliveries to spinners * 1000 bales	3,082	3,010	2,904
Boots and shoes 1000 pairs	114,601	114,900	115,000
Spirits, alcoholic 1000 proof gals	34,753	35,754	37,665
Beer 1000 barrels	26,766	25,100	25,360
Shipbuilding, vessels launched 1000 gross tons	640	1,226	1,446

\* Years ended July 31

The iron and steel industry was less depressed than the coal industry in 1928, but production of pig iron fell considerably below the level of the previous year. The machinery industries made noticeable progress, the electrical-appliances industry was slightly less active than in 1927, and the automotive industries were only fairly well employed. The largest tonnage since 1921, aggregating 1,444,000 gross tons, was launched by the shipyards, but orders declined steadily toward the end of the year. Conditions in the cotton,

ing, the building trades and the railway service, in which wages were reduced, wage rates changed but slightly in 1928. The collapse of speculation in 1929, removed many of the difficulties in the way of a trade revival, money, in particular, becoming much cheaper. At the end of the year, trade and industry were nevertheless reported in a hesitant condition, with the unemployment situation still acute and with the prospect of higher taxation.

COMMERCE While domestic exports in 1928 increased 2 per cent to £724,427,455, as compared with £709,081,263 in 1927, reexports of foreign and colonial produce declined in a similar ratio to £120,352,491 from the 1927 total of £122,952,839. Total exports were valued at £843,779,946 in 1928 and £832,034,102 in 1927, according to provisional figures. Among the domestic exports, coal, cotton goods, iron and steel, and tin showed declines but were more than offset by increases in exports of machinery, chemicals, ships, leather, and rayon and wool textiles. There was a drop in the reexports of raw cotton and crude rubber, but there were increases in reexports of foodstuffs and manufactured goods.

Imports in 1928 were valued at £1,196,940,354, as compared with £1,218,341,150 in 1927, or a decline of 1.8 per cent. Imports of grain and flour, wood and timber, raw rubber, iron and steel, automotive vehicles, and rubber tires suffered the heaviest decreases and there was also a falling off in the demand for foreign coal, iron, and steel. The unfavorable trade balance of £353,160,408 (\$1,718,000,000) was smaller than in any year since 1924. The values of imports and exports (excluding the bullion, specie, and foreign merchandise transhipped under bond) for the years 1926, 1927, and 1928 are given in the accompanying table.

Board of Trade figures for 1929 showed an increase of £26,000,000 in total imports, an increase

## UNITED KINGDOM FOREIGN TRADE VALUES

Year	Imports £	Domestic Exports £	Reexports £	Total Exports £
1926	1,241,361,277	653,046,909	125,494,968	778,541,877
1927	1,218,341,150	709,081,263	122,952,839	832,034,102
1928 *	1,196,940,354	723,427,455	120,352,491	843,779,946

\* Provisional figures

woolen, and linen-textile industries were unfavorable, but rayon production was much larger than in the previous year and exports increased to a total of about \$50,000,000. The chemical industry experienced a better year. Steel production in the calendar year 1929 reached a post-war peak of 9,654,700 tons, the highest output since 1917.

In general, industrial profits in Great Britain fell off during the fiscal year 1928-29, as compared with the previous year, according to a survey made by the *Times Trade and Engineering Supplement*, London. Of 122 firms distributed among 13 main industries, those in 10 industries showed a lower ratio of profits to capital, three industries showed a higher ratio. The actual profits were generally above the low levels reached after the 1926 coal strike, dividends evidenced a downward trend. In 1929 industrial and trade conditions improved toward the end of the year. Exports were higher and the number of unemployed showed a decrease from 1,520,730 on Dec 30, 1928, to 1,510,200 on Dec 30, 1929 (see UNEMPLOYMENT). Outside of coal min-

ing, of £6,000,000 in exports of British goods, and a decrease of £10,500,000 in reexports. The respective figures were: Imports, £1,221,591,000. British exports, £729,555,000. Reexports, £109,742,000. Exports of manufactured articles declined by £5,000,000, while exports of coal increased by £9,500,000. The Board of Trade estimated the credit balance for both visible and invisible trade in 1929 at £151,000,000, as compared with £152,000,000 in 1928, £114,000,000 in 1927, and an adverse balance of £7,000,000 in 1926. Invisible exports in 1929 were calculated at £517,000,000, as compared with £510,000,000 in 1928, and the net national shipping income at £130,000,000, income from overseas investment at £285,000,000, net government receipts from overseas at £22,000,000, and income from other sources at £65,150,000.

In 1929 the United States continued as the chief source of British imports, supplying 15.8 per cent of the total. Argentina and British India, the two sources next in importance, supplied 6.4 per cent and 5.4 per cent, respectively. Imports from the United States showed a slight falling off from

the previous year, due to smaller imports of wheat and flour and the elimination of coal imports.

The principal countries which supplied Great Britain's import requirements, with the values of the goods supplied, are given in the accompanying table.

Other countries taking substantial allotments of the United Kingdom's exports in 1928 were: New Zealand, £19,297,000, Italy, £14,354,000; Denmark, £9,763,000, Sweden, £9,715,000, Switzerland, £7,923,000, Norway, £7,939,000, Poland, £5,253,000, Japan, £14,539,000, Straits Settlement, £11,400,000; China, £15,718,000,

#### PRINCIPAL SOURCES OF IMPORTS INTO THE UNITED KINGDOM

Country of origin	Value	1926	Value	1927	Value	1928 *

Russia	24,130,217	1.9	21,052,000	1.7	21,548,000	1.7

\* Provisional figures

Of total imports into the United Kingdom, 30.4 per cent came from other parts of the British Empire in 1928, 30.1 per cent in 1927, 30.3 per cent in 1926, and 32.5 per cent in 1925. As shown in the accompanying table, the import value of articles falling in the classifications of food and drink, raw materials, and manufactured articles, showed aggregate declines in 1928, as compared with the previous year, while imports of animals not for food and of parcel-post articles increased in value. Domestic exports of food, drink, and tobacco, manufactured articles, animals not for food, and parcel-post goods showed varying increases in value over the previous year, while the export value of raw materials declined, as shown

Hong-Kong, £5,476,000, Ceylon, £5,971,000, Brazil, £16,031,000, Chile, £5,129,000, Egypt, £11,186,000, Nigeria, £8,943,000, and the Gold Coast, £4,077,000. The exports and imports of gold were unusually heavy in 1928, the exports more than doubling from £29,060,010 in 1927 to £60,523,701 in 1928, while the imports increased from £32,404,512 in 1927 to £47,808,055 in 1928. Silver imports and exports also increased, imports totaling £10,200,223, as compared with £7,173,051 in 1927 and exports, £9,188,769, as compared with £7,145,577 in 1927. In 1929 imports from the United States totaled £847,979,856 and exports to that country amounted to £329,766,636,000.

FINANCE For the fiscal year ending Mar 31,

\* Provisional figures.

The British Empire absorbed about 45 per cent of the exports of the United Kingdom in 1928 and the United States, about 6 per cent of the total. The exports were distributed by grand divisions as follows: Europe, 30 per cent, Asia, 23.5 per cent, North America, 14 per cent, Oceania, 12 per cent, Africa, 12 per cent, and South America, 8.5 per cent. Countries taking the bulk of the domestic exports of the United Kingdom in 1926, 1927, and 1928 are indicated in the accompanying table.

1929, total government revenues amounted to £836,435,000 (£4,070,511,000) and total expenditures to £818,041,000 (£3,980,966,000), leaving a surplus of £18,394,000, as against a surplus of £14,239,000 in the preceding year. The ordinary receipts of £758,104,000 were larger than the budget estimates, chiefly because of unexpectedly large estate duties, and larger returns from income and stamp taxes and from special receipts. The 1928-29 budget created a new fund through a customs duty of \$0.08 a gallon on

## PRINCIPAL DESTINATIONS OF EXPORTS OF UNITED KINGDOM GOODS

gasoline for facilitating local taxation reform

Of the total expenditures, the ordinary expenditures of £682,201,000, or £739,710,000 including the sinking fund, exceeded the budget estimates. As other costs of the national debt were greater by £7,491,000 than anticipated, only £57,500,000 was applied to the sinking fund instead of the £65,000,000 contemplated in the estimates. Thus, although total expenditures were £2,154,000 under the estimates, the apparent improvement was due to the reduction in sinking-fund payments. The items making up the total of ordinary receipts and expenditures in 1927-28, 1928-29, and 1929-30 are shown in the accompanying table.

## UNITED KINGDOM ORDINARY BUDGET ESTIMATES FOR 1929-30, COMPARED WITH RETURNS FOR 1927-28 AND 1928-29

(b) Not available, included under "All other"

Some changes in accounting methods will be noticed in the table. Prior to 1928-29, the financial accounts included the gross receipts and expenditures for posts, telegraphs, and telephones, as well as the revenue from motor-vehicle duties and the expenditure of that revenue on the road fund. After that year, the budget accounts showed only the net receipts for posts, telegraphs, and telephones and only the ex-

chequer share of motor-vehicle duties, the road fund having been deducted. The debt service after 1923 included contributions to the new sinking fund.

Chancellor of the Exchequer Winston Churchill's budget for 1929-30, made public in the spring of 1929, was noteworthy principally for its abolition of the duty on tea, which produced about £8,000,000 revenue annually. The tea tax had been one of the stand-bys of British taxation since the days of Queen Elizabeth. It was also announced that the Government would proceed to relieve agriculture from taxation immediately, instead of waiting for the general application of its derating plan in October. Taxes on betting were repealed, but license duties were imposed on bookmakers and on their office telephones, and a duty on totalizer bets. The railway passenger duty was withdrawn and an increase of manufacturers' duties was imposed to counterbalance the derating of breweries and tobacco factories. An extra grant of 15 per cent was provided for roads and bridges if half the workers employed on such projects came from depressed areas. There was also a reduction of the tax on heavier motor-cycles and trucks.

A surplus of £11,980,000 was estimated for 1929-30 in the Churchill budget, but new obligations incurred by the Labor government following its advent to power in June were so extensive that at the end of the third quarter of the fiscal year (Dec. 21, 1929), it was estimated there would be a deficit of about £35,000,000. On the same date, the revenues had fallen £19,942,947 below, and expenditures had increased £17,109,002 above, estimates. The financial commitments for 1929 and 1930 involved in new legislation passed under the auspices of the Labor party included Unemployment Insurance Act (1929, £3,500,000, 1930, £3,500,000), Unemployment Insurance Bill, no. 2, 1929, £3,750,000, 1930, £8,500,000; Widows', Orphans', and Old-age Contributory Pensions Bill (1929, £40,000, 1930, £5,300,000), for the development of agriculture, £1,000,000; local capital grant of £500,000 to the Local Authorities Fund (1929, £40,000, 1930, £750,000), Housing Act (1929, £13,000, 1930, £100,000), and Civil-service Bonus (1929, £800,000). The total of these commitments was placed at £8,243,000 for 1929 and £18,967,000 for 1930.

On May 31, 1928, the total debt of the British Government amounted to £7,630,973,000 (£37,136,130,000), while the unpaid loans extended by it to the Allied Powers, the dominions, colonies, and other sources totaled £2,133,600,000. The debt amounted to \$813 per capita and was three times as large as that of France,

the European country carrying the next heaviest debt. Besides unpaid loans, the Government held Suez Canal shares and other assets to the value of £132,035,000. The foreign debt consisted mainly of that to the United States, which was reduced from \$4,470,847,000 on Mar 31, 1929, to \$4,428,000,000 on Dec 16, 1929. On the latter date, the total of payments to the United States since the funding of the British debt amounted to \$1,124,970,000, of which \$174,000,000 was for repayment of principal. In the fiscal year 1928-29, the total debt was reduced by about £103,000,000. The floating debt, consisting of treasury bills and loans and means advances, was reduced from £1,272,000,000 on Mar 31, 1921, to £737,345,000 on Mar 31, 1929.

New capital raised in the United Kingdom by public issue in 1928, 1929, and 1930, for national purposes, amounted to £362,519,000, the highest total for any year after 1920. In 1929 there was a sharp decline in new capital raised. About 60 per cent of the 1928 total was for domestic purposes, 24 per cent was for other parts of the British Empire, and 16 per cent was for foreign issues. The war-time conversion treasury-note issue was a "big" feature in 1928 with the note issue of the Bank of England and the total note issue of the country was again centred in the bank, the fiduciary limit under normal conditions being fixed at £260,000,000.

London's position as an international financial centre was severely tried in 1929, due to the steady flow of funds to New York during the first half of the year, the temporary advances required by Germany, and withdrawal by France of a substantial part of the large balances maintained in London. The activity reached its climax in January and Europe during the year and was an appreciable element in the strain. In January, the Bank of England was forced to increase its rate from 4½ to 5½ per cent to prevent the further outflow of gold. This replenished the gold supply by nearly £14,000,000, but, by the end of May, the outflow of gold commenced again, reducing the bank's gold stock to £132,000,000 in September. On September 26, the bank rate was again raised, this time to 6½ per cent, the highest in eight years. Gold recommenced its inward flow and, on November 21, the rate was reduced to 5½ per cent. Foreign loans floated in Great Britain in 1929 totaled \$541,468,153, as compared with \$768,300,000 in 1928. The 1929 figure was only \$130,000,000 short of the total foreign loans issued in the United States.

**SHIPPING.** On June 30, 1928, the British merchant marine consisted of 8204 vessels of 19,875,000 gross tons, of which 19,754,000 gross tons represented vessels moved by steam or other power. The number of vessels in the foreign trade entering British ports in 1928 totaled 83,732 of 90,442,000 net registered tons, while vessels clearing numbered 84,421 of 91,297,000 net registered tons. British shipping generally found the demand for tonnage poor in 1928, although it improved toward the end of the year. For statistics concerning the vessels launched during the year in Great Britain, see **SHIP-BUILDING AND SHIPPING**.

**RAILWAYS.** The depression in the coal trade and in the heavy industries and in motor competition in both passenger and freight business resulted in an unsatisfactory year for the

British railways in 1928. Railway freight tonnage and receipts were much smaller than in the previous year and the receipts from passenger traffic decreased by 2 per cent. The four privately owned systems into which the railways are divided all together failed by \$44,115,640 to earn the "standard revenues" during the year, which was the first in which the standard schedule of fares and charges determined in the Railway Act of 1921 became operative. There was a \$9,000,000 decrease in net income for the year, while gross receipts fell by \$32,000,000. Statistics of the railways for Great Britain only in 1926, 1927, and 1928 are shown in the accompanying table. The total investment in roads of the four companies at the end of 1928 amounted to \$5,801,023,458, as against \$3,787,534,391 at the close of 1927. The total investment in all railway facilities and equipment was \$4,623,507,570, as against a 1927 investment of \$4,609,478,249, and the respective figures for the total capital investment in all railway services were \$5,455,727,200 and \$4,437,603,300.

\* Excluding livestock.

\* Standard gauge only.

\* Including miscellaneous receipts not shown separately.

The London, Midland, & Scottish Railway failed by £4,056,622 to earn the fixed standard earning in 1928, the London & Northeastern, by £3,609,974; the Great Western, by £1,254,900, and the Southern, by £237,067. An adjustment of the tariff schedules in an attempt to produce the standard revenues for each of the four companies was undertaken by the Railway Rates Tribunal in 1929. A further decrease of about £1,750,000 in passenger-traffic revenue occurred in 1929, according to the London Times. The railways were carrying more passengers than ever before, but the wide extension of cheap-ticket facilities intended to arrest the loss of passengers had resulted in decreasing revenues from this source.

During 1928 there were 460 people killed and 24,324 injured in railway accidents in Great Britain. On Sept 22, 1929, the Southern Railway, which possessed 1,100 miles of any of the electric lines, began to operate all its electric trains on the third-rail direct-current system. Railway improvements costing about £20,000,000 were projected in 1929. The underground group in London planned to extend the Piccadilly line northward from Finsbury Park to Cockfosters, and the District Railway westward from Hammersmith to Northfields. The doubling and quadrupling of tracks,

electrifications of certain sections, improvement of stations and of goods accommodation, and the conversion of old rolling stock were planned by other railways. The underground group expected to spend £13,000,000 on its extensions and improvements requiring three years for completion.

**OTHER COMMUNICATIONS** In 1928 the government-owned telegraph and telephone systems had 363,000 and 7,278,000 miles of wire, respectively. Gross receipts of the postal service were £42,998,000, of the telegraphs, £5,011,000, and of the telephone system, £18,875,000. In 1928 civil airplanes flew 1,011,000 miles, carrying 27,659 passengers and 771 tons of goods and mail. Regular air service from England to India was established early in 1929, and in September, 1929, a night-and-day air-taxi service was established in London, to provide immediate service to all parts of Europe.

Plans for state contributions toward extensive road-construction projects as an aid to the solution of the unemployment problem were formulated by the Labor government during 1929 and by the end of the year 30 of the county boroughs in the industrial north and others in various parts of the country had submitted five-year construction programmes, to cost about \$109,496,000. In order to obtain the state subsidy, preference in employment upon roads must be given to married men resident in the county. A number of the programmes were approved and were to be commenced at an early date.

**ARMY AND NAVY** The military system of the United Kingdom provides for a regular and territorial army and a reserve. Troops in the army serve both at home and abroad. Territorial troops serve only at home in peace times. The regular army in 1929-30 totaled 206,655, of whom 59,987 were in India. The strength of the territorial army on Dec. 1, 1928, was 146,266 (See **MILITARY PROGRESS**). The accompanying table from the *Statesman's Year Book* for 1929 shows the number of classes of the more important units of the British fleet, ships and vessels of the dominion.

Class	Completed by end of		
	1926	1927	1928
Battleships and battle Cruisers	22	20	20
Cruisers	49	50	50
Aircraft carriers and tenders	7	7	7
Flotilla leaders and destroyers	174	174	157
Submarines	56	56	51

**GOVERNMENT** George V, born June 3, 1865, was the reigning monarch during 1929. He succeeded his father, Edward VII, on May 6, 1910. The cabinet during the first part of 1929 was as follows: Prime Minister, Treasury, and Leader of the House of Commons, Stanley Baldwin; Foreign Affairs, Sir J. Austen Chamberlain; Privy Seal and Leader of the House of Lords, Marquis of Salisbury, President of the Council, Earl of Balfour; Chancellor, Lord Hailsham; Chancellor of the Exchequer, Winston S. Churchill; Home Affairs, Sir William Joynson-Hicks; Colonies and Dominions, Leopold C. M. S. Amery; War, Sir L. Worthington Evans; India, Viscount Peel; Air, Sir Samuel Hoare; Admiralty, W. C. Bridgeman; President of the Board of Trade, Sir Philip Cunliffe-Lister; Health, Arthur N. Chamberlain; Agriculture and Fisheries, Lieut.-Col. Walter E. Guinness; Secretary for

Scotland, Sir John Gilmour; Education, Lord Eustace Percy; Labor, Sir Arthur Ramsay-Steel-Maitland; Chancellor of Duchy of Lancaster, Lord Cusheundun; First Commissioner of Works, Marquis of Londonderry; Attorney-General, Sir Thomas W. H. Inskip; Pensions, George C. Tyron; Transport, Wilfrid W. Ashley; Solicitor General, Sir Frank Boyd-Merriman; Postmaster General, Sir William Mitchell-Thomson; Lord Advocate, William Watson; Solicitor General for Scotland, A. M. MacRobert. For changes in the cabinet, see below, under *History*. The composition of Parliament following the general election of May 30, 1929, was as follows: Labor, 288; Conservatives, 260; Liberals, 59; Independents, 8.

## HISTORY

The advent of the Labor government to power on June 5 following its great gains in the general election of May 30, was perhaps the outstanding even in a year which contributed an unusual number of significant developments to the chronicle of British history. The formation of the second Labor cabinet by Premier Ramsay MacDonald was followed by a drastic reorientation of foreign policy, which bore fruit in at least a temporary abandonment of Anglo-American naval rivalry, the calling of the five-power conference for the reduction of naval armaments in London for Jan. 21, 1930, the offer of virtual independence to Egypt and Iraq, the resumption of diplomatic relations with Soviet Russia, and a new and unexpectedly firm stand with regard to Great Britain's participation in the settlement of the reparations problem, and increased cooperation in the work of the League of Nations.

At home, the new government extended social welfare legislation, such as old-age and unemployment insurance, in a manner which threatened a budget deficit and an increase in taxation (see under *Finance* above), attacked the unemployment problem apparently without great success, and secured the passage of a new law intended to revive the sadly depressed coal industry. The year also was marked by the recovery of King George from his serious illness of the previous winter, by the development of a serious threat of revolution in India, the quiescence of the Prayer Book dispute which in 1928 seemed to threaten the disestablishment of the Church of England, and by further movements toward unity among the religious bodies. Industrial conditions in general showed improvement, except for several important industries. There was marked progress toward conservation of Britain's natural beauties. On the whole, the year ended with the nation in a much more optimistic frame of mind than at its opening.

**DOMESTIC POLITICS** The outcome of the general election of 1929 was accurately forecast by the results of more than 50 by-elections held in the interval between the Labor party's accessions to office in 1924 and 1929, through which the party more than doubled its representation in Parliament. The failure to solve the unemployment problem, the continuance of the depression in the coal and other important industries, and the growing naval rivalry with the United States all contributed to bring about the overthrow of the Conservative government, which had held an unusually long tenure of office—since November, 1924. The Conservatives

campaigns on their record for social legislation, appealing to the country to repudiate the Labor party's socialistic programme. They proposed measures for the relief of industries from local taxation, for the "safeguarding" of certain important industries, and for the reform of local government.

The Labor programme, while endorsing the Liberal proposal of free trade, declared this was insufficient. It promised to solve the unemployment problem by establishing the 48-hour week throughout industry, enforcing international labor standards, raising the school-leaving age from 14 to 15 years, and the creation of a superannuation scheme for aged miners. Unemployment relief and the repeal or amendment of the Trades-disputes Act also were included in the Labor platform. Labor attacked the Conservative government in the foreign field for the rupture with Russia, the failure to evacuate the Rhineland, the breakdown of the Geneva Conference on Naval Disarmament in August, 1927, the Anglo-French Naval Agreement in July, 1928, and the increasingly difficult relations with the United States.

Labor, in an important declaration of foreign policy, announced that it stood for the complete remuneration of the right of private war and private blockade, the full acceptance of the new doctrine of the freedom of the seas under international regulation, for cooperation in the League of Nations' sanctions against a state which resorts to war in breach of its covenants, and for the development and codification of international law on the assumption that private war and private blockade are international crimes.

The voting of May 30 resulted, in round numbers, as follows: Conservatives, 8,506,000; Labor, 8,292,000; Liberals, 5,178,000; Independents, 251,000; Communists, 50,614. Labor made gains which exceeded the hopes of its most optimistic supporters, securing 288 of the 415 seats in the House of Commons, as against 260 seats by Conservatives, 59 by Liberals, and 8 by Independents. Premier Stanley Baldwin resigned on June 4 and on the following day the King called J. Ramsay MacDonald to form a new cabinet. The new ministry was announced on June 7 as follows: Prime Minister and First Lord of the Treasury, J. Ramsay MacDonald; Lord Chancellor, Lord Justice Sankey; Lord President of the Council, Lord Parmoor; Lord Privy Seal and Deputy Leader of the House of Commons, J. H. Thomas; Chancellor of the Exchequer, Philip Snowden; Secretary of State for Foreign Affairs, Arthur Henderson; Secretary of State for Home Affairs, J. R. Clynes; Secretary of State for the Colonies and Dominions, Sidney Webb (Lord Passfield); Secretary of State for War, Tom Shaw; Secretary of State for India, Captain Wedgwood Benn; Secretary of State for Air, Lord Thomson; First Lord of the Admiralty, Albert V. Alexander; President of the Board of Trade, William Graham; President of the Board of Education, Sir C. P. Trevelyan; Minister of Health, Arthur Greenwood; Minister of Agriculture and Fisheries, Noel Buxton; Minister of Labor, Miss Margaret Bonfield; First Commissioner of Works, George Lansbury; Secretary for Scotland, William Adamson; Chancellor of the Duchy of Lancaster, Sir Oswald Mosley. On August 22, the post of Minister of Transport, occupied by Herbert Morrison, was raised to cabinet rank.

As in 1924, Labor entered office without the votes required to carry through its programme unaided. Lacking 20 votes of a majority, the Labor government was forced to depend on Liberal support. Lloyd George, the Liberal leader, announced following the election that he regarded the Liberals as holding the fate of the new government in their hands. Liberal support would be forthcoming for progressive measures in foreign policy and for a resolute attack upon the unemployment problem, he said, but would be withdrawn if the Labor party attempted to put its Socialistic doctrines into practice. On November 28, the Conservative and Liberal leaders combined against the ruling party on the new dole bill and only the absence of a large number of their followers from the House of Commons prevented the defeat of the Labor government. On a number of other questions during the year, Labor maintained itself only by narrow margins.

As was generally expected, the Conservative policy of protection was discarded and a return to free trade decreed by the new government. Premier MacDonald announced in his address, at the opening of Parliament July 3, that the existing safeguarding duties would not be renewed when they expired and that they might be repealed at an earlier date. On a vote taken July 9, the Conservative proposal for free trade within the Empire and for a tariff on foreign goods was rejected by the combined Laborites and Liberals by a vote of 340 to 220.

Parliament adjourned July 26 without any serious attempt on the part of Conservatives or Liberals to embarrass the new government, but with evidences of restiveness among the more radical members of the Labor party at the moderation of its programme. During the last week in July, a strike in the Lancashire cotton industry, involving some 500,000 operatives, threatened to precipitate a cabinet crisis, but the arbitration of the dispute was agreed upon, following the intervention of Premier MacDonald. A settlement, announced August 22, fixed the reduction of wages at a 6½, in place of the 12½ per cent reduction originally imposed.

With his prestige greatly increased by the success of his visit to the United States and Canada during the summer, Premier MacDonald returned for the reassembling of Parliament on October 29 to face many pressing problems. In the session which followed, his government carried through a number of its proposals for social legislation, its unemployment-insurance measure was passed December 16 by a vote of 273 to 199, after a move for a larger dole by the Left wing of the Labor party had been rejected, its bill for the rehabilitation of the coal industry was adopted December 19, and other measures were enacted providing for widows', orphans', and old-age-contributory pensions, the development of agriculture, housing improvement, and a civil-service bonus.

The coal bill provided for the reduction of working hours in the pit bottom from eight to seven and one-half, the gradual purchase by the state of mineral rights, and the creation of a statutory obligation upon the mine owners to conform to recognized district marketing schemes for regulating their output and prices. The widows' pension bill extended the 10-shilling weekly pension to approximately 500,000 widows who were unprovided for by the original meas-

## TWO BRITISH STATESMEN

ure passed by the Conservative government. Its original cost to the state was placed at \$40,000,000 annually. Other measures were introduced by the Labor government to facilitate slum clearance and town planning, land drainage, and the reform of factory laws.

The Government's efforts to relieve unemployment were outlined by J. H. Thomas, Minister in Charge of Employment, before Parliament on November 4. He reported projects already begun to cost about \$200,000,000, including the development of water-supply systems and the improvement of railroads. He also reported optimistically upon his visit to Canada during the summer, where he sought to extend the market for British coal, iron, steel, and other products. For other details of the unemployment situation, see UNEMPLOYMENT, under *Great Britain*.

**ANGLO-AMERICAN RELATIONS** Increasing irritations in the relations between England and the United States and the growing naval rivalry following the collapse of the Geneva Disarmament Conference in 1927 led to a demand in both countries for an effort to smooth out these difficulties. President Hoover gave early evidence of his willingness to reopen the naval question and the American proposals, as set forth by the Ambassador to Belgium, Hugh Gibson, before the Preparatory Disarmament Commission of the League of Nations, were approved by Sir Austen Chamberlain, the Conservative Foreign Secretary, before the British House of Commons on April 24.

Eleven days after he was called upon to form the Labor cabinet, Premier MacDonald met the American Ambassador to the Court of St James's, Charles G. Dawes, at Forres, Scotland, where discussions were initiated upon the problem of naval reduction. In July, the Premier announced in Parliament that work on two cruisers, two submarines, and a submarine-depot ship had been suspended. On October 4, MacDonald arrived in the United States, announcing that in addition to discussing the naval problem, he hoped to develop "the closest possible understanding" between the two countries. He spent 12 days in the United States, six of them in Washington and at President Hoover's summit camp on the Rapidan. There were two concrete and immediate developments from his conversations with the President. On October 8, Great Britain sent invitations to the United States, France, Italy, and Japan, to attend a five-power naval conference in London the latter part of January, and on October 9, Premier MacDonald and President Hoover issued a joint statement summarizing their discussions and the conclusions arrived at. The Kellogg-Briand Peace Pact had been the starting point of the discussions, the statement said, and the main conclusion arrived at was that "On the assumption that war between us is banished, and that conflict between our military and naval forces cannot take place, these problems have changed their meaning and character, and their solution, in ways satisfactory to both countries, has become possible." Later, in New York, Mr. MacDonald made it clear that no exclusive understanding between the two countries was contemplated.

Having successfully dispelled the suspicions of other nations concerning a possible military alliance between the English-speaking nations, thus giving greater prestige to the Kellogg-

Briand Pact, and having brought about a greatly improved status in Anglo-American relations, the Premier next visited Canada.

The Labor leader was congratulated by all parties upon his return from America, but the limitations imposed upon his desire for naval reductions at the January conference were indicated by the close margin of eight votes by which the Government's Coal-mines Bill was adopted shortly before the adjournment of Parliament for the Christmas holidays. On the other hand, the announcement that King George had consented to open the naval parity, lent considerable strength to MacDonald's hand. The Premier stated on November 9 that the conference would not discuss the question of the freedom of the seas. On November 13, the Government announced that it had ordered work on the Singapore naval base to be slowed, pending the outcome of the conference. Negotiations between the five Powers invited to the conference continued to the end of the year. For the policies laid down by the other Powers to govern their participation in the naval conference, see FRANCE, ITALY, JAPAN, and the UNITED STATES, under the sections on *History*.

**OTHER FOREIGN RELATIONS** The Labor government seemed no less successful in the conduct of most other aspects of British Foreign relations. The proposed treaty offering virtual independence to Egypt, while it had not been accepted by the Egyptian Nationalist Government up to the end of the year, disposed of the critical situation aroused by the Nationalist agitation against British control. See EGYPT, under *History*.

The negotiations for the resumption of relations with Russia were commenced soon after the formation of the Labor government, but were broken off in July when the Russians rejected the British demand for a guarantee of payment of British debt claims. A new law and the cessation of Communist propaganda as a preliminary to any settlement. In September, the British withdrew from this position and a protocol signed October 3 restored full diplomatic relations with the understanding that debt claims and similar matters would be settled later by negotiation. The protocol bound both governments to refrain from subversive propaganda and to use restraint upon all persons or organizations within their jurisdiction. The agreement was approved by the House of Commons on November 5, the vote being 324 to 199, with the Laborists supporting the Government. The House of Lords, however, on December 4 voted 43 to 21 in favor of a motion stating that at the moment diplomatic recognition of the Soviet regime was undesirable. Diplomatic relations with Russia were resumed December 20, when the Soviet Ambassador, Grigori Y. Sokolnikov, presented his credentials to the Prince of Wales, who acted for King George. Formal pledges on the subject of propaganda were then exchanged by the Soviet Ambassador and Foreign Secretary Henderson. See RUSSIA, under *History*.

Other developments in foreign policy under the Labor government were the evacuation of the Rhineland by British troops during September, the successful demand of the British delegation at The Hague Reparations Conference in August for a larger share of German reparations than was allotted to Great Britain under the original Young Plan (see REPARATIONS), the

signing by Great Britain at the Tenth Assembly of the League of Nations in September of the so-called optional clause of the World Court statute, binding the country to submit international disputes to the compulsory jurisdiction of the Court (see *WORLD COURT*), and the submission to the League Assembly by Premier MacDonald and Foreign Minister Henderson of proposals for the revision of the League Covenant in line with the Kellogg-Briand Peace Pact. On December 13, the British Foreign Office issued the White Paper in defense of the signature of the optional clause of the World Court which advanced the revolutionary suggestion that, under the Kellogg-Briand Pact and the Covenant of the League of Nations, there can be no neutrals in future wars so far as signers of the optional clause are concerned. Political friends of the League Covenant and the Kellogg-Briand Pact have deprived nations of the right to employ war as an instrument of policy and have forbidden states which have signed them to give aid and comfort to the offender, the White Paper went on to say, "As between such states there has been, in consequence, a fundamental change in the whole question of belligerent and neutral rights."

Relations with the Nationalist Government of China became more friendly during the year, the British giving up their perpetual leasehold on the Chungking concession and agreeing in theory to the Nationalist programme for the abolition of extraterritoriality on Jan. 1, 1930, although stipulating that modifications in the existing system of consular jurisdiction should not take place until a modern system of jurisprudence was established by China (see *CHINA*, under *History*). In September, the Government announced that it had decided to recommend the admission of Iraq into the League of Nations in 1932 without conditions, the implication being that Britain would withdraw from its mandate over Iraq before that date (see *IRAQ*, under *History*). About the same time, the D'Abreu Mission to Argentina concluded a trade agreement with that country which gave Great Britain a considerable share in competition with rival industrial nations.

**ARGENTINA**, under *History*. The Government faced a difficult problem with respect to the Indian agitation for immediate independence. The question came before Parliament on November 1, following a reiteration by Lord Irwin, Viceroy of India, that dominion status was the ultimate goal of constitutional development in India desired by the British Government. The impression that the statement had been issued despite the disapproval of the Simon Commission proved groundless and the Government emerged from the debate with a victory for its Indian policy, which was opposed by Mr. Lloyd George and some of the Conservative leaders. Mr. Benn, the Secretary for India, explained that the Viceroy's statement was intended to remove doubts in India as to British persistence in the Montagu policy of eventual autonomy, as set forth in the declarations of 1917 and 1919, and that the Labor government had no intention of granting immediate dominion status to India. See *INDIA*, under *History*.

**OTHER EVENTS** That the net results of the new government's activities at home and abroad were generally satisfactory to the electorate was indicated on November 2, when the Labor party made substantial gains in municipal elections

held in 300 cities and boroughs in England and Wales. The failure of Communist candidates to make any impression on the voters was another feature of the elections. Further revision of the statutes of the United Kingdom and of the respective dominions in line with the changed status of the dominions as coequal members of the British Commonwealth was forecast as a result of a conference of dominion constitutional lawyers and representatives held in London in November and December. The legal experts were understood to have agreed that the system of appeals from decisions of the dominion courts to the Privy Council was out of date. Recommendations on this and other subjects were to be submitted to the next imperial conference, scheduled for 1930. See *IRISH FREE STATE*, under *History*. Important diplomatic changes occurred November 12. Sir Ronald Lindsay, permanent Under-Secretary of State for Foreign Affairs and chief of the Foreign Office, was appointed Ambassador to Washington to succeed Sir Esmé Howard. At the same time, Sir Edmund Drey, former Ambassador to Brazil, was appointed the new British Ambassador to Soviet Russia.

The reunion of the two branches of the Scottish Presbyterian Church—the Church of Scotland and the United Free Church—took place formally in Edinburgh on October 2. The two branches had remained split since 1843. There were some evidences during the year of the development of a Nationalist movement in Scotland, with the aim of achieving a dominion status similar to that held by the Irish Free State within the British confederation.

See **UNEMPLOYMENT**, under *Great Britain*, **MOND CONFERENCES**, **BRITISH TRADE-UNION CONGRESS**, and **LEAGUE OF NATIONS** For relations with dominions and other parts of the British Empire, see articles upon each.

**GREECE** A republic in southeastern Europe, comprising the lower Balkan peninsula and many islands in the Aegean Sea, formerly a constitutional monarchy. King George II was forced to leave Greece, Dec. 18, 1923, and the Republic was established Apr. 13, 1924, as the result of a plebiscite. In continental Greece are included Macedonia, Western Thrace, and Epirus, the chief island possession is Crete (capital, Athens).

**AREA AND POPULATION** The total area of Greece before the Balkan Wars of 1912-13 was 25,223 square miles, as a result of these wars, Greece added 20,730 square miles to her territory. Under the Treaty of Lausanne (1923), Greece obtained a further area of 3182 square miles, the total area of the present Greek Republic is 49,012 square miles. According to the census of May 15, 1928, the population was 6,204,684. The total population in the present territory in 1920 was 5,021,700. The number of Greek refugees from Turkey settled in Greece up to May 15, 1928, totaled 1,221,850, of which 589,420 were male and 632,430, female. Of the total number, 151,890 transferred to Greece prior to the evacuation of Asia Minor in 1922, and 1,069,960 moved subsequently. The principal cities, with their populations in 1928, are Athens, 452,919, Piræus (Piræus), 251,328, Saloniki, 236,524, Patras, 61,278.

**EDUCATION** School attendance is compulsory for all children between the ages of 1 and 12, although the law is not very well enforced in the country districts. In 1926-27 the total school attendance was 731,372. There were 323 infant

schools, with 375 teachers and 12,513 pupils; 687 high schools, with 2823 teachers and 92,735 pupils; 7619 primary schools, with 13,747 teachers and 632,933 pupils, and 28 commercial schools, with 269 teachers and 3013 pupils. Two universities at Athens, the National University, and the Capodistria University, had 61 professors and 9799 students, and one at Salonika, founded in 1925, had 14 professors and 65 students. There were also various technical and agricultural schools.

**PRODUCTION.** Land available for cultivation in 1926 totaled 3,536,000 acres, or one-fifth of the total area of Greece, and there were about 475,000 acres of trees, shrubs, and bushes. Agricultural production increased both in quantity and value in 1928, as compared with 1927. Olive oil produced amounted to 30,419,000 gallons, a 45 per cent increase over the previous year, and was valued at \$26,650,000. The tobacco crop, estimated at 135,456,000 pounds, and valued at 2,300,000,000 drachmas (\$29,900,000), was slightly smaller than in 1927. The production of figs, raisins, and cereals, increased. The production and value of other leading crops in 1928 was as follows: Wheat, 15,767,000 bushels, \$31,200,000; barley, 10,859,000 bushels, \$9,945,000; currants and raisins, 332,895,000 pounds, \$17,160,000; wine, 62,080,000 gallons, \$9,750,000. Rye production amounted to 2,124,000 bushels; oats, 8,765,000, corn, 4,212,000, potatoes, 1,633,000.

The chief mineral products, with their values in 1927, were crude chromite, \$216,875; emery, \$293,491; iron ore, \$264,491; iron pyrites, \$342,508; crude magnesite, \$123,309; calcined magnesite, \$597,408; lignite, \$451,425; smelted lead, \$871,651. In the same year, the total value of mineral and metallurgical products sold was \$3,448,000, as compared with \$3,301,000 in 1926.

Chief among the industrial products of Greece, with the output in 1928, were: Cotton yarn, 17,064,000 pounds; wool fabrics, 4,374,000 yards; distilled spirits, 4,636,000 gallons; products of sugar and starch, 25,463,000 pounds; soap, 55,115,000 pounds; shoe leather, 15,432,000; fine leather, 3,968,000; cigarettes, 10,000,000 pounds. The total value of factory production in 1928, excluding wine and olive oil, was 6,727,182,000 drachmas (\$87,453,000), as compared with 6,115,620,000 drachmas (\$80,726,000) in 1927. In general, industry was more active in 1928 than in 1927. Improved foreign credits and political stability encouraged public-works construction and important irrigation and reclamation projects were started in eastern Macedonia, Thessaly, and Epirus. The activity on public works resulted in less unemployment.

**COMMERCE.** Greek exports rose to \$6,282,075 in 1928 from the 1927 figure of \$6,037,411, while imports dropped to \$12,488,122 from \$12,061,948 in 1927, thus reducing the unfavorable visible trade balance from \$8,564,537 in 1927 to \$6,206,047 in 1928. As usual, the unfavorable visible balance was offset by receipts from shipping, tourist travel, and emigrant remittances.

Exports of tobacco continued to account for about half the total value of export trade. The decline in the value of imports was attributable to smaller purchases of cattle, butter, cheese, and flour, and the lower prices of sugar and textile imports. Iron and steel, wheat, and machinery imports were larger. The United States was again the leading source of Greek imports, supplying nearly one-sixth the total, while Germany sup-

planted the United States as the leading market for Greek exports, taking 26 per cent of the total, as against 20 per cent by the United States, Italy, the United Kingdom, and France, were other leading customers, taking 16.5, 13.2, and 5 per cent of the total exports, respectively. The United Kingdom followed the United States as the chief source of imports, supplying 14.4 per cent of the total; Germany supplied 8.6, France, 6.9, and Italy, 5.2 per cent. Quantities and values of the chief imports and domestic exports in 1927 and 1928 are shown in the table on page 356.

Imports for 1929 totaled 13,275,531,000 drachmas and exports 6,985,196,000 drachmas, as compared with 12,488,122,000 and 6,282,075,000 drachmas, respectively, for 1928 (1 drachma equalled \$0.013), according to preliminary figures.

The adverse trade balance was 6,290,335,000 drachmas in 1929 and 6,206,047,000 in 1928.

In October, 1929, it was announced that the Government had decided to establish a free harbor in Piræus to be devoted to foreign trade, particularly the export trade with the Orient. The harbor was to be equipped with modern warehouses and a coaling station, in the hope that it would attract traffic en route to the Orient from Rotterdam, Trieste, and other European ports.

**FINANCE.** The Greek budget for 1928-29 balanced at 11,115,000,000 drachmas (\$144,495,000), as compared with receipts of 8,837,000,000 drachmas (\$114,495,000) and expenditures of 8,878,000,000 (\$115,414,000) in 1927-28. For 1929-30 receipts were estimated at 9,666,000,000 drachmas (\$125,658,000) and expenditures, excluding service of the debt, at 9,658,000,000 (\$125,554,000). The fiscal year ends March 31. During 1928 the Government concluded two loan agreements—the League of Nations loan of \$9,000,000 of which the United States was expected to furnish \$12,167,000 (about \$2,500,000), and the Productive Works loan of \$22,000,000. The League approved the former loan in 1927, but attempts to float it were held up pending ratification by the United States Senate, which occurred in February, 1929. Of this loan, \$3,000,000 was to be used to maintain the stabilization of the currency at the rate of 375 drachmas to the pound sterling. The remainder was to be employed to balance the budget and for refugee work. The loan was issued on condition of the formation of a new Bank of Greece.

The Productive Works loan was to be made available over a period of five years for reclamation works in northern Greece, road construction, and agricultural credits. Preliminary returns for the fiscal year 1928-29 indicated that both receipts and expenditures would be below estimates, although a slight surplus was expected. A dengue-fever epidemic was held partially responsible for the decline in revenues. Mortgaged revenues assigned to the international financial commission increased during 1928 and 1929, the gross receipts for 1928 totaling 4,063,836,000 drachmas, as compared with 3,891,700,000 drachmas in 1927. Emigrant remittances were estimated at about \$40,000,000 for 1928, as against about \$37,000,000 for the previous year.

On Jan. 1, 1929, the public debt stood at 36,783,938,000 drachmas (\$478,191,000), or a per capita debt of 6130 drachmas (\$80). The foreign debt of 25,738,690,000 drachmas was held chiefly in Great Britain, the United States, and France, the amount due to the United States Government being \$20,250,000. To meet the service of the external debt, various revenues were pledged and

placed under control of the International Financial Commission. On May 10, 1929, an agreement for payment of the \$18,125,000 debt to the United States Government over a period of 62 years was concluded at Washington. The American portion of the League of Nations loan (\$12,167,000) was to be repaid in 20 years at 4 per cent. At the beginning of 1929, the note circulation amounted to 5,690,000,000, and gold reserves to 554,000,000 drachmas, exclusive of 372,000,000 drachmas held abroad.

**COMMUNICATIONS.** Of the nine systems which comprise the entire Greek railways of 1991 miles, the state railways operate 884 miles. During 1927 operating revenues of the state railways amounted to 309,401,242 drachmas, and other revenues to 3,391,807, while operating expenses reached 317,982,807 drachmas, and other expenses 14,333,226, thus leaving a deficit of 19,522,349 drachmas. In the same year, the Government railways carried 3,559,000 passengers and 1,047,000 tons of freight. There were 202 locomotives and 4094 freight and passenger cars in operation on state lines. In 1929 there were about 8611 miles of highway in Old and New Greece and 570 miles were under construction. A road-construction programme involving an estimated expenditure of about \$29,000,000 was inaugurated in the summer of 1928. The merchant marine on June 30, 1928, consisted of 515 steam- or motor-driven vessels of 100 tons or more, with

a total gross tonnage of 1,187,508. In 1927, 3581 vessels of 4447 tons net registered tons engaged in foreign trade entered Greek ports. In the same year, 5210 steamers of 2,700,657 tons and 3288 sailing vessels of 91,729 tons passed through the Corinth Canal. Telephone and telegraph lines are owned by the Government. In 1927 there were 7739 miles of telephone, and 30,894 miles of telegraph wire.

For army and navy, see **MILITARY PROGRESS** and **NAVAL PROGRESS**.

**GOVERNMENT.** The Republic of Greece was established by a plebiscite on Apr 13, 1924. A new constitution, published on Sept 22, 1926, was revised by the Chamber elected on Nov 7, 1926. The new constitution published on June 3, 1927, provides, among other things, that a second House (Senate) consisting of 120 members shall be established, that Parliament shall be elected by direct, universal, and secret voting, and that the Senate shall be elected partly by the people, partly by the Parliament and Senate in a common meeting, and partly by the corporations of the different professions. President in 1929, Admiral Konduriotis; the cabinet as constituted July 19, 1928, was as follows: Premier, Eleutherios Venizelos; Minister for Foreign Affairs, Alexander Karapanos; War, Themistocles Sophoulis; Marine, Pericles Argyropoulos; Interior, K. Zavitzianos; National Economy, P. Vourloumis; Agriculture, L. Kanavas; Social Insur-

ance, E. Emmanouelides; Justice, P. Petrides; Finance, George Maris; Communications, Dr. Christomanos; Education, K. Gontikas. The composition of the Chamber of Deputies elected Aug. 19, 1928, was as follows. Republican parties, 227 (including 186 Venizelos Liberals), Royalist Popular party, 22, Metaxists, one.

#### HISTORY

Premier Venizelos continued his active foreign policy during 1929. On March 21, a treaty of friendship was signed with Yugoslavia at Belgrade, providing for the arbitration by the League of Nations of disputes between the two countries. A week earlier, a series of economic conventions was signed by representatives of the two countries at Geneva. The treaty was considered a move on the part of Greece and Yugoslavia to present a common front toward Bulgaria in support of the Treaty of Neuilly and in opposition to Bulgaria's alleged encouragement of the formation of an autonomous Macedonian state under the protection of the League of Nations. The conclusion of the treaty with Italy's rival seemed to interpose further difficulties in the way of Premier Mussolini's plan for a compact of friendship and non-aggression among Greece, Turkey, and Italy.

An outbreak of naval rivalry between Greece and Turkey offered another serious check to the Italian plan. The announcement by the Turkish Government in May that it intended to order several warships in Italy was followed by immediate steps on the part of Greece to purchase a number of destroyers from France. Although Greek finances were in no condition to warrant additional expenditures, Premier Venizelos declared that Greece must have a navy in the Aegean as strong as the Turkish fleet.

On July 10, Turkish official organs announced that negotiation with Greece concerning the exchange of populations had been broken off, the cause apparently having been the refusal of the Turks to grant the demand that Greek nationals who held passports issued by the former Sultan's government should be allowed to return to Turkey. Premier Venizelos later announced that he had not given up hope of a settlement but feared that the difficulties of his government were not fully understood in Ankara. With the rival of a new Greek Minister of Foreign Affairs in the Turkish capital in December, hope for a settlement of the long-outstanding difficulties was renewed.

A League of Nations commission was appointed to dispose of numerous questions arising from the forced removal of some 1,500,000 Greeks from Turkey and of several hundred thousand Turks from Greece following the Lausanne Treaty of 1924. Besides failing to solve the most important questions, the commission cost the two countries between \$4,000,000 and \$4,000,000 in the five years ending in 1929, and the two countries in 1929 were attempting to dispose of outstanding questions by direct negotiation. The negotiations hinged upon five main issues: (1) The amount of compensation to be paid by Greece for damage done to Turkish property during the Greek invasion of 1922. (2) The status of the Greeks who were established in Constantinople before the conclusion of the Lausanne Treaty and the status of Turks living in western Thrace. (3) The case of those Greeks who left Turkey before the establishment of the Turkish Republic and who

were never allowed to return to liquidate their property. (4) The matter of the evaluation of property belonging to Turks in Greece and to Greeks in Turkey. (5) The alleged persecution by Greek authorities of Turks living in western Thrace.

While realizing the desirability of an early settlement of these questions, Premier Venizelos was hindered in the negotiations by the attitude of some 1,500,000 Greek refugees who threatened to turn him out of power at every suggestion of concessions to the Turks. At home, Premier Venizelos found himself confronted with increasing political difficulties as the year progressed. On January 26, largely due to his personal insistence, the Chamber of Deputies voted an investigation of alleged breaches of the common law by General Theodore Pangalos, former dictator, and three of his ministers, Tavoularis, Tantalidis, and Vogopoulos. The first Greek Senate to meet since 1862 assembled on May 16. Under the constitution of June 4, 1927, it consists of 120 members, of whom at least 90 must be elected by popular vote for a term of 10 years. Its powers are strictly limited.

The absence of Premier Venizelos at The Hague Reparations Conference during the summer was taken advantage of by his political opponents to win a number of decisive victories at municipal elections, particularly in Athens, Patras, Corinth, and Saloniki. On December 10, the resignation of President Paul Kondouriotis took place unexpectedly. Admiral Kondouriotis, who became a national hero following his defeat of the Turkish fleet in 1912, was made provisional President on the proclamation of the Republic in 1924. He resigned during the dictatorship of General Pangalos, but in 1928 again was elected President by the Chamber. He gave ill health and advanced age as the reasons for his resignation. Former Premier Zaimis, then President of the Senate, was appointed President provisionally, pending an election. On December 11, General Gonatas, Minister of Transport, whose presence in the cabinet caused Royalist Deputies to vacate their seats, presented his resignation. Minister of the Interior Argyropoulos and Dr. Pappas resigned from the government December 29, following the publication of a letter written by their leader, General George Kondyles, charging the government with leading the country into political anarchy. General Kondyles executed a *coup d'état* against General Pangalos in August, 1926.

Other events during the year included the announcement by Premier Venizelos on November 14 of the creation of a Ministry of Aviation, with himself at its head, a two-day riot and political demonstration against the Government by university students in Athens November 28 and 29, and the award by the Government on December 18 of a \$30,000,000 contract to the British firm of Henry Boot & Sons for the reclamation of waste and swamp land in Thessaly and Epirus. In August, the revelation that the mixed Greco-Bulgarian Commission appointed by the League of Nations to fix the indemnity payable to Greece by Bulgaria had cost the two countries \$2,500,000 aroused considerable feeling. The sum was almost equal to the whole amount under dispute.

**GREEK ARCHAEOLOGY.** See ARCHAEOLOGY. **GREEK STUDIES.** See PHILOLOGY, CLASSICAL for summary of recent work.

**GREEN, ALICE SOPHIA AMELIA** (Mrs. JOHN RICHARD). An Irish historian, died May 28, 1929, in Dublin, Ireland. She was born in Kells, Ireland, in 1849, the daughter of Edward A. Stopford, Archdeacon of Meath, and was educated at home by private reading. In 1877 she was married to John Richard Green, historian and author of *Short History of the English People*. Until his death in 1883, Mrs. Green aided him in his work, and after his death published a revised edition of the *Short History* (1888) and in 1916 another edition with an epilogue of her own. Her first book, *Short Geography of the British Isles* (1880) was written in collaboration with her husband. She was an enthusiastic and outspoken Nationalist, an interest which is reflected in her books. *The Making of Ireland and Its Undoing* (1908); *Irish Nationality* (1911), *The Old Irish World* (1912). Mrs. Green was a prolific author, writing many books and pamphlets, all on historical subjects. When the Irish Free State Parliament was established in 1922, she was elected a member of the Senate. In 1913 the University of Liverpool made her an honorary doctor of literature.

**GREENLAND.** The island second in size in the world, being next to Australia. Situated in the North Atlantic to the north and east of Canada, it is the only colonial possession of Denmark. The area is variously estimated at from 826,000 to 849,000 square miles. The settled portion has an area of 46,740 square miles, with a population in 1923, of 14,804, of whom 248 were Danes and other Europeans and 14,556, natives. The colony is divided into the three provinces of North, South, and East Greenland, with 7845, 6246, and 713 inhabitants, respectively. Denmark extended its sovereignty over the entire island in 1917. The largest settlement is Sydproven, with a population of 901, and the smallest, Skansen, with a population of 49. The interior remains largely unknown. Nearly the entire country consists of a plateau from 2000 to 3000 meters above the level of the sea, and is covered by a thick, permanent coat of snow and ice, only about one-twentieth of the surface being suitable for cultivation. Most of the inhabitants are located on the coast or on adjacent islands. The trade with Denmark in 1925 consisted of 3,271,000 kroner in imports and 7,192,000 kroner in exports. The trade, chiefly in seals, sealskins, fox skins, and oil is a monopoly of the Danish government. The budget for 1925-26 estimated receipts at 3,180,000, and expenditures at 3,774,000, kroner. At the head of the government is a director who resides in Copenhagen. Director in 1929, J. Daugaard-Jensen. See **POLAR RESEARCH**.

**GRENADEA**, gre-na'da. An insular possession of Great Britain in the Windward group of the West Indies. Area, 133 square miles, population at the census of 1921, 66,302, estimated in December, 1926, 71,621. Grenada includes half the Grenadine Islands, the other half being administered from St. Vincent. The capital is St. George with a population of about 5000. In 1927 the movement of population was: Births, 2294; deaths, 1147. In 1927 there were 58 government and government-aided schools for elementary education, with 12,605 pupils and one secondary school. The chief products, which are also the chief exports, are cacao, spices, lime juice, cotton, and cottonseed. The production of sugar was rapidly increasing, in 1927 the local production of rum was 44,446 proof gallons. In the same

year, the revenue was £155,508 and the expenditure, £131,413. The exports were £506,533 and the imports, £415,607. The total shipping entered in 1927 was 534,455 tons, nearly all British. The colony is under the Governor of the Windward Islands, whose headquarters are at St. George, but has its own institutions. Governor and Commander-in-Chief of the Windward Islands, including Grenada, in 1929, Sir Frederick Seton James; Colonial Secretary for Grenada, H. Ferguson.

**GRINNELL COLLEGE.** A coeducational, non-sectarian institution of higher learning in Grinnell, Iowa, founded in 1847. The enrollment for the autumn of 1929 was 809, distributed as follows: Seniors, 135, juniors, 121, sophomores, 173, freshmen, 239, graduate students, 3, unclassified, 8, school of music, 130. There were 65 faculty members. The productive funds amounted to \$1,500,000 and the income for the year, exclusive of dormitories, was \$320,000. The library contained 85,000 volumes. President, John Hanson. Thomas Main, Ph.D., LL.D.

**GRUNDY, JOSEPH R.** See UNITED STATES, under *Congress*.

**GRYZBOW, BATTLE OF, CELEBRATION.** See CELEBRATIONS.

**GUADELOUPE**, ga'da-loop'. A French insular possession in the Lesser Antilles in the West Indies, consisting of two islands separated by a narrow channel, the one on the west being Guadeloupe proper, or Basse-Terre, and the one on the east, Grande-Terre. Combined area, 532 square miles, total area, including five small dependent islands, 688 square miles, population in 1926, 243,243. Basse-Terre is the capital, with a population of 8379, chief town and port, Pointe-à-Pitre, with 26,455 inhabitants.

There were 113 public and private elementary schools in 1926-27, with 324 teachers and 17,180 pupils. For higher education, there was one lycée with 464 pupils and a secondary course for girls at Pointe-à-Pitre, with 322 pupils. The chief products for exports are cacao, coffee, sugar, and rum. Bananas, sweet potatoes, maize, tobacco, manioc, and various vegetables are other products. In 1926 the imports were 144,849,469 francs and the exports, 167,663,138 francs. Revenue and expenditure for 1927 balanced at 29,018,396 francs, the public debt on Dec. 31, 1926, was 499,078 francs. The tropical hurricane of Sept. 12, 1928, inflicted damage estimated at between 300,000,000 and 500,000,000 francs and caused a marked setback to economic development. There is communication with France by means of two steamship companies, and a wireless station at Destellan. At the head of the government are a governor and an elected council and the colony sends to the French Parliament at Paris one senator and two deputies.

**GUAM**, gwam. An insular possession of the United States, situated at the southern end of the Mariana, or Marianne, Islands in mid-Pacific about 1500 miles from Manila and 5053 miles from San Francisco. The largest and most populous island of the Mariana group, it has an area of 210 square miles and a population (in 1928) of 17,654, excluding the military and naval establishments. Capital, Agaña, with about 8500 inhabitants.

The public-school registration in 1928 numbered 3596. The appropriation of \$44,860 made from island government funds for education was supplemented by a United States appropriation

of \$13,000. Education is compulsory between the ages of 7 and 12. Spanish and English are spoken in addition to the native Chamorro. Cacao, coffee, copra, corn, rice, sugar, sweet potatoes, and timber are the chief products of the island, but only copra is exported, the shipments in 1928 totaling 5,075,747 pounds. There were about 4000 head of cattle in 1928, including 900 water buffaloes. The trade of the island is principally with the United States and Manila. In 1928 imports totaled \$454,599 and exports, \$195,862. Of the 12 ships which entered Apia, the entry port, in 1928, only four were merchant vessels.

Guan is a United States naval station, of which the governor, who is appointed by the President, is commander. Salaries of the higher government officials, the Navy doctors, and hospital corps are paid by the Federal Government. Medical care for the entire population is provided by the Navy, as there are no private hospitals or doctors in private practice. For the fiscal year 1929, the United States Government appropriated \$22,000 for medical and hospital care of the population and for the care of leprosy. Governor in 1929, Commander Willis W. Bradley, U. S. N., who succeeded Captain L. S. Shapeley, U. S. N. (retired) on June 11, 1929.

**GUATEMALA**, *gwat'-ma-lah*. A republic of Central America lying between the Caribbean Sea and the Pacific Ocean, and south and southeast of Mexico. Capital, Guatemala City.

**AREA AND POPULATION** The area is estimated at 42,353 square miles, population, according to the census of 1920, 2,001,900, estimated in 1928, 2,345,616. About 60 per cent of the population is pure Indian and the remainder is composed mainly of half-castes. From 1924 to 1928, births averaged 96,042 annually and deaths, 47,714, the average excess being 48,328. The populations of the chief cities were: Guatemala City, 115,928; Totonicapán, 30,888; Cobán, 26,774; Chiquimula, 25,191; Escuintla, 20,574; and Quetzaltenango, 20,125.

**EDUCATION** The school age is from 5 to 17 years and the total number attending school in 1927-28 was 114,815. In 1921 there were 577,568 persons of school age. About four-fifths of the population are illiterate. Schools in 1928 numbered 3297, of which 2736 were national primary schools and 566 private institutions of learning. The school personnel numbered 3430 teachers. According to the report of the Minister of Public Education, in 1928 there were 50 schools above the primary grade with an enrollment of 3278 and an average attendance of 2775. The various schools of the University had an enrollment of 645.

**PRODUCTION** Agriculture is the principal source of wealth in Guatemala. The economic well-being of the country is directly and almost wholly dependent upon its coffee, which, because of its mildness and high quality, generally commands high prices. The comparatively limited annual production assures a steady market. Sugar and bananas are the other chief export crops, while wheat, corn, potatoes, and rice are produced mainly for domestic consumption. High prices for coffee continued until near the end of 1928 and in consequence, the country was generally prosperous. The business turnover was larger than ever before, government revenues increased, and the imports were the greatest on record, despite a brief political disturbance during the year

and damage to the corn crop by grasshoppers.

The coffee crop in 1927-28, amounting to approximately 100,000,000 pounds, was one of the largest ever produced, and was disposed of at excellent prices. In 1928-29 an even larger crop of 110,000,000 pounds was harvested. The banana crops of 1927 and 1928 were estimated to have been reduced by about 1,500,000 stems each year as a result of heavy winds and floods. Banana shipments to the United States in 1928 totaled 6,193,000 stems and in 1927, 6,022,000 stems. The sugar crop in 1928-29 amounted to about 33,400 metric tons, while during 1927-28 it was placed at about 29,254 tons. In 1928 it was estimated that there were 320,000 cattle, 79,000 horses and mules, 137,000 sheep and goats, and 71,000 swine in the country. The 1,316,000 acres of forest land in Guatemala contain valuable mahogany and cedar trees which are exploited to a considerable degree.

In 1929 business and economic conditions in Guatemala became unfavorable due to a continued decline in the price of coffee, political difficulties resulting in the suspension of certain constitutional guarantees, and the unprecedented rainfall, which caused flood damage to roads and crops and the interruption of traffic. The 1929 coffee crop was estimated to equal that of the previous year, but a comparatively small amount was disposed of at favorable prices.

The only minerals produced commercially are mica and gold, mica production amounting to 28,860 pounds in 1928 (14,720 in 1927), and gold production to 10,339 troy ounces (10,327 in 1927). Industrial plants consist mainly of coffee-cleaning plants, sugar mills, and distilleries, with some small factories for the manufacture of cigars and cigarettes, cotton cloth and hosiery, soap, candles, shoes, etc. There were 140 manufacturing establishments of fair size in the country in 1929, representing a capital investment of about \$18,000,000.

**COMMERCE** Exports in 1928 totaled \$28,212,000, or 17 per cent less than in the previous year, while imports increased by 22 per cent to \$24,145,000. The favorable balance of trade for the year was \$4,067,000. Smaller shipments of coffee and wood accounted for the decrease in exports, while the import increase was due particularly to large increases in imports of foodstuffs, railway materials, and rayon, and to larger purchases of most manufactured articles. The United States furnished 58 per cent of the total imports and purchased 54 per cent of the total exports. Germany furnished 14 per cent of the imports and took 33 per cent of the exports, and the United Kingdom supplied 11 per cent of the imports.

The values of the chief imports in 1928, with figures for 1927 in parentheses, were as follows: Cotton and manufactures, \$3,753,000 (\$3,806,000), iron and steel, \$2,088,000 (\$1,936,000), wood and iron products, \$2,006,000 (\$1,972,000), wheat flour, \$1,297,000 (\$1,121,000), other foodstuffs, \$2,460,000 (\$1,249,000), silk and rayon goods, \$1,432,000 (\$1,057,000), railway material, 1,024,000 (\$512,000), machinery, \$976,000 (\$659,000). The values of the chief exports in 1928 and 1927 were: coffee (clean), \$22,349,000 (\$27,801,000), bananas, \$3,096,000 (3,011,000), coffee (in shell), \$713,000 (\$768,000), sugar, \$374,000 (\$413,000), wood, \$338,000 (\$684,000), chiclé, \$445,000 (\$485,000). In 1929 both imports and exports showed a downward trend. Banana shipments, however, were larger.

**FINANCE.** During the fiscal year ending June 30, 1928, ordinary revenues were 15 per cent greater than in the previous year, the increase resulting mainly in collections of import duties, which accounted for about half the total revenues. The receipts totaled 14,266,000 quetzales (one quetzal equals \$1 at par), as compared with 12,411,000 in 1926-27, while expenditures for 1927-28 were 14,120,000, and for the previous year, 12,259,000. Expenditures in 1927-28 included a payment of 250,000 quetzales toward the capital of the Banco Central de Guatemala. Chief items of expenditure in 1927-28 were: For the service of the debt, 2,905,000 quetzales; national defense, 2,108,000, education, 1,583,000; agriculture, 1,278,000, posts, telegraphs, and telephones, 1,278,000, all other, 5,036,000. The expenditure budget for 1928-29 aggregated 13,145,000 quetzales. The public debt at the beginning of 1929 amounted to \$16,837,000 of which a greater portion was held abroad. The British holdings totaled \$8,288,277.

**COMMUNICATIONS.** The International Railways of Central America, operating the only railroad of importance in Guatemala, had 498 miles of line in operation in 1928, which carried 2,202,000 passengers and 737,230 tons of freight. The gross receipts were \$8,407,188 and the net return after taxes amounted to \$3,068,263. In July, 1929, a connecting link of the International Railways extending 40 miles between Zacapa, in Guatemala, and San Salvador, Santa Ana, and Ahuachapán, in Salvador, was completed at a cost of \$12,000,000. In 1929 there were 1396 miles of highway. The government-owned telegraph and telephone systems in 1928 had 4430 and 4980 miles of wire, respectively, gross receipts were \$264,900 and \$154,000, respectively. There were 373 post offices. Radio communication service was established in Guatemala City, Puerto Barrios, and other cities during 1928. On Oct. 4, 1929, daily airplane service was inaugurated between Guatemala City and San Salvador, the capital of Salvador. Other air lines were in operation during the year between Guatemala City and Vera Cruz and between Los Angeles, Mexico City, and Guatemala City.

**GOVERNMENT.** The executive power is vested in the President elected for six years and legislative power, in the National Assembly, consisting of representatives elected for four years, and the Council of State of 13 members, part of whom are elected by the National Assembly and part appointed by the President. President in 1929, General Lázaro Chacón, elected December, 1926, for a term expiring May 15, 1933. A convention signed by the Foreign Ministers of Guatemala, Honduras, and Salvador on May 27, 1927, bound the three countries to a unified foreign policy.

#### HISTORY

The internal political situation, which led to the establishment of modified martial law in the latter part of 1928, remained critical throughout 1929. A rebellion broke out in the extreme northwestern part of the country and on January 17 the insurgents seized the towns of Retalhuleu and Mariscal, and stopped traffic across the Mexican border. Government troops attacked the two towns three days later and on January 22 the government announced that the rebellion had been crushed and a number of rebel leaders captured and executed by firing squads. The in-

surgent chiefs, Juan F. Rivas and Colonel Marciano Casado, however, were reported to have escaped into Mexico.

President Lázaro Chacón accepted the resignation of his entire cabinet on February 3 in an effort to strengthen popular support of the government. On February 12, the new cabinet was constituted as follows: Minister of Foreign Relations, Adrián Recinos; Government and Justice, Carlos Zachrisson; Finance, Rodolfo Sandoval; Public Instruction, H. Abraham Cabrera; Public Works, Daniel Hernández Figueroa; War, Miguel Larraive; Agriculture, Manuel María Heriera.

Despite the reconstitution of the cabinet, the government considered it necessary to continue for the remainder of the year the suspension of constitutional guarantees. Two citizens of the United States, J. Zenon Posadas and Alessio F. Losi, who were arrested late in February on charges of complicity in the revolt, were saved from probable execution through the intervention of United States Minister Gessler.

Negotiations for the settlement of the boundary dispute with Honduras continued during the year with such satisfactory results that on October 25, the State Department of the United States invited both governments to name delegates to meet in Washington for a further exchange of views. The United States offered to participate in the discussions if so desired. Both nations accepted and the meeting was set for Jan. 15, 1930. Friction between Guatemala and Nicaragua, which led to the severance of diplomatic relations following the Sacaca revolution in Nicaragua in 1926-27, also was eliminated and on March 11 diplomatic relations between the two countries were resumed.

Other important events in Guatemalan history during 1929 included the ratification on October 28 of the general treaty of inter-American arbitration and the protocol of progressive arbitration, which was signed at Washington in January, 1928, the drawing up of plans for a national palace at Guatemala City to cost nearly \$1,000,000, and the inauguration by the government of an intensive campaign against illiteracy, which included the creation of schools in all army barracks and posts. On November 4, the government reported that 21 persons had lost their lives as a result of the eruption of the volcano, Santa Maria, 70 miles northwest of Guatemala City. Unofficial estimates placed the number killed at 300, the injured at 200, and property damage at \$1,000,000. Sheldon Whitehouse, a career diplomat serving as counselor of the American Embassy at Madrid, was appointed the American Minister to Guatemala in November, 1929.

**GUTH, WILLIAM WESTLEY** American college president, died Apr. 19, 1929, in Baltimore, Md. He was born in Nashville, Tenn., Oct. 15, 1871, and was graduated from Stanford University in 1895. He also studied at the Hastings College of Law, was admitted to the bar in 1895, and practiced in San Francisco (1895-98). He then studied for the ministry, being ordained in the Methodist Episcopal Church in 1900 and served as pastor in West Chelmsford, Mass. (1900-01), and in Cambridge (1904-08). In 1908 he accepted the presidency of the College of the Pacific, which

he left to become president of Goucher College in 1913. He resigned from the ministry in 1919. Dr. Guth traveled widely in Egypt, Palestine, Asia Minor, in Europe, and in England. He was the author of several books of a religious nature.

**GYMNASTICS.** The Swiss Turn Verein again achieved the team honors in gymnastics for 1929, capturing the laurels at the national Amateur Athletic Union championships held under the auspices of the Philadelphia Turngemeinde, April 27. The individual winners of the events were: Rope Climb, Manfred Kraemer, Newark A. C.; Free Calisthenics, Alfred Jochim, Swiss Turn Verein; Long Horse, Adolph Zink, New York T. V.; Side Horse, Frank Haubold, Swiss T. V.; Horizontal Bar, Alfred Jochim, Swiss T. V.; Indian Clubs, Robert Job, Hudson Co. T. V.; Parallel Bars, Alfred Jochim, Swiss T. V.; Tumbling, William J. Heiman Jr., Overbrook High School, Phila.; Flying Rings, Alfred Jochim, Swiss T. V.; All-around, Alfred Jochim, Swiss T. V.

The winners in the intercollegiate tournament held at Philadelphia in March were: Horizontal Bars, D. O. Wells, Massachusetts Tech.; Side Horse, F. M. Adamson, Navy; Parallel Bars, J. I. Stewart, Dartmouth; Flying Rings, W. H. Reynolds, Massachusetts Tech.; Tumbling, A. H. Gould, Dartmouth; Rope Climb, W. J. Galbraith, Navy; All-around, John Menzies, U. of Chicago.

**GYPSUM.** In 1928 the disorganization and unsatisfactory condition, due to competition and price cutting which had been manifest in this industry since 1926, continued with the result that the quantity and value of gypsum products sold were considerably less than in 1927. This situation continued until towards the close of 1929 when better conditions prevailed, due to a realization of the value of cooperative effort on the part of the producers and a study of production and distribution costs, together with a standardized product. In 1929 there was recorded a tendency to erect new plants adjacent to the centres of consumption rather than near the mines, and as a result large plants were to be found at Chicago Ill., Detroit, Mich., Boston, Mass., Philadelphia and Chester, Pa., Staten Island, N. Y., and Portsmouth, N. H. It will be seen that all of these plants permitted water transportation of gypsum rock from the mines to the works with resulting economies. In fact, plants located at strategic points with modern equipment were operating much more profitably than the older works.

A number of improvements were made in rotary calcining and other processes, while the utilization of byproduct gypsum in chemical plants was of increasing importance. In 1928 the total quantity of crude gypsum mined in the United States amounted to 6,102,250 short tons. The value of sales was \$32,036,163, of which 999,412 tons valued at \$1,902,034 were sold without calcining and 3,641,385 tons valued at \$30,134,129 were sold calcined. New York as a producer ranked first in the total of value of sales in 1928 with \$9,613,307, followed by Iowa with \$5,355,214, Ohio with \$3,805,796, Michigan with \$3,159,369, Texas with \$3,094,145. Imports of gypsum into the United States in 1928 had a total value of \$1,542,254, of which crude gypsum amounted to 918,586 tons valued at \$1,340,920. The leading source of production of gypsum imported into the United States was Canada with 933,478 tons valued at \$1,242,781; Mexico was second with

92,363 tons valued at \$92,563. The exports of crude gypsum in 1928 amounted to 2112 tons valued at \$23,764. In 1929 imports of gypsum into the United States amounted in value to \$1,214,238, of which 925,344 tons valued at \$1,060,874 were crude gypsum. Exports of crude gypsum in 1929 were 3777 tons valued at \$30,870.

The world production of gypsum in 1927, the last year for which complete figures were available, totaled 11,100,000 metric tons with the United States ranking first as a producer, followed by Canada with 983,677 tons, Spain with 911,346 tons, Italy with 673,931 tons, and Great Britain with 514,364 tons. In 1928 the production of gypsum in Canada amounted to 1,205,846 short tons valued at \$3,622,007, as compared with 1,063,117 tons valued at \$3,251,015 in 1927.

**HABERMANN, BARON HUGO VON.** A German painter, died in Munich, Feb. 27, 1929. Born in Dillingen, June 14, 1840, he attended a school for court pages and the University of Munich. Displaying a talent for water colors during the latter part of his life, he studied under Karl von Piloty until 1879. After imitating the Romantic school with such pictures as, "The Monk" and "The Ploughman," he developed an individual style, largely through the study of French modernists, and in 1904 became the president of the Munich Secessionists, one of the earliest groups of German modernists. Baron von Habermann was appointed professor at the Munich Academy in 1905. His first original pictures were descriptive, as "The Sickroom" and "The Daughter," but he later specialized in portraits of women. He received the Order of Merit for Science and Art in 1925. His paintings hang in numerous art galleries throughout Germany, notably in the Munich Pinakothek, the Berlin National Gallery, and in museums at Frankfurt, Hamburg, Bremen, and Hanover.

**HADRAMAUT, THE SEE ARABIA**

**HÆMATOPHANTIC.** See MINERALOGY.

**HAGUE TRIBUNAL.** See ARBITRATION, INTERNATIONAL.

**HAITI, hâïtè.** A West Indian republic comprising the western third of the island of Haiti, the other part being the Dominican Republic, or Santo Domingo. Capital, Port-au-Prince. See DOMINICAN REPUBLIC.

**AREA AND POPULATION.** The area has been variously estimated at from 10,204 to 11,072 square miles; population, estimated, 1927, 2,550,000, excluding 3000 foreign white residents and the military and naval forces of the United States stationed there in conformance with the Treaty of 1915. The capital, Port-au-Prince, had a population of approximately 80,000 in 1929, excluding suburbs. Cape Haitien, about 12,500; Aux Cayes, 12,500; Gonaves, 10,000; St. Marc, 8000; Jacmel, 7500, and Port-des-Paix, 5000. The inhabitants are Negroes and mulattoes, the later descended from French settlers. The language is a dialect known as Creole French. There was a comparatively large migration to Cuba, amounting to 14,098 in 1928 and 21,619 in 1927. Many of the emigrants returned to Haiti annually after the Cuban crops were harvested.

**EDUCATION.** Primary instruction is free and has been compulsory since 1910. In 1927-28 there were 1179 schools with 107,551 pupils enrolled. Of the total school enrollment, about 10,000 were in the American-directed agricultural and vocational schools in 1929, and 95,000 in Haitian-controlled schools which offer the usual aca-

demic education. About 10.32 per cent of the total budget was devoted to education, the appropriations being equally divided between the American- and Haitian-controlled institutions. In recent years, the rural schools have been much improved. Secondary education is provided by national lycées and by private institutions. The University of Haiti was established in 1921.

**PRODUCTION.**—Haiti is preponderantly agricultural. Coffee, cotton, tobacco, logwood, sugar, and cacao are exported in considerable volume, but prosperity follows the trend of coffee production and prices. Haiti experienced an exceptionally prosperous year in 1928 due to a large coffee crop, which amounted to 90,712,000 pounds, valued at \$17,916,000, as compared with a crop of 63,257,000 pounds, valued at \$11,384,000, in 1927. In 1928–29 crops were less satisfactory, coffee exports declined sharply, and a severe depression ensued. The 1928 cotton crop was smaller than in 1927 but brought higher prices, virtually the entire crop being exported. Cotton exports totaled 9,761,000 pounds in 1927–28, valued at \$2,002,000, as compared with 10,805,000 pounds, valued at \$1,467,000, in 1926–27. The export crop of sugar amounted to 13,475 metric tons of raw, and 3200 tons of refined, sugar, cacao production remained practically stationary, while tobacco production expanded to 2,500,000 pounds. Livestock in 1927 consisted of 87,000 cattle, 185,000 swine, 5000 sheep, 216,000 goats, 115,000 horses, and 233,000 mules and asses.

Mineral resources are considerable although undeveloped. They include copper, coal, and iron, for the working of which some concessions have been granted, also gold, silver, antimony, tin, sulphur, kaolin, limestone, porphyry, nickel, and gypsum. In 1928 there were two sugar mills, a logwood factory, a cottonseed-oil plant, and a number of smaller manufacturing plants supplying local requirements. Among the minor products manufactured in Haiti, of little commercial importance but typical of domestic life, are baskets, ropes, fish nets, and hammocks.

**COMMERCE.**—The foreign trade of Haiti declined sharply during the fiscal year ending Sept. 30, 1929, from the totals reached in the banner year, 1927–28, the total trade amounting to \$33,962,000, or a decrease of \$12,915,600 from 1927–28. The 1928–29 trade, however, exceeded the 1926–27 figure of \$31,050,400, which according to the *Monthly Bulletin* of the Financial Adviser-General Receiver for September, 1929, represented what was considered a normal year. Imports in 1928–29 were valued at \$17,238,000, as compared with \$20,248,000 in the previous year, and exports amounted to \$16,724,000, as compared with \$22,607,000 in 1927–28. There was an import excess of \$514,000, as contrasted with an export surplus of \$2,419,000 in 1927–28. France continued as the leading market for Haitian products, taking 55.29 per cent of the total value, as compared with 49.77 per cent in the preceding year. Exports to the United States declined from 8.18 per cent of the total in 1928 to 7.81 per cent of the total. Imports from the United States also declined from 75.34 per cent of the total value in 1928 to 68.85 per cent of the total in 1929. Depressed business conditions in 1929 were accompanied by the failure of a number of business firms.

**FINANCE.**—In the budget for the fiscal year ending Sept. 30, 1930, issued by decree of Presi-

dent Borno on Aug. 16, 1929, total expenditures were fixed at 40,090,989 gourdes and the revenues were estimated at 40,100,000 gourdes (one gourde being equivalent to \$0.20). The largest item of expenditure was the sum of 13,464,962 gourdes set aside for the service of the public debt. Other items were: Interior, 11,576,645 gourdes; Public Works, 5,716,440; Agriculture, 2,841,660; Justice, 1,327,095; Public Instruction, 1,947,268; Labor, 945,000; Finance, 889,980; Foreign Relations, 584,200; Worship, 457,672; Commerce, 340,000. Customs receipts were calculated at 33,000,000 gourdes (actual receipts were 45,082,000 in 1927–28), and internal taxes at 6,200,000 gourdes (4,242,000 in 1927–28). Miscellaneous receipts were placed at 800,000 gourdes in 1929–30 and amounted to 1,047,000 in 1927–28. In 1927–28 export duties amounted to 7,364,602 gourdes, or 31.14 per cent of the total customs receipts of 45,082,092 gourdes. In 1928–29 actual revenues totaled \$8,504,305, or 15.6 per cent less than in 1927–28, while actual expenditures were \$8,823,000, or 7.6 per cent more than in the previous year. Customs receipts in 1928–29 declined by 21.8 per cent to \$7,019,530.

The gross public debt of Haiti on July 31, 1929, totaled 88,757,000 gourdes, as compared with 94,860,000 on the same date in 1928, and 100,107,000 in 1927. Assets July 31, 1929, amounted to 33,968,000 gourdes.

**COMMUNICATIONS.**—In 1928 there were 158 miles of railway line, all privately owned, the gross receipts from which totaled \$261,000. A highway system of 930 miles connects almost all of the principal towns and production centres and provides the leading means of transportation. Much of the system is suitable for automobile travel. In 1927–28 the telegraph system had 1717 miles of wire and gross receipts amounted to \$36,960, while the telephone system had 4888 miles of wire and gross receipts amounted to \$102,700. An air-mail line between Haiti and other Caribbean countries and the United States was inaugurated Jan. 9, 1929.

**GOVERNMENT.**—The constitution as adopted June 12, 1918, provides for the National Assembly to consist of the Senate and House of Representatives. This body has never been elected. Instead, the legislative functions are carried on by the Council of State, consisting of 21 members appointed by the President and holding office at his pleasure and appointed among the several departments, who were supposed to act until the President fixed the date for the election of the Assembly. As he had never done so, this body still functioned at the end of 1929. Executive power is vested in the President elected for six years by the Council of State. He acts through a ministry of five members. The President in 1929 was Louis Borno, who was elected Apr. 10, 1922, and reelected Apr. 10, 1926.

#### HISTORY

An outbreak in Haiti in December, 1929, which resulted in the declaration of martial law by the American forces of occupation and in a clash between marines and a mob of 1500 Haitians at Aux Cayes, December 7, in which five Haitians were killed and 20 wounded, attracted the attention of the United States to its relations with the Negro republic. The outbreak was primarily the result of the internal political situation, which was complicated by American support of President Borno and his administration. Poli-

tics in Haiti is carried on largely by the educated mulattoes. The great bulk of the population (85 to 90 per cent) is totally illiterate and, generally speaking, takes part in the political life of the country, if at all, under the direction of the mulattoes and a few educated Negroes.

Trouble had been brewing for some time under the régime of President Borno, who had ruled the country since 1922. Constitutional amendments adopted in January, 1928, authorized the Government to curtail the freedom of the press, abolish jury trials, and to replace all judges in 1929. The term of the Presidency was extended from four to six years, but the incumbent was made ineligible for reelection. Government organs, however, contended that the amendment did not apply to President Borno, as he was in office at the time the amendment was passed. The President's long silence as to his plans led the Opposition to fear he would be a candidate for reelection with the support of the American officials and the agitation against his régime was increased. On November 27, Borno announced that he would not accept a third term. The Opposition was not satisfied, however, as the President is chosen by the Council of State, which Borno appointed and controlled.

A further cause of unrest was the announcement of President Borno on October 12 that because of the "passions" of the Opposition, elections for the Legislature, which he had promised in April, 1928, would be held in January, 1930, would again be postponed. No legislative elections had been held in Haiti since 1917. Following this announcement, a number of leading Haitians organized the National League of Constitutional Action, which demanded the restoration of the Haitian constitution and the "reinstatement of the nation in its right of sovereignty." A public meeting called by the league was broken up by the police under orders of the Borno government, several speakers were arrested, and a number of Opposition newspapers were suppressed.

The prevailing unrest found expression on October 31, when students of the Central School of Agriculture struck because the Government had reduced by \$2000 a \$10,000 scholarship fund at the school. The strike spread to other colleges and professional schools and finally to employees in the customs office at Port-au-Prince and to dock workers and other laborers. Martial law was declared in Port-au-Prince and Cape Haitien by Colonel Richard Catts, commander of the U. S. Marines in Haiti, on the night of December 4, after customs employees had destroyed office furniture and injured two United States officials. Minor clashes between excited mobs and the American Marines or members of the Haitian National Guard occurred on December 5 and 6, followed by the trouble at Aux Cayes December 7.

The U. S. State Department took cognizance of the seriousness of the situation on December 4, by making public a message sent to President Borno, condemning his action and his decision to withdraw from the presidential race. On December 6, additional Marines were dispatched to Haiti and, on the following day, President Hoover sent a message to Congress asking for an appropriation of \$50,000 to send to Haiti a commission to investigate the situation and to "endeavor to arrive at some more definite policy than at present." The President had recommended the dispatch of such a commission to

Haiti in his regular message to Congress on December 4.

The cruiser *Galveston*, with a marine detachment of 50 men, arrived at Jacmel December 8 and within a few days the situation had quieted to such a degree that President Hoover ordered the marine reinforcements en route from the United States diverted to the American naval base at Guantanamo. A modified system of martial law continued in force for some time, but there were no further disturbances.

On December 15, the presidents of seven Haitian political organizations dispatched petitions to President Hoover asking for American supervision of the legislative elections in April. They stated that free and impartial elections could not be held under the existing French electoral system, and requested that provision be made for the election of the President by direct suffrage instead of by the Council of State, as provided in the constitution. At the end of the year, observers reported that the agitation against the Borno government was continuing and that further disturbances might be expected unless more satisfactory provision was made for a popular election. The United States House of Representatives on December 18 approved President Hoover's recommendation for the sending of a commission to Haiti, but no action had been taken by the Senate up to the end of the year.

President Borno, on November 26, appointed a new cabinet, consisting of Antoine C. Sansaricq, Foreign Minister; Francis Salgado, Finance Minister; Charles de Belba, Minister of the Interior; Hannibal Price, Minister of Education; and Charles Riboul, Minister of Justice. A treaty fixing the boundary line between Haiti and the Dominican Republic, signed Jan. 21, 1929, was ratified by Haiti on February 11 and by the Dominican Republic on February 25. The resignation of Dr. A. C. Millspaugh, American Financial Adviser to the Haitian government, was announced in January. The reasons for his withdrawal were not given.

**HALDANE, J. S.** See PHILOSOPHY.

**HAMILTON, WILLIAM PETER.** An American editor, died in Brooklyn, N. Y., Dec. 9, 1929. He was born in England, Jan. 20, 1867, and began newspaper work in 1890 on the staff of the *Pall Mall Gazette*, for which he traveled as correspondent to many parts of the world. He served as lieutenant of the British Auxiliary Forces, the Royal Engineers, and was war correspondent in the first Matabele war, South Africa (1893-94). He went to America in 1899, where he joined the staff of the *Wall Street Journal*, of which he became editor in 1908. Mr. Hamilton was a contributor on financial and economic topics to many magazines. He wrote *The Stock Market Barometer* (1922).

**HAMILTON COLLEGE.** A nonsectarian institution for the higher education of men in Clinton, N. Y., founded in 1812. A total of 433 students was registered for the 1929 autumn session, distributed as follows: Seniors, 84; juniors, 85; sophomores, 112; and freshmen, 152. There were 43 members of the faculty for the year 1929-30. The productive funds of the college were approximately \$4,223,327 and the income for the year 1928-29 was \$381,784. The library contained 130,330 volumes and 30,325 pamphlets. President, Frederick C. Ferry, Ph.D., Sc.D., LL.D.

**HAMILTON SALE.** See ART SALES.

**HAMPTON, HERBERT.** An English sculptor and painter, died in London, Feb. 13, 1929. Born in 1862, he attended Bishop-Stortford College, and later studied art at Westminster, the Slade Schools, London, and at Paris. Mr. Hampton was chosen to design a number of important public memorials, including Queen Victoria's memorials at Ipswich, Lancaster, New Zealand, and India, the Lord Abedare Memorial for Cardiff, Wales; the Hon. William Rolleston Memorial for New Zealand, and that for the Maharaja Mayurbhanj. Among Hampton's portraits are those of Queen Mary, Lord Kelvin, Maharaja Tagore, and Raja Ban Bahari. He also painted a number of ideal interpretations, several, such as "Appolo," "Orpheus," and "The Huntress," being hung in the Royal Academy, London, or the Salon, Paris.

**HAMPTON NORMAL AND AGRICULTURAL INSTITUTE.** An institute founded in 1868 in Hampton, Va., for the education of Negroes and Indians. The enrollment for the autumn term of 1929 was 1003, while that for the two summer sessions was 1138. The faculty for the present school session ending May 29 numbered 10. Productive funds on June 30, 1929, amounted to \$9,268,083 and the income from all sources was \$601,371. There were 70,354 volumes in the library. Acting principal, George P. Phenix.

**HANDBALL.** Alfred Banuet, of the Olympic Club, San Francisco, was the champion handball player in the United States in 1929. He triumphed over Joseph Griffin of the Detroit Y. M. C. A. in the final of the senior four-wall championship held at the New York Athletic Club in the late part of March, and paired with his clubmate, Lane McMillan, to capture the doubles event with ease. The one-wall singles title contested at the 7th Regiment Armory in New York in March went to Mike Schmookler, of the Trinity Club, Brooklyn, while Eckard Galowin and Seymour Alexander of the Trinity Club earned the doubles championship. F. Olney of the Los Angeles A. C. captured the junior singles championship at his home club in February, while the doubles event was taken by Joe Powers and Harry Goube, of the Los Angeles A. C. in March.

**HANNAUER, GEORGE.** An American railway president, died Nov. 2, 1929, in New Haven, Conn. He was born Dec. 19, 1872, in St. Louis, Mo. He began work with the Terminal Railroad Association in St. Louis in 1890. In 1903-07 he was superintendent of the Wiggins Ferry Company, after which he became superintendent of the Indian Harbor Belt Railroad, being promoted to general superintendent in 1911 and to general manager in 1912. In 1920 he also became vice president, and in 1922 relinquished his duties as general manager. He was selected as president of the Boston & Maine Railway in 1927 and soon distinguished himself in connection with his able work on the financial and physical rehabilitation of this system. Mr. Hannauer was known as an authority on railway terminal operation in which he had spent the greater part of his career.

**HARBORS.** See PORTS AND HARBORS.

**HARMSWORTH, SIR HILDEBRAND AUBREY.** An English journalist, died in London, Apr. 18, 1929. He was born in 1872, and was educated under private tutors and at Merton College, Oxford. At the age of 16, he joined his brothers, Lord Northcliffe and Lord Rothermere in journalism. He himself started the *New Liberal*

*Review* in 1901, and was sole proprietor of the *Globe*, a newspaper, 1908-11. He was twice an unsuccessful candidate for the House of Commons, first contesting Gravesend as an Imperial Liberal in 1900, and again in 1906 contesting Mid Salop as a member of Mr. Chamberlain's fiscal reform party. In 1922 he was created a baronet.

**HARRISON, CHARLES CUSTIS.** An American educator, former provost of the University of Pennsylvania, died in Philadelphia, Pa., Feb. 12, 1929, where he was born May 3, 1844. He was graduated from the University of Pennsylvania in 1862, receiving the A. M. degree in 1865. He was engaged in the sugar-refining industry from 1863-92. Having been trustee of the University of Pennsylvania since 1876, Mr. Harrison was appointed acting provost in 1895, and the following year made provost, retaining that position until 1911. He devoted his energies to developing the university and during his administration the assets increased from \$5,000,000 to \$17,000,000, and 27 dormitories, the museum, law school, engineering and dental buildings, gymnasium, and Henry Phipps Institute were added. The honorary LL. D. degree was conferred on Mr. Harrison by Columbia, 1895, Princeton, 1896, Yale, 1901, and the University of Pennsylvania, 1911.

**HARRISON, (LOVELL) BIRGE.** American landscape painter, died in Woodstock, N. Y., May 11, 1929. He was born Oct. 28, 1854, in Philadelphia, Pa. He studied art in Philadelphia and in Paris with Carolus Duran and under Cabanel. Because of ill health, Mr. Harrison traveled and painted in Australia, the South Sea Islands, and the western part of the United States from 1889 to 1893. He was especially famous for his scenes of snow and city streets. His paintings are found in the museums of Europe and America, and he received medals at expositions in Paris and in the United States. In 1910 he was a director of the landscape school of the Art Students' League in New York, he was a member of the National Institute of Arts and Letters, National Academy of Design, and the Union Internationale des Arts and des Lettres. Among his best-known paintings are "November" (Museum, Marseilles), "Return from the First Communion," "Summer Idyl," "Calling Home the Cows," "The Hidden Moon," "Quebec from the River," "The Flatiron Building in a Blizzard," "Fifth Avenue at Twilight." In 1909 he published *Landscape Painting*.

**HARSEBERGER, JOHN WILLIAM.** American botanist, died in Philadelphia, Pa., Apr. 27, 1929. He was born Jan. 1, 1869, in Philadelphia and was graduated from the University of Pennsylvania in 1892. He made botanical expeditions to Europe, Brazil, Argentina, Chile, Mexico, Alaska, Arizona, Utah, Canada, West Indies, southern Florida, in the Northwest, and in the Eastern States. In 1892 he returned to the University of Pennsylvania as instructor in botany and zoology, becoming assistant professor in 1907 and professor in 1911. He lectured in the Society for the Extension of University Teaching and in farmers' institutes in Pennsylvania, 1904-06. He was in charge of nature study, Pocono Pines Assembly, in the summers of 1903-08, of ecology, Marine Biological Laboratory, Cold Spring Harbor, N. Y., 1913-21, and of botany, Nantucket Maria Mitchell Association, 1914-15. His writings include *Masse, a Botanical and Economic Study* (1893); *The Botanists of Philadelphia and their Work* (1899); *A Phytogeographic Survey of*

*North America* (1911), in *The Vegetation der Erde* series; *Vegetation of South Florida* (1914), *The Vegetation of the New Jersey Pine Barrens* (1916); *Pastoral Agricultural Botany* (1920).

**HARVARD UNIVERSITY.** A nonsectarian institution of higher education for men in Cambridge, Mass., founded in 1636. The number of students enrolled for the year 1929-30 was 8312, distributed as follows: College, 3202, including 568 seniors, 705 juniors, 857 sophomores, 987 freshmen, and 85 out of course. Graduate schools: Arts and science, 945; business administration, 1011; education, 289. Professional schools: *Fieneering*, 283; theology, 85; law, 1639; medicine, 616; dentistry, 108; public health, 21; architecture, 73; landscape architecture, 58. Special students, 56. Bussey Institution, 20. For the summer session of 1929, the registration was 3076. The officers of instruction for 1929-30 numbered 1427, of whom 261 were professors, 87, associate professors, and 138, assistant professors. Among those who assumed permanent chairs during the year were Edward Sampson Thurston, professor of law, Albert Hertlein, associate professor of civil engineering, Sidney Bradshaw Fay, professor of history, Alden Benjamin Dawson, associate professor of zoology, Baron Alexander von Stael-Holstein, professor of Central-Asian philology, and Harry Hemley Plaskett, associate professor of astrophysics.

The list of visiting professors and lecturers during the year included Henri Guy, president of the University of Grenoble, who came as exchange professor from France for the first half-year, Marcel Aubert, professor of medieval archaeology in the École Nationale des Chartes, Paris, came as lecturer on fine arts for the first half-year, and Leon Rohm, professor of the history of ancient philosophy at the Sorbonne, Paris, came as lecturer on philosophy for the first half-year. England was represented by three lecturers: Arthur Darby Nock, fellow of Clare College, Cambridge, as lecturer on the history of Christianity during the first half-year, Benedict Humphrey Sumner, lecturer and tutor in medieval history in Balliol College, Oxford, as lecturer on history during the second half-year, and William Boothby Selbie, principal of Mansfield College, Oxford, as the William Belden Noble lecturer in the field of religion. The German lecturers were Wolfgang Laepe, professor of the German language and literature in the University of Kiel, as lecturer on German for the first half-year, and Otto von Guericke, professor of physics in the University of Göttingen, as lecturer on physics during the first half-year.

Svein Rosseland, director of the astronomical observatory at the University of Oslo, lectured on astronomy, and Tibor Radó, lecturer on mathematics in the University of Szeged, lectured on mathematics for the first half-year. Otis Johnson Todd, professor of Greek in the University of British Columbia, came as lecturer on Greek and Latin, William Hung, professor of history in Yenching University, was again lecturer on Chinese history, and Robert Alexander Falconer, president of the University of Toronto, came as the Ingersoll Lecturer on the Immortality of Man. Among the lecturers from American colleges and universities were Chauncy Brewster Tinker of Yale University, in fine arts, Thomas Harrison Reed of the University of Michigan, in government, John Paul Nafe of Clark University, in psychology; James Blaine Hedges of

Clark University, in history; Ernest Stacey Griffith of Syracuse University, in government, and Arthur McCandless Wilson of Grinnell College, in history. The Western exchange professor chosen for the second half-year of 1929-30 was Walter Silz, assistant professor of German, to lecture at Carleton, Grinnell, and Pomona Colleges. Walter Bradford Cannon, George Higginson, professor of physiology, was chosen as exchange professor from Harvard to France for the second half-year.

The total productive funds of the university in June, 1929, were \$92,978,138; and the total income for the year, including gifts for immediate expenditure, was \$12,988,034. The operating expenses for the year ending June 30, 1929, were \$11,608,095 and were budgeted from the following sources of income: Funds and gifts, \$5,891,539, and operating receipts, \$5,916,556, including tuition fees, \$2,781,198, dormitory rentals, \$768,647, income of dining halls and Harvard Union, \$828,065, income from athletic sports, \$853,446, and other operating income, \$685,200. The Harvard House Plan, which was made possible by a gift in 1928 of more than \$11,000,000 by Edward S. Harkness, had advanced to the stage where the first two houses, Dunster and Lowell, named after the earliest and latest presidents of the university, were ready for occupancy. Professor Chester Noy was appointed head of Dunster House and Prof. Julian Lowell Coolidge head of Lowell House. The plan called for the construction of several additional residential units to house the three upper classes, each house to represent a cross-section of the college, thus promoting a better understanding between diverse groups of undergraduate students.

A school of city planning, made possible by a grant from the Rockefeller Foundation, was founded as part of the faculty of architecture. Prof. Henry Vincent Hubbard of the school of landscape architecture being chosen as head. The Charles D. Norton chair of regional planning, held by Professor Hubbard, was endowed by James P. Curtis; the degree of master in city planning will be awarded. Two new institutes were founded in connection with the law school. The Institute of Criminal Law, under the direction of Prof. Francis Bowes Sayre, will study the problem from the point of view of guilt-finding and of the treatment of those individuals who are convicted. The Institute of Comparative Law, headed by Prof. Josef Redlich, will afford students a concrete basis of ideas from the law of other countries on which to build the legal reforms of the future. A new gymnasium also was completed during the year.

The requirements for a knowledge of languages were changed so that a grade of 70 per cent in the admission examination in advanced German or French would be accepted in satisfaction of the reading requirements in those languages. The library contained 2,866,200 volumes and pamphlets. President, Abbott Lawrence Lowell, Ph.D., LL.D.

**HASTINGS.** THOMAS American architect, died Oct. 22, 1929, in Mineola, N. Y. He was born in New York City, Mar. 11, 1860, and was graduated from École des Beaux Arts, Paris, in 1884. The following year, with John M. Carrère, he formed the firm Carrère & Hastings, which soon established for itself a high place among archi-

fects Their first notable pieces of work were the Ponce de Leon and Alcazar hotels in St. Augustine, Fla. They designed the New York Public Library at Fifth Avenue and Forty-second Street, St. Ambrose Chapel in the Cathedral of St. John the Divine, the memorial amphitheatre where the Unknown Soldier is buried at Washington, the pedestal for the statue of Lafayette in the Louvre, Paris, the American Embassy and Devonshire House in London, and many other well-known buildings Mr Hastings received many honors in recognition of his attainments, among them membership in the National Academy of Design and the American Academy of Arts and Letters, and he was made Chevalier of the Legion of Honor

**HAUK, MINNIE** A famous German dramatic and coloratura soprano, died in Lucerne, Switzerland, February 6 She was born in New York, Nov 16, 1852 Trained under A Errani in New York and M Strakosch in Paris, she won immediate success at her debut as Amina in Bellini's *Sonnambula* (Brooklyn, Oct. 13, 1866) Two years later, she sang at Covent Garden During 1870-73 she was a member of the Hofoper in Vienna, and during 1873-77 of the Komische Oper in Berlin After that, until her retirement from the stage in 1890, she sang only as guest in the principal opera houses of Germany, Austria, France, Belgium, England, and the United States In 1881 she married the celebrated traveler Count Ernst von Hesse-Wartegg, and with him made three tours around the world During the war, her entire fortune was swept away, but as soon as her plight became known, a fund was raised by Geraldine Farrar and the Music Lovers' Foundation of New York In 1919 her eyesight began to fail and by 1922 she was almost totally blind During her brilliant career, she appeared in about 100 operas, her most famous rôle being Carmen, which she sang over 500 times in French, German, Italian, and English She was not only a great singer, but also a remarkable actress She wrote her autobiography under the title, *Memoirs of a Singer* (London, 1925)

**HAVERFORD COLLEGE.** An institution of higher education under the control of the Society of Friends in Haverford, Pa., founded in 1833 Registration for the autumn term of 1920 totaled 297 students, distributed as follows: Graduates, 7, seniors, 58, juniors, 68, sophomores, 82, and freshmen, 82. There were 37 members on the faculty The productive funds of the institution amounted to \$4,210,289, par value, and the total income for 1928-29 was \$477,777 The endowment was increased by \$12,850, and \$25,750 was expended for new buildings The library contained 113,000 volumes President, William Wistar Comfort, Ph D., Litt D, LL.D.

**HAWAII**, ha-wi't A territory of the United States, consisting of a group of islands in the north central Pacific Ocean, formally annexed, Aug 12, 1898 The nine inhabited islands with their respective areas in square miles are as follows: Hawaii, 4015, Maui, 728, Oahu, 599; Kauai, 547, Molokai, 261, Lanai, 139, Niihau, 97, Kahoolawe, 69, Midway, 27. Capital, Honolulu, on the island of Oahu The population according to the census of 1920 was 255,912, as compared with 191,909 in 1910 On June 30, 1929, the Board of Health estimated the population at 357,619, of which 236,577 were American citizens and 121,072 aliens. The population

was divided by race and nationality as follows: American, British, German, Russian, 38,006; Japanese, 137,407, Filipino, 63,869, Portuguese, 29,717, Chinese, 25,211, Hawaiian, 20,479, Caucasian-Hawaiian, 16,087; Asiatic-Hawaiian, 10,598, Porto Rican, 6023, Korean, 6393; Spanish, 1851; others, 508. The birth rate in 1928 was 33.84 per 1000 population, as compared to 37.16 for 1927, the total births being 11,543 The death rate for 1928 was 11.7 per 1000 population, as compared to 11.87 for 1927, the total of deaths being 3992 The infant mortality rate was 83.69, as compared with 95.97 for 1927 and 104.21 for 1926. Marriages for the year were 2736, or 8.02 per thousand population Honolulu, the largest city, had an estimated population in 1928 of 113,000

**EDUCATION** Hawaii's public-school system is centralized under Territorial control. All public schools are under the direction of the superintendent of public instruction and commissioners appointed by the governor The total expenditures for public schools, including the teachers' normal and training school for the year ending June 30, 1928, was \$5,417,788 During the school year 1928-29, there were maintained 250 schools with 2485 teachers and 70,232 pupils There were 65 private schools with 440 teachers and 9497 pupils The University of Hawaii at Honolulu had 38 instructors and 536 students in 1927. English is the language of instruction

**PRODUCTION AND COMMERCE** Agriculture is the main industry of the islands and the two chief export crops are sugar and pineapples, although coffee, hides, honey, sisal, bananas, rice, wool, tobacco, and cotton also are exported. Production of raw cane sugar during the crop year 1928-29 was estimated at 852,000 short tons, as compared with about 904,000 tons in the previous year

The pineapple crop amounted to 8,633,000 cases of 24 cans each, as compared with 8,879,000 cases in 1927 Pineapple exports for 1928 amounted to \$40,871,000, or about \$6,000,000 more than in the previous year. Investments in the pineapple industry at the end of 1928 were estimated at \$16,381,500 for canneries and \$13,958,500 for fields, the total acreage under cultivation being 49,356 The 1928 coffee crop was estimated at 6,750,000 pounds, 12 per cent larger than in 1927, but shipments to the United States were only 3,700,000 pounds, or one-third less than in the previous year Banana shipments declined from 217,000 bunches in 1927 to 183,500 bunches Livestock on the islands in 1927 included 168,000 cattle, 17,000 swine, 15,000 sheep, and 20,000 horses, mules, and asses Manufacturing consists principally of the canning of pineapples and the preliminary processing of sugar, which is shipped to the United States for refining The manufacture of paper and building material from cane pulp was under experiment

Commerce of the islands is largely with continental United States, the value of shipments to the mainland in 1928 totaling \$116,956,000, as compared with \$109,236,000 in 1927, and \$98,201,000 in 1926 Exports to other countries in 1928 amounted to \$2,524,000. Imports from the United States in 1928 were \$77,824,000 and in 1927, \$79,630,000, while imports from other countries in 1928 totaled \$10,362,000 and in 1927, \$9,172,000 Raw and refined sugar and canned pineapple are the chief exports to the United States, the respective values in 1928 being \$72-

936,000 and \$39,589,000 Shipments from the United States to Hawaii included vegetable food products, textile products, lumber, iron and steel, nonmetallic minerals, oils, machinery, chemicals, and a wide variety of other manufactures Imports from foreign countries consisted mainly of jute from India, nitrates from Chile, silks from China and Japan, native foodstuffs from Japan, meat and butter from Australia and New Zealand Canada, Great Britain, and the Philippines took considerable quantities of canned pineapple

**FINANCE** Receipts by the various counties showed a decline during the year. On June 30, 1929, the total revenue was \$11,926,631, as compared with \$12,000,000 during the previous fiscal year The revenue of the government for 1928-29 was \$11,926,631 and expenditures (not including capital outlays), \$10,682,110, as against a total income of \$11,579,668 and expenditures (not including capital outlays) of \$9,579,058 for the previous year. Including capital outlays, the total expenditure in 1927-28 amounted to \$12,709,000 Total resources on June 30, 1929, were \$2,389,512 The bonded indebtedness, which stood at \$28,585,000 on June 30, 1928, was increased by \$1,175,000 on Feb 1, 1929, by an issue of 4½ per cent public-improvement bonds

**COMMUNICATIONS** In 1928 there were about 1038 miles of railways operating on the various islands, of which railway companies operating public lines had 368 miles The remainder consisted mainly of private lines operated by plantations, but which carried passengers as well as freight During the year ending June 30, 1928, the public lines carried 2,211,000 tons of freight and 1,073,000 passengers A number of the islands have excellent highways and in 1928 there were 36,300 motor cars registered, 23,000 of which were in the city of Honolulu New vessels were added in the same year to the fleet of 16 small steamers which provided regular service to all important points in the islands There were 64,862 miles of telephone wire, and 22,031 instruments operated by four companies on June 30, 1928 On Nov 11, 1929, an inter-island commercial air service was inaugurated

**GOVERNMENT** The territorial elections are held regularly in November of each even year, to elect the delegate to Congress for two years, one-half of the Hawaiian Senate for four years, and all the members of the Hawaiian House of Representatives for two years The sessions of the Legislature are held biennially in odd-numbered years Governor in 1929, Lawrence M Judd

**HAWKES, McDOUGALL** An American lawyer, died in New York, May 22, 1929, where he was born July 29, 1862 He attended schools in Germany and France, and, having received the M A degree from Columbia in 1885 and the A B degree in 1886, he was graduated from the law school in 1887 Admitted to the bar in the year of his graduation, he practiced in New York until his death In 1899 he became first vice president of the New York Republican County Committee and as commissioner of docks and ferries in New York, 1902-03, he was instrumental in carrying out the Chelsea improvement He served as bridge and tunnel commissioner of New York State, 1907-28 Mr Hawkes aided in the foundation of the French Institute in the United States, and was chairman of the trustees of the French-American Chamber of Commerce, Inc

**HAY.** The total hay crop of the United States in 1929 was estimated by the Department of Agriculture at 114,039,000 tons, which was 7 8 per cent larger than the crop of 1928 and 7 9 per cent larger than the average production of the five years 1923-27 The 1929 crop was larger than in 1928 in the area extending from the New England States westward to South Dakota and southward to Tennessee South and west of this area production was less than in 1928 in most States Due to a small carryover of old hay the average December 1 farm price of hay was practically the same as that of the previous year, \$11 77 per ton, although the crop was larger The total farm value at these prices was \$1,349,000,000 in 1929 and \$1,240,000,000 in 1928 The crop of 1929 was made up of 101,715,000 tons of tame hay and 12,924,000 tons of wild hay Although nearly 1,000,000 acres more of wild hay were cut, the production was practically the same as in 1928 as a result of lower yields per acre in some of the prairie hay States

The yields of tame hay in the leading States were estimated as follows Wisconsin, 7,390,000 tons, New York, 6,653,000; Iowa, 6,342,000; Illinois, 5,554,000, Missouri, 5,211,000, California, 5,178,000, Michigan, 5,022,000, and Ohio, 5,009,000 The average yield per acre ranged from 0 61 of a ton in Georgia to 3 52 tons in Arizona As in the preceding year the States growing hay crops wholly or largely under irrigation reported the higher average yields per acre The average farm price per ton on Dec 1, 1929 ranged from \$8 50 in North Dakota to \$22 in Rhode Island The more important wild-hay-producing States in 1929 and their estimated yields were as follows Nebraska, 2,652,000 tons, Minnesota, 2,010,000, South Dakota, 1,712,000, and Kansas, 1,080,000 These four States produced over half of the total crop of wild hay The average yield per acre varied from 0 63 of a ton in South Dakota to 1 70 tons in Delaware, and the farm price per ton on December 1 from \$6 20 in Ohio to \$16 in Florida

The tame hay crop of 1929 included 29,847,000 tons of alfalfa hay (see ALFALFA), 26,991,000 tons of mixed clover and timothy hay, 13,390,000 tons of red, alsike, and crimson clover hay, 10,338,000 tons of timothy hay, 4,323,000 tons of soy bean, cow pea, and peanut hay, and 2,350,000 tons of sweet-clover hay The production of clover hay showed a marked increase over the yield in 1928 During the fiscal year ended June 30, 1929, the United States exported 12,000 tons and imported 36,000 tons of hay Amendment No 2 of the official hay standards, effective Nov 1, 1929, issued by the Department of Agriculture, provided for slight changes, the principal ones being the reduction of the color specifications for No 1 grade from 50 per cent to 45 per cent green in the timothy and clover group, from 60 per cent to 50 per cent in the prairie hay and grass hay groups, and from 45 to 40 per cent in the Johnson grass and Johnson grass mixed hay group

**HAYTI** See HAITI

**HEADLAM-MORLEY, SIR JAMES WYCLIFFE** English historian, died Sept 6, 1929, in Wimbledon, England He was born Dec 24, 1863, and was educated at Eton and at King's College, London, and at the University of Berlin From 1885 to 1890, he was a fellow of King's College, and after his years in Germany, he lectured for the Cambridge University Extension He was professor of Greek and ancient history at Queen's College, London (1894-1900), staff inspector of

secondary schools for the Board of Education (1902-20) and a member of the Prime Minister's committee on modern languages (1917-18). From the outbreak of the World War, he worked with the propaganda organization set up at Wellington House (1914-17), was assistant director of the political intelligence bureau in the Department of Information (1917-18), and of the Political Intelligence Department in the Foreign Office 1918-20. He went as a member of the political section of the British delegation to the Peace Conference at Paris (1919). In 1920 the post of historical adviser was created for him in the Foreign Office and there he served until retirement in 1928. He was made commander of the Order of the British Empire in 1920 and upon retirement was knighted. He wrote *On Election by Lot at Athens*, *Life of Bismarck*, *Classical Studies in Germany* (reports issued by the Board of Education), *The History of Twelve Days*, *The German Chancellor and the Outbreak of War*, *The Issue*, *British Documents on the Origin of the War* (vol. xi, being "The Outbreak of War," of which he was editor).

**HEART DISEASE.** Dr. C. D. Kerley, well known as a pediatrician, discussed "Children Apt to Develop Heart Disease" in the *Journal of the American Medical Association* for February 16. The susceptible child is in the first place the one who is sensitive to rheumatic and other infections, while those with chorea and pains in the lower limbs are more threatened than those without them. If a child presents two or all three of these peculiarities, he is particularly sensitive in this respect. It is very apparent that any focus of local infection like infected tonsils must be removed. Pains in the legs worse in bad weather include the so-called growing pains and, if this symptom is present, no time should be lost in removing infected tonsils, teeth, etc. The author is a great believer in giving these children courses of sodium salicylate, oil of wintergreen and other substances containing salicylic acid, although he does not in this connection mention aspirin, which should relieve the leg pains. This salicylic-acid treatment in advance has been termed unscientific, but, as long as there is a possibility that it can prevent the development of endocarditis, it will find users. In some instances, this liability to rheumatism runs in families and it is in such familial cases that the best prophylactic resources should be utilized.

**HEJAZ or HEDJAZ.** See ARABIA.

**HELMELM.** See CHEMISTRY, INDUSTRIAL.

**HELMOLT, HELMOLT, HANS FERDINAND A.** German editor and historian, died Mar. 18, 1929. He was born July 8, 1865, in Dresden, and studied philosophy and history at Leipzig and Bonn. He was appointed to an editorial position in the Bibliographic Institute at Leipzig. His published works include *König Rupprechts Zug nach Italien* (1892), *Fabræus und Syber* (1895), *Weltgeschichte* (9 vols., 1899-1907; English translation, 1902-08), a study based on the ethnographic method and prepared with the aid of 37 specialists, *Ranke-Bibliographie* (1910), *Briefe Gustav Freytags an A. von Stosch* (1913), *Dresdner* (1914); *Ehrenbuch des deutschen Volkes* (1923), *Hindenburg* (1926).

**HENDERSON, BERNARD WILLIAM.** An English historian and educator, died in Windsor Forest, Jan. 11, 1929. Born in London, Nov. 4, 1871, he attended Lincoln College, Oxford. Elected fellow of Merton College, 1894, he also served as

librarian, 1897-1901. He then joined Exeter College, where he remained as tutor from 1902 until his death, also being librarian, 1904-06 and 1916-24, sub-rector, 1905-13 and 1915-18; and senior tutor, 1919-24. At various times, Dr. Henderson served as examiner at London, Cambridge, and Oxford universities. Oxford conferred on him the M.A., and D.Litt. degrees. A student of Roman history, he wrote several books on the subject, which were important for their scholarship, original viewpoint, and vivid style. These were *Life and Principate of the Emperor Nero* (1903), *Civil War and Rebellion in the Roman Empire* (1908), contributions to *A Companion to Latin Classics* (1911), *The Study of Roman History* (1919), *Life and Principate of the Emperor Hadrian* (1923), and *Five Roman Emperors* (1927). He also wrote a history of Merton College, several volumes of poetry, and one Greek history, *The Great War Between Athens and Sparta* (1927).

**HENRI, ROBERT.** American painter, died in New York City, July 12, 1929. He was born in Cincinnati, Ohio, in 1865, studied art in the Pennsylvania Academy of Fine Arts in Philadelphia, 1886-88, in the Académie Julien and École des Beaux Arts, Paris, 1888-91, and studied without instruction in France, Spain, and Italy. Returning to America, he settled in New York, where he became a leader in the radical movement in American art, and as head of the New York School of Art, the "Independent School," exercised a wide influence. Henri's art was characterized by daring, individuality, sincerity of purpose, and simplicity. His works are in galleries and museums all over the United States and in Europe, and he received numerous prizes and medals. Among his best-known works are "La Neige," purchased by the French government for the Louvre; "Spanish Gipsy," in the Metropolitan Museum of New York; "The Equestrian," Carnegie Art Institute, Pittsburgh; "Young Woman in Black," Art Institute of Chicago; "Girl with Fan," Pennsylvania Academy of Fine Arts, Philadelphia; and "Laughing Girl," Brooklyn Institute Museum. He was a member of the National Academy and the American Institute of Arts and Letters.

**HENRY, PRINCE OF PRUSSIA (HEINRICH ALBERT WILHELM)** German admiral, died Apr. 20, 1929, in Hennelmark, Germany. The second son of Frederick III., Emperor of Germany, and brother of William II, he was born Aug. 14, 1862, in Potsdam, Brandenburg, and educated in the Gymnasium at Kassel (1875-77), and in the Marine Academy (1884-86). He traveled around the world in 1878-80, visited the United States in 1882-84 and 1903, and South America in 1914. In 1880 he was made a naval officer, rising in rank until he became admiral in 1901. In 1906 he was chief of the active battleship fleet and general inspector of the marine. He also was made a field marshal in the Prussian army. In the World War, he held chief command of the German fleet.

**HERBETTE, MARCE.** French Ambassador to Belgium, died in Paris, Nov. 3, 1929. He was born in Paris, Nov. 11, 1871, and was educated at the Condorcet Lyceum and the French Gymnasium of Berlin. He entered the diplomatic service as an attaché to the French Ambassador in Berlin. He was chief of the bureau of communications, sub-director of the International Unions, and chief of the cabinet and of the bureau of personnel in the Office of Foreign Affairs. In 1922 he

was appointed Ambassador to Belgium. He wrote *Une Ambassade turque sous le Directoire*, *Une Ambassade persane sous Louis XIV*, a translation of Prince von Bulow's *Politique allemande*, and *L'Avenir de la France*. He was a commander of the Legion of Honor.

**HERCULANEUM.** See ARCHAEOLOGY.

**HEREDITY.** See EMBRYOLOGY.

**HERRICK**, MYRON T. American Ambassador to France, died in Paris, Mar. 31, 1929. He was born Oct. 9, 1854, in Huntington, Ohio. After studying at Oberlin College and Ohio Wesleyan University, he was admitted to the bar in 1878. He practiced law in Cleveland until 1886, when he turned to business, holding important offices in Cleveland and New York corporations. Active in politics, he went six times as delegate to Republican National Conventions, was a presidential elector-at-large of Ohio in 1892, and a member of the Republican State Executive Committee and the Republican National Committee. He served with the rank of colonel on the staff of McKinley when the latter was Governor of Ohio and was himself Governor of that State, 1903-06. President Taft appointed him Ambassador to France in 1912, and he held that post until December, 1914, part of the time at the request of President Wilson.

In 1921 Mr. Herrick was again appointed Ambassador to France by President Harding, where he remained until his death. Ambassador Herrick won the admiration of the French people by his refusal to leave Paris when the French government fled to Bordeaux at the beginning of the World War, and he further endeared himself to the French and to Americans in France by his war-relief activities. He organized the American Relief Clearing House in Paris and established the American Ambulance Hospital at Neuilly, France.

In 1915 France awarded him the Grand Cross of the Legion of Honor and at his death in Paris showed him great and unusual honor. Ambassador Herrick's reception of Landheigh in Paris when the aviator made his famous flight across the Atlantic was considered in both France and the United States a friendly and gracious gesture. He was interested in fair credit, giving as one of his reasons for accepting the ambassadorship to France the opportunity to study that country's excellent system. His *Rural Credits* was published in 1914. A biography of Myron T. Herrick by Col. T. Bentley Mott, U. S. A., was published in 1929.

**HESSE**, hēs. Since November, 1918, a republican state of the German Republic, situated in the western part of Germany, formerly a grand duchy of the German Empire. Area, 2,908 square miles; population, at the census of 1925, 1,347,279. The capital is Darmstadt with a population of 89,465. Other important cities are Mayence, or Mainz, with 108,537 (with suburbs), Offenbach, 79,362, Worms, 47,015, and Giessen, 33,600. In 1928 there were 1013 public elementary schools, with 3876 teachers and 149,307 pupils. The areas and yields of the chief crops in 1927 were: Wheat, 79,700 acres, 64,753 tons; rye, 154,215, 112,741; barley, 113,317, 91,630; oats, 118,555, 80,453; potatoes, 150,277, 909,128; 34,247 acres were under vines, yielding 5,120,544 gallons of wine, valued at 24,232,904 marks. On Dec. 21, 1928, there were 313,200 cattle, 42,300 sheep, 329,000 swine, and 117,800 goats. The ordinary revenue and expenditure for the

year 1928 were estimated to balance at 170,667,666 marks. The funded debt as of April, 1928, was 73,495 marks, the floating debt, 29,164,000 marks; and the Reichsmark debt, 12,935,375 marks. The government has a unicameral legislature and a responsible ministry. As a result of the elections held on Nov. 13, 1927, the Landtag (70 members elected for three years), the new Diet is composed as follows: Socialists, 24, Democrats, 5, German People's party, 7; Centre, 13, German Nationalists, 3; Hessian Peasants Union, 9, Communists, 6, other parties, 3. The cabinet, nominated on Feb. 14, 1928, was as follows: Premier and Minister of Education, Herr Adelung (Socialist); Finance and Justice, Herr Kirchberger (Centre); Interior, Herr Leuchner; Labor and Economic Affairs, Herr Korell (Democrat).

**HILLIS**, NEWELL DWIGHT. An American Congregational clergyman and author died in Bronxville, N. Y., Feb. 25, 1929. Born in Magnolia, Iowa, Sept. 2, 1858, he was graduated from Lake Forest University in 1884, and from the McCormick Theological Seminary, Chicago, in 1887. He was ordained into the Presbyterian ministry in 1887, and as pastor of the First Church, at Peoria, Ill., 1886-89, he became known for his eloquence and enthusiasm. His reputation for scholarship was increased by his pastorate at Evanston, Ill., 1889-95. He then was called to the independent Central Church of Chicago, where he remained until 1899. Dr. Hillis succeeded Lyman Abbott as pastor of the Plymouth Congregational Church, Brooklyn, in January, 1899, where his tremendous activity gained a following comparable to that of his noted predecessor, Henry Ward Beecher. He became president of the Plymouth Institute, an educational institution, at its foundation in 1914. Dr. Hillis in business ventures was far less successful than in the pulpit, and his financial failure during the years 1917-18, and the failure of various undertakings in which he was involved. Nevertheless he enjoyed the support and confidence of his parishioners in his various difficulties.

Dr. Hillis in addition to his work in the church, traveled continually as an inviting lecturer. At the outset of the World War, 1914, he was outspoken in his denunciation of alleged German atrocities, and in his criticism of the United States Government's neutrality policy. He became pastor emeritus of Plymouth Church in 1924, but he retained his presidency of the Institute until his death. His vigor brought him a reputation in Europe, as well as in the United States, and several of his 20 volumes of sermons were translated into foreign languages. His numerous books include: *A Man's Value to Society* (1896), *Great Books as Life Teachers* (1899), *Influence of Christ in Modern Life* (1900), *Success Through Self-help* (1903), *The Fortune of the Republic* (1906), *Contagion of Character* (1911), *Prophecy of a New Era* (1912), *Lectures and Orations of Henry Ward Beecher* (1913), *The Story of Phadrus* (1914), *German Atrocities* (1918), *The Blot on the Kaiser's 'Southceon*

(1918); *Rebuilding the Ruined Lands of Europe* (1919); and *The Better American Lectures* (1921).

**HISPANIC SOCIETY OF AMERICA, THE.** An international organization founded in 1904, in New York City, to establish a public library and museum designed to be a link between the English-, Spanish-, and Portuguese-speaking peoples, and to advance the study of the Spanish and Portuguese literature, and history, and the study of the countries wherein Spanish and Portuguese are or have been spoken languages. Since 1904, when a collection of paintings, manuscripts, maps, and coins, and a library of about 40,000 volumes were placed in charge of the society, valuable additions have been made to this collection, and a number of temporary exhibitions have been held of the works of noted Hispanic artists. Membership in the society is limited to 100, is honorary, and includes specialists and scholars of all nationalities distinguished in the Hispanic field. The society has published over 200 catalogues, reprints of old manuscripts, and monographs. The *Revue Hispanique* is published every two months in Paris. The president for 1929 was Archer M. Huntington and secretary, George Bird Grinnell. The museum and headquarters of the society are at 150th Street, West of Broadway, New York City.

**HISTORICAL ASSOCIATION, AMERICAN.** A society for the promotion of historical studies and writings, formed in 1884 by a group of American scholars and chartered by Congress in 1889. Under provision made by the United States Government, it publishes annual reports and is charged with the office of communicating its proceedings and its information on the state of historical study and writing to the secretary of the Smithsonian Institution, for transmission to Congress. In 1929 the association had a membership of 3700, who represented not only every State of the Union but also Canada and many European and South American countries. It invites to membership not only those who are engaged in historical work and teaching but all who feel a sufficient interest in historical science to prompt them to join.

The forty-fourth annual meeting opened Dec. 30, 1929, and was held in Durham and Chapel Hill, N. C. Among the subjects of papers delivered and topics discussed at the various conferences were the following: "The Theory of Persecution during the Middle Ages"; "Opportunities for Research in American History"; "Erasmus and Toleration"; "The Revolt in the Old Southwest"; "The Content and Scope of American Social History"; "The Historical Importance of Parthia"; "Andrew Jackson, a Century Estimate"; "Nineteenth Century Nationalism"; "The Rehabilitation of a Rural Commonwealth"; "Diplomatic Episodes of Modern European History"; "The Industrial Revolution in the Twentieth Century"; "The League of Nations"; "The Great Plains and the American Frontier"; "The Place of Bolshevism in the History of Russian Socialism"; and "Imperial Unity, 1760-74." During the presentation of the paper on Imperial Unity by Clarence E. Carter of Miami University, it was announced by Randolph G. Adams, director of the University of Michigan Library, that the university had recently obtained the papers of Gen. Sir Thomas Gage, British commander-in-chief in America, 1763 to 1775.

For the encouragement of historical research, the association offers two biennial prizes of \$200 each for the best monograph, printed, or in manuscript, in the English language, submitted by a writer who has not achieved an established reputation. The Herbert Baxter Adams Prize, awarded in odd years for an essay in the history of the Eastern Hemisphere, and in even years the Justin Winsor Prize for an essay in the history of the Western Hemisphere, and the insular possessions of the United States. The Herbert Baxter Adams Prize was awarded in 1929 to H. S. Commager for his work, *Struensee and the Reform Movement in Denmark*.

The George Louis Beer Prize of \$250, which was established in honor of its founder, the late George Louis Beer, for the best work upon any phase of European international history since 1895, was awarded for 1928 to Sidney B. Fay for *Origins of the World War*, and for 1929 to M. B. Giffen for *Fashoda, the Incident and the Diplomatic Setting*. The John H. Dunning Prize, awarded biennially in accordance with the terms of the bequest of Miss Mathilde M. Dunning for the best historical essay, dealing preferably with the Southern States during the reconstruction period, was presented in 1929 to Hayward J. Pearce, Jr., for his paper, *Benjamin H. Hall: Secession and Reconstruction*.

The official organ of the association is the *American Historical Review*, a quarterly. The *Annual Report* contains proceedings, important papers read at the annual meetings, texts of significant documents, reports on American archives, reports on history teaching, and papers on agricultural history. Officers for 1929 were: President, James Harvey Robinson, first vice president, Everts B. Greene, second vice president, Ephraim D. Adams, secretary, Dexter Perkins, treasurer, Charles Moore, assistant secretary-treasurer, Patty W. Washington, editor, Allen R. Boyd. The officers elected for 1930 were: President, Everts B. Greene, first vice president, Ephraim D. Adams, second vice president, Carl Becker. Headquarters are at 40 B Street S. W., Washington.

**HISTORY.** SEE LITERATURE, ENGLISH AND AMERICAN, FRENCH LITERATURE, GERMAN LITERATURE, ITALIAN LITERATURE, SCANDINAVIAN LITERATURE, SPANISH LITERATURE.

**HOBART COLLEGE.** An institution for the higher education of men in Geneva, N. Y., founded chiefly under the auspices of the Protestant Episcopal Church in 1822 and permanently chartered by the Regents of the University of the State of New York in 1825. William Smith College, a coordinate institution for the separate instruction of women, administered by the Hobart College corporation, and with instruction given by the Hobart College faculty, was established in 1908. The student enrollment in Hobart College for the autumn of 1929 was 335, while the enrollment in William Smith College was 146. The combined faculty of the two colleges numbered 40. The endowment amounted to \$1,200,000, and the income for the year was approximately \$200,000. There were 87,000 volumes in the library. During 1929 Geneva Hall, the oldest building on the campus (1822), was remodeled and refurbished for dormitory use at a cost of \$75,000. An endowment campaign also was launched to raise \$1,000,000 for new buildings and \$1,000,000 for instruction. President, Murray Bartlett, D.D., S.T.D., LL.D.

**HOCKEY.** Professional hockey enjoyed more popularity in 1929 than ever before in its history in America, and the work of the Boston Bruins of the National Hockey League in capturing the world's championship and the Stanley Cup was superb. Embracing as it did the close of one season and the opening of a new one, 1929 showed that the Bruins were far and above the best team in the league. The Boston team led its section of the league, defeated the leaders of the other division, the Montreal Canadiens, for the league championship and then proceeded to carry off the Stanley Cup in equally as sensational a manner.

In the post-season play-off series, Boston went through five games without suffering a defeat, downing the Canadiens for the league championship by scores of 1-0, 1-0, and 3-2. The Bruins followed this triumph by taking the final of the Stanley Cup series from the New York Rangers with two straight victories, 2-0, and 2-1. In the race for individual scoring honors, Ace Bailey of Toronto captured the laurels with 32 points. Neil Stewart of the Montreal Maroons was second with 20, while Howie Morense of the Montreal Canadiens and Blair of Toronto tied for third place with 27 points each.

The Boston Tigers won the Canadian-American League, Tulsa was first in the American Hockey Association, while Vancouver earned the laurels in the Pacific Coast League. Oakland showed the way in the California Hockey League, and in the Canadian Professional League the Bruins were beaten by Windsor in the

Although there was no college league the Yale University was recognized as the best six, the Blue losing but one game out of seventeen, winning 15 and tying one. In addition most of the hockey-playing American Yale conquered such strong Canadian societies as McGill and Toronto University.

**HOFMANNSTHAL.** hōfmann-stal, HUGO (HOFMANN) von, Austrian poet, died July 15, 1929, in Rodaun, Austria. He was born in Vienna, Feb. 1, 1874, and studied at the university in that city. He began his literary career at the age of 18, when he published under the name, "Theophil Mouren," a short lyric-dramatic study, *Gestern* (1892). His best-known works are the librettos written for Richard Strauss's music *Der Rosenkavalier*, which was heard in New York in 1913, is especially famous. His verse is lyrical and romantic. Others among his works are *Ausgewählte Gedichte* (1903), *Das Mädchen der 672. Nacht, und andere Erzählungen* (1904), *Viktor Hugo* (1904), *Vorspiele* (1908), *Prosaische Schröpfen* (1907), *Jedermann, ein altes Spiel erneuert* (1912), *Ariadne auf Naxos* (1912), *Prinz Eugen, der Edle Ritter* (1915), *Alkestis* (1916), *Rodaners Nachklänge* (1920), *Der Tod des Tizian* (1920), *Der Schweserge* (1921), *Die Frau ohne Schatten* (1921), *Das grosse Welttheater*, a mystery play (1923).

**HOLLAND.** See NETHERLANDS, THE.

**HOLY CROSS, COLLEGE OF THE A Roman Catholic college for men under the Society of Jesus in Worcester, Mass., founded in 1843. The enrollment for the autumn of 1929 totaled 1079, with a distribution as follows: Graduate school of chemistry, 7, arts course, seniors, 190; juniors, 168, sophomores, 219, and freshmen, 253, science course, seniors, 8, juniors, 17; sophomores, 15, and freshmen, 27; physical education**

seniors, 36; juniors, 46, sophomores, 44, and freshmen, 53. The faculty numbered 88. The library contained 10,000 volumes. President, the Rev. John M. Fox. S. J.

**HOLZ,** hōltz, ARNO. A German poet and critic, died in Berlin, Oct. 25, 1929. He was born in Rastenburg, East Prussia, Apr. 26, 1863, but while a child, he moved with his parents to Berlin. There, in 1882, he published his first volume of poems, *Klingenscherer*, which won the Augsburg Schiller Prize. His modern tendencies, photographic realism modeled upon Zola, were manifested in *Deutsche Weissen* (1884, with Jerschke) and in *Buch der Zeit* (1885). Among his other works are *Neue Götter* (1892, in collaboration with Johannes Schlaf), *Socialists kroten* (1896), *Die Kunst, ihr Wesen und ihre Götter* (1891 et seq.), *Revolution der Lyrik* (1899), *Die Heuschmiede*, a poetical drama in one act (1902), *Lieder auf einer alten Laute* (1903), *Dafnis* (1904), *Frei*, a comedy (1905), *Sonnenfinsternis*, a tragedy (1908), *Ignorabimus*, a tragedy (1913), *Das aussagefähige Werk* (1919); *Kindheitsparadies* (1924), *Sieben Billionen Jahre vor meiner Geburt* (1925), *Götter und Götzen* (1925).

**HOME DEMONSTRATION WORK.** See AGRICULTURAL EXTENSION WORK.

**HOME ECONOMICS.** See AGRICULTURAL EXTENSION WORK, FOOD AND NUTRITION.

**HOME MANAGEMENT.** See AGRICULTURAL EXTENSION WORK.

**HOMICIDE.** See CRIME.

**HONDURAS,** hōn-dō-ras. A Central American republic, bounded on the north and northeast by the Caribbean Sea, on the southeast by Nicaragua, on the southwest by Salvador and the Pacific Ocean, and on the west by Guatemala. Capital, Tegucigalpa.

**AREA AND POPULATION.** The estimated area is 44,275 square miles, population, according to the census of 1926, 700,811, mostly Indians with a strain of Spanish blood. The chief towns with their populations in 1926, the latest available statistics, are Tegucigalpa, 26,736, San Pedro Sula, 16,881, La Ceiba, 12,136, Cholutea, 10,444, Santa Rosa de Copan, 9795, Comayagua, 9413, Juticalpa, 9591. The chief ports are Amapala on the Pacific and Porto Cortez and Omoa on the Atlantic.

**EDUCATION.** Elementary education is free and compulsory between the ages of 7 and 15. In 1928 there were 95,188 children of school age, of whom 36,484, or 38.3 per cent, attended school. The 1055 primary schools had 1355 teachers. There were also 12 secondary schools with 393 pupils, and engineering, law, and medical schools, with 131 students. The National University at Tegucigalpa had 75 students in 1925.

**PRODUCTION, ETC.** The principal occupation is agriculture and the chief products bananas and coffee. Bananas are grown mostly along the Atlantic coast and constitute the main export. Both the banana and coffee crops were unusually large in 1928, and the coffee crop, which is the mainstay of the central and Pacific coast sections, was of exceptional quality. The sugar crop was short, due to a shortage of laborers and adverse weather conditions. In the year ending March 31, 1928, banana exports totaled 2,100,000 bunches, valued at \$18,671,000, as compared with 17,090,000 bunches valued at \$13,581,000 in the previous year, coffee exports amounted to 5,140,550 pounds, valued at \$829,000, as compared

with 3,153,000 pounds in the previous year; and sugar exports set a record of 50,298,000 pounds, valued at \$1,451,500, due to heavy production in the previous season. Banana exports in 1929 amounted to 28,241,608 bunches.

Silver and gold are the only minerals mined in commercial quantities, although deposits of zinc, copper, lead, iron, and coal have been found. Silver exports in 1927-28 amounted to 2,032,000 ounces, valued at \$1,213,000, and in the calendar year 1928, to 138,700 pounds valued at \$1,250,000. There is little manufacturing, except for the making of sugar.

COMMERCE. The foreign trade showed large increases in 1927-28, the exports rising to the record figure of \$23,143,000, as compared with \$17,546,000 in the previous year, while imports amounted to \$12,574,000, as compared with \$10,630,000 in 1926-27. Bananas constituted 80 per cent of the total exports, the remainder consisting of other foodstuffs. The United States took 76.3 per cent of the total exports and supplied 79.4 per cent of all imports. About two-thirds of all the imports were manufactures. The United Kingdom, Germany, and France were other leading sources of imports, and a considerable proportion of the exports went to the United Kingdom and Germany. In 1928 Honduran imports totaled \$12,573,595 and the exports \$23,142,738, as compared with imports of \$10,630,416 and exports of \$17,546,290 in 1927.

Imports in 1927-28 were divided in general categories as follows: Manufactures, \$8,359,000, foodstuffs and beverages, \$2,182,000, raw materials, \$1,955,000, live animals, \$71,000. The values of exports for the same categories were: Foodstuffs and beverages, \$21,308,000, bullion and coin, \$1,273,000, raw materials, \$411,000, live animals, \$101,000.

FINANCE. The budget for the fiscal year 1929-30, as amended and approved by a special session of Congress on Aug. 19, 1929, balanced at 13,101,922 pesos (one peso equals about \$0.50). The estimated receipts included 4,134,000 pesos from customs duties, 2,519,000 from monopolies, 1,705,000 from various services, 987,000 from internal revenue stamps and stamped paper, 3,322,100 of special revenues, and 1,318,922 of miscellaneous income. The chief items of expenditure were: Government, 1,755,863 pesos, public works, 3,903,504, public credit, 2,494,138, war and marine, 1,699,863, public instruction, 1,209,364, treasury, 1,040,203.

The budget for 1928-29 estimated receipts and expenditures at 10,706,000 pesos. The estimated revenue for 1929-30 was considerably above the actual receipts in 1927-28, which amounted to only 12,029,870 pesos. The increase of 1,072,053 pesos was provided for by a gambling-license tax passed by Congress in 1929, which was expected to yield 1,000,000 pesos. In 1927-28 ordinary revenues and expenditures totaled 12,030,000 and 11,365,000 pesos, respectively, the revenues showing a 13 per cent increase over those for the previous fiscal year. The public debt on July 31, 1928, amounted to approximately 28,364,000 pesos (\$14,182,000), of which 11,200,000 pesos represented the external debt.

COMMUNICATIONS. In 1929 there were about 1048 miles of railway line and 361 miles of highway. Of the highway, 113 miles was macadam. The road budget increased from \$44,411 pesos in 1926-27 to \$48,000 in 1929-30, the new administration inducted into office in February,

1929, having announced the construction and improvement of highways as one of its principal aims. At the end of the fiscal year 1926-27, there were 5300 miles of telegraph wire and gross receipts from operation during the year totaled 778,000 pesos. On the same date, there were 4646 miles of telephone wire and 1963 instruments, the gross receipts for the year being 71,747 pesos.

GOVERNMENT. According to the constitution of Oct. 3, 1924, the executive power is vested in the President nominated and elected by popular vote, and holding office for four years, legislative power is in the Congress of Deputies consisting of 43 members chosen for four years directly by popular vote. In 1924 the constitution was amended to provide for a permanent commission of five members which transacts the routine business for Congress while that body is not in session. President in 1929, Dr. Vicente Mejia Colindres, who assumed office Feb. 1, 1929, for a four-year term.

### HISTORY

Active steps toward the solution of the boundary dispute between Honduras and Guatemala were continued by the State Department of the United States during 1929 and on October 25 the State Department notified both governments that it felt the discussions had reached a point where further progress could best be realized by a frank and friendly exchange of views. Both governments accepted invitations to meet in Washington for the discussions, and also the offer of the State Department to participate, if so desired. The first meeting was scheduled to take place Jan. 15, 1930. For the background of the dispute, see article on HONDURAS in the 1928 NEW INTERNATIONAL YEAR BOOK.

New territorial disputes arose during 1929 with other Central American countries. On January 6, the Government made public notes of protest which were addressed to the governments of Nicaragua and Colombia with regard to the disposition of the Quitasueño and Roncador Keys in a treaty signed between the two countries. The note stated that Honduras held "titles of undeniable ownership" to the Keys and was disposed "to maintain its rights by respectful but firm protests."

Another boundary dispute with Nicaragua promised to result from the action of United States Marine aviators in bombing territory along the border in connection with efforts to eradicate Nicaraguan bandit or insurgent forces. On April 10, Honduras addressed a note of protest to the United States, alleging that the Marines had dropped several bombs on the Honduran town of Las Limas, that marine forces had crossed into Honduran territory on three different occasions, and that Nicaraguan constabulary had raided Honduran territory, killing two citizens and wounding a third. The U. S. State Department on the same day made public a dispatch from Nicaragua, denying that Las Limas had been bombed, but stating that both Las Limas and Brail "were so close to the border that both countries claim them." On April 13, Coronado Garcia, secretary of the Honduran presidential staff, issued a statement to the effect that the territory in question was not within the limits disputed by Nicaragua. "Las Limas belongs to Honduras," he said, "and the jurisdiction of this country has always been recognized."

On July 21, President Colindres called an ex-

traordinary session of Congress to approve presidential decrees establishing martial law along the Nicaraguan border. The decrees were deemed necessary because of repeated depredations across the border by Nicaraguan armed bands.

Dr Colindres was inaugurated as President on February 3, after Congress on January 19, by a vote of 40 to 3, had formally approved his election. The retiring executive, President Barahona, paid high tribute to the United States for the sympathetic aid which he said had been extended to Honduras during the civil war and other troublesome problems which confronted the country when he became President in 1925.

A new immigration law, passed by Congress on Feb. 12, 1926, placed further restrictions upon the admittance of immigrants to the country. One section of the law prohibits the entry of persons who "advise, teach, or proclaim non-recognition of the authorities of Honduras or its laws or the overthrow of the government by force or violence, if they are acknowledged opponents of all organized government, or teach, proclaim, or practice the destruction of property." This measure was considered to be aimed principally at Communist agitators, whose activities have been reported from various Central American and South American countries.

The Liberal party won all eleven seats contested for Congress in orderly elections held October 27. In the municipal elections of November 26, the Liberals, of whose party President Colindres was a member, won 175 out of 273 municipalities and gained control of all except three of the larger cities.

**HONDURAS, BRITISH** See BRITISH HONDURAS

**HONG KONG.** A possession of Great Britain at the mouth of the Canton River, about 90 miles to the south of Canton, comprising an irregularly shaped island, 11 miles long from east to west, varying from 2 to 5 miles in breadth, with an area of 32 square miles, also the opposite Peninsula of Kowloon, separated from it by a strait about a half-mile wide. Total area, 391 square miles. In 1916 a scheme was begun for the reclamation of 9,500,000 square feet of land from the sea in Kowloon Bay, this project was still in progress in 1929. The population, according to the census of 1921, was 625,166, of whom 612,310 were Chinese, estimated at the end of 1927 at 977,900, of whom 961,400 were Chinese. The movement of population in 1927 was Registered births, 7500, deaths, 14,761. In the same year, the number of Chinese immigrants was 54,447 and the number of emigrants, 600,233. Victoria, the chief business centre is on Hong Kong Island and had a population of 323,273 in 1921. While education is not compulsory, the schools are under government inspection and required to keep certain standards. The total number of pupils in all schools in 1927 was 49,111 and the total expenditure on education, \$1,091,423. For higher education, there is the British University of Hong Kong which is attended mostly by Chinese students.

The principal industries are sugar refining, shipbuilding, rope making, the manufacture of tobacco, cement, and knit goods, and tin refining. The latest available statistics for trade are those of 1925 when the imports were valued at £43,484,410, and exports £40,353,906. The revenue for 1927 was £2,134,453 and the expenditure £2,084,506. In 1927, 51,289 vessels (including 24,

054 junks and 7893 steamships under 60 tons) representing altogether 36,834,014 tons, entered and cleared in the foreign trade. Of these, 3861, with a tonnage of 9,600,440, were British ocean-going steamers. The colony is under a governor aided by executive and legislative councils. Governor in 1929, Sir Cecil Clementi (appointed in 1925).

**HOPS.** The production of hops in 1929, as reported by five producing countries, including the United States, to the International Institute of Agriculture, Rome, was 128,041,000 pounds, an increase of 22.7 per cent over the preceding year and 31.6 per cent above the average for the five years 1923-27. The area devoted to hops in these countries in each of the two years was 133,000 acres. The 1929 yields of the European countries reporting were estimated as follows: England and Wales 40,219,000 pounds, Germany 30,074,000 pounds, Czechoslovakia 19,941,000 pounds and Belgium 6,207,000 pounds. In 1927 the production in Ukraine, which produces the bulk of the crop of the Soviet Republics, was 6,753,000 pounds, or practically the same as the average production for Russia in the five years 1909-13. Poland in 1927 yielded 4,318,000 pounds. The Canadian production is about 1,000,000 pounds and the Australian, 2,000,000 pounds annually.

As estimated by the Department of Agriculture, the United States produced 33,220,000 pounds in 1929, compared with 32,944,000 pounds in 1928 and 27,635,000 pounds, the five-year average. The area dropped from 26,200 acres in 1928 to 24,900 in 1929, but yields averaged 6 per cent above those of the year before. Farm prices averaged only 11.4 cents per pound on Dec. 1, 1929, compared with 19.3 cents a year ago, indicating a total farm value of \$3,788,000 in 1929 and of \$6,365,000 in 1928. As in previous years, yields were recorded only for the Pacific Coast States. Oregon produced 18,445,000 pounds on 17,000 acres, California, 9,700,000 pounds on 5000 acres, and Washington, 5,075,000 pounds on 2900 acres. The average yields per acre were 1085, 1940, and 1750 pounds, respectively. The average farm price on Dec. 1, 1929, in each one of these States was 8 cents a pound below the corresponding price the year before. For the fiscal year ended June 30, 1929, the United States exported 8,830,000 pounds, as against 11,812,000 pounds in the preceding fiscal period. The imports for the year amounted to 649,000 pounds. Comparatively large stocks remaining unsold in England in the spring and summer of 1929 affected the international trade in hops and especially the market for hops produced in the United States.

**HORTICULTURE.** Horticulture in its many phases, both commercial and amateur, continued to be an important factor in human welfare in 1929. Commercial production proceeded in a normal manner, substantial but not oversized crops were grown and marketed in an orderly fashion and generally with greater profit to the grower than in the case of the bumper crops of the preceding year. Part of the decline in fruit production was the result of disastrous frosts in the central valleys of California in April, the temperatures being, according to the *California Citigraph*, the lowest reached at that season in 51 years. The losses were early estimated at some \$50,000,000 but later it became evident that in certain fruits the decreased crops would bring proportionally greater returns, thus partially offsetting the expected losses.

Ornamental horticulture increased its hold on the American people as evidenced in a rapid expansion of the garden-club movement among home owners. The greater proportion of leisure accruing to the American people as a result of improved practices and management in the various industries was reflected in an increased interest in the finer things of life, including gardens. The investment of the American people in home gardens is really tremendous—comparable to, according to the eminent horticulturist, Dr. L. H. Bailey, if not exceeding, that in commercial horticulture.

**PRODUCTION IN 1929** A study of crop production figures released Dec. 18, 1929, by the Bureau of Agricultural Economics, U. S. Department of Agriculture, showed a rather curious situation. Fruit yields almost without exception dropped below those of 1928, while yields of vegetables were consistently larger. However, the differences in most instances were not sufficiently large to upset market conditions, in fact, the smaller crops of fruits very generally brought greater returns to the growers than did the oversized crops of 1928.

The total yield of all kinds of apples in the United States in 1929 was 139,754,000 bushels as compared with 186,893,000 bushels in 1928, peaches in 1929 are estimated at 45,998,000 bushels, nearly 13 million bushels less than in the preceding year. Pears in 1929 were 20,903,000 bushels, declining from 24,212,000 bushels of 1928, yet the total farm value of the pear crop was considerably larger in 1929, grapes declined from 2,671,076 tons in 1928 to 2,022,417 tons in 1929, oranges from Florida and California dropped more than 20,000,000 boxes from 53,705,000 in 1928 to 33,100,000 in 1929, yet the 1929 orange crop sold for over 11 per cent more, the grapefruit from Florida declined from 10,500,000 boxes in 1928 to 6,500,000 boxes in 1929, yet the net returns to the growers were considerably larger.

Lemon yields in California in 1929 were 5,900,000 boxes, just 2,000,000 below 1928, cranberries in 1929 are computed at 541,000 barrels as compared with 551,000 barrels in 1928, pecans yielded 27,588,000 pounds in 1929, considerably less than the 41,972,000 pound crop in 1928, strawberries, with 331,441,000 quarts in 1929, differed very little from the 1928 crop of 334,331,000 quarts and sold for approximately the same money, watermelons and cantaloupes were the only fruits to show increases in 1929—65,283,000 watermelons were sold in 1929 as compared with 61,380,000 in 1928. Cantaloupes yielded 10,840,000 crates in 1929 as compared with 15,416,000 crates in 1928.

Vegetables increasing in yield include sweet potatoes, 84,661,000 bushels in 1929, 77,661,000 in 1928, asparagus, 9,907,000 crates in 1929 as compared with 9,150,000 crates in 1928, snap beans, 167,600 tons in 1929, 145,500 tons in 1928, cabbage, 1,069,400 tons in 1929 as compared with 984,200 tons in 1928, carrots, 10,256,000 bushels in 1929, 6,992,000 bushels in 1928, cauliflower, 6,450,000 crates in 1929, 5,031,000 crates in 1928, celery, 8,886,000 crates in 1929, 7,624,000 crates in 1928, canning sweet corn, 639,300 tons, as compared with 592,900 tons in 1928; lettuce, 20,325,000 crates in 1929, 18,382,000 crates in 1928, onions, 25,867,000 bushels in 1929, 20,454,000 bushels in 1928; green peas, 287,500 tons, as compared with 277,600 tons in 1928;

spinach, 189,500 tons in 1929, 140,800 tons in 1928, tomatoes, 1,846,100 tons in 1929, 1,394,000 tons in 1928. The few vegetables to show decreased yields in 1929 were white potatoes, 357,451,000 bushels, as compared with 465,350,000 bushels in 1928. Paradoxically as it may seem, the much smaller 1929 crop sold for nearly twice as much as the 1928 crop. Cucumbers declined slightly in 1929 to 8,644,000 bushels, eggplant dropped from 896,000 bushels in 1928 to 713,000 in 1929, peppers from 4,466,000 bushels to 4,103,000 bushels in 1929.

**FOREIGN TRADE** According to data presented by the Department of Commerce in the *Monthly Summary of Foreign Commerce* of the United States, Part I, October, 1929, there was a material gain in the value of exported horticultural products—\$132,955,383 for the 10 months ended Oct. 31, 1929, as compared with \$113,798,634 for the same period in 1928. Imports, on the other hand, show comparatively slight change in value—\$114,331,887 in 1929 and \$111,290,538 in 1928. Underlying causes for the notable increase in value of horticultural exports lie in conspicuous increased value of grapefruit, oranges, and apples (boxed and barreled stock). Barreled apples exported in the 1929 period were valued at \$10,143,399 as compared with \$4,943,888 in 1928, an increase of more than 100 per cent. Dried and evaporated fruit exports, on the other hand, declined in value, principally because of material reductions in raisins in both value and quantity. Vegetables, and vegetable products showed consistent but not striking gains in 1929 as compared with 1928 and nursery stock imports declined somewhat despite the impending quarantines on fruit stocks.

**FOREIGN FRUIT CROPS** Large crops of apples and pears in continental Europe materially lessened the demand for American and Canadian fruit, a situation offset in part by the small American crop. Canada, on the other hand, produced an apple crop approximately 25 per cent above the 5-year average, 1924-1928, the greatest increase occurring in Nova Scotia. Canadian pear, peach, grape, and plum yields were, on the other hand, lower than in 1928. A large crop of oranges in Spain and Italy also tended to lessen the European demand for American apples. The Australian apple crop of 1928-1929 season was small with the exception of Western Australia. Severe January frozes greatly reduced the West Mexico crop of winter vegetables, especially tomatoes and peppers. Smaller prune crops in France and Jugoslavia indirectly effected the American prune market, tending to maintain high prices. At the Imperial Fruit Show held in Birmingham, England, October 25 to November 2, fine exhibits of apples were presented by Canada, Australia, and New Zealand, and of oranges by South Africa, indicative of the strong competition offered American fruit in English markets.

**COOPERATIVE MOVEMENTS** The newly created Federal Farm Board proved a rock of refuge to certain cooperative organizations in 1929, loaning money to the badly distressed Florida citrus interests, to the raisin growers of California, and other large fruit growing and marketing enterprises. In all cases, the loans were secured on actual property and were not subsidies but rather temporary aid for the improvement of marketing facilities. The California Raisin Marketing Board had a successful year, assisting materially in the marketing of the largest citrus crop ever pro-

duced in California. The exchange handled 52,266 carloads of oranges and grapefruit and 13,151 carloads of lemons, slightly more than 75 per cent of the total crop grown in the State. Shipments to European markets were increased and national advertising campaigns conducted as aids in disposing of the large crop. The California Walnut Growers Association handled a large crop of walnuts with substantial profits to the grower. Evidence was thus presented that the well-organized, well-managed cooperatives have a real and almost irreplaceable function in horticulture, as well as other enterprises. Aided by the Federal Farm Board, the cooperative marketing movement is certain to gain momentum and become an increasing support to American horticulturists.

**PROTECTIVE MEASURES.** The year 1929 went on record as a notable year in the regulation of the movement of plant and plant products within and into the United States. Drastic action was, of course, required in the case of the Mediterranean fruit fly in Florida and on July 30 the Secretary of Agriculture announced that on and after July 1, 1931, by amendment to Quarantine 37, Mahaleb cherry, Myrobalan plum and other fruit stocks will be excluded from entry into the United States. Supplementing an earlier promulgation forbidding the entry on and after July 1, 1930, of apple, pear, quince, and Mazzard cherry stocks, the new ruling practically excludes all fruit stocks and will necessarily have a widespread influence on American horticulture. The period of readjustment will be undoubtedly difficult but it is generally conceded the American nurserymen may be counted upon to meet the emergency. See ENTOMOLOGICAL, ECONOMIC.

Incidental to a study of the Mexican fruit worm in southern Texas, a census was made of the citrus trees in the Rio Grande Valley. Of a total of over 3 million trees, about 70 per cent was grapefruit and 28 per cent, orange.

A very destructive disease of peach trees, known under the curious name of phony disease, necessitated the issuing of a quarantine restricting the movement of peach and nectarine trees from the infected area in Georgia, where thousands of acres of peach orchards have been killed or rendered useless by the disease, the nature of which is not yet understood. Concrete evidence of the need and effectiveness of quarantines is presented in a total during the year ended June 30, 1929, of 5461 lots of intercepted insects and plant diseases forwarded to Washington for identification and in a total of 19,934 interceptions of prohibited plants and plant products during the same period, the data being obtained from the annual report of the chief of the Plant Quarantine and Control Administration.

**RESEARCH ACCOMPLISHMENTS.** Striving toward the goal of an effective horticultural practice resting on established truths rather than empirical findings, the research workers in horticulture and allied subjects made substantial progress in 1929. Further evidence was secured at the Oregon Experiment Station (*Bulletin 254*), showing that peaches have a definite storage life beyond which they will not ripen satisfactorily, irrespective of conditions under which held. The same station (*Bulletin 252*) developed a new system of grading pines based on separation by specific gravity in salt solutions of definite densities. The Maryland Experiment Station (*Amer Soc Hort. Sci. Proc.* 25, 1928, pp. 162-164), reported that the male parent of apple seedlings exerted a significant in-

fluence on the growth of the young tree. The California Experiment Station (*Calif Citrogr.* 14, 1929, No. 9) presented evidence that grapefruit, lemon, and orange trees require minute quantities of boron for their proper development but that appreciable amounts were toxic. Comparable observations in the case of the tomato plant were made at the Maryland Experiment Station (*Plant Physiol.* 4, 1929, No. 1). Studies at the Maryland Experiment Station of the chemical composition of garden peas, ripening at different times, showed no influence of temperature upon composition or quality of freshly harvested peas provided the peas were gathered at the correct stage. Further proof was forthcoming at the California Experiment Station (*Amer Soc Hort Sci Proc.* 25, 1928, pp. 13-16) that male asparagus plants are more productive than female plants, sufficiently so to justify rejecting the latter for planting.

The remarkable increase in trained workers in horticulture was indicated in the presidential address presented at the 25th annual meeting of the American Society for Horticultural Science (*Amer Soc Hort Sci Proc.* 25, 1928, pp. 378-395). In 1903 the combined horticultural staffs of colleges in 44 States embraced 101 members, as compared with 529 in 1928. The qualitative gain in the same period is shown in the statement that in 1928 there were 53 horticultural students working for the degree of doctor of philosophy.

**MISCELLANEOUS.** Nut culture received much needed help in 1929 in the form of the Federal Experiment Station at Shreveport, La., for studies in pecan culture and in a \$200,000 gift from W. K. Kellogg for the foundation of a chair of nut culture at Michigan State College. At the same time, Mr. Kellogg deeded to the college a tract of 800 acres near Battle Creek to be used as a field station for nut investigation.

Announcements were received in the United States of the Ninth International Horticultural Congress to be held in London, Aug. 7 to 15, 1930, immediately preceding the Fifth International Botanical Congress to be held at Cambridge. Propagation, vegetative and seminal, was to be the principal subject for discussion by the visiting horticulturists.

**NECROLOGY.** Henry Daggett Hooker, Jr., horticultural chemist at the University of Missouri and author of many fundamental bulletins on horticultural subjects, died October 26 at the untimely age of 37 years. Combining a splendid training with unusual energy and capacity for clear thinking, Dr. Hooker had quickly become one of the foremost leaders in scientific horticulture. Frank Henry Hall, long associated with New York State Station at Geneva as editor and lastly as a horticulturist, died October 17 at the age of 63 years. From a horticultural standpoint, Mr. Hall was best known for his work in the classification of vegetable varieties, being joint author of the *Peas of New York*, recently published by the station.

**BIBLIOGRAPHY.** The number of new books on horticultural subjects appearing during the year was rather limited, particularly from American sources. Notable among the new accessions were M. Arthold, *Handbuch des Weinbaues* (Vienna, 1929), E. C. Aechter and H. B. Knapp, *Orchard and Small Fruit Culture* (New York, 1929); A. Edwards, *Rock Gardens* (London, 1929); A. D. Hall, *The Book of the Tulip* (London, 1929); P. Kache, *Die Praxis des Baumschulbetriebs* (Ber-

lin, 1929), R. W. Rees, *Pear Survey of the United States and Canada* (Rochester, 1929); C. W. J. Unwin, *Sweet Peas, Their History, Development and Culture* (Cambridge, England, 1929); A. E. Wilkinson, *Practical Vegetable Culture* (New York, 1929); I. Preston, *Garden Lilies* (New York, 1929); A. F. Calvert, *Daffodil Growing for Pleasure and Profit* (London, 1929)

**HOUSEHOLD ECONOMICS.** See AGRICULTURAL EXTENSION WORK

**HOWARD UNIVERSITY.** A nonsectarian institution for the higher education of men and women in Washington, D. C., incorporated by Act of Congress, Mar. 2, 1867, "for the education of youth in liberal arts and sciences," open to students without regard to race, but principally for the education of Negroes. The registration in the several colleges and schools of the university for the summer school and autumn quarter of 1929 totaled 2354, distributed as follows: College of liberal arts, 600; college of education, 466; school of applied science, 71; school of music, 40; school of religion, 33; school of law, 68; school of medicine, 370; academic evening classes, 300; summer session, 402; special students, 4. The faculty in the autumn of 1929 totaled 206 members, divided as follows: Academic, 76; medical, 69; dental, 13; pharmaceutical, 5; law, 12; religion, 9; music, 9; applied science, 13. The total endowment amounted to \$843,400, the endowment income for 1928-29 was \$42,889. The total income for 1929 from all sources was \$588,903, and the expenditures were \$561,373. The United States Government appropriated \$320,000 toward salaries and other expenses for 1929-30 and \$240,000 toward the completion of a chemistry building, the latter sum being appropriated by the second session of the Seventieth Congress and approved by the President on March 4, 1929. The school of medicine received an appropriation of \$82,000 from the General Education Board, the larger portion of which is to be devoted to the training of men of distinguished ability for full-time positions in the pre-clinical laboratories. The General Education Board also appropriated \$80,000 to be used over a period of four years for raising the salaries of teachers in the undergraduate schools. The department of zoology in the college of liberal arts received an appropriation of \$80,000 from the Julius Rosenwald Fund for the development of graduate work in research over a period of five years. Miscellaneous donations totaled \$54,796. The library contained 48,625 volumes. Administrative officers: Mordecai Wyatt Johnson, S.T.M., D.D., president; Emmett J. Scott, A.M., LL.D., secretary-treasurer.

**HUDSON RIVER BRIDGE.** See BRIDGES.

**HUNGARY.** A kingdom of central Europe, formerly constituting, with Austria, the Dual Monarchy of Austria-Hungary. Capital, Budapest.

**AREA AND POPULATION.** Before the World War, Hungary had an area of 125,609 square miles, area at the time of the census of 1920, 35,875 square miles. Population before the War, according to the census of Dec. 31, 1910, 20,886,487, population at the census of Dec. 31, 1920, 7,980,143, estimated in 1928, 8,598,574. After the census of 1920 was taken, an additional area of 36 square miles, with a population of 7000 was awarded to Hungary. Budapest, the capital, had a population of 971,169, excluding suburbs, in 1927. Other cities with a population of more than

100,000 in the same year were: Szeged, 124,347, and Debrecen, 107,976. The movement of population in 1927 was Births, 218,548; deaths, 150,675, marriage, 77,026. The population of 1927 was distributed according to religion about as follows: Roman Catholics, 5,485,050, or 64.3 per cent; Helvetican Evangelicals, 1,771,122 or 20.8, Augsburg Evangelicals, 525,515, or 6.2, and smaller numbers of Greek Catholics, Greek Orthodox, and Unitarians. The Jews numbered 476,860, or 5.6. Of a total of 5620 emigrants in 1928, 5471 went to the United States.

**EDUCATION.** In the school year 1926-27, there were 6541 elementary schools with 688,768 pupils and 17,012 teachers. There were also 4457 general and 1230 agricultural continuation schools. There were 20 training colleges for elementary school-teachers for men and 25 for women, with 567 teachers and 5936 students. Primary schools for boys and girls numbered 174 and 237, respectively, with a total of 83,792 pupils and 4199 teachers. For secondary education, there were 27 gymnasiums, 71 realgymnasiums, 22 modern schools, and 32 girls' secondary schools. The total number of teachers in these secondary schools was 2994 and the number of students, 61,017. Hungary has four universities and since 1919 an independent faculty of economics at Budapest all maintained by the state. In 1920-27 the University of Budapest had 371 professors and 5396 students, the University of Szeged, 107 and 1137, the University of Pecs, 71 and 1005, and the University of Debrecen, 63 and 952. There are also many theological schools and a number of technical institutions for higher learning, such as technical high schools, etc.

**PRODUCTION.** In 1928 about 60 per cent of the total area of Hungary, or 13,810,000 acres, comprised arable land, 4,147,000 acres were permanent meadow and pasture, 797,000 acres were devoted to trees, shrubs, and bushes, and 2,696,000 acres to forests. Abundant crops in 1928 resulted in a rise in the total value of agricultural production to \$674,000,000 from a total of \$623,000,000 in the previous year. The value of field crops in 1928 amounted to \$580,000,000, including: Wheat, \$122,000,000, rye, \$332,800,000, corn, \$49,900,000, and potatoes, \$16,500,000. Grain exports failed to increase, however, as grain was held for higher prices. The acreage of all principal crops increased slightly, with the exception of corn and rye. Prohibitive interest rates, running as high as 15 per cent, and the difficulty of finding markets abroad for farm products in the face of protective-tariff barriers continued as the primary reasons for unsatisfactory agricultural conditions. The area and production of the principal crops in 1927 and 1928 are shown in the accompanying table.

#### HUNGARIAN CROPS AREA AND PRODUCTION

Crop	Area *		Production *	
	1927	1928	1927	1928
Wheat .. . . .	4,049	4,138	76,938	92,087
Rye .. . . .	1,656	1,641	29,368	35,528
Barley .. . . .	1,009	1,014	23,685	27,872
Oats .. . . .	646	650	22,513	23,725
Corn .. . . .	2,639	2,637	68,348	43,325
Potatoes .. . . .	645	655	73,665	47,280
Sugar beets .. . . .	180	184	1,455 *	1,100 *
Grapevines .. . . .	544	548	51,587 *	21,955 *
Tobacco .. . . .	58	56	69,095 *	45,415 *

\* Thousands of acres.

\* Thousands of units—bushels, except as indicated.

\* Unit, metric ton

\* Unit, gallon of must. \* Unit, pound.

Livestock in the country in 1928 consisted of 2,662,000 swine, 1,805,000 cattle, 1,566,000 sheep, 40,000 goats, and 918,000 horses. Industrial production in 1927 was valued at \$469,000,000, as compared with \$385,000,000 in 1926. In 1928 there were 200,000 cotton spindles and 1700 looms, as contrasted with 131,000 and 1500, respectively, in the preceding year. In general, the industrial situation showed moderate improvement over 1927 and unemployment was negligible. Industrial production in metric tons in 1928, with figures for 1927 in parentheses, was as follows: Coal, 783,000 (840,000), lignite, 6,243,000 (6,203,000), iron ore, 203,000 (195,000), pig iron, 284,000 (300,000), steel ingots and castings, 486,000 (472,000), cement, 426,000 (417,000). Alcohol production was 11,016,000 gallons in 1928 and 10,778,000 in 1927. The value of iron, metal, and machinery products in 1927 amounted to \$80,623,000, of food products and tobacco, \$205,225,000, of stone and glass, \$24,918,000, of textiles, \$60,014,000, of chemicals, \$32,390,000.

Industries continued active in 1929, but a general business stagnation was in evidence for the greater part of the year, attributed mainly to the lack of foreign funds, internal political difficulties, and the reparations question (see below, under *History*).

COMMERCIAL Imports in 1928 amounted to \$207,952,000, as compared with \$200,345,000 in 1927, or an increase of 4 per cent, while exports increased by 2 per cent to \$143,193,000 from the 1927 figure of \$139,843,000. The adverse trade balance of \$64,759,000 was thus somewhat greater than in the preceding year. The influx of foreign capital and greater investment and building activity were reflected in considerable increases in imports of machinery and apparatus, hides and skins, paper and paper products, automobiles, wood products, and coal. While raw-cotton imports increased, imports of practically all classes of textiles decreased due to the growth of domestic manufacture.

Agricultural products were again the chief articles of export, although exports of some farm products were considerably smaller than in 1927. The proportion of manufactured articles in the export trade rose to 35 per cent in 1928 from 30 per cent in 1927. Czechoslovakia, Germany, and Austria were the chief sources of imports and also Hungary's principal customers in 1928. Of the exports, Austria took 34, Czechoslovakia 17.7, and Germany 11.7 per cent, while, of the imports, Czechoslovakia supplied 22.7, Germany 19.5, and Austria 16.4 per cent. Imports from the United States were valued at \$7,128,000 in 1928, as compared with \$4,245,000 in 1927. The value of the foreign trade by principal commodities is shown in the accompanying table. The unfavorable trade balance in 1929 was \$4,000,000, or more than \$60,000,000 less than in 1928.

FINANCE. The budget for 1929-30 estimated receipts at 1,112,000,000 pengos (par value of pengo, about \$0.1749) and expenditures at 1,429,000,000, as compared with estimated receipts of 1,360,000,000 and expenditures of 1,358,000,000 in 1928-29. The actual budget operations in the fiscal year ending June 30, 1928, resulted in a surplus of 90,000,000 pengos, which was used for capital investment. The receipts for the first half of 1929-30 were considerably below estimates. The chief revenue items in the latter budget included direct taxes, 181,000,000 pengos,

# HUNGARY'S IMPORTS AND EXPORTS BY LEADING COMMODITIES

[In thousands of dollars]

Commodity	1927	1928
<b>IMPORTS</b>

customs, 128,000,000, turnover taxes, 115,000,000, stamps and dues, 102,000,000; tobacco monopoly (gross), 158,000,000, posts, telegraphs, and telephones (gross), 113,000,000; state railways (gross), 315,000,000, all other, 320,000,000. The principal items of expenditure included state railways (gross), 319,000,000 pengos, education, 148,000,000; national defense, 151,000,000; posts, telegraphs, and telephones, 100,000,000, debt service, 93,000,000, tobacco monopoly, 75,000,000; all other, 534,000,000.

The public debt on Jan. 1, 1929, was reported at 2,906,612,000 pengos (\$508,366,000), of which 1,161,527,000 gold kronen (\$235,325,000) represented pre-war debt. In addition, a loan with the nominal value of \$36,000,000 was contracted in 1928 with the Swedish-American Match Trust. The note circulation at the end of December, 1928, amounted to 513,000,000 pengos, the gold reserves to 201,000,000, and foreign assets to 54,000,000, as compared with a note circulation of 487,000,000 pengos, reserves of 197,000,000, and foreign

assets of 114,000,000, on the same date in 1927. Under the revised Young Plan, signed Jan. 20, 1930, at The Hague, Hungary agreed to pay \$2,000,000 in reparations annually until 1943 and \$2,700,000 annually from then until 1966 inclusive.

**COMMUNICATIONS** The government owned 1925 miles of the 4374 miles of railroad line which it operated in 1927-28. In addition, there were a few private lines in the country, the most important being the Duna-Sava-Adria Railroad, with 356 miles of line. In the year ending June 30, 1928, the government-operated lines carried 87,448,000 passengers and 30,186,000 metric tons of freight, and the gross receipts totaled 297,110,000 (\$51,875,000), as against expenditures of 288,712,083 pengos. The net income was 8,397,596 pengos in 1927-28 and 13,445,128 in 1928-27. In 1928 the government-owned telegraph and telephone systems had 51,174 and 273,584 miles of wire, respectively, while their respective receipts for the year ending June 30 were \$816,000 and \$5,299,000.

**GOVERNMENT.** Technically, Hungary is a constitutional monarchy with the throne vacant. The Horthy régime, which won control of the government on Aug. 7, 1919, decided that the question of who was to be chosen monarch would be postponed until the nation was liberated from external pressure. Nicholas Horthy de Nagybánya was elected Regent on Mar. 1, 1920, to rule in the interim. The Legislature has two Houses, the Lower House of 245 members, and the Upper House consisting of the six following groups—(1) elected representatives of the former hereditary members, (2) members elected by the county councils and municipalities, (3) heads of the various religious communities, (4) high dignitaries of the State, (5) representatives of scientific institutions and the chambers of commerce; (6) life members appointed by the head of the state. Following the elections of Dec. 20, 1926, the Lower House was constituted as follows: Party of National Unity, 171, Christian Social Union, 35, Socialists, 14, various other parties, 25.

The ministry, originally formed on June 17, 1922, was reorganized Sept. 5, 1928, as follows: Prime Minister, Count Stephen Bethlen, Minister of Foreign Affairs, Dr. Louis Walko; Interior, Dr. Béla Seitovszky; Public Economy, Dr. John Bud, Finance, Dr. Alexander Wekerle, Agriculture, John Mayer, Commerce, Maximilian Herrmann, Public Instruction, Dr. Count Kuno Klebelsberg, Justice, Dr. Tibor Szitvay (appointed Feb. 5, 1929); National Defense, Count Charles Csáky; Social Welfare, Dr. Joseph Vass.

### HISTORY

Three major issues agitated Hungary's domestic and foreign politics during 1929. The question of the revision of the Treaty of Trianon through which Hungarian minorities were incorporated in the neighboring states of the Little Entente, and that of the termination of the Regency and the selection of a new King, had been acute for a number of years. The third issue, that of reparations and the indemnification of Hungarian optants in Yugoslavia, Rumania, and Czechoslovakia, whose properties were confiscated at the close of the World War, came suddenly to the fore in connection with the efforts to liquidate the reparations question at the Hague Conference held during the month of August, 1929.

The desperate financial condition of both Austria and Hungary led the Allies to agree in 1922-23 that full reparations payments from these two countries should be suspended until 1943. For the period 1923-43, Hungary's quota was fixed at \$40,000,000. Subsequently, a moratorium granted Austria was extended to 1968. Count Bethlen, the Hungarian Premier, contended that the Allies in 1923 had verbally promised that reparations would not be required of Hungary after 1943. The Committee on Eastern Reparations, which met at Paris during 1929 in an effort to arrive at a satisfactory solution of the reparations problem in so far as it affected Austria, Hungary, and Bulgaria, for ratification at The Hague Conference in January, 1930, was unable to reach an agreement concerning Hungary. The greatest obstacle to a settlement was Hungary's refusal to waive her claims to the properties of the optants confiscated by Rumania and the Little Entente countries, in return for a reduction in the Hungarian reparations quota. Premier Bethlen on December 10 demanded that the two problems be dealt with separately. In support of his stand, he pointed out that Paragraph 250 of the Treaty of Trianon provided that the confiscation of the property of Hungarian nationals by other countries could be taken before international arbitral courts for adjudication. That the optants' case had not been referred to arbitration by the League Council was attributed to the attitude of France and the countries of the Little Entente. On December 12, the Rumanian Foreign Minister replied that Rumania would refuse to sign the Young Plan and that there could be no general peace in Middle Europe unless the Little Entente's standpoint on the optants was accepted. Premier Bethlen had indicated, however, that Hungary would be willing to pay reparations after 1943 provided the optants' cases were submitted to arbitration, and since there were only 350 optants involved, an agreement at the second Hague Reparations Conference did not seem impossible.

Originally, Hungary's claims against Rumania for confiscated property of optants aggregated 600,000,000 gold crowns (about \$120,000,000). Through the intervention of the League of Nations, this claim was reduced to 300,000,000. In 1929 the Hungarians offered to settle for 130,000,000 gold crowns, but the highest the Rumanians would offer was 100,000,000. The optants' claims against Czechoslovakia and Jugoslavia were estimated on the basis of awards already made at about 170,000,000 gold crowns, making a total Hungarian claim of about 300,000,000 (\$60,000,000).

The campaign for the revision of the Trianon Treaty proved a fertile source of internal political disputes, as the question became complicated with the agitation against the continuance of the Horthy régime and in favor of the possible crowning of Prince Otto, 16-year-old son of the late Emperor Charles and Empress Zita, who was a student at the University of Louvain, Belgium. The Christian Socialist party withdrew its support from Count Bethlen's coalition government on February 26, on the ground that he had failed to make a clear pronouncement in favor of the ultimate crowning of Prince Otto. Ten days earlier, the Premier had stated that while his greatest individual desire was to witness the revision of the treaty, he considered it the government's duty "to keep far off the cliques which

wish to roast their small game near the flames of the revision." In Czechoslovakia, Rumania, and Jugoslavia, the revisionist agitation in Hungary continued to evoke bitter criticism and hostility. The Czechoslovakian press denounced even those Hungarians who advocated a partial revision of the treaty as having in mind the eventual extension of Hungarian dominion over alien races formerly held in subjection.

Hope that Italy's rivalry with France in southeastern Europe would lead to her support of Hungary's demand for treaty revision received additional encouragement when Signor Dino Grandi, who later in the year became Minister for Foreign Affairs in Mussolini's new cabinet, paid an official visit to Budapest on May 2. Signor Grandi made the significant announcement that the tie between the two countries, symbolized by the recently concluded alliance, would "grow stronger and stronger." The Italians were also relied upon to support the Hungarian reparations position at the second Hague Conference.

Later in May, Premier Bethlen contributed two important announcements to the revisionist and royalist restoration debates. One was that while Hungary "would never rest until her lost territories were restored," the government was determined to postpone the questions of revision "until a general pacific atmosphere develops." The other was, "The Hungarian people are convinced that the rule of the elected Regent, Admiral Horthy, is best and will not change as long as he lives." The latter statement created much excitement in Budapest, and Count Andrássy, leader of the Legitimists, declared (previous to his death on June 12) that it was the desire of the people that the Horthy régime be terminated without delay.

Support of the Socialist party was secured in July for the agitation for revision of the treaty, through a deal dictated by political exigencies. The Socialists had previously refused to join the movement on the ground that a change of boundaries was not desirable while the country "was enslaved by a reactionary government." The announcement, however, that a delegation of members of the British Labor party would visit Hungary to study the economic condition of the country as affected by the treaty led the Premier to promise the Hungarian Socialists the full right to hold meetings and broader suffrage in municipal elections in return for their intercession with their British confrères on behalf of the revisionist movement. It was hoped that this agreement presaged the further introduction of democratic methods of government in Hungary, but both Regent Horthy and Premier Bethlen declared shortly afterward that the time was not ripe for experimentation with Western democracy in Hungary.

Other developments of the year included the decision of the Hungarian-Czechoslovak mixed arbitral tribunal on February 5 that Czechoslovakia must indemnify Archduke Friedrich of Hungary and hundreds of other Hungarians for properties confiscated by the Czechs after the conclusion of the peace treaties, the announcement in August of the breakdown of similar negotiations with Rumania; the conclusion of a five-year arbitration treaty with Bulgaria on July 22, and the ratification by the Hungarian Lower House on June 19 of the Kellogg-Briand Peace Pact. **ICELAND.** An island state united with Denmark by the Act of Union of Nov. 30, 1918. Situated to the northwest of Great Britain (to which it is next in size of European islands), and with its northern coast touching the Arctic Circle, Iceland has an area of 39,709 square miles, population according to the census of 1920, 94,690, estimated at the end of 1927, 103,307. The capital, Reykjavik, had a population of 24,304 in 1927. All the other towns had populations of less than 3000. The number of foreign-born inhabitants is very small and consists chiefly of Danes and Norwegians. The movement of population in 1927 was: Births, 2642, deaths, 1292; marriages, 594. Religious freedom is complete, but there were only 463 dissenters from the endowed national church, the Evangelical Lutheran, at the census of 1920. Primary instruction is compulsory between the ages of 10 and 14, children up to the age of 10 years being privately educated as a rule.

In 1920 there were 209 elementary schools, with 318 teachers and 6485 pupils, several continuation schools, and a university at Reykjavik. Of the total area, about 68 per cent is highland; 12 per cent, glaciers, 10 per cent, lava, and 6 per cent, lowland. Only about one-fourth of 1 per cent of the area of the island is under cultivation, producing chiefly hay, potatoes, and turnips. The crops in 1927 were: Hay, 3,010,000 cwt.; potatoes, 84,000, and turnips, 37,000. Livestock in the same year totaled 52,800 horses, 27,900 cattle, 590,000 sheep, 2800 goats. The value of the fish catch in 1926 was estimated at 24,656,000 crowns, of which the cod fishery contributed 21,999,000, and the herring fishery, 2,657,000 crowns (one crown exchanged at approximately \$0.215 in 1928). In 1928 the fish catch was estimated at 80,000 tons, which compared with 60,000 tons in the previous year.

Economic conditions in Iceland showed steady improvement during 1928 and 1929. Exports in 1928 amounted to 74,000,000 crowns, as compared with 54,400,000 in 1927 and 44,000,000 in 1926, while import values for the same years were 54,000,000, 50,000,000, and 51,000,000 crowns, respectively. Fish and fish products make up the bulk of the exports. In 1929 about 200,000 sheep

were exported as salted mutton Wool is another important export item The chief imports in 1928 were cereals and other foodstuffs, textile manufactures, timber and wooden products, coal, metals, and hardware, and vessels, carriages, and machinery The bulk of Iceland's trade is carried on with Denmark, Great Britain, Norway, Sweden, and Germany, in the order named

The budget for 1929 estimated revenues at 10,883,600, and expenditures at 10,847,000 crowns This represented a considerable increase over the budget estimates for 1928, which placed revenues at 10,302,000 and expenditures at about 10,307,000, crowns In 1927 actual receipts amounting to 2,027,405 crowns on Jan 1, 1928, amounted to 11,174,000, and actual expenditures to 12,066,000, crowns A comparatively large reserve fund, amounting to 2,027,405 crowns on Jan 1, 1928, was invested by the state in different loans On the same date, the public debt stood at 11,288,750 crowns, of which 7,050,079 were held abroad, mainly in Denmark

There are no railroads in Iceland, inland travel being mainly by carriage, motor vehicle, or on horseback In 1928 there were 568 miles of highway, mostly in the southern lowlands Steamers and motor vessels are used for coastal traffic In the same year, there were 240 post offices and seven wireless stations The electric and telephone systems had a total of 111,000 lines of line at the end of 1927 The merchant marine in 1927 consisted of 81 steam vessels of 23,788 gross tons, 215 motor vessels of 5472, and 20 sailing vessels of 558; or a total of 316 vessels of 29,818 gross tons

Executive power is vested in the King of Denmark who acts through a responsible ministry, and legislative power in the King and Althing or Parliament, which consists of 42 members, of whom six are elected for eight years by proportional representation for the whole country, and 36 for four years by universal suffrage The Althing is divided into two Houses, of which the Upper has 14 members and the Lower, 28 The right to vote is possessed by both men and women over the age of 25 King in 1929, Christian X, President of the Council and Minister of Trade and Communications, Tryggvi Thorhallsson, Justice and Ecclesiastical Affairs, Jonas Jonsen, Finance, Magnus Kristjansson

**IDAHO.** POPULATION According to the Fourteenth Census, the population of the State on Jan 1, 1920, was 431,866 The estimated population on July 1, 1928, was 546,000 The capital is Boise

**AGRICULTURE** The following table gives the acreage, production, and value of the principal crops in 1928 and 1929

Crop	Year	Acreage	Prod Bu	Value
Hay	1929	1,196,000	2,872,000 *	\$30,752,000
	1928	1,148,000	2,766,000 *	30,123,000
Wheat	1929	1,083,000	25,515,000	24,354,000
	1928	1,160,000	28,972,000	25,913,000
Potatoes	1929	102,000	17,136,000	20,664,000
	1928	116,000	19,720,000	8,874,000
Dry beans	1929	92,000	2,116,000	5,519,000
	1928	86,000	1,634,000	5,882,000
Apples	1929		5,500,000	6,050,000
	1928		5,500,000	4,125,000
Oats	1929	151,000	6,040,000	2,899,000
	1928	137,000	6,439,000	3,091,000
Barley	1929	147,000	5,728,000	3,784,000
	1928	144,000	6,192,000	3,901,000
Corn	1929	54,000	1,944,000	1,827,000
	1928	58,000	2,488,000	2,245,000

\* Tons.

**MINERAL PRODUCTION.** The production of the five metals gold, silver, copper, lead, and zinc, on which almost the entire yearly total of the mineral industry of the State depends, was for all these metals, except lead, in greater quantity for 1928 than for 1927 Lead, however, contributed of itself, the chief part of the value of the State's mineral product, and in 1928 lead was not only produced in less quantity, but commanded a lower average price at the mine Consequently, in succession to that of the previous year, the metal production of 1928 scored a second sharp reduction in value. The value of the output of the five metals for 1928 was \$26,667,706, for 1927 it had been \$28,104,413. There were produced of lead, in 1928, 290,645,905 pounds, valued at \$0 058 a pound, in 1927, 302,038,423 pounds, at \$0 063 Zinc production was for 1928, 62,526,048 pounds, 1927, 53,556,345, copper 1928, 2,072,165 pounds, 1927, 2,173,163, gold, 1928, 20,980.38 fine ounces, 1927, 15,315 67, silver, 1928, 8,998,330 fine ounces, 1927, 8,901,409. The chief mineral products outside of this dominant metal group were stone, clay products, and phosphate rock. The aggregate value of the mineral product of the State was, for 1927, \$29,183,929, for 1926, \$31,752,821

The value of the gold, silver, copper, lead, and zinc produced from ore mined in Idaho in 1929, according to Federal estimates, was about \$32,278,490 Substantial increases were recorded in the production of silver, copper, lead, and zinc, and the value of the combined output was greater than any year since 1918, despite a slight decrease in the output of gold

The mine output of gold in 1929 was valued at about \$403,100 Output of silver increased nearly 6 per cent, to about 9,535,000 ounces, but the value decreased to about \$5,091,690, on account of a fall in the average price of silver The output of lead increased to about 304,230,000 pounds in 1929, and the value to about \$19,318,600 Zinc recovered from ore and concentrate increased to about 99,100,000 pounds in 1929, and the value to about \$6,590,150

**TRANSPORTATION.** The total number of miles of railroad line under operation on Jan 1, 1929, was 2938 91 There was no reported construction of additional mileage in 1929

**MANUFACTURES** According to the biennial Federal Census of Manufactures published by the U S Department of Commerce in 1929 and dealing with the operations of 1927, there were in the State, in 1927, 470 manufacturing establishments These employed 13,513 wage earners, whose wages for the year totaled \$18,970,043. Materials and supplies used in production cost \$47,927,463 Manufactured products attained the combined value of \$86,256,399.

**EDUCATION** The population of school age in the school year 1929-30 numbered 143,322 In 1928-29 the total school enrollment was 106,032, of whom 95,799 were in grade schools and 25,000 in high schools Approximately one of every four residents of the State was attending school in 1929 The illiteracy rate—1.5 per cent—was lower in only two States, Iowa and Nebraska The institutions of higher education are the University of Idaho at Moscow, the College of Idaho at Caldwell, and the State normal schools at Lewiston and Albion.

**CHARITIES AND CORRECTIONS.** The central State authority in matters of welfare in 1929 rested in the Department of Public Welfare, which con-

ducted a health service, food and drug inspection, work in child hygiene, a board of eugenics, and supervision of several State institutions. The latter were the Northern Idaho Sanitarium, Orofino, with about 350 inmates, State School and Colony, Nampa, 375 inmates, Idaho Soldiers' Home, Boise, and Lava Hot Springs, a public resort, at Lava. The State Penitentiary, at Boise, directed by a board consisting of the Governor, Attorney-General, and Secretary of State, contained 408 prisoners on Nov 30, 1928.

**LEGISLATION.** The State Legislature met in regular biennial session, adjourning March 7. A system of taxation of State and national banks was enacted. A comprehensive plan of State revenue, however, failed of passage. A number of acts affecting highways and automobiles were passed. An appropriation of \$19,500 was made for further building at the State normal school at Lewiston.

**POLITICAL AND OTHER EVENTS.** The policy of placing grade school pupils in the hands of male teachers for at least one year out of four was proposed by State Commissioner of Education Vincent as essential to giving pupils the experience of masculine discipline. The discovery of new gold deposits in the neighborhood of Wallace, reported by a prospector, was the occasion of a gold rush, somewhat reminiscent of earlier times, in October. Lieutenant-Governor W. B. Kinne was captured by bandits between Lewiston and Orofino in June, but escaped, and his three captors were later captured and sent to prison. The State Supreme Court, in the matter of an inheritance tax case, interpreted the law as requiring that two payments of State inheritance tax must be made where a wife, inheriting under her husband's will, herself died before the estate, probated in another State, had been closed.

**OFFICERS.** Governor, H. C. Baldrige, Lieutenant-Governor, Oscar E. Hailey, Secretary of State, Fred E. Lukens, Auditor, E. G. Gallet, State Treasurer, Byron Defenbach, Attorney-General, W. D. Gillis, Superintendent of Public Instruction, Myrtle R. Davis, Inspector of Mines, Stewart Campbell.

**JUDICIARY.** Supreme Court Justices, William E. Lee, Alfred Budge, Raymond Givens, Bertram S. Varnan, T. Bailey Lee.

**IDAHO, UNIVERSITY OF.** A corducational State institution of higher learning in Moscow, Idaho, founded in 1889, with a southern branch in Pocatello, established by act of the State Legislature and opened in the autumn of 1927. The total enrollment at Moscow in the autumn of 1929 was 2007, distributed as follows: Junior college, 370, letters and science, 431, agriculture, 133, engineering, 191, law, 21, mines, 58, forestry, 98, education, 277, business, 189, special courses, 19, and nonresident, 220, the total enrollment at Pocatello was 524. The enrollment for the 1929 summer session was 240 at the university and 78 at the southern branch. The faculty in 1929 numbered 160. The physical plant of the university was valued at \$2,807,000 and that of the southern branch at \$640,000, making a total of \$3,447,000. The productive funds of the university amounted to \$2,016,460, and the income for 1928-29 was approximately \$1,250,000. The library contained 90,000 volumes. The outstanding achievement of the year was the establishment of the university junior college at Moscow, coordinate with the southern branch

at Pocatello. The junior college offers two years of work, admitting to the colleges of letters and science, law, education, and business administration. President, Frederick James Kelly, Ph.D.

**ILLINOIS, POPULATION.** According to the Fourteenth Census, the population of the State on Jan 1, 1920, was 6,485,280. The estimated population on July 1, 1928, was 7,396,000. The capital is Springfield.

Chicago's population, late in 1926, was estimated on the basis of birth rates and school assessors' statistics as being 3,151,989, an increase of 16.7 per cent over the 1920 official census. The population of the metropolitan area of the city was estimated at 4,100,000. In 1928 the U. S. Bureau of the Census estimated the population of Chicago as of July 1, at 3,157,400.

**AGRICULTURE.** The following table gives the acreage, production, and value of the principal crops in 1928 and 1929.

Crop	Year	Acreage	Prod Bu	Value
Corn	1929	8,900,000	311,500,000	\$224,280,000
	1928	9,570,000	367,488,000	257,242,000
Hay	1929	3,594,000	5,602,000	\$3,230,000
	1928	3,156,000	4,154,000	\$3,462,000
Oats	1929	4,281,000	141,738,000	\$5,695,000
	1928	4,649,000	174,338,000	66,248,000
Wheat	1929	2,451,000	38,577,000	40,498,000
	1928	1,567,000	22,949,000	25,893,000
Barley	1929	456,000	12,084,000	6,767,000
	1928	680,000	20,060,000	19,632,000
Potatoes	1929	63,000	5,040,000	7,812,000
	1928	70,000	7,700,000	5,005,000

\* Tons

**MINERAL PRODUCTION.** Coal, which furnishes the chief part of the value of the State's yearly mineral product, and which forms the basis of an active industry in the production of pig iron, was more extensively mined in 1928, owing largely to the conclusion of labor difficulties at the mines. There were produced in 1928, 55,948,199 short tons of coal, the production of 1927 had been 46,848,224 tons. In value the coal product was \$112,095,000 for 1928, for 1927, \$101,356,000. The coke production likewise rose, to 3,240,964 tons of beehive coke in 1928, from 3,013,940 in 1927, but declined in value to \$19,867,463 for 1928, from \$21,076,519 for 1927. Blast furnaces of the State shipped 4,094,514 long tons of pig iron in 1928, in 1927, 3,466,203, in value, \$73,524,773 in 1928 and \$66,442,068 in 1927. Outside the coal and iron group the most important mineral industry in the State is that of clay products. These attained, for 1927, \$34,346,886, for 1926, \$37,030,004. In the cement industry, the shipments of 1928 were 7,405,067 barrels, those of 1927, 7,061,240. The value of shipments was, 1928, \$11,602,848, 1927, \$11,312,783. Petroleum production declined somewhat in quantity to 6,459,000 barrels for 1928, from 6,994,000 for 1927. The steady and heavy production of sand, gravel, and low-grade stone added materially to the annual mineral product. The value of all minerals produced, with the exception of such items as pig iron smelted from imported ore, was, for 1927, \$180,288,000, for 1927, \$237,241,000.

**TRANSPORTATION.** The total number of miles of railroad line under operation on Jan 1, 1929, was 12,118.47. There were built, in 1929, 3.85 miles of additional second, and 7.87 of third, track.

**MANUFACTURES.** According to the biennial Census of Manufactures published by the U. S. De-

partment of Commerce in 1929, there were in the State, in 1927, 14,711 manufacturing establishments. These employed 623,468 wage earners, whose wages for 1927 totaled \$614,102,612. Materials and supplies used in manufacture cost \$2,921,092,107. The manufactured products attained the combined value of \$6,386,003,235.

**EDUCATION** The minimum school term for the public schools of the State was lengthened by enactment to 8 months, from 7, and the provisions for compulsory attendance were rendered more stringent. According to State Superintendent Blair, in the *Journal* of the National Education Association, an outstanding feature of the year's developments was the adoption of the equalizing principle in the employment of the fund for State distribution. Improvement was made in the law for the certification of teachers, and a retirement system was established in the State teachers' colleges, which received a material increase of appropriations. The school population of the State for the academic year 1927-28 was estimated at 2,011,890. There were enrolled in the public schools 1,378,751 pupils. Of these, 1,109,823 were in the elementary and 268,928 in the high-school grades. Expenditure for public-school education in 1928 was current, \$113,871,353; capital outlay, \$29,549,919. The salaries of teachers averaged \$1604.01 a year. Among 43 counties there were 114 consolidated school districts.

**CHARITIES AND CORRECTIONS** Supervisory powers over a great number of institutions of care and custody rested in 1929 with the Department of Public Welfare, created in 1917. Its officials included, under the director of public welfare, an alienist, a criminologist, a superintendent of prisons, a superintendent of Charities, a supervisor of paroles, and superintendents of both the adult blind and of the visitation of children.

Under the superintendent of charities were the State hospitals for the insane, colonies for the feeble-minded and for epileptics, State schools for the deaf and for the blind, training schools for delinquent boys and for delinquent girls, the State Eye and Ear Infirmary, the Industrial Home for the Blind, homes for disabled ex-soldiers and sailors, for soldiers' widows and for soldiers' orphans. Under joint control of this official and of the University of Illinois were the State research and educational hospitals. The institutions of a strictly penal character were under the supervision of the superintendent of prisons. The State alienist headed the State Psychopathic Institute. On July 1, 1929, the State's mental hospitals contained 21,869 patients, the feeble-minded and epileptic colonies, 4137 and 491, respectively, the delinquent schools, 774 boys and 522 girls, and the penal institutions, 8030 prisoners. The total number of persons in institutions of the State was 37,342.

**LEGISLATION.** The State Legislature met in regular session, adjourning on June 20, after a protracted session. The most conspicuous measure that it passed was that providing a gasoline tax of 3 cents a gallon, to go into effect on August 1. The gasoline tax had long been opposed by the legislators from Chicago and Cook counties. The law provided a division of the tax proceeds in the proportion of 1 cent to the State and 2 cents to the individual counties. The proceeds of the tax were to be expended on road improvement. A bill was enacted to create a force of 300 State highway police, to be invested

with full police powers. An election commission of three was charged with the duty of studying the working of the election laws of the State and reporting thereon to the legislative session of 1931.

By statute was formed a new governmental body, the State judicial advisory council, conceived on the plan of the similar body existing in Cook County. The State council was to consist of 15 members, some legislators and some members of bench and bar. It was charged to study the State laws with reference to judicial organization and to procedure. By the Chicago Board of Trade Act, the securities listed on that board were exempted from qualifying under the "blue-sky" law, a like measure similarly exempted securities of the Chicago Curb Association. Another enactment affecting Chicago as a financial centre was the Call-money Act, which made it legal to charge above 7 per cent on collateral loans in writing, and thus removed from the local market a handicap imposed by an earlier statute restricting interest to 7 per cent.

A number of laws affecting the status of women were enacted. One of these strengthened the county system of mothers' pensions by appropriating \$500,000 to reimburse counties from State funds, up to 50 per cent of their pension disbursements. Women were admitted to jury service, and a number of bills bearing on jury service by women were passed, subject to confirmation by referendum. The schooling requirement to qualify a child of fourteen years to go to work was raised to passage through the eighth grade, from the former requirement of passage through the sixth. The obligatory minimum school year was made 8 months, instead of 6. The school distribution fund was increased to \$10,000,000 a year, from \$6,000,000. A new State system of certification for teachers was adopted.

Chief among the many enactments especially concerning Chicago were a series of acts to enable the city to carry out the solution, sought for many years, of its transit problem. With the reported approval of the transit companies affected and of the City Council, the latter was empowered to enter into a contract with a future unified company, to issue a terminable operating permit, to establish a city regulatory commission and to proceed to build subways. Without the transit companies' approval a bill was passed authorizing a fixed franchise term of 40 years. Nine associate judges were added to the municipal court of Chicago.

The Chicago Sanitary District was granted the power to issue \$27,000,000 of bonds without the sanction of a popular referendum, for the reported purpose of constructing the works of sewage disposal and the like required under the terms of the decree of the United States Supreme Court in the Great Lake diversion suit. A large increase of \$35,000,000 was made in the tax levy allowed to the Chicago Board of Education. A bond issue for the purpose of building an elevated two-deck highway through the West Park district, to the total of \$20,000,000, became law, subject to approval by referendum. A measure to prohibit the sale, possession, or use of the machine guns extensively employed in the feuds of the Chicago gangsters was enacted, but incurred much ridicule as not likely to be observed by the lawless, and was vetoed by Governor Emmerson.

**POLITICAL AND OTHER EVENTS.** In conformity with the previous report of Charles Evans

Hughes as special master, the United States Supreme Court rendered on January 14 a decision against the Chicago Sanitary District in the suit brought by a number of the Lake States to prevent the District's diverting water from Lake Michigan in excess of its permitted allowance. Under the decision the District was required to proceed as soon as possible to dispose of its sewage in such manner as would render the diversion of lake water for that purpose needless. The course of the District in diverting 8500 cubic feet a second, instead of the 4167 feet allowed it by Federal permit was held a defiance of the Federal authority. It remained possible for the District to divert water within the legal limit for the purpose of canal navigation. The water level of the Great Lakes rose later to exceptional height by reason of a wet spring. Nevertheless Special Master Hughes held further hearings and ordered on December 13 that the District's diversion of water be reduced to 6500 cubic feet a second by July 1, 1930. At that date the North Side sewage disposal plant, which the District had under construction, was expected to be complete. Three other plants were to be completed in 1933, 1935, and 1938, respectively.

A deficit in the municipal finances occurred in the city of Chicago. It was necessary as early as the outset of April for the city to negotiate a loan on tax anticipation warrants, to the total of \$40,000,000. The difficulty grew directly out of the popular vote at the spring municipal elections, which went against further bond issues. By the end of June Cook County was reported to have against it \$2,500,000 in bills payable and to be without further means to pay salaries. The county treasurer issued an appeal for the prepayment of taxes, but this brought in only a few thousands of dollars. The county's mid-September pay roll of \$400,000 was not met when due. The city's deficit at the end of the year was estimated at \$12,500,000 with regard to operating and maintenance expenditure, but the service of the city debt, which was covered by separate tax levies, was unaffected. Budget proposals carrying heavy reductions in the number of city and county employees were made. A school building loan of \$40,725,000 was secured on future taxes, and an advance from this paid December's teaching salaries.

The locks at Government Dam No. 51, at Golconda, Illinois, were completed at the end of July, affording passage for vessels from and to the Ohio River. On the Illinois River the State proceeded with its project of carrying through the Illinois Waterway from Chicago to the Ohio River, despite the exhaustion of a \$20,000,000 bond issue for the purpose. The State constitution, however, was held to prohibit the application of ordinary revenue to such a purpose, and Governor Emmerson sought in October to obtain Federal aid to the extent of some \$5,000,000 estimated as necessary for completing the waterway.

A series of legislative measures having been enacted to enable Chicago to bring about a consolidation of transit lines, the city authorities proceeded in the late summer to the work of drafting a consolidation ordinance for submission to a referendum vote. Negotiations were also held with the transit companies on the chief points at issue. The campaign to abate crime in Chicago continued in 1929, with repeated round-ups of criminal suspects. There occurred none the less on February 24 a massacre of 7 mem-

bers of one of the North Side criminal gangs, of which the perpetrators could not be found. The Chicago *Daily Journal* ceased separate issue August 21, being absorbed by the Chicago *Daily News*. The *Journal* was at the time 85 years old and the longest established of the evening dailies of the State. A municipal airport for amphibian planes, situated in Grant Park, was dedicated June 24.

The State of Illinois gained a judgment on July 30, in the Federal District Court, in a suit brought by the Standard Oil Company for the recovery of \$2,000,000 paid the State in gasoline taxes in 1928, the decision bore on similar contests over the gasoline-tax law, affecting tax collections of some \$8,500,000. A State Supreme Court decision found that wagering at dog races was legal within the provisions of the pari-mutuel system for horse races. Allegations of abuse in the distribution of prize-fight tickets were followed by the resignation of the State Athletic Commission and the appointment on August 9 of two new commissioners. An effort was made late in the year to organize the coal-mine labor of the State under an organization known as the National Miners' Union, which was antagonistic to the United Mine Workers, the organization previously in control.

OFFICERS. Governor, Louis L. Emmerson, Lieutenant-Governor, Fred E. Sterling; Secretary of State, William J. Stratton, Treasurer, Omer N. Custer; Auditor of Public Accounts, Oscar Nelson; Attorney-General, Oscar E. Carlson; Superintendent of Public Instruction, Francis G. Blair.

JUDICIARY. Supreme Court. Chief Justice, William M. Farmer, Associate Justices, Oscar E. Heard, Clyde E. Stone, Paul Samuel, Frederic R. DeYoung, Warren W. Duncan, Frank K. Dunn.

ILLINOIS, UNIVERSITY OF. A coeducational, State institution of higher learning in Urbana-Champaign, Ill., founded in 1867. The enrollment in the autumn of 1929 was 12,413, of whom 9097 were men and 3316 were women, distributed among the several colleges as follows: Liberal arts and sciences, 4155; commerce and business administration, 1990; education, 881; engineering, 1741; agriculture, 692; music, 152; journalism, 75; law, 292; library, 131; graduate school, 948; medicine, 548; dentistry, 168; pharmacy, 668. The 1929 summer-session enrollment was 2423, of whom 1391 were men and 1032 were women. The number of persons on the teaching staff above the rank of assistant was 737, in the grade of assistant or lower there were 459, and administrative officers totaled 26. The library contained 800,330 volumes and 164,750 pamphlets. The productive funds from Federal endowment totaled \$649,013, and from private gifts, \$464,071. The income for the year 1928-29 was \$6,926,602, of which \$4,837,887 was from the State. During 1928-29 a laboratory of applied mechanics and an addition to Lincoln Hall were constructed. During 1929-30 work was to be begun on a new building for the College of Medicine in Chicago. President, David Kinley, Ph.D., LL.D.

**IMMIGRATION.** During the fiscal year 1929, there were admitted into the United States 279,678 immigrants and 199,649 non-immigrant aliens. There departed from the country 69,203 emigrants and 183,295 non-emigrant aliens. Of the permanent immigration of the year, Europe furnished 158,598, North and South America, 116,177, and Asia, 3758. The four principal sources were Canada with 64,440 immigrants; Germany, 46,751 immigrants, Mexico, 40,154; and Great Britain and Northern Ireland, 23,576. No other country contributed more than 20,000 immigrants. The sex distribution was 142,132 males and 137,546 females. Of the total group, 47,935 were under 16 years of age, 207,990 were from 16 to 44 years, and 23,753 were over 44 years. Two-thirds of the immigrants were single (182,307).

The records of the Bureau of Immigration of the Department of Labor showed that the total number of deportations of aliens found to be unlawfully in the country reached 12,908 for the year, as compared with 11,025 for the fiscal year 1928. A total of 18,127 alien applicants were debarré from entering the country, 16,094 rejections occurring at land border ports, and

2033 at seaports. In the rejections at land-border ports, the great majority of the cases were turned back because of improper immigration visas. The accompanying table gives a summary of immigration facts for the year by racial groups.

Important laws were enacted during the year. Under the Act of Mar. 2, 1929, an alien resident of the United States, concerning whose admission to the country no record was available, was entitled to registration provided he entered the country prior to June 3, 1921, had resided in the United States continuously since such entry, was a person of good moral character, and was not subject to deportation. The Act of Mar. 4, 1929, made reentry after deportation a felony, punishable by fine and imprisonment, and also provided that any alien deported shall be forever barred from admission into the country. However, this last section was modified by the law of June 24, 1929, which provided that aliens deported prior to Mar. 4, 1929, had permission to re-apply, if permission had already been granted prior to that date.

**COMPARISON OF QUOTA WITH NON-QUOTA IMMIGRANTS.** The following table indicates that the number of immigrants coming from non-quota

NET INCREASE OR DECREASE OF POPULATION BY ADMISSION AND DEPARTURE OF ALIENS, YEAR ENDED JUNE 30, 1929, BY RACE OR PEOPLE, SEX, AND AGE PERIODS

Race or people	Aliens admitted			Aliens departed			Increase (+) or decrease (-)
	Immigrant	Non-immigrant	Total	Emigrant	Non-emigrant	Total

countries is almost as large as those admitted from Europe.

## IMMIGRANT ALIENS ADMITTED

Fiscal year	Canada and Newfoundland	Mexico	Central and South America	Europe
1925	102,753	32,964	3,669	148,366
1926	97,368	48,316	4,481	155,562
1927	84,580	67,721	5,548	168,968
1928	75,281	59,016	5,917	168,513
1929	66,451	40,154	5,260	158,598

It will be noted that there has been a constant decline in the number of immigrants from Canada, while immigration from the United States has fluctuated in both directions. On the other hand, comparatively few permanent immigrants come to the United States from Central America and South America. It would appear that the trend has been upward in recent years, and the Secretary of Labor expects continued increases. Europeans who probably originally should have liked to have come to the United States, except for quota restrictions, are now coming in increasing numbers to South American countries. While these persons themselves cannot hope for admission to the United States, except within quotas of their native countries, their own children born in the Western Hemisphere will not labor under such disabilities. It is not unlikely that the future will see a sizable immigration to the United States from Latin America.

**MEXICAN LABOR.** The total number of Mexican immigrants admitted during the fiscal year 1929 was 40,154. During the same period, 10,500 Mexican aliens left the country. Over 94 per cent of the alien entrants via the Southern Land border were born in Mexico, 10,544 gave Mexico as their country of birth, 1329 claimed European nationality, principally Germany, Russia, England, and Spain, 595 claimed birth in China, 208 in other Asiatic countries, and 402 in other countries.

Among the Mexican immigrants, the unskilled workers continued to predominate, 11,581 giving their occupation as that of common laborer and 3167 as farm laborer. There were 4252 Mexican immigrants recorded as skilled laborers, 1206 as servants, 732 as professional persons, 1295 in miscellaneous occupations, and 10,687 as having no occupation. During the year, there evidenced itself in some of the Southern States a decided reaction in favor of Mexican labor. In Texas, for instance, a measure was introduced in the State legislature seeking to make it difficult for Mexicans to leave the State. The demand for farm hands and for railroad construction workers made the retention of Mexicans in the country a matter of considerable importance, not only to the States of New Mexico, Arizona, and California, but even so far in the interior as Colorado. In this last State, Mexican farm laborers were being used extensively on the beet sugar plantations. This tendency favorable to Mexico is interesting in the light of the agitation that has appeared in a number of States, calling for the restriction of immigration. The 1928 YEAR BOOK recorded the introduction of such a measure in Congress.

**INTERNATIONAL ALIEN CONFERENCE.** The First International Conference on the Treatment of Foreigners adjourned in December, after having met for one month at Paris, without accomplishing its chief aim, i.e., the conclusion of a convention outlining the general governmental control of alien residents and alien business interests.

This conference, which was organized by the League of Nations, first began its sessions on November 5, with representatives from 40 countries present. The United States and Russia also sent unofficial observers. A draft convention which had been prepared was submitted to the conference, article by article. It immediately became evident that there were a series of contradictions in the convention that, in effect, would succeed in

## IMMIGRATION QUOTAS

nullifying one another. Thus, one article granted sweeping liberties to the foreigner, while another in effect specifically declared that the freedom of the high contracting parties as regards the admission of foreigners or policing measures was not affected. The revision of the convention failed to meet with the general consent of the delegates who voted down the adoption of the disputed articles in their new form, the conference encountered another difficulty in the handling of the problem of the taxation of foreign business interests.

**QUOTAS.** Despite President Hoover's request for repeal, Congress on June 13 voted to retain the national-origins clause in the immigration law. This clause had been debated since 1924 and on a number of occasions Mr. Hoover, both as Secretary of Commerce and as Republican nominee, had declared himself as opposed to the system for admitting new immigrants. On July 1, the new quotas were put into effect. The table on page 385 contrasts the quotas under the national-origins dispensation with the quota system operating up to June 30. It will be observed that the nations to suffer heaviest from the new quota system are Germany, the Irish Free State and Norway, while Great Britain and Northern Ireland and Italy are to be the chief nations.

Bombay (Presidency)	123,621	19,348,219
Bombay	77,035	16,012,342
Sind	46,506	3,279,877
Aden	80	56,500
Burma	283,707	13,212,192
Central Provinces and Berar	98,876	13,812,760
Central Provinces	12,109	15,335,444
Berar	17,767	3,075,316
Coorg	1,582	163,838
Delhi	593	488,188
Madras	142,260	42,318,985
Northwest Frontier Province	13,419	2,251,340
Punjab	96,848	20,685,024
United Provinces	106,295	15,635,787
Agra	82,187	33,309,145
Oudh	24,158	12,166,842
Total provinces	1,094,300	247,003,293

ing the Indian states and agencies which are in political relations with the Government, according to the census of 1921, was 1,805,332 square

miles, of which 1,094,300 square miles were in the British provinces. The total population in 1921 was 318,942,480, as compared with 315,158,396 in 1911. The population of the British provinces in 1921 was 247,003,293, as compared with 243,933,178 in 1911. In 1923 the census commissioner for India estimated the population at about 319,000,000, or a gain of 1.2 per cent over 1911, average density, 177 to the square mile, maximum provincial density, 608 to the square mile in the Province of Bengal. Over 90 per cent of the population was classed as rural, only 9½ per cent living in towns of 5000 or more.

The following table from the *Statesman's Year Book for 1923* gives the area and population of all the British-governed divisions of India according to the census of 1921.

The area and population of the Indian states and agencies subject to the British government at the time of the 1921 census are shown in the following table.

#### INDIAN STATES AND AGENCIES AREA AND POPULATION

State or Agency	Area in square miles in 1921	Population in 1921
Assam (Manipur) State	8,456	384,016
Baluchistan States	80,410	378,977
Baroda State	8,127	2,126,522
Bengal States	5,434	896,926
Bihar and Orissa States	28,648	3,959,669
Bombay States (including States in Western India Agency)	63,453	7,409,429
Central India Agency	51,531	5,987,023
Central Provinces States	31,176	2,066,900
Gwalior State	26,357	3,186,075
Hyderabad State	82,698	12,471,770
Kashmir State	84,258	3,320,518
Madras States Agency	10,696	5,460,312
Mysoore State	29,475	5,978,892
Northwest Frontier Province (Agencies and Tribal areas)	25,500	3,825,136
Punjab States Agency	37,059	4,416,036
Punjab States Agency	128,987	9,844,384
United Provinces States	2,818	81,721
	5,949	1,134,881
Total States	711,032	71,939,187
Total India	1,805,332	318,942,480

**RELIGION ETC.** The enumeration of the population in 1921 was Hindus, 216,734,586; Moslems, 68,735,233; Buddhists, 11,571,268; Animistic, 9,774,611; Christians, 4,754,064; Sikhs, 3,238,803; Jains, 1,178,500; Parsis, 101,778; Jews, 21,778. The principal languages are Hind, Bengali, and Urdu. The population of over 250,000 with their populations in 1921 are Calcutta (with suburbs), 1,327,547; Bombay, 1,175,014; Madras, 526,977; Hyderabad, 404,187; Rangoon, 341,962; Delhi, 304,420; Lahore, 281,781; and Ahmedabad, 274,007.

From 1922 to 1926, the births in the British Provinces averaged 8,198,707 annually, deaths, 6,228,907, the annual excess of births being 1,969,739. In 1921, 72 per cent of the population was engaged in pastoral and agricultural pursuits. Emigrants from India in 1927-28 numbered 222,169. Under the Indian Emigration Act, the emigration of unskilled laborers is lawful to Ceylon and Malaya only.

**EDUCATION.** There are two kinds of schools in India, namely, those which meet certain requirements of the government, known as "recognized schools" and those which do not, known as "unrecognized schools." The recognized schools may

be under public or private management. They are divided into English and vernacular schools and consist of primary and secondary grades. There were in India in 1926-27, 211,048 recognized schools, with 10,520,350 pupils, and 35,216 unrecognized, with 628,146 pupils. Of the 11,157,496 students in educational institutions in British India in 1926-27, 8,256,760 were in primary schools, 1,854,067 were in secondary schools, and 81,919, in universities. In the same year, there was spent on education 245,847,572 rupees, a sum representing less than 10 cents per capita. Notwithstanding sincere effort, little real advancement has been made in the education of the masses. Of the country's vast population according to the census of 1921, more than 90 per cent was illiterate.

**PRODUCTION.** Agriculture is the main support of the population, more than 229,000,000 (out of the total population of 318,000,000) relying upon agriculture, forestry, and stock raising for their maintenance, at the census of 1921. In the British Provinces in 1926-27, there were of arable land, 304,170,000 acres (or 43 per cent of the total), of trees, shrubs, and bushes, 1,470,000, of forests, 87,026,000, of uncultivated productive lands, 152,526,000, and of unproductive land, 149,009,000. The Indian States in the previous year had of arable lands, 79,413,000 acres, of trees, shrubs, and bushes, 821,000, of woods and forests, 17,321,000, of unproductive land, 23,204,000, and of cultivable waste, 16,304,000. Of a total of about 350,000,000 cultivated acres in all India, approximately 290,000,000 of which are under crops in an average year, some 80,000,000 acres are devoted to rice, 30,000,000, to wheat, and 23,000,000, to cotton.

The area and yield of the principal crops in British India and the Indian states in the 1928-29 crop season are shown in the accompanying table

INDIAN CROPS AREA AND YIELD, 1928-29		
Crop	Area *	Production *
	1928-29	1928-29
Wheat	82,211	289,781
Barley	6,387 *	119,003 *
Rice, rough	79,258	2,428,785
Sugar	2,576	2,735 *
Tea	753 *	390,920 *
Rape and mustard	5,930 *	848 *
Sesamum	5,442	488 *
Linseed	3,852	351 *
Castor seed	1,418	111 *
Peanuts	6,079	3,025 *
Cotton	24,992	2,398,604 *
Jute	3,181	3,966,400 *
Indigo	67	1,411 *

\* Thousands of acres

\* Thousands of units—bushels, except as indicated

\* 1927-28 figures \* Not including Indian states

\* Unit, long ton / Unit, pound

More than half of the Indian wheat crop is produced in the Punjab and the so-called United Provinces. Losses to the 1928-29 crop were not serious in these districts, although the production was reduced somewhat by cold and frost damage. The monsoon, which lasts from June to September, is the chief controlling factor in crop production. Rice, sugar cane, castor beans, and groundnut crops are harvested in February, wheat, rape, and mustard in the spring, and sesame in the autumn. The biannual cotton crops are harvested in April and in October. The uneven distribution of the monsoon and floods in the region between Madras and Calcutta, reduced the 1928 crops somewhat, but in general

the yields were satisfactory. The 1928-29 rice crop was 5 per cent larger in area and 12 per cent larger in yield than in 1927-28, likewise the 1928-29 peanut crop of 3,025,000 long tons was 11 per cent larger and the acreage increased to 6,079,000 acres from 5,426,000 acres in 1927-28. The jute crop, in which India maintains a practical world monopoly, was estimated about 3 per cent lower than in 1927-28, the cotton crop acreage was 8 per cent larger and the estimated production 9 per cent larger than in the previous year, but the raw-sugar crop was placed at 2,735,000 long tons, or 15 per cent less than the year before, and the unfavorable conditions in the tea industry caused a decline in both the quantity and value of exports for 1928-29. The 1929 monsoon was evenly distributed and the 1929-30 crops were estimated to be approximately the same as in the preceding year.

In accordance with the recommendations of the Royal Commission on Agriculture, the Council of Agricultural Research was established in 1929 for the purpose of, among other things, improving crop production methods. The Research Council was financed by an initial grant of £200,000 and an annual grant of £50,000 from the Indian government and was expected to coordinate the activities of all institutes and other bodies engaged in agricultural research work. See AGRICULTURAL EXTENSION WORK, COTTON.

In the British Provinces in 1927, there were 120,697,000 cattle, 30,591,000 buffaloes, 23,237,000 sheep, 39,288,000 goats, 1,691,000 horses, 1,478,000 mules and asses, and 506,000 camels. In the Indian states in 1926, there were 26,228,000 cattle, 7,048,000 buffaloes, 11,848,000 sheep, 9,715,000 goats, 444,900 horses, 312,600 mules and asses, and 170,900 camels. Mineral production in India in 1927 was valued at £22,920,000 (\$111,540,000), as compared with £25,819,000 (\$125,650,000) in 1926. The coal industry continued depressed and oil production in Burma declined. The production and value, in United States dollars, of the chief mineral products in 1927 were coal, 22,082,000 long tons, \$34,454,000, petroleum, 281,114,000 imperial gallons, \$21,517,000, manganese ore, 1,129,000 long tons, \$13,841,000, gold, 384,273 troy ounces, \$7,917,000, lead, 65,967 long tons, \$7,986,000. Silver, iron ore, tungsten, tin, chromite, salt, mica, jadeite, and rubies were other mineral products.

Industry is confined mainly to manufacturing coarser grades of cotton textiles, jute, iron and steel, and to cotton ginning, sugar and oil refining, paper making, and printing. Other industries are rice mills, tea factories, foundries, and railway shops. In 1926-27 there were 306 cotton mills, with 8,412,817 spindles, 158,124 looms, and 384,082 employees, 93 jute mills, with 51,016 looms, and 18 woolen mills, with 92,213 spindles and 2011 looms. Labor conditions, which were very unsettled in 1928, with numerous and long-drawn-out strikes, improved during 1929. In 1928 the working days lost reached 31,647,400, as compared with 2,019,970 in the preceding year. In general, industrial operations were more profitable in 1929 than in 1928, although economic conditions remained subnormal. At the end of the year, the uncertainty of the political situation was reflected in a somewhat depressed commercial situation.

**COMMERCE.** For the fiscal year ending Mar. 31, 1929, imports totaled \$912,900,000, as compared with \$909,000,000 in the previous year, while

domestic exports were valued at \$1,190,100,000, or 3 per cent more than the 1927-28 figure of \$1,161,100,000. The excess of exports over imports for 1928-29 was \$305,000,000 and for the preceding year, \$287,000,000. The foreign trade by principal groups of commodities in 1927-28 and 1928-29 is shown in the accompanying table

#### INDIAN TRADE BY COMMODITY GROUPS [Millions of dollars]

Group	1926-27	1927-28
<b>GENERAL IMPORTS *</b>		
Food, drink, tobacco	139.1	135.4
Raw materials, produce, articles		
mainly unmanufactured	74.3	93.1
Articles, manufactured	609.8	664.5
Live animals	15.0	16.0
Postal articles not specified

Postal articles not specified		
Gold, silver, bullion, specie *	7.3	9.6
Total	1,100.0	1,171.0

\* Including currency notes since 1922-23

In the calendar year 1928, the United Kingdom supplied 46.2 per cent of the imports and purchased 22 per cent of the exports of India, the United States furnished 6.8 per cent of the imports, and took 11.7 per cent of the exports. Corresponding percentages for other countries participating in the Indian trade were Japan—imports, 6.6 and exports, 10.2; Germany—imports, 6.6 and exports, 10.1; France—imports, 5.5 and exports, 5.3; Italy—imports, 5.6 and exports, 4.6. The imports from the United Kingdom, which ordinarily furnished almost one-half of the total, declined slightly in the calendar year 1928, from the 1927 total, as did imports from Japan and the United States, while imports from Italy, France, Germany, and Belgium increased. Exports to Germany, Belgium, France, the Netherlands, and the United States were much larger, while those to the Straits Settlements, Japan, and Ceylon were smaller.

Foreign trade was well maintained in the calendar year 1929 and resulted in the usual favorable merchandise balance. In 1929 imports from the United States amounted to \$61,495,000 and exports to that country were valued at \$140,333,000. Imports from the United States in 1929 dropped to \$53,373,000. The foreign-trade figures relate only to the political territory of British India, as the ports of the native states are relatively unimportant.

**FINANCE** The budget of the central government of British India, excluding native states and provincial governments, for the fiscal year ending Mar. 31, 1930, estimated revenues at 1,331,600,000 rupees (one rupee exchanged at about \$0.36499) and expenditures at 1,340,000,000, leaving a deficit of 8,000,000 to be covered by appropriating the surplus for 1928-29, estimated at 3,000,000, and by transferring from the Revenue Reserve Fund the remaining 6,000,000 required, leaving a balance of 1,400,000 rupees. Expenditures for 1929-30 were placed 300,000,000 rupees higher than the revised estimates for expenditures in the preceding year. In the preliminary

budget for 1928-29, receipts and expenditures balanced at 1,296,475,000 rupees. The year ended with an actual estimated surplus of 3,000,000 rupees, due to a surplus of 40,000,000 of land and customs revenue resulting from financial operations in 1927-28 and the collection of 65,000,000 of salt revenue more than the allotted share, at the expense of the 1929-30 fiscal year. Without these windfalls, the actual deficit for 1928-29 would have been about 75,000,000 rupees, according to the London *Times*. Capital expenditure on railways in 1929-30 was estimated at 285,000,000 rupees and the issue of a £5,250,000 loan for the purchase of the Southern Punjab Railway was provided for. The estimated deficit for 1929-30 was attributed to the fact that the gap between receipts and expenditures caused by the final remission of provincial contributions in 1928-29 had not been closed by new taxation.

The public debt of the central government on Mar. 31, 1928, amounted to 9,897,000,000 rupees (about \$3,612,306,000), including the debt incurred on behalf of the provincial governments. Of the total debt, 82 per cent was contracted for railways, irrigation projects, and similar productive purposes. Of the productive debt, 1,263,400,000 rupees was incurred on behalf of the provincial governments. The per capita debt stood at about 31 rupees, or \$11.30.

**COMMUNICATIONS** The total length of railway line on Mar. 31, 1928, was 39,712 miles, of which 28,426 miles were owned by the Government of British India and 11,286 miles belonged to the Indian states and private companies. The railroads were more than usually prosperous in 1928, showing increases in both freight and passenger traffic. Statistics for all Indian railways are shown in the accompanying table.

#### STATISTICS OF RAILWAYS, YEARS ENDED MARCH 31

Item	1927	1928
Length of line, total	miles 39,049	39,712
Length of tracks	do 52,886	53,846
Locomotives	number 9,873	9,541
Passenger cars	do 26,469	26,961
Freight cars	do 230,726	228,271
Average capacity	long tons 18.0	18.2
Train miles, total	thous 170,720	179,661
Freight train miles	do 57,328	59,874
Passengers carried	thous 611,972	651,831
Passenger miles	millions 20,366	21,704
Freight carried	1000 long tons 112,966	118,257
Ton miles	millions 20,376	21,902
Gross receipts	1000 rupees 1,123,566	1,182,245
Passenger service	do 444,835	456,740
Freight service	do 678,731	695,832
Gross receipts, equivalent \$1000	407,293	430,097

For the year ending Mar. 31, 1929, the Indian railways reported gross revenues of \$433,869,000, operating expenses of \$272,360,000, and a net revenue from operations of \$161,508,000, according to a preliminary report of the Indian Government Railway Board.

The rapid extension of the Indian railway system during recent years is shown by the preliminary statistics for March, 1929, placing the length of the entire system at 41,000 miles, of which nearly 30,000 miles were owned by the central government and about 11,000 miles by the private companies or the governments of native states. Of the Imperial lines, about 18,000 miles were operated directly through the Railway Board, while 12,000 miles were operated by companies under long-term contracts with the government. Electrification of the Great Indian

Peninsula Railway main line from Bombay to Igatpuri and Poona was completed in November, 1929. New and improved equipment and rolling stock were placed in operation. Other improvements under way during 1929 were the electrification of the Madras suburban section of the South Indian Railway and the construction of the Vizagapatam Harbor, in which the Bengal-Nagpur Railway was directly interested. Progress in highway construction continued. The first inland Indian air-mail service connecting Delhi with Jodhpur, Hyderabad, and Karachi, terminus of the London line, was inaugurated in December, 1929.

The merchant marine on June 30, 1928, consisted of 184 vessels of 100 tons or over, with a total gross tonnage of 187,325. During 1927-28, 3918 vessels of 8,876,840 tons entered, and 3916 vessels of 8,701,752 tons cleared, the ports of British India.

**GOVERNMENT** Executive and legislative power rests with the Governor-General-in-Council. The Council consists of no fixed number of members, but at least three of them must have had 10 years' service in India and one must be a lawyer of at least 10 years' standing. The administration of India in England is under a Secretary of State for India, aided by a council appointed by him, of which at least half the members must have been residents of India for 10 years and must not have left India more than five years previous to their appointment. A high commissioner for India in England acts as agent for the Governor-General-in-Council and conducts business assigned by the Secretary of State. There is also in India the Legislative Council consisting of the Governor-General and two Chambers, namely the Council of State and the Legislative Assembly, both constituted under the Montagu-Chelmsford Act. See NEW INTERNATIONAL YEAR BOOK for 1919 et seq. The Viceroy and Governor-General during 1929 was Baron Irwin of Kirby Underdale (appointed Apr. 4, 1926). The Secretary of State for India was Capt. Wedgwood Benn, appointed in June, 1929, to succeed Viscount Peel. The High Commissioner for India in the United Kingdom was Sir A. C. Chatterjee.

### HISTORY

The agitation against British rule in India assumed an increasingly serious aspect during 1929, reaching a climax on December 31, when the All-India National Congress in session at Lahore adopted with only six dissenting votes Mahatma Gandhi's resolution favoring complete independence for India and rejecting the British offer of eventual dominion status. The Gandhi resolution authorized the executive committee of the All-India Congress, in connection with the independence campaign, "whenever it deems fit, to launch upon a programme of civil disobedience, including the nonpayment of taxes, whether in selected areas or otherwise and under such safeguards as it may consider necessary."

The Viceroy's proposal for a round-table conference to include the British authorities and representatives of the native states, the Nationalists decided to boycott the Legislative Assembly and councils, and adopted a resolution urging the native princes to grant constitutional government to their respective states. Another resolution adopted warned subscribers to Indian loans that debts incurred by the government for other than purely Indian national interests would

be repudiated by a national government if it came into power.

An active policy of civil disobedience and the refusal to pay taxes, it was predicted by observers in India, probably would result in wholesale arrests and consequent clashes. There was thus ground for serious concern as to the course of events during 1930. Other factors, however, tended to minimize the importance of the Nationalist programme. It was pointed out that the All-India Congress has little or no following among more than half of the total population, that is, the 70,000,000 Mohammedans, the 30,000,000 Sikhs, and some 3,000,000 Sikhs.

It was estimated that only 5 per cent of the remaining population was literate, which made about 7,000,000 from whom the Nationalist movement would be expected to recruit its principal following. The 7,000,000 literates, however, were by no means unanimous in favor of independence. The National Liberal Federation, which met at Madras December 30, adopted resolutions denouncing the policy of independence advocated at Lahore and accepting the Viceroy's proposals for a round-table conference. The Liberals favored dominion status, with a federal bond uniting British India with the native states.

Varadarajulu Naidu, one of the influential leaders of the All-India Congress, and other moderates, resigned following the adoption of the resolution favoring independence, on the ground that it was "suicidal." On the other hand, Mahatma Gandhi's programme was not considered drastic enough by a radical minority of the Nationalist Congress, and an extreme Left Wing party, headed by Srimivasa Iyengar, was formed following the Lahore Congress. Finally, the independence movement was opposed by the native princes, to whom the British government was bound by a series of treaties and engagements and who favored a federal government representative of the three parties involved—Great Britain, British India, and themselves. The native states, it should be noted, had sufficient military forces to conquer British India, once the British withdrew. As for the Sikhs, who were in attendance at the Lahore Congress, it was indicated that they would refuse to accept the Nationalist programme as adopted at the Congress, affirming that the independence was also their ultimate goal.

These significant developments in 1929 were forecast by the action of the All-Indian and Moslem League in adopting at Calcutta on Dec. 28, 1928, a resolution sponsored by Mahatma Gandhi which threatened the organization of a noncooperative movement and the nonpayment of taxes if the British government did not accept in its entirety before the end of 1929 the dominion status constitution for India drafted by the Nehru committee. The cleavage between Moslem and Hindu interests was demonstrated at a meeting in January of the All-India Moslem Conference. The resolutions adopted demanded a federal system for India, with complete autonomy and residuary powers vested in the component states, with the central government restricted to specific powers, and with other constitutional safeguards for Moslem rights.

The same fear that Moslem culture in India would be threatened by an independent government with the Hindus in control was demonstrated by representatives of the Central National

Moslem Association who appeared before the Simon Commission at Calcutta on January 15. They demanded separate representation for Moslems on all councils on a population basis, that the minority should have 40 per cent of the membership of such councils, and that no bill affecting religious, educational, or social interests could be passed if opposed by one-fourth of the community concerned.

On February 13, the Chamber of Princes, composed of the rulers of the native states, unanimously affirmed that they would assent to no proposals for an adjustment of the political situation in India which did not have as their basis the continuance of the British connection. Meanwhile, a committee headed by Sir Harcourt Butler was completing its study of the relations between the Indian states and Great Britain, and the states and British India. The committee's report, issued April 17, recommended the continuance of British supremacy over the states as the only means for their preservation and that assurance be given the native princes that Britain would not assign the paramount power to an Indian government in British India responsible solely to an Indian legislature.

The committee reported that it had found no practical method of federalization between the Indian states and British India, declared that the existence of two Indias must be recognized, and recommended that in the future the Viceroy should stand as the agent of the Crown in all dealings with the Indian states and not as the Governor-General-in-Council, in which capacity he represented the Government of British India. The Butler Committee commenced its study at the close of 1927. Another contribution to the discussion of the relation of the native states to a Nationalist government in India was made by the conference of subjects of the native states, held at Simla May 25. The princes were asked to demonstrate their sympathy with the Nationalist movement by converting themselves into constitutional rulers.

The Simon Commission continued its investigation into conditions in India during the year and was expected to present its report early in 1930. In the meantime, charges by Indian leaders that Great Britain was seeking to forget or deny the pledge of eventual dominion status made in 1917 led Lord Irwin, the Viceroy, to reaffirm the pledge on two occasions. The first was in opening the budget session of the Indian Legislature at Delhi on January 28. The second was made October 31, in connection with a declaration on the Labor government's Indian policy, when he said, "it is implicit in the declaration of 1917 that the natural issue of India's constitutional progress as there contemplated is the attainment of dominion status." Neither statement, however, had the desired effect of limiting the violence of the independence agitation. On April 8, two bombs were thrown into the government benches in the Indian Legislative Assembly at Delhi in the presence of Sir John Simon. Sir George Schuster, the finance member of the Viceroy's executive council, and four Indian members of the Assembly were injured.

The boycott of the Simon Commission in its investigations throughout India continued and Mahatma Gandhi led a vigorous campaign against the purchase or sale of British cloth. Riots and arrests resulted from the looting of British and native shops and the burning of cloth

looted from them, and violent strikes occurred in many of the cotton and steel mills. Alleged Communistic activities in connection with these events led the government to press for the passage of its bill providing for the banishment of alien Communists, which the Assembly had rejected in 1928.

It was during this discussion that the bombing of the Assembly took place. On April 12, Lord Irwin announced that he had passed the public safety bill by ordinance without waiting for legislative enactment. Shortly before, the government had struck at alleged Communist agitators under the sedition law, arresting about 100 men in half a dozen of the large cities. Attacks upon the government for this action by Indian radicals in the Assembly were cut short by the Viceroy, who "disallowed" the debate on the ground that it would be detrimental to public safety. In June, Lord Irwin announced the postponement of the Indian General Election, which was to have been held the coming winter. His grounds were that the situation was abnormal and that any election prior to the submission of the Simon report would only intensify the political passions of the country.

These conflicts between the British and the Indian Nationalists were accompanied by a long series of savage clashes between Moslems and Hindus in various parts of India. Apparently, the refusal of the Moslems to support the Nehru report on "immediate dominion status" and other "dissonant" discussions had emphasized the religious and social gulf between the two sections of the population. Religious riots in Bombay in February resulted in the death of several hundred persons.

The advent of the Labor government to power in Great Britain in June increased the hope of the Indian leaders for an immediate loosening of the British hold. The Viceroy's declaration of October 31 proved a disappointment to the radical Nationalists and intensified the political ferment in India. The British government's proposal for a round-table conference, however, received the support of many leading Indians. It was indicated that the conference would probably be held after the publication of the Simon Commission's report and before the joint committee of the two Houses of the British Parliament suggested an Indian policy for the consideration of Parliament.

A temporary furore among the Conservatives and some Liberals in Great Britain caused by the Viceroy's reiteration of the pledge of dominion status was calmed by Premier MacDonald's assurance that the government had no intention of acting before the submission of the Simon report and that the statement was issued "in order that a better atmosphere and more confidence should be established pending the Simon Commission's report." A statement signed by about 30 progressive Indian leaders welcomed the proposed round-table conference provided the Nationalists were given predominant representation and a policy of general conciliation and amnesty to political prisoners was adopted. The "better atmosphere" hoped for by the Labor government as a result of the Viceroy's declaration failed to develop, however, and, on December 23, an attempt to assassinate Lord Irwin was made as his train approached Delhi; also, the All-India Congress rejected all British advances as inadequate. Gandhi, who had declared his willingness to wait for dominion status, was apparently forced by the

tide of public opinion to declare for immediate independence.

A Royal Commission to explore all aspects of the labor situation in India, headed by J. H. Whitley, former Speaker of the British House of Commons, was announced in January. On September 3, the Legislative Assembly at Simla passed the third reading of the child-marriage bill, which provided that the age of marriage should not be under 14 years and that the age of consent should not be under 16 years. In 1921, 40 per cent of the girls between the ages of 10 and 14 years were reported as being in the marriage state.

Preliminary steps toward the union of Protestant churches in southern India were taken during the year.

**BIBLIOGRAPHY.** Important recent works were J. Coatsman, *India in 1927-28* (1928), G. T. Garratt, *An Indian Commentary*, London (1928).

See **GREAT BRITAIN**, under *History*.

**INDIANA. POPULATION.** According to the Fourteenth Census, the population of the State on Jan. 1, 1920, was 2,930,390. The estimated population on July 1, 1928, was 3,176,000. The capital is Indianapolis.

**AGRICULTURE.** The following table gives the acreage, production, and value of the principal crops in 1928 and 1929.

Crop	Year	Acreage	Prod Bu	Value
Corn	1929	4,124,000	131,968,000	\$ 97,656,000
	1928	4,483,000	157,802,000	108,883,000
Wheat	1929	1,631,000	27,721,000	31,048,000
	1928	910,000	10,040,000	12,429,000
Hay	1929	3,179,000	3,539,000 *	35,700,000
	1928	1,884,000	2,581,000 *	30,901,000
Oats	1929	1,895,000	54,008,000	21,603,000
	1928	2,440,000	89,910,000	33,267,000
Potatoes	1929	55,000	4,620,000	6,930,000
	1928	61,000	6,649,000	4,654,000
Tobacco	1929	20,600	15,965,000 *	1,033,000
	1928	14,700	11,234,000 *	2,696,000
Rye	1929	125,000	1,625,000	1,462,000
	1928	86,000	946,000	889,000

\* Tons    ♢ Pounds

**MINERAL PRODUCTION.** The situation of the coal industry, the main basis of the mineral industries of the State, did not immediately improve in 1928 because of the conclusion of labor troubles in the mines. Coal production fell to 16,378,580 short tons for 1928, from 17,935,758 tons for 1927. The value of the coal produced in 1928 was \$29,212,000, of that produced in 1927, \$36,381,000. The production of coke nevertheless was higher in 1928, attaining 6,094,201 short tons, as against 5,549,762 for 1927, the value of the 1928 product was \$38,237,790, of that of 1927, \$37,162,981. The pig-iron output of the State rose conformably to 3,842,762 long tons for 1928, from 3,447,764 for 1927, in value, to \$63,622,330, for 1928, from \$62,097,518 for 1927. The production of stone, largely of high grades, stood second to that of coal in 1927 among the primary mineral industries of the State. There were produced in that year 5,813,000 short tons, as against 4,699,230 in 1926, in value, \$22,634,359 for 1927 and for 1926, \$22,797,189. The clay products, third of the groups of the State's mineral industry, totaled \$17,855,971 for 1927; for 1926, \$18,747,835. Petroleum and natural-gas output remained secondary in value and little changed. The entire mineral product of the State reached the value of \$107,578,234 for 1927, as compared with a total of \$118,692,304 for 1926.

**FINANCE.** State expenditures in the year ended Sept. 30, 1928, as reported by the U. S. Department of Commerce, were for maintenance and operation of governmental departments, \$27,772,816 (of which \$5,325,081 was for local education); for interest on debt, \$92,096; for permanent improvements, \$10,422,693, total, \$44,287,595 (of which \$192,572 represented interdepartmental payments and \$19,306,765 was for highways, \$7,436,397 being for maintenance and \$11,870,368 for construction). Revenues were \$44,745,297. Of these, property and special taxes formed 30.2 per cent, departmental earnings and remuneration for officers' services, 10.4, license sales, 42.2. Gasoline taxation of \$10,949,805. The unfunded debt on Sept. 30, 1928, total and net alike, was \$2,062,500. On a property valuation of \$5,117,890,125 were levied State taxes of \$11,771,147.

**TRANSPORTATION.** The total number of miles of railroad line under operation on Jan. 1, 1929, was 7173.14. There were built, in 1929, 4.31 additional miles of first, 21 of second, 1.85 of third, and 1.92 of fourth or other track.

**MANUFACTURES.** According to the biennial Census of Manufactures published by the U. S. Department of Commerce in 1929, there were in the State, in 1927, 4726 manufacturing establishments. These employed 250,117 wage earners whose wages for 1927 totaled \$375,217,514. Materials and supplies used in manufacture cost \$1,227,168,557. The manufactured products attained the combined value of \$2,153,479,432.

**EDUCATION.** There was some effort to repeal or amend the law safeguarding teachers' tenure, but the law of 1927 was maintained unaltered. Two years of training were rendered requisite to qualification for an elementary teacher's license; for a high school teacher's license, four years. According to the annual review of the *Journal* of the National Education Association, a revision of the elementary-school curriculum was effected and steps were taken toward revising that for the high schools. For the academic year 1928-29, the school population of the State was estimated at 850,829. There were enrolled in the public schools, in that year, 641,149 pupils, not including those in kindergartens or ungraded, numbering 19,385. In the elementary grades were 503,875 pupils, in the high-school grades, 137,274. The gross total of expenditure for public-school education in the year was \$76,488,480. The median yearly salaries of teachers ranged from \$1470 for elementary and \$1947 for high-school teachers in cities to \$967 and \$1399, respectively, for the same classes in rural schools.

**CHARITIES AND CORRECTIONS.** The Board of State Charities as functioning in 1929 exercised supervision over institutions for the care or custody of persons, whether those of the State or of its subdivisions, but it did not directly administer such institutions. The Board consisted of six unpaid nonpartisan appointees, each serving for three years, and was created in 1889. Under its care were the institutions of 92 counties and some 20 State institutions. These were the Central State Hospital, Logansport State Hospital, Richmond State Hospital, Evansville State Hospital, and Madison State Hospital, the School for Feeble-minded Youth, the Farm colony for the Feeble-minded, and the Village for Epileptics, the Soldiers' Home, the Soldiers' and Sailors' Orphans' Home, the University Hospital, schools for the deaf and for the blind, the In-

diana State Prison, the Indiana Reformatory, the Indiana State Farm, the Indiana Women's Prison, the Indiana Boys' School and the Indiana Girls' School.

**LEGISLATION** The State Legislature met in regular biennial session and adjourned on March 11. Of the measures that it passed, that of chief political importance was the repeal of the institution of the primary election, in so far as it applied to State-wide candidacies. The candidates for representatives in Congress were excepted, thus remaining subject to selection by the primary. The law of 1921 enabling cities to adopt government by city manager was amended in important respects, but both the original law and its amendments of 1920 were later in the year declared unconstitutional by the State Supreme Court. It was prohibited by enactment to follow the daylight-saving system of summertime. A measure providing for the general permanent registration of voters was passed, but was vetoed by Governor Leslie. Enactments applying to the control of gas utilities in the city of Indianapolis enabled that city to acquire the property of the Citizens' Gas Company and created a city utilities district with bond issuing powers up to 1 per cent and a board of managers numbering five trustees. Provision was made for the increase of the gasoline tax to 4 cents a gallon, the increase in the proceeds to go to the State highway commission in order to defray the more rapid paving of State roads.

**POLITICAL AND OTHER EVENTS** Municipal elections were held in November, and the result of these, both in Indianapolis and in certain of the other cities of the State was the defeat of republican organizations that had worked in alliance with the Ku Klux Klan. On this account, the elections were interpreted as having a State-wide significance. Indianapolis in particular elected as Mayor Reginald H. Sullivan, its first Democratic Mayor since 1913, by the unprecedented majority of about 33,000. The election of Sullivan spelled the defeat of George V. Coffin, Republican County Chairman, for many years the dominant figure in the political situation in the city. Coffin had unsuccessfully opposed the law and the local referendum by which Indianapolis elected to adopt government by a city manager.

The city-manager plan for Indianapolis, however, was halted in another direction. Suit having been brought against the constitutionality of the enabling law, the State Supreme Court declared it unconstitutional by a decision rendered early in October, the Bench being divided 3 to 2. The majority opinion based its findings on the view that the law, in requiring the certification of the validity of some 19,000 petitioners' names in five days demanded the impossible.

Steps were taken in the course of the year to place the city of Indianapolis in possession of the property of the Citizens' Gas Company, under the terms of a contract of 1905. Confusion over daylight-saving time arose in Indianapolis, for the reason that the Legislature passed a law intended to nullify the city ordinance prescribing the change to daylight-saving in the summer months. The ordinance remained in force as far as the city offices were concerned, but elsewhere practice was divided, standard time prevailing. The disregard of the liquor laws in Lake County gave occasion to a campaign of Federal inquiries and prosecutions in the summer. At Vincennes,

the 150th anniversary of the taking of Fort Sackville by George Rogers Clark was celebrated on February 25 by the demolition of a grain elevator on the site of the fort, in preparation for the creation there of a national memorial.

**OFFICERS** Governor, Harry G. Leslie, Lieutenant-Governor, Edgar D. Bush, Secretary of State, Otto G. Ffield, Auditor, Archie N. Bobbitt; Treasurer, G. Banta Reynolds, Superintendent of Public Instruction, Roy P. Wisheart.

**JUDICIARY** Supreme Court Judges, Julius C. Travis, David A. Myers, Clarence R. Martin, Willard B. Gemmill, B. M. Willoughby.

**INDIANAPOLIS** See **MUNICIPAL GOVERNMENT**

**INDIANA UNIVERSITY** A coeducational State institution of higher learning in Bloomington, Ind., founded in 1820. For the first semester of the academic year 1929-30, the registration aggregated 4269 students, of whom 2597 were men and 1672 women. These were distributed as follows: Graduate school, 272; arts and sciences, 2552; law, 127; commerce and finance, 169; music, 85; education, 309; medicine, 428; dentistry, 136; nurses' training, 191; social service, 49. The faculty had 303 members. The endowment funds amounted to \$774,778, and the total income for the year, from State and private sources, was \$2,424,750. The library contained 216,400 volumes. In 1927 the Legislature appropriated a mill tax that was expected to yield at least \$350,000 a year, for ten years, to be used exclusively for the construction of new buildings and the purchase of land. President, William Lowe Bryan, Ph.D.

**INDIANS** The total Indian population of the United States, according to the report of the Secretary of the Interior for the fiscal year 1929, was 337,652, enumerated at 82 Federal agencies located in 25 States, or 345,575 including those not at agencies. In 1928 this number was 355,901. The greatest number were to be found in the State of Oklahoma, with Arizona second, and New Mexico third. The total budget appropriation for the Bureau of Indian Affairs for the fiscal year ending June 30, 1929, was \$36,144,509, of which \$21,860,000 was total permanent and indefinite appropriations, including trust funds.

The Commissioner of Indian Affairs, Charles H. Burke, resigned in June, 1929, after a period of service since 1921, or a longer time than that of any incumbent of the office. Under his successor, Charles J. Rhoads, and the new assistant commissioner, William J. Scatagood, the Bureau of Indian Affairs embarked on a new policy in solving this century-old problem, the aim of which was to make the Indian a self-supporting and self-respecting citizen as rapidly as it could be brought about. To accomplish these ends it would be necessary to revise the Indian educational programme along practical lines and to perfect plans for the absorption of these people into the industrial and agricultural life of the nation. The decentralization of the activities of the bureau was to be effected as rapidly as possible, problems of health and education becoming responsibilities of the various States. The Office of Education was to be asked to collaborate in supervision of Indian education, and the health problem was eventually to be lodged with the Public Health Service. The objective of the new policy was the placing of the Indian and his property upon a normal basis, regarding him as a potential citizen instead of the ward of the

Government, and the elimination of the Bureau of Indian Affairs within a period of 25 years

**HEALTH** The Association of State and Provincial Health Authorities of North America appointed during the year a committee on Indian health. Through this committee, information regarding Indian health matters was disseminated to State, county, and municipal health authorities, and the diagnostic, laboratory, and medical facilities of these organizations were made known and available to health agencies of the Indian Service. Trachoma, tuberculosis, and diseases of infancy and childhood, however, continued to constitute the outstanding health problems among the Indians. Increased facilities had been provided for the care of tuberculosis and for incipient cases in Indian children, but material progress in the eradication of this disease would not be brought about until a well-organized field nursing service had been instituted, together with an educational programme which would reach the Indian home. The extension of the programme would have its effect also in the reduction of mortality among infants and children. During the year, new hospitals or sanatoria were established or constructed in Tacoma and Toppenish, Wash., within the Western Navajo jurisdiction, Chin Lee, Havasupai Canyon, and Kaibito, Ariz.; Keshena, Wis., and Taos and Tolatchi, N. Mex. Attention also was given to the collection of more accurate data relating to health and disease among Indians, and the statistical section of the Indian Office cooperated to the end that better health records and more complete reports of births, deaths, and population might be available.

**EDUCATION** In 1929 there were enrolled in the Federal Indian boarding schools and day schools 26,111 pupils, while 34,288 attended the State public schools and 7188 more attended the various mission or private schools.

One of the most important phases of the eventual solution of the Indian problem, however, was the further elimination from the Federal schools of those who might to advantage attend the State public schools and thus make room for more than 15,000 Indian children who were without educational opportunities. The States and the local public-school districts appeared generally to be in sympathy with the plan of education by the States, conditioned upon such financial assistance as they needed and as the Federal Government could offer. The average tuition rate for Indians enrolled in State public schools has been 35 cents per pupil per day. There also was repealed in 1929 legislation limiting the support of Indian boarding schools to certain fixed amounts. For many years the amount so prescribed was \$167 per pupil but was later raised somewhat, the highest allowance being \$285 for schools having an attendance of less than 200 students.

**INDUSTRY** Generally throughout the United States, the Indians continued to make encouraging progress along industrial lines, especially in farming and livestock activities. Cooperation in this work was given by the extension service of the U. S. Department of Agriculture and by many State colleges which placed their facilities at the disposal of the Indian Service. There were appointed during the year six directors of agriculture and three home demonstration agents, and this personnel should do much in the furtherance of agricultural pursuits. The largest and most

important single project initiated in 1929 was the subjugation of 50,000 acres of allotted lands within the Pima Reservation in Arizona, which would eventually be irrigated from the Coolidge Reservoir. This work would require several years for completion, after which it was believed the opportunity would be afforded the Pima Indians of agricultural rehabilitation.

**ALLOTMENTS** During the fiscal year, 253 allotments were made to individual Indians, embracing lands within various reservations aggregating 24,211 acres. In addition, 57 allotments were made to Indians residing on the public domain in various States, embracing 8371 acres. The period of trust was extended by order of the President on allotments made to the following tribes and bands: Prairie Band of Pottawatomie, Kansas; Iowa Tribe, Kansas and Nebraska; Winnebago, Nebraska; Pawnee, Oklahoma; Siletz, Oregon; Lower Brule and Rosebud, South Dakota; The purchase of 3071 acres of land in Polk County, Tex., for the Alabama and Coushatta Indians was consummated at a cost of \$29,000, and on the Crow Reservation, Montana, 160 acres of land on the site of the Reno battlefield were purchased at a cost of \$800 and set aside for the construction of a monument.

**BOARD OF INDIAN COMMISSIONERS** The Board of Indian Commissioners is an independent organization, dissociated from the Indian Service and acting in an advisory capacity to the President, Congress, the Department of the Interior, and the Bureau of Indian Affairs. In April, 1929, it observed its sixtieth year of active cooperation with these groups. During 1929 it officially visited and inspected 23 Indian Service agencies and nonreservation schools in California, Florida, Virginia, Minnesota, Montana, Nevada, New York, New York, North Dakota, Oregon, South Dakota, Washington and Wisconsin, offering as a result the following suggestions and recommendations:

Each reservation should have its particular program determined by qualified specialists sent there for that particular purpose and, where there are none, competent agricultural instructors should be detailed to reservations to lead the Indians toward a better appreciation of subsistence farming.

Any reservation economic program will fall short of its full purpose if it does not include provisions for ways and means to secure gainful labor for the Indians, especially at times when crop failure, or other causes, make it necessary for the Indians to leave their homes to find work. The Indian Service never has had a well planned organization to get jobs for Indians.

An Indian school which should move and more to stress the academic at the expense of the practical, to lay emphasis on the completion of high-school courses and the attainment of college entrance credits, is losing sight of its real reason for existence, which is to prepare the Indian boys and girls eventually to take their places as self-reliant members of an American community. Indian Service schools should strive not so much for uniformity and standardization as for adaption to actual and varying needs; they should apply methods suited to the special problem of the Indian. Above all, they should emphasize vocational training and the teaching of applicable and useful trades.

The Indian Service should draft a bill which would provide and adequately provide for the enforcement of law and order on reservations, have the bill introduced at the coming session of Congress, and then do all things that are proper to get the bill enacted into law.

The great American public is lamentably ignorant about the American Indians. The Interior Department or the Bureau of Indian Affairs would be doing only a plain duty by disseminating sane and reliable information about the American tribes and their people, about their peculiar relations to the Nation, and about the various phases of the perplexing and complicated Indian problem.

It is to be hoped that the devoted labors of reservation missionaries may yet be appreciated by church members

and that the churches will encourage their home mission boards to continue and enlarge their mission activities in the American Indian country.

**INDO-CHINA.** also known as **FARTHER INDIA.** The southeastern peninsula of Asia including the following divisions: Burma, politically attached to British India, Siam, a self-governing monarchy; French Indo-China, comprising Cambodia, Annam, Cochinchina, Laos, and Tongking, the Federated Malay States, a British protectorate; the Straits Settlements, a British colony, and the Malay States of Johore, Kedah, Kelantan, Perlis, and Trengganu. See the articles on **BURMA**, **FRENCH INDO-CHINA**, **SIAM**, and the other principal states mentioned.

**INFANTILE PARALYSIS.** Dr. A T Legg's analysis of the Massachusetts epidemic of 1927 appeared in the *Journal of the American Association* for January 5. The total number of cases was 1189, about half of which were treated at the Harvard Infantile Paralysis Clinic. The peak of the incidence was in the early autumn and the mortality 14.2 per cent. The chief foci of the disease as shown by a map were Boston and Haverhill, and in one small town in the latter region there were 26 victims. In about 4 per cent, there was more than one case in the family, and one family in Haverhill had four cases with two deaths. It was found that sensitiveness in the limbs, especially the legs, was present as an early symptom in about 80 per cent of all patients examined. The principal object of this analysis was to fix the total severity of the epidemic as shown by the muscles involved, the order of involvement, and the degree of paralysis. This brings out the great differences which subsist between individual epidemics in this respect. Numerous curious facts were brought out, such as the contrast between the frequency of incidence and the severity of paralysis of individual muscles; thus, the quadriceps muscles were involved with great frequency, but the paralysis was mild in degree. Each epidemic is more or less a law to itself.

**INCIDENCE OF INFANTILE PARALYSIS AT LOWEST LEVEL.** The fear that a new wave of infantile paralysis is due or due in the near future seems to have been dispelled by an announcement made by the U. S. Public Health Service. From Dec. 1, 1929, to June 1, 1930, the incidence should not exceed one case in 100,000 population. From June 1, 1930, to the following December, it is apt to increase to from 4 to 14 cases with the peak at the middle of September. The Public Health Service is accustomed to trace the incidence from the first of each June for a marked and steady increase may mean an epidemic similar to that of 1916. It therefore appears that parents should not fear the disease between December of this year and warm weather and only then when there is a marked increase of five or ten fold over the figure of June 1 during that month and afterward.

**INLAND WATERWAYS.** See **CANALS.**

**INSANITY.** Drs. Hoskins and Sleeper of the Worcester State Hospital have studied 80 patients with dementia præcox and have found defective action of the glands of internal secretion in about half. In 14 patients, the thyroid was chiefly involved, in 13 the pituitary, etc. Secretions were given to 53 of the 80 patients. Of the total number to show actual deficiency, one-half, or about 20, showed significant improvement as a result of the gland treatment. Five patients became well enough to be discharged and four others were so nearly well that they were expected to follow. The secretion which appears to be the most valuable is the thyroid, which suggests that each secretion be separately tested. This form of insanity alone costs the State of Massachusetts annually about \$4,000,000 and it is said that one hospital bed out of every six in the entire country is occupied by a dementia præcox patient. It is a living death for it begins usually in the young, lasts many years and is practically incurable. It sometimes undergoes remissions and this fact must be borne in mind when cures are claimed.

**INSULIN.** The use of insulin by the mouth is considered exhaustively by R. Stephan in the *Munchener medizinische Wochenschrift* for September 28. In theory, insulin should act in its physiological manner when swallowed, its subcutaneous injection in theory being unphysiological. Naturally, much might depend on the combination in which the insulin is swallowed. As a result of much experimentation, the author learned that a combination of insulin with biliary acids is not destroyed in the empty stomach and is readily absorbed. The author had not enough diabetic patients in his service for an extensive tryout, but in two cases the results were as follows. In the first, in a man of 61 with diabetes of one year's duration and a blood pressure of 230, with an elimination of about 40 gms. of sugar daily, insulin by the mouth for a period of six days caused the disappearance of all the sugar from the urine. In the second case, in a man of 64 with daily excretion of about 32 gms. of sugar, the same kind of result was obtained. The total number of patients thus far treated is 12, all with the same favorable result. In the same journal, Dr. M. Ottow relates two cases of the peroral administration of insulin in diabetic children. Sugar and acetone bodies disappeared from the urine. In all of the patients, the tolerance to sugar in the diet was augmented. See **DIABETES**

**INSURANCE.** The business of insurance had a most unusual year in 1929. To life insurance, it was a year of triumph, when much was accomplished and still greater things started, but in fire and casualty insurance it was one of annoying and perplexing problems, hot competition and some disappointments, which, however, seemed rather to strengthen than to demoralize. There developed among leading companies in both the fire and casualty-surety fields coöperation which

had been lacking and a strengthening of company organizations under more direct control of chief executives.

The public's desire to buy stocks of insurance companies was less marked in 1929 than in the year before. Approximately \$160,000,000 of new capital and surplus was paid into insurance companies, as compared with \$225,000,000 in 1928. About two-thirds of this amount went into fire and marine companies and most of the remainder into casualty-surety companies, as the amount of financing done by life companies was relatively small. The number of companies organized was smaller than in 1928. About 50 companies reduced the par value of their shares to make them more available to small investors. Comparatively few prominent companies' shares are now of a higher par value than \$25, most of them are \$10 and some are \$5.

Life insurance had the greatest year in its history. In July the volume of one hundred billion dollars of legal reserve life insurance in force was reached, and the fact was very widely commented upon. The best estimates place the amount of new insurance written and paid for during the year at \$19,800,000,000, an increase of \$1,100,000,000 over that of 1928. The amount of life insurance in force in legal reserve companies in the United States at the end of the year was nearly \$104,000,000,000, on the lives of 67,000,000 persons. The assets of the companies on Dec. 31, 1929, were estimated to be \$17,000,000,000, an increase of nearly \$1,640,000,000 during 1929. During the year the companies paid approximately \$850,000,000 to beneficiaries of deceased policyholders and \$1,150,000,000 to living policyholders as dividends, cash surrender values, disability benefits, and other payments. The mortality experience of the companies was favorable although possibly not quite so favorable as in 1928 because of the influenza epidemic early in 1929.

Group life insurance written amounted to approximately \$1,900,000,000, somewhat less than the extremely large production of 1928. The field of group insurance was broadened, as the law of New York State now permits it to be written on groups consisting of borrowers from banks and purchasers of various commodities on installments for the protection of creditors. Group annuity and pension systems are also being developed.

The collapse in the value of securities in October did not seriously affect the assets of life insurance companies, as their investments are largely in real-estate mortgages, bonds of the highest class, preferred and guaranteed stocks and loans upon their own policies. The stock-market crash, however, did create the greatest and most urgent demand for policy loans ever experienced in the history of the business. Loans were made just as rapidly as the companies' employees could handle them and in some instances were made at branch offices and agencies on telegraphic orders from home offices. While policy loans are always regretted by companies as they often lead to lapse of the policies and seldom are repaid until the policies become claims, nevertheless the way in which this emergency was met impressed upon the public the value of life insurance.

It was a question whether the losses sustained by the public would interfere with the sale of life insurance in November and December. Apparently it did not, so far as ordinary insurance was con-

cerned, as sales in each month exceeded those of the corresponding month in 1928. It is believed that many whose estates were depleted by shrinkage in stock values sought to restore them immediately by purchase of life insurance.

The work of educating life-insurance salesmen made gratifying progress during the year. The American College of Life Underwriters, chartered by act of Congress and empowered to grant the degree of Chartered Life Underwriter, has a standardized course of study necessary to prepare for the examinations which it conducts, and many colleges, Y M C A schools, and other institutions are now giving this work.

In fire insurance a fair underwriting profit was made by most companies and an excellent one by some. The premium income did not vary greatly from that of the two previous years. Losses and expenses were a little higher than in 1928. From the standpoint of profits from investments the year was extraordinary. Companies which were active in the stock market and those which held large amounts of common stocks purchased when prices were lower made large profits until the break occurred in October. Companies whose investments were chiefly in bonds possibly suffered a little depreciation. After the crash experiences differed. Some suffered depreciation on stocks. Some had taken their profits earlier and bought heavily when the prices broke, realizing an appreciation by the close of the year. A few companies whose December 31st statements have appeared reported losses from depreciation almost negligible. Others reported 1 or 2 per cent of the value of their securities and some made a much less favorable showing. On the whole, however, the investments of fire insurance companies appear to have been very sound.

The development of groups of companies under one management continued. A marked development was the acquisition of control of casualty-surety companies by fire companies, making it possible for more groups to write all classes of insurance except life. Acquisition of insurance companies by holding companies continued.

New fire insurance companies which were entering the various States and making inroads upon the business of the old companies created some confusion in the field, which was increased by the controversies among the old companies themselves. To meet the competition both of new stock companies and of mutuals, the old companies reduced rates on profitable classes in important sections of the country and also required their agents to represent only companies affiliated with organizations, on pain of losing their affiliated companies, which include the largest ones and are needed by agents to handle their large lines.

One effect of this stress was the bringing into one organization in the West of the companies which are affiliated with the organization in the East and on the Pacific coast. For nearly twenty years some of these companies had been connected with an organization in the West which was frequently at war with the larger one to which most of the affiliated companies owed allegiance. The new alignment improves the prospects of orderly conduct of the business in the field.

An important step was taken in May when the National Board of Fire Underwriters, whose membership comprises nearly all the important stock fire insurance companies, decided to take charge of the adjustment of fire losses in which several companies are involved. Heretofore losses

had been adjusted by various individuals and bureaus representing the companies which employed them, and settlements had been made at times with a view to influencing business to the companies which paid losses on the most liberal basis. While the National Board's plan had not been put into operation by the end of 1929, it contemplated one adjustment bureau representing all stock companies, employing only qualified adjusters, maintaining its own staff of attorneys, cooperating with the arson investigators of the National Board and eliminating the competitive element in the settlement of losses.

There was considerable litigation resulting from the attempts of States to force reductions in fire insurance rates or their refusal to permit increases and from interference by States with the commissions paid by companies to their agents. Decisions were adverse to the companies in several instances, but two of the most important of these cases were before the Supreme Court of the United States on appeal when the year closed.

The continual increase in commissions paid by fire insurance companies to their agents has been taken up by the National Convention of Insurance Commissioners, and a committee of that body is now studying the whole subject of acquisition cost of fire insurance, believing that this expense may have reached a point where it is throwing an unjust burden upon the premium-paying public.

The growth of casualty insurance was less rapid in 1929 than in previous years. In some classes the volume of premiums was little higher, or even less, than in 1928. The experience on the two major classes, workmen's compensation and automobile liability, was not satisfactory although the latter probably produced some profit. On some of the minor lines a fair profit was made. The surety business continued to grow, but several leading companies have reported abnormally high losses, especially toward the close of the year. Recently organized companies were numerous and aggressive and they made inroads on the business of the established institutions. Payment of excessive commissions in some instances, writing at reduced rates and giving broader coverage for the same premium, together with the rapid growth of reserves which always attends a large increase in business, had a serious effect upon the surplus of some of the younger companies and, as the end of the year approached, a few of them reduced capital in order to increase surplus and several sold out to parties who could refinance them or reinsure their business and liquidate them, or possibly effect their merger into other companies.

The Association of Casualty and Surety Executives absorbed several organizations which were performing special functions—sometimes overlapping—and coordinated their activities. The National Bureau of Casualty and Surety Underwriters, the organization of leading companies which makes rates, policy forms, and rules for the conduct of several classes of casualty insurance, was reorganized and greatly strengthened. This organization also does valuable work in the field of accident prevention and safety education.

Workmen's compensation insurance made little or no profit for the companies on their underwriting. They were supposed to derive their profits in this class from investment of the reserves, but some years they make a small profit on underwriting also. The workmen's compensation laws,

however, were continually being amended to be of greater benefit to injured workmen and the increases in rates for insurance to take care of these additional benefits often lagged behind the expenditures they caused.

Automobile liability insurance, which produces a very large premium income for casualty companies, had an unusual year. The common method of doing business was first disturbed by introduction of installment plans of paying premiums, designed to induce more persons to carry insurance. This system did not become very popular. Then, merit rating of private pleasure cars was introduced with the idea of making drivers more careful and also of inducing the uninsured to insure. Under this plan owners who had not reported an accident for two years previously were granted 10 per cent reduction in rates upon renewal of their policies. As an extra premium could not be collected from owners with bad accident records, a material reduction in the average rate resulted.

Another factor tending to reduce profits was the writing of fleets of automobiles at inadequate rates brought about by the competition for the large premiums involved. The trouble was increased by permitting employers to include in their fleets the private cars of their employees, also at inadequate rates. The casualty companies recently have formed an organization to which the experience of companies on fleets is to be reported, so that reasonable rates on them can be made. Unfortunately for the stock companies much of the best automobile liability business was going to the mutuals and reciprocals.

The experience of Massachusetts with its compulsory automobile liability insurance law had not been such that any other State was inclined to enact such a law in 1929. Several important States did enact "financial responsibility" laws, similar to those of Connecticut and New Hampshire, which have been found satisfactory. Under these laws an automobile owner is not compelled to carry insurance but to do so is the easiest way for him to make sure that he will not lose his license because of injuring somebody and being unable to satisfy a judgment for damages.

The volume of burglary insurance increased very little, but a fair underwriting profit was made. Rates on open stock insurance for merchants were revised and some of them were materially reduced. The residence burglary policy was liberalized and made broader in its coverage. Bank burglary and robbery insurance is now unprofitable to the companies because of the large increase in losses from bank hold-ups. The burglary insurance companies last year began issuing "kidnaping coverage" as an addition to office- and store-robbery insurance. It identifies the owner where a custodian is captured by robbers outside of the premises and forced to return and admit them or to give information which will enable them to gain an entrance.

The previous unsatisfactory conditions in plate-glass insurance were somewhat improved. As there is little exposure to extremely heavy losses and usually a profit is made, the number of companies writing this class has increased to about a hundred, and those companies formerly controlling the major part of the business, seeing their volume decrease year by year, had been unable to agree upon methods to meet the conditions. Early in 1929, however, most of these companies came together. They appointed a committee to

study the whole subject and other committees to deal with several large cities having peculiar problems of their own. Rates were reduced a third on large-sized plates and in December some reductions were made on other classes of glass. At the close of the year the business was in a healthier condition, but the premium income was believed to have been reduced approximately 15 per cent from that of 1928.

The volume of steam boiler and machinery insurance did not materially change. Losses were a little higher than in 1928 but not enough to prevent the making of a profit. The companies last year adopted a standard policy, broader in coverage and more readily understood. Rates are now undergoing revision and some changes are to be looked for in 1930.

The fidelity and surety business with a premium income of over \$100,000,000 in 1928, continued to grow, although some of the leading companies made little or no gain in premium income because of the activities of new companies. The underwriting experience was unusual and, while companies probably made a profit, it was not as large as usual. Except for losses on depository bonds resulting from bank failures, especially in Florida and Nebraska, the year was not unusual until the stock market crashed. Then the companies were called upon to pay heavy losses under bankers' and brokers' blanket bonds and fidelity bonds, due to defalcations of employees who had been speculating. The companies were so certain that other losses would be disclosed by audits early in 1930 that many of them set up additional reserves for losses incurred but not reported prior to December 31. Fortunately, the surety companies are very strong financially, even though their conservative investments suffered some depreciation. A considerable increase in business is expected in 1930, as employers nearly always take more insurance after periods of heavy embezzlement losses. It is expected that a vast amount of construction work will be undertaken this year, and this will call for a large volume of contract bonds.

**INTELLIGENCE TESTING.** See **PSYCHOLOGY**.

### **INTERNAL COMBUSTION ENGINES**

This classification includes gasoline engines of the automobile, aviation, marine, stationary, and semiportable types, gas engines, employing natural, manufactured, and blast furnace gas, and oil engines of the Diesel and semi-Diesel type. While many refinements in the design of gasoline engines were made during 1929, there was little that was radically new.

The gas engine held which had been more or less dominant for a few years, save an occasional large unit for steel mills, in 1929 showed considerable activity in that about 40 1000-hp engines of the double-acting tandem type were installed during the year. With the opening of extensive natural-gas fields in the Southwest and the construction of long pipe lines to many cities in the Middle West, a revival of the gas engine seemed probable.

Although the production of Diesel engines during 1929 was slightly under that of 1928, this fact can hardly be taken as an indication of falling off in the popularity of this type. Instead, it was due to conditions in certain fields that held promise for the Diesel. On the other hand, the Diesel

found application in fields that heretofore employed few, if any, engines of this type. For instance, a considerable number of engines of around 300 horse power each were built for switching locomotives. Such engines, while not adaptable to locomotives on main-line service in the United States (a few had been so employed in Europe), were widely used in Diesel-electric sets for railway cars on branch lines.

During the year a Diesel engine was installed in New York City's largest and newest hotel, The New Yorker, to supplement its steam plant and two such engines were ordered for the largest department store in that city. A considerable number of Diesel engines were being employed to furnish the power to contractor's equipment in connection with the flood-control work on the Mississippi River, and for semi-mobile contracting equipment in general the Diesel was finding favor.

In the field of aviation the Packard Motor Company attracted wide attention by its demonstration of a radial single-valve, solid-injection Diesel. See **AERONAUTICS**.

For marine service the Diesel continued to be popular among ships built in European yards but, with the exception of tugs, ferry boats, and a few tankers, it has made little headway among American built ships of the ocean-going class. This has been in spite of the financial support offered a few years back by the U. S. Shipping Board and has been due largely to the competition of foreign yards that could build such engines at greatly reduced cost.

Many Diesels have been installed in waterworks pumping stations, mines and quarries, and in some flour mills. They have also been installed in small and medium-sized municipal lighting plants and to a limited extent in private central power stations, principally in the West and Southwest. One American holding company placed a number in Central American power stations under its ownership. As applied to industrial power plants, the Diesel is often handicapped in competition with steam turbines and steam engines where there is a demand for steam for process or heating.

In sizes below 300 horse power, the mechanical oil-injection type of Diesel predominates and has been gaining favor in sizes up to 1000 horse power. Above this, the air-injection type is used almost exclusively.

During the year a start was made toward the standardization of Diesel fuel oil specifications through the formation of a committee representing engine manufacturers, users, and the American Society of Mechanical Engineers. Research work and tests were being conducted to this end. See **ELECTRIC RAILWAYS**.

**INTERNATIONAL ARBITRATION.** See **ARBITRATION**, **INTERNATIONAL**.

**INTERNATIONAL ASSOCIATION FOR SOCIAL PROGRESS.** See **SOCIAL PROGRESS**, **INTERNATIONAL ASSOCIATION FOR**.

**INTERNATIONAL BANK.** See **REPARATIONS**.

**INTERNATIONAL INSTITUTE OF AGRICULTURE.** See **AGRICULTURE**.

**INTERNATIONALISM.** Although no outstanding world gatherings like the Universal Christian Conference on Life and Work, or the World Conference on Faith and Order were held during 1929, five important international gatherings of an interim character were held. In various

ways, they revealed clear tendencies in the direction of a new sense of world friendship on the part of the Protestant churches. The coöperation of the Eastern Orthodox churches with Protestantism in these gatherings was a distinctive feature.

The Continuation Committee of the Life and Work Movement met for a week at Eisenach, Germany (September 2-9). Dr S. Parkes Cadman was the Chairman of this Committee, which was carrying forward the programme begun by the Universal Christian Conference on Life and Work, held at Stockholm in 1925. The Federal Council of the Churches of Christ in America had become the body through which American coöperation in this international programme was secured. Other sections were organized in Great Britain, on the Continent of Europe, in the Eastern Catholic churches, and a fifth section in the churches of other lands. Through the Continuation Committee on Life and Work, a programme of social service in matters of an international scope, parallel in many respects to the programme of the Federal Council in our own country, was being developed.

A conference of representatives of the churches of various lands interested in the research work of the churches was held during the summer, in Geneva, under the auspices of the Life and Work Movement. The American churches were represented by Dr. Worth M. Tippy and Dr. F. Ernest Johnson, of the Federal Council. Another such meeting was that of the Central Bureau for the Relief of the European Churches, held in Basle, Switzerland, August 23-24. This body came into being in 1922 as a result of the initiative taken by the American Federal Council and the Swiss Protestant Federation, in securing assistance for the churches which had been severely weakened by the economic aftermath of the World War. Through the coöperation of the Federal Council over \$625,000 had been raised since that time in America for the relief, and considerable amounts had also been provided by the churches of Switzerland, Sweden, and other countries in a position to help. The conference in 1929, marking the seventh anniversary of the gathering at Bethesda House, Copenhagen, which launched the Central Bureau for Relief, resurveyed the situation, determining how far the rehabilitation of the church life of Europe had progressed and what still remains to be done.

During the last week of August, the Continuation Committee of the World Conference on Faith and Order gathered at Engadine, Switzerland. This body is interested in the question of the organic union of Christendom rather than in present coöperative possibilities. From August 19 to 23, at Frankfurt, Germany, there was held a meeting of the committee which was preparing for the Congress of Religions on World Peace. On September 21, the Committee of the World Alliance for International Friendship through the Churches met at Montpellier, France, bringing together representatives of the various national councils which make up the World Alliance. The chief topic on the agenda was disarmament.

The Committee on World Friendship Among Young People, instituted by the Federal Council of Churches' Commission on International Justice and Good Will, announced its first project under the Zelah Van Loan World Friendship Award—a prize essay contest for the Americas, the theme being "Christ and World Friendship." The young

people of North, Central, and South America, and the Caribbean region were invited to participate in this competition. There were to be two sets of prizes, one for the best essays from the United States and Canada, the other for the best essays from the Latin American countries. The first prize in each area was to be \$300, the second \$100, and the third \$50. There were to be thirty prizes of \$10 each. There were to be two sets of judges—one to pass upon the essays from the United States and Canada, and another to pass upon the essays from Mexico, Central America, South America, and the Caribbean region. The judges for North America were to be named by the Committee on World Friendship Among Young People, upon nomination by various young people's organizations and mission boards. The judges for Mexico, Central America, South America, and the Caribbean region were to be named by the Committee on Coöperation in Latin America.

In March, 158 Australian boys, members of the Young Boys, of the Young Australian League, arrived in New York for a three months tour of the United States and Canada. They were preparatory school boys, and, while in Washington, marched in the inaugural parade.

The fifth session of the Institute of International Relations was held at Mission Inn, Riverside, Calif., December 8 to 13. Since 1921 an Institute of Politics (see POLITICS, INSTITUTE OF) has been held at Williamstown, Mass., under the auspices of Williams College, but few representatives from the Western States were able to attend. The Institute at Riverside was organized by the University of Southern California for the promotion of the serious study of the problems involved in international relations. It was believed by those in charge that an understanding of such problems would lead to universal good will and world peace. The committee having the sessions of the Institute in charge was headed by Dr. Rufus B. von Klenzsmid, the president of the University.

In 1926 and 1927, 13,000 Doll Messengers of Friendship went to Japan, sent by the children and young people of the United States, and in response, late in 1928, came 58 Doll Ambassadors of Good Will to the United States, to which welcomes were given in more than a thousand receptions in all parts of our land. An illustrated volume was published in 1929 giving the first full account of that remarkable adventure in the field of dolls, as well as in international relations, unique in the annals of human history. In the closing chapter is a statement of the principles and objectives underlying these projects of the Committee on World Friendship Among Children.

In 1928 Mexico was selected as the country for this international exchange and in 1929 the country chosen for the third project was the Philippine Islands and the symbol chosen to bear the good-will greetings from the children of the United States to the Filipino children was the Friendship Treasure Chest. The project was to be consummated in the Philippines on Dec. 30, 1930, a national holiday commemorating the death of Dr. José Rizal, the great Filipino patriot. The Department of Education was to receive the Friendship Treasure Chests and distribute them and their contents to the children of the Philippines.

As in other years the children of the United States will be asked to send to the children of the Philippines a personal letter of friendly greeting.

with a good-will message, together with such articles as crayons, drawing sets, games, scrap-books, harmonicas, sewing kits, paper dolls, puzzles, handkerchiefs, and beads. In addition, it was hoped that every Friendship Treasure Chest would contain at least one book. Even though the Filipino children learn English in their schools there were very few public libraries. There was, therefore, a great need of good books. A bibliography of 400 books suitable for children from six to fifteen years of age had been prepared under the supervision of Miss Clara Whitehall Hunt of Brooklyn, a librarian widely known as an authority on children's books.

Announcement was made in London of the award of Commonwealth Fund Fellowships to 30 honor students of British and Colonial universities. These fellowships were established in 1925 by the Commonwealth Fund of New York, of which Edward S. Harkness was president, in the thought that additional facilities for British university graduates to study and travel in the United States would foster the development of understanding and good will between this country and Great Britain. In 1929 the number of Fellowship awards had been increased from twenty-three to thirty, including three for men in the British Colonial Service. This was the fifth annual award. Including the appointees referred to, 115 British students had received these fellowships. They had been graduated from the British universities of Aberdeen, Belfast, Bristol, Birmingham, Cambridge, Cork, Durham, Edinburgh, Glasgow, Leeds, Liverpool, London, Manchester, Oxford, Reading, St. Andrews, and Wales, and the Colonial universities of Adelaide, British Columbia, New Zealand, Queensland, and Tasmania. Their fields of study had been widely diversified, including such subjects as astronomy, architecture, archaeology, chemistry, classics, engineering, education, history, literature, physics, and medicine. The universities to which they were coming are California, California Institute of Technology, Chicago, Columbia, Cornell, Harvard, The Johns Hopkins, Massachusetts Institute of Technology, Michigan, Princeton, Stanford, Wisconsin and Yale.

These fellowships were awarded, not as a result of examination, but on the candidate's university and general record, and after a personal interview with the committee of award. The chairman of the committee was Sir Walter Buchanan-Riddell, Principal, Hertford College, Oxford. The other members are Sir James Colquhoun Irvine, Principal, University of St. Andrews, Sir Theodore Morrison, Principal, Armstrong College, Newcastle-on-Tyne, Lord Chelmsford, Viceroy of India from 1918 to 1921 and First Lord of the Admiralty, 1924, in Ramsay MacDonald's cabinet, Sir Edwin Cooper Perry, London School of Hygiene and Tropical Medicine, and Professor John Henry Clapham, King's College, Cambridge. Of this committee, Sir Walter Riddell and Sir James Irvine had traveled in the United States at the invitation of the Commonwealth Fund and had visited several American universities. It was expected that other members of the committee would visit the United States later. The Honorary Chairman of the Committee was H. R. H. The Prince of Wales.

The Norman Wait Harris Foundation for the Study of International Relations held its Sixth Institute June 17 to 28 at which there were present lecturers from Tokyo, Rome, Berlin, and

the United States. The lectures, which dealt largely with matters of population and sustenance, were published in book form by the University of Chicago. In addition, there was a series of round tables organized to discuss certain phases of the general problems of population and migration.

The convention for the amelioration of the condition of the wounded of armies in the field in time of war, a revision of the Red Cross Convention of 1906, was signed at Geneva, July 27, 1929, on behalf of the United States of America, Austria, Belgium, Brazil, Bulgaria, Chile, China, Cuba, Czechoslovakia, Denmark, Dominican Republic, Egypt, Estonia, Finland, France, Germany, Greece, Hungary, Italy, Latvia, Mexico, Nicaragua, Norway, the Netherlands, Poland, Portugal, Rumania, Kingdom of the Serbs, Croats, and Slovenes, Siam, Spain, Switzerland, Turkey, and Uruguay. The convention relating to the treatment of prisoners of war was signed at Geneva, July 27, 1929, on behalf of the United States of America, Austria, Belgium, Brazil, Bulgaria, Chile, China, Cuba, Czechoslovakia, Denmark, Dominican Republic, Egypt, Estonia, Finland, France, Germany, Greece, Hungary, Italy, Latvia, Mexico, Nicaragua, Norway, the Netherlands, Poland, Portugal, Rumania, Kingdom of the Serbs, Croats, and Slovenes, Switzerland, Turkey, and Uruguay.

**INTERNATIONAL LAW.** The second session of the preparatory committee for the Conference on the Codification of International Law was held from January 28 to February 17, with M. Basdevant, Professor of Law at Paris University, in the chair. The committee considered replies from governments to the questionnaire sent out in February, 1928, after its first session, dealing with the three items figuring on the Conference agenda, namely, nationality, territorial waters, and the responsibility of states for damage caused on their territory to the person or property of foreigners. Replies were received from twenty-nine governments, some of which, however, did not deal with all three of the questions on the agenda. As a result of this examination, the committee laid down certain principles, accompanied by observations, as a basis of discussion for the Conference. These principles did not represent the personal opinion of the members of the committee, but were merely a statement of the provisions upon which agreement appears to exist among governments. They were of a provisional character, the committee reserving its right to amend them if necessary.

The regular session of the International Institute of Public Law was held at Paris, June 22-24, 1929. The subjects discussed by scholars from various European countries included the state of representative government, new tendencies in connection with declaration of rights, the popular initiative and referendum, and the rules of constitutional law in connection with the making and ratification of international treaties.

**CONVENTION AND CODE OF INTERNATIONAL LAW.** On August 3, the Brazilian Ambassador at Washington deposited with the Pan American Union the ratification of Brazil of the Convention and Code of International and Private Law signed at the Sixth International Conference of American

States at Havana, Feb. 20, 1928. On August 10, the *Chargé d'Affaires* of Peru likewise deposited the ratification of his government. The *Chargé d'Affaires* of Haiti notified the Pan American Union of Haiti's ratification on July 20. Moreover, the Dominican Republic, Nicaragua, and Panama were reported to have completed their ratification of the Convention and Code of International and Private Law and the Congress of Costa Rica and Cuba were reported to have approved ratification. The delegation of the United States to the Sixth International Conference of American States did not sign these instruments.

CONFERENCE FOR THE CODIFICATION OF INTERNATIONAL LAW. By note of July 15, the Acting Secretary General of the League of Nations informed the Department of State at Washington that the date of the Conference for the Codification of International Law had been provisionally fixed for Mar. 13, 1930. The governments of the following states, in addition to the members of the League, were invited by the Council of the League to attend the conference: Brazil, Costa Rica, Free City of Danzig, Ecuador, Egypt, Iceland, Mexico, Monaco, San Marino, Turkey, Union of Soviet Socialist Republic, United States of America.

The following subjects were on the agenda of the Conference: 1. Nationality, 2. Territorial Waters, 3. Responsibility of states for damage done in their territory to the person or property of foreigners.

A committee of five jurists appointed by the Council of the League of Nations made a study of the above questions and, after consulting the governments of the states invited to participate in the conference, drew up a report which was to serve as a basis for the discussion at the March conference. The documentation prepared by the committee of jurists for the use of the conference was forwarded to the Government of the United States by the Secretariat of the League of Nations.

The Bureau of Research in International Law, of which Prof. Manley O. Hudson of the Harvard Law School was director, published a report, "Codification" as a supplement to the *American Journal of International Law* for April, 1929.

A palace for the American Institute of International Law was to be erected in Havana. The cornerstone was laid on May 19. It was proposed that the palace should provide quarters not only for the American Institute but for organizations affiliated with it. It would house an Inter-American Library and American Academy of International Law at The Hague. There would be a place for the Cuban Society of International Law and for the Latin Centre of the Carnegie Endowment for International Peace.

INSTITUTE OF INTERNATIONAL LAW. The thirty-seventh annual meeting of the Institute of International Law was held at Briarcliff Manor (New York) October 18, Elihu Root presiding. This was the first time that the Institute had held a meeting in America. Founded in Ghent in 1873, it had met 36 times on European soil. It is composed of 60 members and 60 associates, the majority of them Europeans. All are regarded as authorities on International Law. The address of welcome was delivered by Dr. Nicholas Murray Butler, President of the Carnegie Endowment for International Peace, under whose auspices the Institute met.

\* Decree of approval voted by President.

One of the first items of business was the adoption of three declarations of the rights of individuals in all countries. According to these pronouncements it is the duty of every State to recognize for every individual, . . . of his nationality, the equal right to . . . and property, and to the exercise of the religious faith and the language of his choice. These declarations are intended to be a part of a comprehensive interpretation of International Law. While the statements will be put forth in the private capacity of the Institute, it is hoped that in time they will receive official cognizance. This is the first time in the history of the Institute, possibly of any similar organization, that an effort was made to formulate the general rights of man. Much of the formulated doctrine is already a part of the United States Constitution and all of it was generally accepted by the Institute as proper. The resolutions were approved by a Committee composed entirely of European lawyers under the chairmanship of Andre N. Mandelstam, formerly head of the legal department of the Foreign Affairs Ministry of Russia and now a resident of France. The formal declaration follows:

It is the duty of every State to recognize for every individual the equal right to life, liberty and property and to accord to every one on its territory the full and complete protection of the law without distinction as to nationality, sex, race, language, or religion.

It is the duty of every State to recognize for every individual the right to the free exercise both public and private of every faith, religion or belief of which the practice is not incompatible with public policy and good morals.

It is the duty of every State to recognize the right of every individual to the free use of the language of his choice and for instruction in this language.

Inserted in the minutes of the Institute was an interpretation tempering the third declaration so as to eliminate international interference with whatever curriculum a State may prescribe in its public schools. The declaration is to be construed only as denying to a State the authority to prevent private instruction in any language.

At a later session of the Institute the following declarations were adopted:

No motive whatsoever based directly or indirectly on differences of sex, race, language or religion can authorize a State to refuse to any of its nationals private and public rights and especially the admission to institutions of . . . protection and the exercise of different economic . . . professions and industries.

The equality already provided is not to be nominal but really effective and excludes all discrimination, direct or indirect.

No State has the right to withdraw, except for reasons taken from its general legislation, its nationality from those who for reasons of sex, race, language or religion it might wish to deprive of the rights guaranteed by the preceding articles.

An official comment on the Institute declared that it is notable that the Institute stresses the fact previously not covered even in individual State constitutions that these fundamental rights are guaranteed without distinction of sex, which is a great triumph for the cause of the equal rights of women.

Resolutions also were adopted dealing with corporations and International Law. This subject was of special importance because of the increase of world trade with corporations formed in one country doing business in another. After the formal sessions at Briarcliff the Institute visited New York and Washington, stopping at Princeton and Philadelphia.

**INTERNATIONAL RAILWAY.** See GUATEMALA.

**INTERPARLIAMENTARY UNION** The executive committee found that, owing to difficulties of accommodation, it would not be possible to hold the meetings of the Interparliamentary Council and Permanent Study Committees at Arcachon as previously announced. The meetings were therefore held at Geneva from August 23 to 31. Five of the permanent study committees were in session. These were the committees on (1) Political and Organization Questions, (2) on Juridical Questions, (3) on Economic and Financial Questions, (4) on Ethnic and Colonial Questions, and (5) on Social and Humanitarian Questions. In addition, there was a sub-committee on Security and Meetings of the Inter-Parliamentary Council of the Executive Committee and a General Public Committee.

On August 23, the Union formally opened its sessions with the United States having one of the largest delegations present. The meetings were taken up mainly with a discussion of the Kellogg Peace Pact, and such questions as international trusts, ethical minorities, narcotics, and social work. While the speakers emphasized the need of a strong peace pact and of detailing methods for settling international disputes, the Union in a resolution passed at the closing session limited itself to the adoption of a motion submitted by Count Apponyi of Hungary deploring the numerous loopholes in the pact and urging the improvement and facilitating of the judicial, arbitrary and conciliatory machinery for the settlement of disputes. On August 29, the delegates of the special committee that had been working to formulate plans for a convention for the control of the manufacture of munitions adjourned after deciding not to color their report to the Council by either a pessimistic or an optimistic tone, but to let the facts speak for themselves. The "facts" would seem to indicate that the delegates had not advanced any since their last session, and that the delayed issues regarding the manufacture of munitions were precisely where they stood at the last meeting.

The greatest of all the difficulties continued to be the application of the convention's publicity provisions to State munition factories as well as to private firms. Japan here was chiefly opposed. Five States, including France and Italy, announced that they could go no further with this convention until the convention for education on armaments had been drafted.

The twenty-sixth annual meeting of the American section was held in the room of the committee on naval affairs of the House of Representatives Feb. 25, 1929. Routine business was transacted and the officers, including the late Hon. Theodore E. Burton, as president, and Representative John J. McSwain of South Carolina, as secretary were reelected.

Bjorn Theodore Adelswaerd, of Sweden, who was head of the Interparliamentary Union for many years, died September 28.

**INTERSTATE COMMERCE COMMISSION.** See RAILWAYS, UNITED STATES.

**INVESTMENTS.** See FINANCIAL RAILWAY.

**IONA SOCIETY, AMERICAN.** An association chartered in 1925 by the Regents of the University of the State of New York "to preserve, encourage, and promote Celtic culture" and for the establishment in Scotland of a center of Gaelic culture. Progress was made during 1929 in de-

veloping plans for the establishment of a university, offering courses in the Celtic language, literature, music, arts, and crafts, to be located in Scotland with its principal office in New York. The officers in 1929 were Richard M. Montgomery, president, John H. Finley, first vice president, James S. Cushman, second vice president, Alexander R. Fordyce, Jr., secretary, H. H. De Frise, treasurer. The headquarters of the society are at 300 Madison Avenue, New York City.

**IOWA POPULATION.** According to the Fourteenth Census of the United States, the population of the State on Jan. 1, 1920, was 2,404,021. According to the State censuses taken in 1925, the population was 2,419,927. The estimated population on July 1, 1928, was 2,428,000. The capital is Des Moines.

**AGRICULTURE.** The following table gives the acreage, production, and value of the principal crops in 1928 and 1929.

Crop	Year	Acreage	Prod. Bu.	Value
Corn	1929	10,944,000	437,760,000	\$306,432,000
	1928	11,202,000	464,883,000	311,472,000
Oats	1929	5,844,000	219,928,000	85,772,000
	1928	6,004,000	231,154,000	85,527,000
Hay	1929	3,560,000	6,720,000*	73,051,000
	1928	3,144,000	4,582,000*	58,648,000
Wheat	1929	454,000	8,794,000	9,314,000
	1928	452,000	8,723,000	8,730,000
Potatoes	1929	75,000	7,650,000	10,710,000
	1928	81,000	10,935,000	5,577,000
Barley	1929	642,000	19,581,000	10,182,000
	1928	802,000	26,466,000	14,292,000

\* Tons.

**MINERAL PRODUCTION.** Iowa was one of the coal-producing States in which the mining of coal recovered most rapidly after the check sustained from the labor troubles at the mines in 1927. Its production of coal for 1928 was 3,083,635 short tons, that of 1927 had been but 2,949,622 tons. In value, the product of 1928 was \$10,525,000, that of 1927, \$9,304,000. Cement production for 1928 attained the quantity, as measured by factory shipments of 6,880,731 barrels, and for 1927, of 5,661,231 barrels, in value, \$10,734,838 for 1928 and \$9,124,405 for 1927. The State held its place as second in production of gypsum in 1927, producing 792,159 short tons, in value \$6,713,497, the production of 1926 was 802,910 tons, in value \$6,588,203. Clay products of 1927 had a value of \$7,158,104, those of 1926, \$4,459,724. Stone, sand, and gravel added considerably to the total yearly value of the State's mineral products which was for 1927, \$33,426,375, for 1926 \$35,971,787.

**FINANCE.** State expenditures in the year ended June 30, 1928, as reported by the U. S. Department of Commerce, were for maintenance and operation of governmental departments, \$22,504,088 (of which \$796,987 was for local education), for interest on debt, \$888,502, for permanent improvements, \$17,255,799, total, \$10,648,389 (of which \$18,322,415 was for highways, \$3,908,499 being for maintenance and \$14,413,916 for construction). Revenues were \$41,183,371. Of these, property and special taxes formed 27.8 per cent, departmental earnings and remuneration for officers' services, 13.8, license sales, 44 per cent (including gasoline taxation of \$4,638,577). The State funded debt of June 30, 1928, \$20,411,000 outstanding, was \$18,847,990 net of sinking funds. On a property valuation of \$1,495,074,319 were levied State taxes of \$9,610,800.

**TRANSPORTATION** The total number of miles of railroad line under operation on Jan. 1, 1929, was 9751.27. According to the annual construction summary there were built, in 1929, 2.70 miles of first and 2.70 of second track.

**MANUFACTURES** According to the biennial Federal Census of Manufactures published by the Department of Commerce in 1929 and relating to the operations of 1927, there were in the State, in 1927, 3061 manufacturing establishments. These employed 73,092 persons, whose wages for the year totaled \$91,210,000. Materials and supplies used in manufacture cost \$496,930,635. Manufactured products attained the combined value of \$769,340,610.

**EDUCATION** The qualifications required of teachers in the public schools were increased by a statute of 1929, according to State Superintendent of Public Instruction Samuelson, in the *Journal* of the National Education Association. A census of handicapped children was taken, a new course of elementary education, uniform for the State, was established, and a commission to revise the course of secondary education was established. The number of persons of school age in the State in 1929 was given as 713,830. There were enrolled in the public schools, 548,852 pupils. Of these, 388,054 were in elementary, and 139,716 in high-school, grades. The expenditures of the year for public-school education totaled \$55,799,804. Salaries of teachers in the public schools, by the month, averaged \$200.39 for men and \$112.58 for women.

**CHARITIES AND CORRECTIONS** The Board of Control of State Institutions starting with 1898, exercised the full management of the State institutions. Its further duties included the inspection of county and private institutions to care for the insane, of detention homes and of organizations to aid neglected children. The 15 State institutions of care or custody were Soldiers' Home, Marshalltown, Soldiers' Orphans' Home, Davenport, Juvenile Home, Toledo, Institution for Feeble-minded Children, Glenwood, State Sanatorium for Treatment of Tuberculosis, Oakdale, Training School for Boys, Eldora, Training School for Girls, Mitchellville, Mount Pleasant State Hospital (insane), Mount Pleasant, Independence State Hospital (insane), Independence, Clarinda State Hospital (insane), Clarinda, Cherokee State Hospital (insane), Cherokee; Hospital for Epileptics and School for the Feeble-minded, Woodward; State Penitentiary, Fort Madison, Men's Reformatory, Anamosa, Women's Reformatory, Rockwell City.

**LEGISLATION** The Forty-third General Assembly of the State of Iowa held its regular session, adjourning April 13. Its chief business was to remedy the interruption in the highway building plans occasioned by the decision of the State Supreme Court declaring unconstitutional an issue of \$100,000,000 of road bonds that had been approved by referendum vote at the general election of November, 1928. The plan followed was to proceed by the issue of anticipatory warrants against roadbuilding costs for the time being, until a resolution, passed by the session, to amend the State Constitution in such manner as to render the desired bond act valid might have time to gain ratification by popular referendum in 1931. The passage of the Bergman Secondary Road Law greatly modified the power of counties to issue their bonds for secondary road improvement. A bill providing for the sterilization of

mental defectives and sufferers from certain inheritable diseases and creating a State board of eugenics was passed.

**POLITICAL AND OTHER EVENTS.** A suit of importance to the highway programme of the State was brought by State Attorney-General Fletcher against the constitutionality of the \$100,000,000 issue of road bonds that had been approved by popular referendum in November, 1928. It was maintained against the bond proposal that it would provide for service of the bonds by road funds accruing from indirect collections, whereas the State constitution required the imposition of a direct tax. The State Supreme Court declared in March that the law providing for the bond issue was unconstitutional and enjoined the State Executive Council from sale of the bonds. An effort was made at Des Moines in June to effect the seizure of non-alcoholic beer brought into the State from Wisconsin and used for the purpose of "spiking," i. e., of fortifying with the addition of alcohol. The municipal court decided that the statutes made no provision against the transportation or sale of non-alcoholic beverages and refused to sustain seizures. A conflict of students and trustees occurred at Des Moines University, a Baptist institution, when the trustees early in May dismissed the president and the teaching force of about 40, for Modernist theological beliefs. Students pelted a meeting of the trustees, who rejoined by closing the university. A group of students then brought suit to compel the institution to resume and obtained on May 13 a District Court order to that effect. Old Fort Atkinson, built about 1840 for the protection of the Winnebagoes against other Indians, was conveyed to the Federal Government to be made a national monument.

**OFFICERS** Governor, John Hammill, Lieutenant-Governor, Arch W. McFarlane, Secretary of State, Ed M. Smith, Treasurer, R. E. Johnson, Auditor, J. W. Long, Attorney-General, John Fletcher, Superintendent of Public Instruction, Agnes Samuelson, Secretary of Agriculture, Mark G. Thornburg.

**JUDICIARY** Supreme Court Justices Truman S. Stevens, Charles W. Vermillion, Frederick F. Faville, Lawrence DeGraff, William D. Evans, E. G. Albert, E. W. Morling.

**IOWA, STATE UNIVERSITY** A coeducational State institution of higher learning in Iowa City founded in 1847. The enrollment for 1928-29 was 9683, of whom 5028 were men and 4657 women. For the autumn of 1929 the enrollment was 6670, while the summer school registration totaled 4339. There were approximately 600 members on the faculty in the autumn of 1929. The income for 1928-29, including revolving funds, was \$5,904,234. Gifts to the university during the same period amounted to \$910,663. The general library contained 361,308 volumes and the law library, 50,700 volumes. A new stadium costing \$500,000 was erected during the year. President, Walter A. Jessup, Ph.D., LL.D.

**IOWA STATE COLLEGE OF AGRICULTURE AND MECHANIC ARTS.** A State institution for the higher education of men and women in Ames, Iowa, founded in 1868. The enrollment for the autumn term of 1929 was 4188, distributed as follows: Agriculture, 826; agricultural engineering, 42; engineering, 1359; home economics, 1025; industrial science, 372; veterinary medicine, 184; and graduate college, 379. The registration for the first half of the

1929 summer session was 1392 and for the second half, 712. The faculty numbered 493 members. The endowment funds amounted to \$695,000, and the income for the year was \$3,450,000. The library contained 180,000 volumes. President, Raymond Mollyneux Hughes

**IRAQ, or MESOPOTAMIA** A territory under British mandate in Asia. It comprises the region on the Tigris and Euphrates rivers between Persia and Northern Arabia; formerly consisting of the vilayets of Bagdad, Basra, and Mosul in the Turkish Empire, conquered by British and Indian troops during the World War and recognized afterward as an independent state to be placed under a mandatory power, in this case, Great Britain Capital, Bagdad

**AREA AND POPULATION** The area is given at 143,250 square miles, population, according to the census of 1920, 2,849,282, distributed as follows: respective divisions Bagdad, 1,111,785,000, Mosul, 703,378. The inhabitants are mainly Mohammedan and are divided among the two Mohammedan sects as follows Shites, 1,494,015. Sunnites, 1,146,685. The Jews in 1920 numbered 87,488 and the Christians, 78,792. The chief seaport is Basra on the Persian Gulf

**EDUCATION** In 1927 there were 24,170 pupils in 249 government primary and elementary schools, with 857 teachers, 847 pupils in two secondary schools at Bagdad and Mosul, and 211 pupils in seven intermediate schools. Al ul Bait University was opened in 1926. The educational budget in 1927-28 amounted to 2,786,053 rupees (the exchange rate of the Iraqi rupee averaged \$0.363 in 1928 and 1929).

**PRODUCTION** Vast areas of rich soil require irrigation to be placed under cultivation. In 1928 about 1400 pumps were providing water for approximately 800,000 acres. As the economics of such irrigation works were closely linked with the problem of cheap oil, much interest was attached to tests for oil being carried on in six different structures. Oil was struck in three wells near Kirkuk. Cotton growing is encouraged by the government and by the British Cotton Growing Association, the crop for 1928 was 5400 bales. Wheat and barley are the chief winter crops, the date crop surplus for export in 1926 was 79,202 tons, valued at 16,791,887 rupees. Wool exports in 1926 totaled 6051 tons valued at 6,550,214 rupees. Other crops are oats, linseed, flax, sheep casings, licorice root, oranges and other citrus fruits, and melons.

**COMMERCE** During the fiscal year ending Mar 31, 1929, imports totaled 95,006,000 rupees (\$34,500,000), as compared with 105,557,000 rupees in 1927-28, and 98,651,000 in 1926-27. Exports totaled 55,741,000 rupees (\$20,300,000) in 1928-29, 61,541,000 in 1927-28, and 46,089,000 in 1926-27. The unfavorable balance of trade in 1928-29 was 39,265,000 rupees, as compared with 44,016,000 in the previous year. The annual large adverse balance is largely offset by such invisible items as cash expenditures by British Forces in Iraq, the cash subsidy given by the British government to the Iraq Army, and expenditures by foreign business firms, pilgrims, and tourists. Iraq handles most of the transit trade to and from Persia, the total transit trade in 1927-28 amounting to 58,811,882 rupees. The United Kingdom, India, and Persia, in the order named, lead in both the import and export trades. Cotton piece goods, sugar, machinery, silk piece goods,

tea, and mineral oils were, respectively, the leading import items in 1928-29. Exports, in the order of their value, in the same year were dates, grains, pulse, and flour, raw wool, hides and skins; and cotton piece goods.

**FINANCE** A small surplus has resulted from budget operations in recent years. The surplus on Mar 31, 1928, was estimated at 21,081,400 rupees. The 1928-29 budget estimated revenues at 57,965,000, and expenditures at 57,529,720, rupees. Actual receipts for 1928-27 were 56,700,473 rupees and actual expenditures, 53,671,711. The British government's grant-in-aid toward the cost of the Iraq Army was 1,800,000 rupees annually.

**COMMUNICATIONS** Railway, steamship, and airplane lines compete for the passenger and freight traffic between Bagdad and Basra. There are some 4800 miles of highways, of which about 2300 miles are clay-bound shingle roads and about 100 miles gravel and macadam. The desert motor route between Iraq and Syria was used by 3894 automobiles in 1927, or 802 more than in 1926. The total route mileage of the railways on Mar 31, 1928, was 752 miles.

**GOVERNMENT** The organic law passed by the constituent assembly in June, 1924, provided for a limited monarchy and a responsible government. The legislative body consists of the Senate of 20 nominated "Elder Statesmen" and the Lower House of 88 elected deputies. The reigning monarch, King Faisal, ascended the throne Aug 23, 1921, as a result of a plebiscite in which 96 per cent of the inhabitants voted in his favor. Premier and Minister of Foreign Affairs in 1929, Abdul Mohsen Es Saadun (appointed in January, 1928).

## HISTORY

Announcement that Great Britain had officially recommended the termination of its mandate over Iraq "by 1932 at the latest" was made by the League of Nations Mandates Commission on November 5. The British note was addressed to the League Council and was scheduled for consideration by the Council in January, 1930. The recommendation was in accord with a promise made by the Labor government in September that it would support Iraq's application for admission to the League without conditions such as those proposed in the unfinished treaty of 1927. It was indicated that the British would propose a new treaty covering their withdrawal as the mandatory power which would provide for British control of the air base at Basra, an important link in the London-Karachi air line, and also for some form of supervision of the Mesopotamian oil fields.

The Mandates Commission after a three-day examination of the British report on Iraq, arrived at the unofficial conclusion that Iraq would not be ready for membership in the League before 1932 at the earliest. The caution exhibited by the Mandates Commission was attributed to the fact that it was the first case of its kind to come before the League, the possible repercussions upon the Syrian and Palestine mandates, and the apparent desire of Italy and Germany to secure League mandates.

The agitation against British control by the Nationalist section of the Iraqi population was at least temporarily ended by this concession. Earlier in the year, the independence movement resulted in the resignation of Premier Abdul

Mohsen Es Saadun (January 21), as irreconcilable divisions had arisen in the cabinet over the acceptance or rejection of the proposed settlement with Great Britain contained in the unratified Treaty of 1927. A new cabinet was announced at the end of April, with Tanfiq Beg Suwaidi as Premier, Minister of Foreign Affairs, and Minister of Religious Foundations.

The new Premier, addressing Parliament on May 6, promised a speedy settlement of the difficulties with Great Britain, a census, reorganization of the army, and further government encouragement of both housing and education. He was unable to secure a working majority, however, due to Nationalist opposition and the resulting cabinet crisis was not resolved until the announcement at Bagdad (September 19) that the British government would recommend Iraq's admittance to the League. Abdul Mohsen Es Saadun again accepted the Premiership of a cabinet which included the strongly nationalistic Yashim Pasha Hashimi. Abdul Mohsen committed suicide (November 13), due to criticism of his policies with respect to the independence negotiations. He was succeeded by Nawi Bey Suwaidi, former Minister of the Interior.

Sir Gilbert Clayton, British High Commissioner for Iraq, who had succeeded Sir Henry Dobbs in March, died suddenly on September 11. Sir Francis J. Newton, British Minister to Baghdad, was appointed his successor. The League of Nations on March 9 approved a proposal from the British government to establish a judicial system in Iraq which would place foreigners and natives on the same legal basis. This was followed by distinct improvement in relations between Iraq and Persia. See GREAT BRITAIN, under *History*, *MANDATES*, *LEAGUE OF NATIONS*.

**IRELAND** The smaller of the two main British Isles, with an area of 32,586 square miles, politically divided into Northern and Southern Ireland, the former consisting of the parliamentary counties of Antrim, Armagh, Down, Fermanagh, Londonderry, and Tyrone, and the parliamentary boroughs of Londonderry and Belfast, and the latter of the remaining 26 counties. Northern Ireland is under a separate Parliament and executive by the Government of Ireland Act of 1920 (see IRELAND, NORTHERN). The Southern counties constitute a self-governing dominion, known as the Irish Free State, under the Treaty of Dec. 6, 1921 (See IRISH FREE STATE). The total population of the island June 13, 1921, was estimated at 4,485,000, as compared with 4,390,218 at the census of 1911. No census for all Ireland was taken in 1921. Statistics for Ireland as a whole are no longer available, but for the two divisions, they will be found under their respective titles, IRELAND, NORTHERN, and IRISH FREE STATE.

**IRELAND, NORTHERN** The northeastern part of Ireland, comprising six of the nine counties of Ulster (Antrim, Armagh, Down, Fermanagh, Londonderry, and Tyrone), and the two parliamentary boroughs of Belfast and Londonderry. Capital, Belfast.

**AREA, POPULATION, ETC.** The area of Northern Ireland, exclusive of water, is 3,353,754 statute acres (also given as 5238 square miles). According to the census taken in 1926, the population was 1,256,561, as compared with 1,250,531 in 1911, the date of the previous census. The estimated population, as of June 30, 1928, was 1,248,-

000. The movement of population in 1927 was: Births, 26,676; deaths, 18,216; marriages, 7175. The population of Belfast was 415,007 in 1926. For the academic year 1927-28, there were 1948 public elementary schools with 201,688 pupils on roll, 71 secondary schools with 9013 pupils, 56 technical schools and 83 other centres with about 24,000 pupils, for higher education, Queen's University at Belfast, with 111 professors and lecturers and 1236 students in 1928.

**PRODUCTION, ETC.** Northern Ireland is distinctly an agricultural section. The pursuit of this occupation employs as many people as all others combined. The principal products are potatoes, cattle, bacon and hams, butter and eggs, the exportable surplus being shipped to Great Britain. The yield of the chief crops in 1927 was: Oats, 275,758 tons, potatoes, 1,057,010, turnips, 709,213, flax, 4988, hay, 945,236. Livestock in 1928 included 737,866 cattle, 624,503 sheep, 229,125 swine, 51,443 goats, 92,889 horses, and 8725 mules and asses. The two principal industrial enterprises are linen manufacturing and shipbuilding, both centred at Belfast. Other important manufactures are ropes and twines, tobacco, soaps, aerated waters, biscuits, spirits, hosiery, and underwear. No separate figures for commerce of Northern Ireland are available, as they are included in the general figures for the United Kingdom. From an industrial and commercial standpoint, 1929 was the leanest of a long succession of lean years. The continued depression in the linen industry, a six months' strike in the Belfast shipyards, and the decision of the White Star Line to postpone construction of a proposed 60,000-ton liner were important factors in the business situation.

**FINANCE** The revenue received by the Northern Irish Exchequer in the fiscal year 1927-28 amounted to £11,024,000, while expenditures were £10,775,000. The budget for 1928-29 balanced at £10,842,000.

**COMMUNICATIONS** In addition to 765 miles of railway, the country is served by various inland waterways, supplemented by 186 miles of canals. There were 12,971 miles of highway in 1928.

**GOVERNMENT** Northern Ireland's local Parliament has restricted jurisdiction, the country forms an integral part of Great Britain and is represented in the House of Commons by 13 members. The district is subject to the same taxation as that of Great Britain. The Governor in 1929 was the Duke of Abercorn. The ministry was as follows: Prime Minister, Viscount Craigavon, Finance, H. M. Pollock, Home Affairs, Sir R. Dawson Bates, Labor, J. M. Andrews, Education, Viscount Charlemont, Agriculture, E. M. Archdale, Commerce, J. M. Baibour.

**HISTORY** Nationalism was the primary issue in the general election held May 22 in which the Nationalist party under Joseph Devlin campaigned for a united Ireland. The Unionist (conservative) party, stood for a continuation of the British connection. The Unionists increased their majority in the Northern Ireland Parliament, winning 38 seats, as against 33 in the previous Parliament. The Nationalists elected all eleven candidates they put into the field, while the Labor and Liberal parties lost ground. In February, Eamonn de Valera was sentenced to a month in jail by a Northern Ireland court for entering Ulster in defiance of an exclusion order issued by the government. He refused a pardon offered him provided he promise not to repeat the offense.

**IRISH FREE STATE.** A self-governing dominion of the British Empire, constituted under the Irish Free State Government Act of Dec. 5, 1922, which embodied the terms of the Treaty of Dec. 6, 1921. Capital, Dublin.

**AREA AND POPULATION.** The Irish Free State comprises about five-sixths of the total area of all Ireland. According to the census of 1926, the total area was 17,019,155 statute acres, or 26,601 square miles. The population, according to this same census, was 2,971,922, as compared with 3,139,688 in 1911, estimated in 1927, 2,957,000. The loss in population is almost entirely due to emigration caused by unsatisfactory economic conditions in the dominion. The movement of population in 1927 was Births, 60,054, deaths, 43,677, marriages, 13,418, 1904, emigrants, 27,148 (24,691 in 1925), Dublin had a population (within its registration area) in 1911 of 397,957. At the census of 1926, the population was 419,156. Other leading cities with their populations in 1926, were Cork, 78,490, Limerick, 39,448, and Waterford, 26,647.

At the time of the census of 1911, there were 2,812,509 Roman Catholics and 327,179 Protestants in what later became the Irish Free State. By the census of 1926, the Protestant population had decreased to about 100,000, a decline of 32.5 per cent. The majority of the Protestant population was at first mainly in opposition to the compulsory study of the Irish language.

**EDUCATION.** Free elementary education is provided in the national schools, which are under local managers subject to the Department of Education. The use of the Irish language as a medium of instruction has largely increased. In 1927-28 there were 516,866 pupils in the national elementary schools, 25,573 in secondary schools, and 3150 students in colleges and universities.

**PRODUCTION.** In 1927 there were 3,406,000 acres, or 22 per cent of the total land area of the Free State, under crops, 8,469,000 acres of grass and grazing mountain land, and 7800 acres under orchards and shrubs. An increase of 2 per cent in the cultivated area in 1928 was offset by excessively rainy weather, which reduced the yield of all important crops except turnips and sugar beets. The area and production of the principal crops in 1927 and 1928 are shown in the accompanying table. The smaller crops of wheat and potatoes in 1928 were partly due to the continued decrease in acreage. Livestock in the country on June 1, 1928, included 4,125,000 cattle, 1,183,000 swine, 3,264,000 sheep, 434,000 horses, 196,000 asses, and 19,000 mules. Hogs slaughtered in 1928 numbered 878,000, and the production of cured pork amounted to 133,291,000 pounds. Exports of livestock increased 16 per cent during the year. In 1928 the fish catch totaled 40,

641,000 pounds, valued at \$1,544,000, as compared with 60,566,000 pounds, valued at \$1,650,000 in the previous year.

The total net output of Irish mines and factories in 1928, according to the census of that year, was £24,190,000 (\$118,000,000), after subtracting the cost of materials, fuel and power from the gross value of the products. Salaries and wages totaling £13,200,000 (\$64,200,000) were paid to 107,300 workers. Butter, cheese, margarine, milled grain, and liquors were the leading manufactured products, the output of each totaling about £7,000,000. Other manufactured products were cured bacon, tobacco, bread, confectionery, and biscuits. All manufacturing industries increased their output in 1928, except breweries and distilleries, the production of malt liquors falling from 2,130,000 barrels in 1927 to 1,956,000 barrels in 1928, and of whisky, from 883,000 gallons in 1927 to 560,000 gallons in 1928.

The industrial situation improved during 1928 and remained satisfactory in 1929. Distribution of electric current from the newly completed Shannon power plant to Dublin and other communities began in the autumn of the latter year and provision for the supply of current to the whole of the Free State during the winter was planned. Thousands of houses were wired on the hire-purchase system, the electricity used for lighting and domestic purposes being charged for at a fixed amount, dependent on the poor law valuation of the house. The cost of the Shannon project from its inception to Mar. 31, 1929, was placed at \$4,350,000. The number of insured workers at the beginning of 1929 totaled 280,905 and the number of insured workers unemployed in the preceding November was 27,724.

**COMMERCE.** Imports in 1928 were valued at \$291,270,000, as compared with \$295,065,000 in 1927, or a decrease of 1 1/2 per cent, while domestic exports totaled \$221,868,000, as compared with \$214,701,000 in the previous year, an increase of 3 per cent. The unfavorable merchandise balance of \$70,402,000 in 1928 was \$11,500,000 lower than in the previous year. Imports of motor cars and oil products in both 1928 and 1929 showed considerable increases, reflecting the rising prosperity of the country. The exports in 1928 were chiefly live animals and animal products, while the principal import included foodstuffs, tobacco, leather products, horses, cotton piece goods, coal, oil products, iron and steel manufactures, and motor cars and parts. Great Britain and Northern Ireland furnished 68 and 10 per cent, respectively, of the imports and purchased 85 and 11 per cent, respectively, of the total exports. Exports to the United States, always relatively unimportant, declined by 28 per cent. Foreign trade conditions in 1929 continued favorable and the unfavorable trade balance was further reduced, according to preliminary estimates.

**FINANCE.** Actual revenues of the Free State Government during the fiscal year ending May 31, 1929, totaled £24,221,000 and actual expenditures, £25,395,000. The budget for 1928-29 showed a slight increase, due to appropriations for a heavier debt service to meet capital expenditures of the preceding five years. Increased duties were imposed on sugar, rubber tires, commercial vehicles, and the rates of the excise and income-tax schedules revised to swell collections. Receipts for the year were slightly above the estimates, while expenditures were lower than in 1927-28. The

#### FREE STATE CROPS AREA AND PRODUCTION

Crop	Area <sup>a</sup>		Production <sup>b</sup>	
	1927	1928	1927	1928

chief items of revenue were The income and property tax, £4,307,000, customs, £7,159,000; excise, £6,794,000, stamp, estate, and other taxes, £2,020,000 Expenditures were apportioned as follows Debt service, £1,594,000, war pensions, £1,934,000; old-age pensions, £2,678,000; education, science, art, etc., £4,505,000, post office (gross), £2,232,000, local grants, £742,000, property-loss compensation, £438,000; all other, £11,466,000 The 1929-30 budget estimated expenditures at £25,441,000 and receipts at £23,964,000

The public debt as of Mar 31, 1928, amounted to £19,466,000 (\$94,731,000), excluding the liability of about £5,000,000 assumed under the treaty concluded with Great Britain in December, 1925, and the contribution to the deficit under the British land acts of about £2,500,000 Currency in circulation in December, 1928, amounted to £12,335,000 and the reserves deposited in the Bank of England to £6,688,000, as compared with a currency circulation of £15,045,000 and reserves of £9,229,000 in December, 1927 New bank notes in £1, £5, and £10 denominations were issued by the Free State Currency Commission on May 6, 1929, in accordance with the provisions of the Currency Act of 1927

**COMMUNICATIONS** The railways, for the most part controlled by private companies, had a total of 3028 miles of line in 1928 and during that year carried 22,633,000 passengers and 4,011,000 long tons of freight, the total gross receipts amounting to £5,778,000 Gross receipts in 1927 totaled £6,005,000, and in 1926, £7,379,000 The declining revenues were due to increasing motor transportations services, which practically doubled in 1928 A total of 13,500 vessels of 9,408,000 net registered tons entered Irish Free State ports in 1928, and 13,403 vessels of 9,447,000 net registered tons cleared Telegraph and telephone systems were government owned In 1927 there were 6877 miles of telegraph line and 74,981 miles of telephone wire

**GOVERNMENT** The Irish Free State has a written constitution which provides that her status shall be similar to that of the Dominion of Canada It has a coequal status with the other dominions of the United Kingdom, has complete control of its economic life, with a customs-boundary right against all nations, including Great Britain and Northern Ireland The Governor-General in 1929 was James MacNeill, appointed Dec 6, 1927 The Executive Council as organized in October, 1927, was as follows President, William T Cosgrave, Vice President, Finance, Posts and Telegraphs, Ernest Blythe, Defense, Desmond Fitzgerald, Industry and Commerce and External Affairs, Patrick McGilligan Education, J. Marcus O'Sullivan, Agriculture, Patrick Hogan, Local Government and Public Health, Richard Mulcahy, Lands and Fisheries, Finian Lynch

#### HISTORY

The Free State experienced another comparatively peaceful year in 1929, the political struggle between the Government and Eamonn de Valera's Republican organization, Fianna Fail, continuing for the most part on a constitutional basis There was a temporary revival of political terrorism early in the year, however, jury members were threatened, injured, and murdered, and it was found necessary to assign armed guards to protect members of the government, which put

into effect drastic public-safety measures and appealed for popular support, but barely carried a by-election in North Dublin fought on this issue Outside the political sphere, the year was marked by the virtual completion of the Shannon River power project (see above) and by steady economic and industrial progress.

Amicable relations with Great Britain were furthered during the year by the friendly attitude of the Labor government. An interesting constitutional question was reported to have been raised by the Irish government in connection with the composition of the Council of State formed to act for King George during his illness The Free State was said to hold that if the council was to include members not belonging to the royal family, the dominions should have been consulted as to its composition and represented upon it In this connection, it was recalled that when Professor Timothy Smiddy was recalled as the Free State Minister in Washington the papers were signed only by Queen Mary, the Prince of Wales, and the Duke of York.

Abolition of the jurisdiction exercised by the Judicial Committee of the Privy Council in the Free State under the terms of the Anglo-Irish Treaty was also demanded during the year by a section of Irish opinion headed by Ernest Blythe, Minister of Finance, and Patrick McGilligan, Minister for External Affairs The authority possessed by the Privy Council, it was felt, was inconsistent with Free State autonomy and would militate against the Free State in financial and other disputes with Great Britain and in its relations with Northern Ireland An important dispute with Northern Ireland arose over the control of fishery rights in Lough Foyle, which Free State authorities were evidently unwilling to submit to the decision of the Privy Council The action of the Free State Government in signing unconditionally in September the optional clause of the World Court statute, pledging itself to accept the compulsory jurisdiction of the Court in international disputes, was reported to be chiefly inspired by the hope that such a move would aid in abolishing the jurisdiction of the Privy Council

Foreign Minister Collins brought up the question at a special conference of dominion delegates held in London in December There, the British delegation under Lord Passfield, Secretary for Dominion Affairs and the Colonies, took the line that they were fully prepared to amend or modify any existing statutes that could be held to conflict with the doctrine of coequality of the various nations forming the British Commonwealth, as set forth at the imperial conference of 1926 There was criticism in the House of Lords on December 3 of Mr Blythe's assertion that the Free State was determined to abolish the right of appeal from the Free State Supreme Court to the Privy Council Lord Passfield assured the Lords that the whole question would be aired at the imperial conference in 1930 and that, if all the dominions concurred, the right of appeal could be ended

Another possible source of dispute with Great Britain arose through the Fianna Fail proposal that the government repudiate annuities on Irish Land Stock held in Great Britain President Cosgrave and his cabinet termed the proposal an attempt at "national embezzlement" and this stand was supported by the Roman Catholic clergy. The issue was fought out in a by-election

in T. J. S. S. during the summer in which the latter had candidate was decisively defeated by General Macdonell, the government standard bearer.

The government's censorship bill, passed by the Dail Eireann during the last week of July, aroused widespread interest and considerable criticism. It provided that all books, newspapers, and periodicals entering or published in the Free State shall be censored by a board of five members appointed by the Minister of Justice. Publications advocating birth control are specifically prohibited and all others are liable to suppression if found to be "indecent, obscene, or likely to corrupt or deprave." The right of defense is given authors, editors, and publishers.

Other events of the year included the ratification of the Kellogg Briand Peace Pact by the Dail on February 22, with the Fianna Fail party voting in opposition, the exchange of diplomatic representatives between the Free State and Vatican City, and a declaration by President Cosgrave during a debate on unemployment (November 14) that, for the first time in many years, emigration from the Irish Free State was rapidly declining. On January 9, Michael MacWhite was named Minister to the United States. See GREAT BRITAIN, under *History*; IRELAND, *NORTHERN*, *WORD* (COT RT).

**BIBLIOGRAPHY.** An interesting volume was Denis Gwynn, *The Irish Iron Age* (New York 1928).

#### IRISH LANGUAGE AND LITERATURE

See *PHONOLOGY*, *MODERN*.

#### IRON AND STEEL.

The iron ore mined in the United States in 1929, exclusive of ore that contained 5 per cent or more of manganese in the natural state, was estimated by the U. S. Bureau of Mines, at 73,283,000 gross tons, an increase of 18 per cent, as compared with that mined in 1928. The ore shipped from the mines in 1929 was estimated at 75,589,000 gross tons, valued at \$197,007,000, an increase of 19 per cent in quantity and of 26 per cent in total value, as compared with the figures for 1928. The average value of the ore per gross ton at the mines in 1929 was estimated at \$2.61, in 1928 it was \$2.46. The stocks of iron ore at the mines, mainly in Michigan and Minnesota, apparently decreased from 9,190,061 gross tons in 1928 to 7,102,000 tons in 1929, or 23 per cent. The Bureau of Mines estimates were based on preliminary figures furnished by producers who in 1928 mined about 99 per cent of the total iron ore. They show the totals for the principal non-ore producing States, and, by grouping together certain States, the totals for the Lake Superior district and for groups of Southeastern, Northeastern, and Western States.

About 86 per cent of the iron ore shipped in 1929 came from the Lake Superior district, in which approximately 63,059,000 gross tons were mined and 65,129,000 tons were shipped, increases of 20 and 21 per cent, respectively, as compared with the quantities mined and shipped in 1928. The ore shipped in 1929 was valued at the mines at \$174,717,000, an increase of 29 per cent. These totals include the ore from mines in southern Wisconsin and ore shipped by rail, as well as by water, from all mines, but exclude manganese ores amounting to approximately 1,048,000 gross tons in 1929 and 1,077,705 tons in 1928 that contained 5 per cent or more of manganese in the natural state. The ore is chiefly hematite. The

stocks of iron ore in this district apparently decreased from 7,926,199 gross tons in 1928 to 6,101,000 tons in 1929, or 23 per cent. The stocks at the end of 1929 were about 3,000,000 tons less than the average for the preceding five years. The shipments of iron ore by water from the Lake Superior district in 1929 (including manganese iron ores), according to the Lake Superior Iron Ore Association, amounted to 65,204,600 gross tons, an increase of 21 per cent, as compared with these shipments in 1928. The average value of the ore at the mines in the Lake Superior district in 1929 was \$2.68 a ton, in 1928 it was \$2.51.

The Southeastern States, which constitute the second largest non-ore producing area, including the Birmingham and Chattanooga districts, mined approximately 6,794,000 gross tons of iron ore in 1929, an increase of 2 per cent, as compared with 1928. The shipments of iron ore from mines in these States in 1929 amounted to 6,975,000 gross tons, valued at \$13,790,000, increases of 8 and 10 per cent, respectively, in quantity and value, as compared with 1928. The ore is mainly hematite, brown ore and magnetite come next in order. The average value of the ore produced in these States in 1929 per gross ton was \$1.98, in 1928 it was \$1.94. The stocks of iron ore at the mines in this group of States, mainly in the Birmingham district, decreased from 1,019,667 gross tons in 1928 to 839,000 gross tons in 1929. These stocks are about 300,000 tons less than the average for the preceding five years.

The Northeastern States, which include the Adirondack district, New York and the Cornwall district, Pennsylvania, in 1929 mined 2,235,000 gross tons of iron ore and shipped 2,290,000 tons, valued at \$6,897,000, increases of 12 per cent in quantity mined, 7 per cent in quantity shipped, and 3 per cent in value of shipments, compared with 1928. The stocks of iron ore in this group of States decreased from 232,030 gross tons in 1928 to 150,000 tons in 1929. These stocks are considerably less than usually carried over at these mines, being about 229,000 tons below the average for the preceding five years. The average value of the ore in these States in 1929 per gross ton was \$3.01, in 1928 it was \$3.13. Most of this ore is magnetite.

The Western States that ordinarily produce non-ore named in the order of their importance are Wyoming, Utah, New Mexico, Colorado, Montana, and Washington. Occasionally, California, Idaho, and Nevada contribute small quantities. All the ore from Wyoming and Colorado and most of that from Utah and New Mexico are used for the manufacture of pig iron. Much of the remainder is used as a flux in smelting copper and the precious metals. It was estimated that the Western States mined and shipped in 1929 approximately 1,195,000 gross tons of iron ore, valued at \$1,603,000, an increase of 14 per cent in the quantities mined and shipped and of 3 per cent in value of shipments, as compared with 1928. The ore comprises hematite, magnetite, and brown ore.

**IMPORTS AND EXPORTS OF IRON ORE.** The imports of iron ore reported for the 11 months ended Nov. 30, 1929, amounted to 2,853,279 gross tons, valued at \$7,389,823, or \$2.58 a ton. The imports for the year 1928 were 2,452,646 gross tons, valued at \$5,428,019, or \$2.21 a ton. The reported exports of iron ore for the 11 months ended Nov. 30, 1929, amounted to 1,302,019 gross

chief items of revenue were: The income and property tax, £4,307,000; customs, £7,159,000; excise, £6,794,000, stamp, estate, and other taxes, £2,620,000. Expenditures were apportioned as follows: Debt service, £1,594,000, war pensions, £1,934,000, old-age pensions, £2,678,000; education, science, art, etc., £4,505,000; post office (gross), £2,232,000, local grants, £742,000, property-loss compensation, £438,000; all other, £11,466,000. The 1929-30 budget estimated expenditures at £25,441,000 and receipts at £23,964,000.

The public debt as of Mar. 31, 1928, amounted to £19,466,000 (\$94,731,000), excluding the liability of about £5,000,000 assumed under the treaty concluded with Great Britain in December, 1925, and the contribution to the deficit under the British land acts of about £2,500,000. Currency in circulation in December, 1928, amounted to £12,335,000 and the reserves deposited in the Bank of England to £6,688,000, as compared with a currency circulation of £15,045,000 and reserves of £11,229,000 in December, 1927. New bank notes in £1, £5, and £10 denominations were issued by the Free State Currency Commission on May 6, 1928, in accordance with the provisions of the Currency Act of 1927.

**COMMUNICATIONS** The railways, for the most part controlled by private companies, had a total of 3028 miles of line in 1928 and during that year carried 22,633,000 passengers and 4,011,000 long tons of freight, the total gross receipts amounting to £5,778,000. Gross receipts in 1927 totaled £6,005,000, and in 1926, £7,379,000. The declining revenues were due to increasing motor transportations services, which practically doubled in 1928. A total of 13,500 vessels of 9,408,000 net registered tons entered Irish Free State ports in 1928, and 13,403 vessels of 9,447,000 net registered tons cleared. Telegraph and telephone systems were government owned. In 1927 there were 6877 miles of telegraph line and 74,981 miles of telephone wire.

**GOVERNMENT** The Irish Free State has a written constitution which provides that her status shall be similar to that of the Dominion of Canada. It has a coequal status with the other dominions of the United Kingdom, has complete control of its economic life, with a customs-boundary right against all nations, including Great Britain and Northern Ireland. The Governor-General in 1929 was James MacNeill, appointed Dec. 6, 1927. The Executive Council as organized in October, 1927, was as follows: President, William T. Cosgrave, Vice President, Finance, Posts and Telegraphs, Ernest Blythe; Defense, Desmond Fitzgerald, Industry and Commerce and External Affairs, Patrick McGilligan, Education, J. Marcus O'Sullivan, Agriculture, Patrick Hogan, Local Government and Public Health, Richard Mulcahy; Lands and Fisheries, Finian Lynch.

#### HISTORY

The Free State experienced another comparatively peaceful year in 1929, the political struggle between the Government and Eamonn de Valera's Republican organization, Fianna Fail, continuing for the most part on a constitutional basis. There was a temporary revival of political terrorism early in the year, however; jury members were threatened, injured, and murdered, and it was found necessary to assign armed guards to protect members of the government, which put

into effect drastic public-safety measures and appealed for popular support, but barely carried a by-election in North Dublin fought on this issue. Outside the political sphere, the year was marked by the virtual completion of the Shannon River power project (see above) and by steady economic and industrial progress.

Amicable relations with Great Britain were furthered during the year by the friendly attitude of the Labor government. An interesting constitutional question was reported to have been raised by the Irish government in connection with the composition of the Council of State formed to act for King George during his illness. The Free State was said to hold that if the council was to include members not belonging to the royal family, the dominions should have been consulted as to its composition and represented upon it. In this connection, it was recalled that when Professor Timothy Smiddy was recalled as the Free State Minister in Washington, the papers were signed only by Queen Mary, the Prince of Wales, and the Duke of York.

Abolition of the jurisdiction exercised by the Judicial Committee of the Privy Council in the Free State under the terms of the Anglo-Irish Treaty was also demanded during the year by a section of Irish opinion headed by Ernest Blythe, Minister of Finance, and Patrick McGilligan, Minister for External Affairs. The authority possessed by the Privy Council, it was felt, was inconsistent with Free State autonomy and would militate against the Free State in financial and other disputes with Great Britain and in its relations with Northern Ireland. An important dispute with Northern Ireland arose over the control of fishery rights in Lough Foyle, which Free State authorities were evidently unwilling to submit to the decision of the Privy Council. The action of the Free State Government in signing unconditionally in September the optional clause of the World Court statute, pledging itself to accept the compulsory jurisdiction of the Court in international disputes, was reported to be chiefly inspired by the hope that such a move would aid in abolishing the jurisdiction of the Privy Council.

Foreign Minister McGilligan brought up the question at a special conference of dominion delegates held in London in December. There, the British delegation under Lord Passfield, Secretary for Dominion Affairs and the Colonies, took the line that they were fully prepared to amend or modify any existing statutes that could be held to conflict with the doctrine of coequality of the various nations forming the British Commonwealth, as set forth at the imperial conference of 1926. There was criticism in the House of Lords on December 3 of Mr. Blythe's assertion that the Free State was determined to abolish the right of appeal from the Free State Supreme Court to the Privy Council. Lord Passfield assured the Lords that the whole question would be aired at the imperial conference in 1930 and that, if all the dominions concurred, the right of appeal could be ended.

Another possible source of dispute with Great Britain arose through the Fianna Fail proposal that the government repudiate annuities on Irish Land Stock held in Great Britain. President Cosgrave and his cabinet termed the proposal an attempt at "national embezzlement" and this stand was supported by the Roman Catholic clergy. The issue was fought out in a by-election

in Leitrim-Sligo during the summer in which the Fianna Fail candidate was decisively defeated by General Maceoin, the government standard bearer.

The government's censorship bill, passed by the Dail Eireann during the last week of July, aroused widespread interest and considerable criticism. It provided that all books, newspapers, and periodicals entering or published in the Free State shall be censored by a board of five members appointed by the Minister of Justice Public.

Birth control are specifically; others are liable to suppression it found to be "indecent, obscene, or likely to corrupt or deprave." The right of defense is given authors, editors, and publishers.

Other events of the year included the ratification of the Kellogg Briand Peace Pact by the Dail on February 22, with the Fianna Fail party voting in opposition, the exchange of diplomatic representatives between the Free State and Vatican City, and a declaration by President Cosgrave during a debate on unemployment (November 14) that, for the first time in many years, emigration from the Irish Free State was rapidly declining. On January 9, Michael MacWhite was named Minister to the United States. See GREAT BRITAIN, under *History*, IRELAND, NORTHERN, WORLD COURT.

#### IRON AND STEEL

The iron ore mined in the United States in 1929, exclusive of ore that contained 5 per cent or more of manganese in the natural state, was estimated by the U. S. Bureau of Mines, at 73,283,000 gross tons, an increase of 18 per cent, as compared with that mined in 1928. The ore shipped from the mines in 1929 was estimated at 75,589,000 gross tons, valued at \$197,007,000, an increase of 19 per cent in quantity and of 26 per cent in total value, as compared with the figures for 1928. The average value of the ore per gross ton at the mines in 1929 was estimated at \$2.61, in 1928 it was \$2.46. The stocks of iron ore at the mines, mainly in Michigan and Minnesota, apparently decreased from 9,190,061 gross tons in 1928 to 7,102,000 tons in 1929, or 23 per cent. The Bureau of Mines estimates were based on preliminary figures furnished by producers who in 1928 mined about 99 per cent of the total iron ore. They show the totals for the principal iron-ore producing States, and, by grouping together certain States, the totals for the Lake Superior district and for groups of Southeastern, Northeastern, and Western States.

About 86 per cent of the iron ore shipped in 1929 came from the Lake Superior district, in which approximately 63,059,000 gross tons were mined and 65,129,000 tons were shipped, increases of 20 and 21 per cent, respectively, as compared with the quantities mined and shipped in 1928. The ore shipped in 1929 was valued at the mines at \$174,717,000, an increase of 29 per cent. These totals include the ore from mines in southern Wisconsin and ore shipped by rail, as well as by water, from all mines, but exclude mangamiferous ores amounting to approximately 1,048,000 gross tons in 1929 and 1,077,705 tons in 1928 that contained 5 per cent or more of manganese in the natural state. The ore is chiefly hematite. The

stocks of iron ore in this district apparently decreased from 7,926,199 gross tons in 1928 to 6,101,000 tons in 1929, or 23 per cent. The stocks at the end of 1929 were about 3,000,000 tons less than the average for the preceding five years. The shipments of iron ore by water from the Lake Superior district in 1929 (including mangamiferous iron ores), according to the Lake Superior Iron Ore Association, amounted to 65,204,600 gross tons, an increase of 21 per cent as compared with these shipments in 1928. The average value of the ore at the mines in the Lake Superior district in 1929 was \$2.68 a ton, in 1928 it was \$2.51.

The Southeastern States, which constitute the second largest iron-ore producing area, including the Birmingham and Chattanooga districts, mined approximately 6,794,000 gross tons of iron ore in 1929, an increase of 2 per cent, as compared with 1928. The shipments of iron ore from mines in these States in 1929 amounted to 6,975,000 gross tons, valued at \$13,790,000, increases of 8 and 10 per cent, respectively, in quantity and value, as compared with 1928. The ore is mainly hematite, brown ore and magnetite come next in order. The average value of the ore produced in these States in 1929 per gross ton was \$1.98, in 1928 it was \$1.94. The stocks of iron ore at the mines in this group of States, mainly in the Birmingham district, decreased from 1,019,607 gross tons in 1928 to 839,000 gross tons in 1929. These stocks are about 300,000 tons less than the average for the preceding five years.

The Northeastern States, which include the Adirondack district, New York, and the Cornwall district, Pennsylvania, in 1929 mined 2,235,000 gross tons of iron ore and shipped 2,290,000 tons, valued at \$6,897,000, increases of 12 per cent in quantity mined, 7 per cent in quantity shipped, and 3 per cent in value of shipments, compared with 1928. The stocks of iron ore in this group of States decreased from 232,030 gross tons in 1928 to 150,000 tons in 1929. These stocks are considerably less than usually carried over at these mines, being about 229,000 tons below the average for the preceding five years. The average value of the ore in these States in 1929 per gross ton was \$3.01, in 1928 it was \$3.13. Most of this ore is magnetite.

The Western States that ordinarily produce iron ore named in the order of their importance are Wyoming, Utah, New Mexico, Colorado, Montana, and Washington. Occasionally, California, Idaho, and Nevada contribute small quantities. All the ore from Wyoming and Colorado and most of that from Utah and New Mexico are used for the manufacture of pig iron. Much of the remainder is used as a flux in smelting copper and the precious metals. It was estimated that the Western States mined and shipped in 1929 approximately 1,195,000 gross tons of iron ore, valued at \$1,603,000, an increase of 14 per cent in the quantities mined and shipped and of 3 per cent in value of shipments, as compared with 1928. The ore comprises hematite, magnetite, and brown ore.

**IMPORTS AND EXPORTS OF IRON ORE.** The imports of iron ore reported for the 11 months ended Nov. 30, 1929, amounted to 2,853,279 gross tons, valued at \$7,369,923, or \$2.58 a ton. The imports for the year 1928 were 2,452,646 gross tons, valued at \$5,428,019, or \$2.21 a ton. The reported exports of iron ore for the 11 months ended Nov. 30, 1929, amounted to 1,302,019 gross

tons, valued at \$4,762,475, or \$3 86 a ton, as compared with exports for the entire year 1928 of 1,282,306 tons, valued at \$4,797,881, or \$3 74 a ton.

The following table shows the . . . and value of the iron ore mined and . . . the United States by the principal producing States. The figures for 1928 are final, but those for 1929 are subject to revision.

ESTIMATES OF IRON ORE MINED AND SHIPPED IN THE UNITED STATES IN 1929 AND ACTUAL OUTPUT IN 1928

District	Ore mined		Ore shipped			
	1928 Gross tons	1929 Gross tons	1928 Gross tons	1928 Value	1929 Gross tons	1929 Value

\* Virginia reported shipments of 232 gross tons, valued at \$671

UNITED STATES STEEL PRODUCTION All previous records for steel ingot production in the United States were exceeded in 1929 when the annual output of all companies was estimated at 54,164,348 tons, by the American Iron and Steel Institute. This compared with the previous peak of 49,865,185 tons, established in 1928. The . . . capacity of all mills in the . . . was estimated at about 64,000,000 tons, so that the 1929 total was within about 14,000,000 tons of the plant limit. The approximate daily output of all companies in 1929 was 174,163 tons and the percentage of operation throughout the full year was 88.81. The daily output in 1928 was 160,338 tons and the percentage of operation, 85.05. The number of working days in 1929 was 311, the same as in 1928. The accompanying table gives the monthly comparison of ingot production in tons for three years.

U S STEEL INGOT PRODUCTION

	1929	1928	1927
January	4,490,154	3,990,902	3,789,874
February	4,326,000	4,043,457	3,812,046
March	5,058,258	4,507,217	4,468,617
April	4,938,025	4,305,382	4,105,799
May	5,274,167	4,297,212	4,047,251
June	4,881,370	3,743,903	3,495,609
July	4,838,093	3,805,598	3,204,135
August	4,927,258	4,178,610	3,498,549
September	4,510,879	4,147,893	3,268,881
October	4,511,650	4,469,968	3,316,292
November	3,513,025	4,266,815	3,127,015
December	2,896,269	4,018,208	3,175,484

The average daily outputs in tons for three years are compared in the accompanying table.

Open-hearth steel-ingot production in 1929 totaled 44,103,466 tons and Bessemer, 7,087,261, while open-hearth production in 1928 was 40,538,657 tons and Bessemer, 6,591,217. See METALLURGY.

UNITED STATES PIG IRON PRODUCTION American pig iron production in 1929 reached a peak total of 42,285,769 tons, or nearly 58 per cent higher than the previous record of 40,361,146 tons.

in 1923. The daily average production of pig iron for the first half of the year was 119,564 tons and for the entire year 115,851 tons. A large use of scrap iron was indicated by the fact that the out-

AVERAGE DAILY OUTPUT STEEL INGOTS

	1929	1928	1927
January	166 309	153 496	145,633
February	180,250	161,738	158,785
March	194,548	166,934	167,960
April	189 824	172 215	158,744
May	195,302	175,821	155,663
June	192,355	143,996	134,446
July	186,080	152,224	128,165
August	182 491	151 763	129 576
September	180,475	165 916	125,726
October	167,098	172,221	127,550
November	115 116	164,109	120,270
December	115,851	160,728	122,134

put of steel ingots was nearly 12,000,000 tons larger than the output of pig iron. Pig iron prices started to climb in the autumn of 1928 and remained fairly uniform during 1929. The Iron Age composite price in March, 1929, was \$18 29 a gross ton, in May \$18 71, and in December, after irregular reductions, \$18 21. As compared with 1928, the total pig iron production increased by 12 per cent.

IRON AND STEEL EXPORTS Exports of iron and steel from the United States in 1929 totaled 3,032,352 gross tons, valued at \$200,428,054, as compared with 2,865,103 tons valued at \$179,880,182 in 1928. The average values per ton of exports were \$66 10 in 1929 and \$62 78 in the previous year. The gain of \$20,547,872 in the value of exports in 1929 represented an increase of 11 4 per cent. Canada, as usual, was the largest

buyer of American iron and steel products, taking about 41 per cent of the total exports Japan, Italy, Mexico, the Philippines, Argentina, Poland, and China ranked next in order.

Imports of iron and steel into the United States in 1929 totaled 739,004 gross tons, or 43,668 tons less than in 1928.

**WORLD PRODUCTION** World production of both pig iron and steel rose to record levels in 1929, the steel output for 21 countries totaling about 117,850,000 gross tons, or 9 per cent more than in 1928, while the pig iron output of 96,180,000 tons was 10.6 per cent higher. As compared with the prewar year of 1913, steel production in 1929 represented a 60 per cent increase and pig iron production and 24 per cent increase. Comparative figures for the iron and steel production of the respective countries in 1929 and in preceding years and also for steel exports and imports of the leading producers are given in the tables compiled by the *Iron Age*.

tons, or 48.5 per cent, of the total steel production. Of the five leading iron and steel producing nations of the world, the United States, Germany, and Great Britain increased their exports in 1929, as compared with 1928, while exports from France and Belgium (including Luxembourg) declined slightly. Conversely, the United States, Germany and Great Britain all showed decreases in iron and steel imports, while France and Belgium increased their imports.

German production of pig iron totaled 13,397,000 tons (11,620,000 in 1928) and of steel 16,234,000 tons (16,060,000 in 1928). Exports of iron and steel from Germany increased nearly 1,000,000 tons, totaling 5,129,043 tons in 1929 and 4,309,716 in 1928. Imports declined to 1,441,054 tons from the 1928 figure of 2,035,712 tons. The exports were the highest since 1913 and the imports the lowest since 1920. The output of the British steel mills in 1929 was 9,654,700 tons, as against 8,519,300 in 1928, while pig iron production increased to 7,579,500 tons from 6,810,100 tons in 1928. British steel production in 1929 was exceeded only in one year—1917, when the total output reached 9,716,544 tons. Steel exports totaled about 4,400,000 tons, as against 4,260,000 tons in 1928. Steel imports declined to approximately 2,760,000 tons from 2,890,000 tons in 1928.

The French iron and steel industry was unsettled during the last quarter of 1929 due to efforts of the Continental Steel Entente to maintain prices by a reduction in tonnage allotments. Nevertheless, the total production of pig iron increased to about 10,296,000 tons, or 5 per cent more than in 1928, while the steel output of 9,530,000 tons was 6 per cent above the 1928 figure. French exports of steel were estimated at 4,250,000 tons (4,890,000 in 1928) and imports at 230,000 tons (140,000 in 1928).

The Belgium-Luxembourg industry was likewise affected by the policies of the Continental Steel Entente and its condition became somewhat depressed toward the end of the year as export sales failed to keep pace with the high levels established during the first six months of the year.

Canadian pig iron production established a record for postwar years, amounting to 1,090,244 tons, or 5 per cent more than in 1928. The output of steel ingots and direct steel castings during 1929 amounted to 1,379,688 tons and constituted a record, being 11 per cent above the 1928 production.

**STEEL AND IRON CARTELS** World consumption of steel slackened somewhat in the closing months of 1929 and export prices showed a resultant depression. To maintain prices the Continental Steel Entente reduced its tonnage production programme by 10 per cent, effective November 1, with salutary effects upon the market. The International Steel Cartel agreement, which was to have expired Oct. 1, 1929, was provisionally extended to the end of March, 1930, the indications being that it would then be renewed for a definite term of years under an agreement for stricter and more direct production control as a substitute for the ineffective overproduction fines France and Belgium, as well as Germany, consistently produced more than their allotted quotas in 1929 and as a result increases in quotas were put into effect for the second and third quarters. In March the total annual quota was raised by 2,000,000 tons to 31,295,000 tons and the German monthly export quota was raised from 300,000 to 330,000 tons, in June the annual quota was again raised to 32,295,000 tons. Despite these increases Germany's overproduction amounted to 895,000 tons in the first quarter and 890,000 tons in the second quarter of the year. The September meeting of the cartel, while leaving the total annual quota at 32,295,000 tons, reduced the fines for overproduction by 25 per cent, and in October the 10 per cent reduction in production (not in quota) was agreed upon. On December 14 the cartel took the first step toward the formation of a joint sales organization, thereby removing one of the principal obstacles to Germany's agreement to the renewal of the cartel. It was planned to establish four identical sales cartels composed respectively of the industries of Germany and the Saar, Belgium and Luxembourg, France and the central European industries of Czechoslovakia, Austria, and Hungary, which would direct export sales of all plants in their respective areas, apportion orders on the basis of the 1929 export activity, and strive to maintain export prices.

Other developments in the field of iron and steel cartels were the renewal of the International Rail Cartel for six years and of the domestic German iron and steel cartels for about 10 years. A definite agreement was reached on April 11, 1929, subject to the renewal of the continental and domestic German tube cartels, under which the International Tube Cartel was to remain in effect until Mar. 31, 1935. Late in 1929 the International Wire Rod Cartel agreed to continue in existence until the end of 1931.

**ITALIAN LITERATURE.** The 1929 season in Italy continued the discussions on the theatrical crisis, and the discussions on the technique of prose creations burst out into renewed vigor with Giovanni Papini's article, "Di questa letteratura" ("This Literature of Ours"), which appeared in the first issue of the new literary magazine, *Pègaso*. The season has witnessed the passing of two notable men of letters, Luciano Zdecoi and Marco Piaga.

The theatrical crisis centring on the cinema versus legitimate drama and foreign drama versus native drama was fruitful of many sug-

gestions by dramatists, actors, and critics as to the *modus operandi* in the future of the Italian theatre. The *Giornale dell'arte* took up in detail the pros and cons as to the difficulties of the stock companies to interest the public with exclusive repertoires of native dramas. Apparently, the actors and dramatists are not viewing the situation in despair in view of the fact that, if the crisis existed in Italy, it existed also to a marked degree in countries throughout the world. The discussions, if nothing else, brought the Italian dramatists *vis à vis* with the fact that the "psychology of the theatre crowd" had to be taken more and more into consideration. The result has been that many of the authors have noticeably digressed from their usual theme and technique. See below, discussions on *Isaurus* of Pinandello and Chiarelli's *K 41*.

The literary weekly, *Piera letteraria* (now *Itala letteraria*) discussed fully the current polemic on prose creation as to whether narrative art of the future was to base its creations on foundations of literary tradition and history, or was to find its medium in introspection and "cerebration" with the view of "stilted" and "abortive" methods of past schools. The discussions started in 1928 and otherwise exhausted, found new impetus with Papini's article, "This Literature of Ours" mentioned above, in which he views the future of the Italian novel and drama pessimistically, drawing this subtle deduction with regard to the "man of letters": "One of the deepest characteristics of our race, especially in the more representative types, is a highly developed sense of individuality. Italy is a country of lonely souls and dictators and not of men who are standardized. Personalist as he is, as a rule, the Italian can do many things he can express his own sentiments, dreams, and yearnings for the past, but looks rather to his political causes and external features than at the psychology of their protagonists. Or, finally, he can ridicule people and correct them, or define himself (satire, controversy), but he can never, or at least he can but badly, produce creatures of the imagination who talk and act like living people. In short, he will never succeed with the theatre and the novel, in the sense of Shakespeare, Molière, a Calderon, or an Ibsen."

Papini goes on to say that the French influence on Italian literature has been especially harmful in that the two literatures are diametrically opposed to each other: the Italian will never attain French wit and lightness of touch. The Italian is a serious, heavy literature. It will always be more educative than amusing (see this discussion in *Herald-Tribune*, "Books," January 20). With this crushing accusation, Papini has far from convinced Italian intellectuals even though he has put them to think. All summed up, it seems that Papini is too hard on his Italian colleagues and their literature, he has had to sustain, in return for his statements, many an invective and many a tirade (see *Piera letteraria*, issues of January and February).

In this connection, we may say that another important event on the literary horizon in Italy last season was the publication of a new magazine devoted to arts and letters, *Pègaso* (Florence), edited by Ugo Ojetti. It appears that *Pègaso* started with material of polemical nature, launching an attack against the spirit or domination of criticism on literary production

(spirit of Croce). *Pegaso* should prove to be a magazine for the intellectuals. It will, let us hope, reflect much of the eclectic personality of its founder, Ugo Ojetta, preëminent as a writer and as a critic of arts and letters. Fortunately, too, it appears that it will draw its contributions from Italy's greatest. Let us hope that *Pegaso* will continue in its healthiness and vitality and give to Italy a magazine most representative of its geniuses and men of letters.

With regret must we note that with the passing of Luciano Zúccoli (pseudonym of Count d'Inglubeim) and Marco Praga, Italy lost in the former a favorite novelist and in the latter a dramatist and critic of the first order. Zúccoli, who enjoyed in his lifetime universal renown, was especially familiar to the English public through his novel, *Things Greater Than He*. Zúccoli attained fame and success in Italian letters for having created a genre suited to his own northern Italian aristocracy, namely, the urban novel with its love theme and its psychological studies of women and children. Marco Praga died in January, 1929. Though not of universal fame, he was considered by many the dean of Italian dramatic critics (he wrote on the drama for *L'illustrazione*), and famous for his theatrical year book, *Cronache Teatrali* (Milan), much consulted by professionals and nonprofessionals.

Another notable event of 1929 was the official inauguration of the Royal Italian Academy, a national institution to function as arbiter in literary matters and in general to enhance the arts and sciences. Pirandello, Panzini, and Marinetti, the Futurist, were among the notables inducted into the Academy.

**FICTION.** The public favored the younger writers during 1929, notwithstanding the usual amount of interest shown the older and more renowned. Comisso, Cinelli, Moravia, Campanile, all in their twenties, or at most slightly over their thirties, contributed novels and prize novels of varied and sweeping subjects. First in order, we have *Gli indifferenti* (*The Indifferent*, Milan), the most successful and most commented-upon novel of the year of the 22-year-old Alberto Moravia. In a plot covering a period of three days, the author has contributed four masterful characterizations in a group that makes up a family of the upper Roman bourgeoisie: a mother conscious of nothing except the gratification of her middle-aged sensuality; a daughter who merely for a change of life hurls herself into deliberate relations with her mother's lover, without ability or inclination to analyze her act; a son, desiring aimlessly to be strong, superior, and motivated by what conventionality would require of persons under difficult circumstances, collapses miserably for all the idealism and morality he affects; then, the lover, representative of a class of "methodic libertines," contributes to the general delinquency and weakness of the family.

All four characters are *indifferent* to any sense of goodness or justice, and the novel, though appealing to be strictly amoral, suggests a strong necessity for morality if the status of our modern social system is not to suffer impairment or decomposition. Though most critics were favorable to the novel, opinions differed as to the ultimate evaluation of the work. Several scathing accusations were launched against the young writer for the use of an "old technique" to arouse interest when portraying several lewd scenes

with shocking realism. The book has withstood its adverse criticism. Adriano Tilgher, one of the ablest and keenest of Italian critics, proclaimed the youthful Moravia as the "new novelist" and his creation the "new novel" on the Italian literary horizon.

The Mondadori Academy Prize went to Delino Cinelli for his *Castiglion che Dio sol sa* (Milan), a novel bringing to mind Edna Ferber's charming *So Big*. This last creation of Cinelli has a bucolic background in which mother earth plays the principal part. Here is the gist of a critical judgment passed on the book (see *Italia che scrive*, April, 1929): "There is in this novel a sentiment for the soil altogether primitive, a soil against which men seem to be helpless creatures destined to play secondary rôles—slaves all attached to it by a chain of hatred and love, of work and of hope." In short, the novel portrays man in his attempt to master the soil, but for all he can do, he emerges from the unequal struggle crushed by his insignificance. This novel, with exception made to several lengthy and tiring episodes, rises to beauty by virtue of its note of sincerity and simplicity.

Giovanni Comisso received the Bagutta Prize for his novel, *Gente di mare* (*Seafaring People*, Milan, Treves), containing no specific plot other than a sequel of sketches of sea voyages of two brothers along the Adriatic shores. As a rest from the intellectual or novel à thèse, this book should meet much favor, especially for its colorful picturizations of strong hearts battling heavy seas, quaint Dalmatian ports, exotic Croatsians, contraband, and dashing episodes.

*Giovannotti non esageriamo! c'è sia detto anche alle ragazze* (*Young Men, No Exaggeration! And This Goes for the Ladies Too!*, Milan), by Achille Campanile, was selected as one of the best novels of 1929 in competition for the Thirty Publishers' Prize. Not coming under any category or technique of novel writing, the book is essentially one of humor, containing a series of topsyturvy adventures of two friends who fall frequently into amazingly funny situations. Barring several coarse and objectionable episodes, the book is refreshing for its genuine fun mixed with subtle satire on some stupid conventionalities of the Italian social order.

It is a pleasure to note that Bianca de Mai, who won a prize in 1928 for her novel, *Pay the Penalty in Silence*, had a worthy successor in the authoress Gabriella Neri, whose novel, *Diana e il Fauno* (Florence), though not receiving a prize, was up for consideration and adjudged one of the best of the year 1929. It deals with the difficulties facing the woman of today who aspires for intellectual freedom. The author has succeeded, in spite of a slightly overworked sex theme, in contributing lucid pages on the psychology of the young woman of today.

In contrast with the above-mentioned youthful authors, we have Massimo Bontempelli of the older generation, who gained the 1929 Thirty Publishers' Prize for his *Il figlio di due madri* (*A Son of Two Mothers*, Rome), pronounced by the committee as the best novel of the year. Bontempelli abandoned his technique of satire and fantasy and contributed in this novel a serious study on maternal love, which his art has set up for universal admiration. The plot revolves about two mothers claiming the same son. The prose is couched in the usual bizarre style characteristic of Bontempelli.

Looking obliquely over the field of novel production, we have, first of all, Luciano Zecchi's ante-mortem novel, *Lo scandolo delle Baccante* (Milan), dealing with a plot laid in ancient Rome. His description of the Dionysian Festivals in the Forest Stimula are of particular interest by way of historical information. Riccardo Bacchelli contributed a strange novel in *La città degli amanti* (*The Lovers' City*, Milan). This novel, too, was put up for consideration of the Publishers' Prize. Briefly, it is a story about a fabulously rich American who founds in Texas a colony on ultra-liberal principles. At bottom, it is a satire on the morals of the Latins in contrast with that of the Puritans.

For those who like reading about élite life and fashionable people, there is Carlo Linati's *La principessa delle stelle* (Milan), written in brilliant style in contrast to a trivial plot. Margherita Sarfatti, known throughout the world for her biography of Benito Mussolini, *Dux*, published *Il Palazzo* (Milan) describing the activities of a noble Italian family in the last 15 years. The plot, spun on love, tragedy, and war, contains a historical survey of pre- and post-Fascist Italy. Speaking of historical novels, one cannot omit the two volumes of *La terza Roma* of the historian Guglielmo Ferrero, to which he is to add a third volume. This novel is available in an English translation *The Seven Vices* (New York). The famous historian has used the medium of the novel to express his historico-political ideas. Lastly, we have two war novels, *La guerra è bella ma scomoda* (*War is Beautiful but Uncomfortable*) and *Le scarpe al sole* (Milan). Both are humorous, detached from the element of tragedy, and profusely illustrated in pen-and-ink sketches. For studies on the foregoing authors, see Camillo Pellizzi's *Le lettere italiane del nostro secolo*, discussed below under *Critica*.

The output of short stories outweighed that of the novel in quantity and perhaps in quality. Chiesa, Deledda, Borgese, Peiri, Milanese, Brocchi, and Negri are among the names that head the list. Chiesa who, let us recall, won the 1928 Mondadori Academy Prize for his novel *Villadorna*, presented in 1929 a volume, *Stories from My Garden* (*Racconti del mio orto*, Milan), 27 sketches in which there is a reflection of much of the author's good nature portrayed in the protagonist, a 50-year-old retired clerk who cultivates his garden and bears with stoicism the domineering attitude of his daughter. Grazia Deledda published a collection of stories for children, *Nell'azzurro* (Milan). They are stories written in Deledda's youth, though meant for children, they found many a reader among the grown-ups. Francesco Peiri, aside from his collection of *Calabrese Sketches*, contributed *Una notte d'amore* (Milan), 26 short stories written in the regional vein—romantic tales with a thin spread of sentimentality and realism. With the exception of a few stories on hackneyed themes, the book, as a whole, offers characterizations of excellent types.

Guido Milanese, whose prose is, as a rule, so delicately worked out that it reads like poetry, gave two volumes, *Asteris* (revised and augmented from a previous edition) and *Fiamme di Ara* (Milan), stories of war, of marine officers, and patriotic episodes extolling Italy and Fascism. Virgilio Brocchi digressed from the novel of the "eternal triangle" and wrote *La giostra delle illusioni* (*Trickery of Illusions*; Milan),

seven stories of which four are devoted to optimism (*Le Serene*) and three to pessimism bordering on tragedy (*Le Torbide*). *Le Torbide* deals with the story of a disconsolate man who is betrayed by his wife and best friend Ada Negri's contribution *Sorelle* (*Sisters*, Milan), might be called episodes of her own life, reflective of the personality of the author, who, through patience and suffering, rose to dignity. The paradoxical *Rosso di San Secondo* contributed some enigmatic and diabolical tales with a setting in Berlin, *C'era il diavolo, o non c'era?* (*Was the Devil There or Not?*, Milan). Giuseppe Borgese added to the richness of the short story output with his *Il sole non è tramontato* (*The Sun Has Not Yet Set*, Milan), a series of impressionistic sketches couched in a laconic style and intense colors.

**THEATRE** The difficulties in theatrical production continued through 1929 in Italy, and the season saw several famous stock companies (Niccodemi, etc.) dissolve. One redeeming feature, however, came about with an organization sponsored by Fascismo and directed by Gioacchino Forzano, of the "Carro di Tespi," composed of an auto-bus for the "strolling players" and a trailer for equipment and scenery. This "Theatopian Car" is destined to travel throughout Italy, with the especial purpose of presenting good plays in the rural towns. It may be said that no outstanding play arose on the theatrical horizon. At best, the season was enlivened by plays of authors of distinction, such as Pirandello, Corradini, Bontempelli, Benelli, etc. Pirandello's *Liùli* (Florence) was revived and met success, together with *Lazarus*, a new play by the author, first played in Berlin and London. *Lazarus* is a slight deviation from his "real and unreal" type of play—it is the story of a man who comes back to life to tell us that there is no after life.

Luigi Chiarelli, too, has in *K 41* a somewhat different sort of play from his usual "grotesques." It is a submarine drama dedicated to Italian sailors. Luigi Antonelli met success with his caricature *Darci la mia vita* (*I'd Give My Life*; see *Comedies*, December, 1929, for the first printing of the play). Sabastino Lopez's *La signora Rosa* continued to be a "hit" in all the towns played in Italy. It is a play spun on the frailties of reality, heart-beats, and intricate emotions. Enrico Corradini, playwright and ultra-nationalist, saw two successful revivals in his *L'apologo delle due sorelle*, a drama suggesting a fairy atmosphere in a sketch on the morality of two sisters, in his *Carlotta Corday*, we have, as the title suggests, a play revolving about Maïut and the French Revolution.

Defino Cinelli dramatized successfully his novel, *La trappola* (*The Trap*), a drama with a rustic background in which the principals are two provincials and a city girl. Massimo Bontempelli apparently is making a specialty these days of the mother-love-and-child theme, he contributed as his 1929 play, *La guardia alla luna*. The distinguished actor, Ruggiero Ruggeri, played in a number of stock dramas, among which was the *drame à thèse*, *La nouvelle idole*, by Currel. Plays by Dario Niccodemi, Luigi Antonelli, and Guglielmo Zorzi were especially successful in Paris in 1929, and among leading foreign dramatists whose plays were then represented in Italy, we have Sarment, Boudet, Valentine, Birabeau, Ibsen, and Chekov. For studies on the drama, see below, *Critica*.

**POETRY.** Though the season was fruitful of several volumes of beautiful poetry, we note that it has not flourished in particular. Summed up, 1929 was a slack year. Ettore Cozzani's *Il poema del mare* (Milan), poetry on the *mare-nostrum* theme, shows total lack of introspective or personal matter; it is purely descriptive. *Poesie*, by Nibilla Aleramo (Milan), in contrast to the above-mentioned poem, is altogether personal; it is, in fact, the reflections of a woman susceptible to love, to beauty, to varied emotions. Umberto Saba, a Triestian, contributed refreshing and monotonous poems in *Preludio e Fughe* (Trieste). Titta Rosi's *Le feste delle stagioni* (Milan), impressions of the seasons, is also readable poetry. In *Il piccolo Orfeo*, Angelo Silvio Novaro has detached his poetry from any element of complexity and succeeded in imparting to it a note of serenity. For humorous poetry, we have Trilussa's *Libro No 9* (Milan), poems in Roman dialect; his realistic patter is especially provocative of laughter. For a study on the poets, see books by Pellizzi and Mignosi mentioned below.

**CRITICA—VARIA.** Because of the enormity of material in criticism published in 1929, we give but a brief survey, with mention only of the most significant studies. First of all, we have Camillo Pellicani's *Le lettere italiane del nostro secolo* (Milan), a survey of contemporary Italian literature commendable for many pages of lucid evaluations and especially helpful for its exhaustive bibliographical notes on the various authors. The usefulness of the text outweighs by far its objectionable bulkiness and some loose arrangement of subject matter. Giovanni Papini contributed two books in religious motif, *Gli operai della lingua* (Florence), with chapters on Petrarch, Michelangelo, St. Francis of Assisi, Jacopone da Todi, etc., and *St. Augustine*, a timely commemoration for the fifteenth centenary of the great African. In this beautiful study of the life of the saint, Papini gives out his views, and for those who might believe his conversion insincere, he unleashes some biting remarks in self-justification. Among the 1929 studies made on Dante, we had Francesco Ercole's two volumes on Dante's political ideas, *Il pensiero politico di Dante* (Milan). Karl Vossler's study on Dante was translated into English by W. C. Lawton, with the title of *Dante as a Contemporary* (New York). Professor Melville Best Anderson spent 23 years in Italy in translating Dante's *Divine Comedy* in English terza rima. It has been prepared in a special edition of four volumes (the first an essay on Dante) in white vellum (San Francisco). Humanism and the Cinquecento were studied in two separate volumes by Giuseppe Toffanin, *Il Cinquecento* (Milan) and *Che cosa fu l'Umanesimo* (Florence). Of the illustrated biographies of the great personalities of Italy, which had been arranged in the series *Italia gente delle molte vite* (Milan), more than a half-dozen were completed during 1929. Biographies of Dante, Leopardi, Mazzini, Savanorola, Columbus, Monti, Alfieri, and Parini are now available in the series.

In *Il tramonto del grande attore*, Silvio D'Amico, dramatic critic, made a study of all the rapidly disappearing great actors of the last generation, and deplored the fact that the great European actors of yesterday have apparently no worthy successors. Antonio Guglielmo Biagaglia speaks on the problems of the theatre, past and present, in *Del teatro teatrale ossia del teatro*

(illus. ed., Tib., Rome). Pietro Mignosi compiled a book on *La poesia di questo secolo* (Palermo), a rather complete list of poets, together with press criticisms and complete bibliographies. Lucio D'Ambra published the third volume of his *Il ritorno a fil d'acqua* (*Thirty Years of Literary Life*; Milan), a series of intimate sketches on the literary men of Italy and of Europe. Withal, it contains much entertaining information and many ideas. Adriano Tilgher made a historical study of Work from the ancient to the present time, and defined it as to the attitudes of Greeks, Hebrews, Romans, Christians, Fascists, Soviets, etc. For a sweeping survey of Italian culture in the past quarter-century, Giuseppe Prezzolini's *La cultura italiana* (Milan) is especially commendable for its vast information on literary, social, religious, and other topics in general in a revised and augmented edition.

Two volumes of history appeared last season and are now available in English translation—Croce's *A History of Italy, 1871-1915* (New York), which gives liberal treatment as regards the political views, and Luigi Villari's *Italy* (New York), which takes up where Croce left off and interprets Fascism favorably in terms of nationalism. There is available in English also *Italian Painting* (Toronto), interpreting the big movements in art. The authors, P. G. Konody and R. H. Wilenski, in addition to colored illustrations, have added black-and-white reproductions. The *Enciclopedia Italiana*, published under the auspices of the Istituto Treccani, appeared in quarterly volumes in 1929. The work is admirably gotten up with 1,000 plates and colored plates (see frontispiece, Vol. 1). The editorship is under the direction of Giovanni Gentile and Tuminelli. This encyclopedia, by virtue of its organization, the standing of its contributors, and the quality of its contributions, promises to be one of the best. It will be completed by 1937, appearing at the rate of one volume quarterly. It is bound in handsome morocco.

#### See also PHILOLOGICAL, MODERN

**ITALIAN SOMALILAND**, so-ma'le'länd. An Italian colony extending along the east coast of Africa from British Somaliland on the northeast to Kenya on the southwest, and bounded on the north by Abyssinia. Area, approximately 190,000 square miles, population, about 1,200,000, including approximately 1000 Italians. Mogadiscio, with a population of about 25,000, is the capital.

The colony is divided into Southern Somalia, formerly called Benadir, and Northern Somalia, which latter in turn is divided into (1) the territory of the Mijerta, extending from Bender Ziade on the Gulf of Aden to Cape Gabà on the Indian Ocean, (2) the territory of the Nogal, from Cape Gabà to Cape Garad, (3) the territory of Obbia, from Cape Garad to the northern boundary of Southern Somalia. Cattle raising and agriculture are the principal occupations of the inhabitants. In Southern Somalia, there are Italian plantations with a cultivated area of about 70,000 acres. Exports in 1927 amounted to 25,300,950 and imports to 156,246,673, lire. The chief exports are gum, oil, sesame, indur, butter, cotton and cottonseed oil, resin, kapok, and ivory, the chief imports, sugar, cotton textiles, rice, tea, coffee, iron, machinery, and timber. Revenues for 1928-29 were estimated at a total of 70,255,250 lire, including 21,240,000 of revenue proper from the colony and a state contribution of 55,015,250.

Expenditures for the year totaled 76,255,250 lire, including civil expenditure, 42,077,150, military, 30,579,100; and extraordinary expenditure, 3,599,000 Governor in 1929, De Guido Corni, appointed in 1928

**ITALY.** A constitutional monarchy of southern Europe, comprising, besides Italy proper, the islands of Sardinia, Sicily, Elba, and some 70 other small islands, together with the territory on the eastern shore of the Adriatic acquired as a result of the Treaty of St. Germain, and arrangement with Yugoslavia in 1920. Capital, Rome. Reigning King in 1929, Victor Emanuel III.

**AREA AND POPULATION** The area of Italy before the War was 110,632 square miles, with a total population on Jan. 1, 1915, of 36,120,118. The area as a result of the survey made at the time of the census of 1921 is 119,710 square miles and the population according to that census, 38,750,433, estimated in 1928 at 40,796,000. During the period 1924 to 1928, births averaged 1,105,628 annually, or 27.4 per 1000 inhabitants, and deaths averaged 657,526, or 16.3 per 1000. In 1927 numbered 228,052, of whom 1,000,000 were born in Italy, 100,000 in countries adjacent to European and Mediterranean countries and 130,094 to transoceanic countries. Of 140,025 Italians returning to Italy (1927), 73,424 came from transoceanic countries. Cities with an estimated population of more than 175,000 on June 30, 1928, included Bologna, 240,020, Catania, 289,644, Florence, 277,688, Genoa, 624,659, Messina, 203,609, Milan, 941,070, Naples, 960,423, Palermo, 444,861; Rome, 877,289, Turin, 570,173, Trieste, 252,517, Venice, 253,608.

**EDUCATION** In 1926-27 there were 3,690,698 pupils enrolled in 32,954 public elementary schools, 140,841 pupils in 2466 private elementary schools, and 607,391 in 7076 infant schools. The secondary schools, including technical, scientific, and normal schools, totaled 1024 government schools with 181,060 students, and 611 private schools with 40,497 students. In the same year there were 25 universities with a total of 37,175 students. There were, in addition, several institutions of university rank, namely, the Institute of Higher Education at Florence, the Royal Scientific and Literary Academy at Milan, and the Higher Technical Institute of Milan. There are higher institutions for commercial education in Rome and other cities, also higher schools for agriculture and engineering.

**PRODUCTION** More than 50 per cent of the population of Italy derived its livelihood directly or indirectly from agriculture in 1929, despite rapid gains made by Italian industry, and the economic conditions of the country was closely linked with the success or failure of the crops. The Government in 1925 initiated a far-reaching programme for the improvement of agriculture, and particularly to increase the cereal production of the country, which included the reclamation of vast areas of waste, marsh, and malarial lands. In 1928 the Government made particular efforts to restrict the movement of the rural population to the cities. Mussolini's so-called "battle of grain," intended to reduce annual wheat imports amounting to one-third the total consumption, resulted in an increase in production from an average of 50,000,000 quintals to 70,000,000 quintals in 1929. About 42 per cent of the total area of Italy, or 32,148,000 acres, were under crops in 1927; 17,232,000 acres were permanent

meadow and pasture; 5,541,000 acres in orchards and vineyards; 12,279,000 acres in woods and forests, 3,091,000 acres were uncultivated productive land; and the remainder was unproductive land. Adverse weather conditions resulted in only fairly successful crops in 1928, but the cereal crops exceeded the 1927 production. In 1929 the crops were generally more than usually successful. The largest wheat crop yet recorded caused imports to be cut to a new low level.

Silk cocoon production increased from 108,951,000 pounds in 1924 to 115,718,000 pounds in 1928. Livestock in the country in 1926 included 7,400,000 cattle, 12,350,000 sheep, 3,082,000 goats, 1,050,000 horses, 1,500,000 mules and asses, and 2,339,000 swine (1923).

#### ITALIAN CROPS AREA AND PRODUCTION

Crop	Area <sup>a</sup>		Production <sup>b</sup>	
	1927	1928	1927	1928
Wheat	12,296	12,264	195,808	228,596

Hemp production in 1929 was estimated at 176,368,000 pounds, or a decrease of about 7 per cent from the 189,022,000 pounds produced in 1928.

The unfavorable conditions confronting most Italian industries early in 1928 improved during the year, the process of amalgamation and concentration of industry continued under government encouragement and there was a wide introduction of improved technical facilities and new methods of production and distribution. Improved conditions in practically all branches of industry continued during the first half of 1929, after which a general slackness became evident. Preliminary indications were, however, that production in most lines would exceed the 1928 totals. Scarcity of liquid funds and the high point at which the lira was stabilized were believed primarily responsible for the slump toward the end of 1929. Conditions in mining industry were unsatisfactory during 1928, there being a decrease of 12 per cent in the output of iron pyrites, and declines in the production of zinc ore and aluminum. Mineral and metal production in metric tons in 1928, with the figures for 1927 in parentheses, was as follows: Iron ore, 609,325 (503,290), lead ore, 55,828 (55,445), zinc ore, 181,309 (222,085), iron pyrites, 552,430 (625,338), lignite, 712,920 (912,458), sulphur, crude and ground, 327,500 (329,580), asphalt, rock and crude bitumen, 320,000 (356,154), salt, marine, 490,299 (685,970), aluminum, 2350 (2544), lead, 21,200 (23,744); pig iron, 489,000 (489,161), steel ingots and castings, 1,909,800 (1,595,770). Total value of mineral production in 1927, 607,894,000 lire (\$31,372,000). The output of the textile mills was generally higher in 1928, the output of raw silk amounting to 11,554,000 pounds (11,045,000 in 1927), of rayon, 55,015,000 pounds (48,000,000 pounds in 1927),

of cotton yarn, 444,017,000 pounds, (404,844,000 pounds in 1927). The number of persons unemployed at the end of 1928 totaled 363,551, as compared with 414,283 at the end of 1927. Unemployment conditions at the close of 1929 were practically the same as at the end of 1928. The Government's great public-works programme undoubtedly prevented much unemployment which would otherwise have resulted from the slackening of industry. At the industrial census of 1927, there were 731,885 industrial establishments employing 4,002,931 employees.

COMMERCE Italy's imports in 1928 totaled \$1,159,000,000, as compared with \$1,051,000,000 in 1927, or an increase of 10 per cent, while exports declined 5 per cent from \$807,000,000 in 1927 to \$764,000,000. The stabilization of the lira and currency revaluation reacted unfavorably on Italian trade, favoring imports at the expense of domestic products and impairing the price position of Italian merchandise on world markets. Italian manufacturers were obliged to reduce their export prices as a result of the higher exchange value of the lira. The situation improved toward the end of the year and in 1929 Italy's foreign-trade position became noticeably better, with imports declining and exports expanding. The bulk of the imports in 1928 consisted of raw materials, the leading commodities being wheat, cotton, coal, lumber, wool, petroleum products, metals, and machinery. There were decreases in imports of coal, oats, meats, tin, and linseed. Cotton fabrics, cheese, silk and rayon fabrics, wool fabrics, raw silk, and felt hats were exported in increased quantities but other stable exports, such as olive oil, oranges, hemp, rice, lemons, wine, and automobiles, registered decreases.

As in former years, the United States was the chief source of imports, furnishing 18.2 per cent of the total, as compared to 10 per cent by Germany, 9.3 per cent by France, and 8.1 per cent by the United Kingdom. In the same year, Germany took 29.8 per cent of the domestic exports (14.3 per cent in 1927), while the United States took 10.5 per cent, France 9.4 per cent, and the United Kingdom, 1.2 per cent. Exports to the United States in 1929 totaled \$118,147,000, or 15 per cent more than in 1928.

In 1928 expenditures by tourists in Italy were estimated at about 36 per cent of the total unfavorable visible trade balance of 7,513,000,000 lire. According to Professor Angelo Maiorini, director of the National Institute of Tourist Industry, tourist expenditures in 1928 amounted to 2,700,000,000 lire, as compared with 2,500,000,000 in 1927, 3,100,000,000 in 1926, and 3,600,000 in 1925.

FINANCE Budget estimates for the fiscal year ending June 30, 1929, placed receipts at 17,043,000,000 lire and expenditures at 17,474,000,000 lire. The actual result of the year's operations was a surplus of 555,000,000 lire and with a still larger surplus in prospect for 1929-30, the Cabinet on July 25, 1929, approved a comprehensive programme for the reduction of indirect taxes, including a 50 per cent reduction in the sales tax and the abolition of numerous minor taxes. The reductions were expected to diminish revenues by 500,000,000 lire annually. It was announced that the Cabinet measures obliged the local governments to reduce their tax totals from 5 to 10 per cent by the end of the calendar year 1930. For 1929-30 the receipts were esti-

mated by the Minister of Finance at 18,500,000,000 lire and the expenditures, at 18,280,000,000 lire. During the first half of the year, receipts fell below the budget estimates, due primarily to decreased customs receipts from duties on wheat.

The Council of Ministers on Dec. 19, 1929, approved the budget for 1930-31 amounting to 19,348,846,399 lire, an increase of 777,923,000 lire over the final expenditure budget for 1929-30. The increases were chiefly due to higher salaries for government employees and for construction projects of the Ministry of Marine. The Government in 1929 reiterated its policies of no loans, no increase in taxation, and no change in the stabilization point. The only private loan during the year was a \$5,000,000 loan contracted in January for industrial purposes. During the years 1925 to 1928, Italian borrowings abroad amounted to 7,117,800,000 lire, of which 3,040,000,000 lire was contracted by the State and municipal governments and 754,300,000 lire, by public-utility companies, the remainder being obtained for private enterprises. Foreign loans in 1928 totaled 812,200,000 lire, as compared with 2,932,700,000 lire in 1927. In November, 1929, Minister of Finance Mosconi announced that 7,640,000,000 lire (about \$402,864,000) in treasury bonds would fall due between November, 1931, and November, 1934, and that the Treasury was making provision for giving the bond holders the choice of repayment in cash or conversion into other redeemable bonds. The transaction would be handled without a foreign loan, it was indicated.

Besides the war debts to the United States (calculated at \$2,042,000,000 in 1925) and Great Britain (calculated at £600,000,000 in 1925) and a loan of \$100,000,000 contracted in 1925, the public debt on Dec. 31, 1928, consisted of 84,719,000,000 lire of internal interest-bearing debt and 2,287,000,000 lire of noninterest-bearing debt (paper money). The total internal debt amounted to 87,006,000,000 lire on Dec. 31, 1928, and to 83,675,000,000 on the same date in 1927. The lira was stabilized in 1927 at \$0.0526. Note circulation at the end of 1928 consisted of 17,295,400,000 lire of notes issued by the Bank of Italy and 101,000,000 lire of State notes.

COMMUNICATIONS Of the 13,072 miles of railway line in Italy in 1928, 10,358 miles were owned and operated by the government and 3314 miles, mostly relatively unimportant local lines,

#### ITALIAN STATE RAILWAY STATISTICS

Item	1927	1928
Length of line	10,303	10,358
Locomotives	6,872	6,813
Passenger cars	9,031	8,842
Freight cars*	157,647	153,871
Passenger train miles	50,876	51,721
Freight train miles	38,839	34,392
Passengers carried	115,726	112,238
Freight carried* 1000 metric tons	56,174	63,111
Ton miles*	7,696	7,277
Gross receipts* 1,000,000 lire	4,914	4,601

Conversion at average exchange rates in 1927, at par in 1928

were owned and operated by private companies. Statistics for the government-owned lines in 1927 and 1928 are shown on page 415.

Plans for the electrification of 4000 miles of the state lines were adopted by the government. In 1929 announcement was made that the government would construct a railway tunnel under the Stelvio Pass at the junction of the Swiss, Italian, and Austrian frontiers. The Stelvio tunnel, was to be more than 11 miles long and was expected to be completed in 1931. As the new route would bring Munich 125 miles nearer to the port of Genoa than to Hamburg and would be shorter by 75 miles than the St. Gothard tunnel route between Milan and Munich, the announcement caused considerable concern in Swiss Federal and commercial circles. The report covering the operation of the state railways in 1928-29 showed a net profit of 97,000,000 lire (\$5,100,000), and a capital expenditure of 470,000,000 lire (\$24,730,000). The length of electrified lines was placed at 1073 miles.

In 1928 the length of first-class national highways in Italy was estimated to be 12,420 miles, that of provincial roads, 24,840 miles, and that of the secondary and communal roads, 55,890 miles, in addition to 2173 miles of roads formerly used for military purposes. In the same year, 4036 miles of new roads were under construction, of which 3105 miles were situated in Southern Italy. Planes of the Italian commercial air lines flew 1,237,650 miles during the year and carried 15,629 passengers, 40,044 pounds of mail, and 502,762 pounds of baggage and goods.

On June 30, 1928, the merchant marine consisted of 1429 vessels of 100 tons and over with a gross tonnage of 2,428,817, of which all but 80,085 tons were power driven. Vessels entering Italian ports in 1928 numbered 14,233 of 21,142,000 net registered tons, while those clearing numbered 13,697, of 20,637,000 net registered tons. The telegraph system and part of the telephone line are government owned. On June 30, 1927, there were 125,362 miles of telegraph wire and 715,000 miles of telephone wire (both State and privately owned).

**ARMY AND NAVY** Liability to military service beginning at the age of twenty and lasting for 19 years is compulsory and universal. The strength of the active army in 1927 was 17,684 officers and 283,200 men. See **MILITARY PROGRESS**.

The Italian Royal Air Force, constituted in 1925 as a separate force under the Ministry of Aviation, had 1800 aeroplanes and a personnel of 25,000 in all ranks in 1928. The expenditure for the fiscal year 1928-29 was estimated at 700,000,000 lire.

The accompanying table from the *Statesman's Year Book* for 1929 shows the classification of the navy in 1927 and 1928.

	Completed at end of	
	1927	1928
Battleships	5	5
Armored cruisers	3	3
Light cruisers	9	9
Fleet leaders and destroyers	73	75
Torpedo boats	55	52
Submarines	45	45

**GOVERNMENT** The Italian constitution, still nominally in force, provided that the King shall exercise the executive power through a responsible ministry and that legislative power shall

rest conjointly in the King and a Parliament of two chambers. The Grand Council of Fascism is the supreme body which "controls all the activities of the régime," under a law promulgated in December, 1928. It "designates" the deputies for the lower chamber and "must give its opinion on all bills dealing with constitutional issues." Its members fall into three categories: (1) Life members, including the head of the Government (Mussolini); the "Quadrumvirate" who led the Fascist march on Rome, ex-ministers who have held office in the Fascist cabinet for at least five years, and those who have acted as secretaries-general of the Fascist party since the march on Rome. (2) *Ex-officio* members. The President of the Senate, the Speaker of the Corporative Chamber, the Cabinet Ministers, the Prime Minister's Under-Secretary, the Under-Secretaries of the Foreign Office, the Home Office, and the Ministry of Labor, the members of the Central Executive of the Fascist party, the two presidents of the National Organizations for Industry and Agriculture and the president of the Trade Unions, and five other high officials. (3) Extraordinary members, i.e., "men who have deserved well of the national cause and the Fascist Revolution, or are experts on the questions under discussion in the Grand Council." There are 35 persons in the first two categories and an unlimited number in the third. All members of the third category and all of the second, except the president of the Senate and the Speaker of the Corporative Chamber, are designated by the head of the Government. By the law of May 17, 1928, the electoral system was radically altered. The franchise was granted to men 21 years and over and also to men aged 18 years and over, if married or widowers with sons, who pay a syndicate rate, or taxes to the amount of 100 lire, or who receive a salary or pension from any public institution. Candidates for the Chamber of Deputies, which has a membership of 400, must be at least 25 years of age and must meet certain other requirements. Candidates are proposed by the National Syndicate Confederation, by certain judicial persons, and by associations of a national character. From these lists of candidates the Grand Fascist Council selects 400 names to be included in the roll proposed to the electors. If the proposed roll is not approved by the electors, new elections must be held at least one month later, this time by the majority system and in accordance with the principle of proportional representation, formerly in use. The King has power to dissolve the lower house at any time.

The Senate on Jan. 1, 1928, was composed of 374 senators and 11 members of the royal family. Under the Constitution the senators are appointed for life by the King on the proposal of the cabinet. Their number is not limited. The King in 1929 was Victor Emmanuel III, born Nov. 11, 1869, who succeeded his father, Humbert I, July 29, 1900. The cabinet, at the beginning of 1929, was composed as follows: Head of the Government, Prime Minister, Secretary of State, and Minister of Foreign Affairs, Interior, War, Marine, Aeronautics, Colonies, and Corporations, Benito Mussolini; Minister of Justice, Alfredo Rocco; Finance, Antonio Mosconi; Public Instruction, Giuseppe Belluzzo; Public Works, Giovanni Giuniati; National Economy, Alessandro Martelli; Communications, Conte di Cortellazzo.

# EXCHANGING RATIFICATIONS OF THE TREATY BETWEEN ITALY AND THE VATICAN

LEFT TO RIGHT IN CENTRE: PRIME MINISTER MUSOLINI, FRANCESCO PAVINI, GENERAL COUNCILOR OF THE VATICAN, AND CARDINAL GASPARRI

## HISTORY

Settlement of the historic dispute between the Italian state and the Vatican was the outstanding event in Italian history during 1929. Other significant developments of the year included the further organization of the Government along Fascist lines, the official action taken to modify Fascist activities in the United States following widespread protests in that country, the continuation and extension of the Fascist programme of internal development, and, in foreign affairs, the Italian demand for naval equality with France, or for a naval pact guaranteeing the security of the Mediterranean, in advance of the London Naval Conference.

**CHURCH AND STATE.** The treaty settling the sixty-year-old "Roman Question" was signed in the Lateran Palace on February 11 by Cardinal Gasparri, the Papal Secretary of State, and Premier Mussolini. The settlement consisted of three documents: (1) a treaty disposing of the "Roman Question" through the creation of a sovereign papal state known as Vatican City, (2) a concordat regulating the conditions of religion and the church in Italy, and (3) a convention systematizing the financial relations between the Vatican and Italy arising out of the split between Church and State in 1870. For details of the new papal state, see VATICAN CITY. The treaty reaffirmed that Roman Catholicism was the only state religion in Italy, and stipulated that the Vatican was to remain extraneous to temporal competitions with other states unless the conflicting parties appealed to it for the settlement of disputes. Vatican City territory was to be considered neutral and inviolable, the Vatican recognized the Italian Kingdom under the dynasty of the House of Savoy, and Italy in turn recognized the state of Vatican City under the sovereignty of the Pope. Italy recognized marriage as a sacrament regulated by canon law in its relation to civil law. Cases concerning nullity and dissolution of marriages celebrated but not consummated were reserved to ecclesiastical courts. The Vatican agreed to the judgment of civil authorities on separations. Religious instruction in elementary and secondary schools was made compulsory.

Under the financial convention, the state agreed to pay the Vatican a cash sum of 750,000,000 lire and 1,000,000,000 lire in Italian state bonds bearing 5 per cent interest, as indemnity for the loss of temporal power in 1870. The Italian Council of Ministers approved a bill for the fulfillment of the treaty on March 13, the bill was ratified by Parliament in May, and was signed by King Victor Emmanuel on May 27. Vatican City came into existence June 10 with the exchange of ratifications.

The settlement was followed on July 25 by Pius XI's dramatic emergence from the Vatican, symbolizing the changed status of the Papacy. It was the first time a Pope had left the Vatican grounds in 59 years. See ROMAN CATHOLIC CHURCH. On December 5 the King and Queen of Italy paid an official visit to the Pope in Vatican City, thus recognizing the absolute sovereignty of the head of the Church within the Vatican domains. The settlement was greeted with manifestations of joy by the Italian populace and by the Roman Catholic press everywhere. It was generally believed to have added immeasurably to the strength of Fascism through enlisting the cooperation of the Church in Italy. This co-

operation was evidenced in the election of March, 1929, when the clergy advocated the acceptance of the list of candidates for the Chamber of Deputies presented by the Fascist Grand Council, and set an example for the population by going to the polls in large numbers.

The Fascists and the Vatican were not long in complete accord, however. In reviewing the settlement before the Chamber of Deputies in May, Premier Mussolini made a number of remarks which drew forth a spirited reply from the Pope. The formula of "a free church in a free state" did not accurately describe the new relationship, the Premier said.

"In this state the church is neither sovereign nor free," he declared. "Its sovereignty here would be a contradiction in terms, and it is not free because it is bound under the terms of the Concordat. The situation may be defined as a sovereign state within the Kingdom of Italy. The Catholic Church, with certain privileges is loyally and freely recognized and other cults are freely admitted."

The Pope took particular exception to Mussolini's remarks upon the subject of education.

"In this field, I am intractable," the Premier said. "Education must be ours. Our children must be educated in our religious faith, but we must round out this education and we need to give our youths a sense of virility and the power of conquest."

Speaking shortly afterward before the pupils of a Jesuit school, the Pope replied: "We never can agree to anything that compresses, decreases or denies the rights which nature and God gave the family and the Church in the field of education. On this point we will not say we are intractable, for intractability is not a virtue, but we are 'intransigent,' just as we could not help being intransigent if asked how much two and two make. Two and two make four. It is not our fault if they do not add to five or six or 40."

In an open letter addressed to Cardinal Gasparri and published in the official Vatican organ, *Osservatore Romano*, on June 5, the Pope took Mussolini further to task for his remarks upon the origin of the Church made before the Chamber of Deputies. He objected to the Premier's statement that the Catholic Church in Italy was in a sense subject to the State, criticized Mussolini's frequent references to the fact that the state had retained all its means of watching over the Church and its clergy, and disapproved of the Duce's contention that Italy must enjoy full liberty of conscience and full liberty of discussion. Referring to the Premier's statement that it was juridically impossible to oblige a Catholic to marry in the Church in preference to only a civil marriage ceremony, the Pope said: "The Church can and must do this with the means at its disposal."

On July 8, the day on which diplomatic relations between the Vatican and the Quirinal were fully established, the Government sequestered the Catholic publication *Monthly Life* on the ground that it "tended to draw Italian Catholic youth away from the legitimate authority of the Italian State and Italian institutions." This was followed by another spirited protest in *Osservatore Romano*. An announcement by Mussolini to the effect that 9000 watchers were maintaining surveillance over the activities of the clergy throughout Italy caused the Pope to assure Italian Catholics that he was also watching and that

they were to have "serene confidence and no alarm" On December 2, in a speech before the parish priests of Rome, Pius XI complained that Catholic newspapers were finding it increasingly difficult to discuss Catholic interests without being curbed by Fascist authorities At the same time, he severely arraigned the Fascist press for the manner in which it discussed subjects relating to the Church. Despite these evidences of friction, the King of Italy on November 11 for the first time since 1870 The new marriage regulations legalizing church marriages went into effect throughout the Kingdom on August 8 Later in the year, a law was passed legalizing marriages by non-Catholic religious authorities

**GOVERNMENTAL REORGANIZATION** The measures adopted in 1928 for the organization of the Government along Fascist lines (see above, under *Government*) were put into effect early in 1929 January 28 to February 17 was fixed by decree as the time within which the national confederations were to propose their candidates The first election under the new system was held March 24, when 8,650,000 voted "yes" and 136,000 "no" to the question "Do you approve the candidates designated by the National Grand Council of Fascism?" The 400 candidates were chosen from about 1000 names submitted by 32 Fascist organizations representing various branches of capital, labor, the universities, war veterans, government employees, etc The new Fascist parliament was opened by the King on April 20 Among the principal duties of the legislature, the King said, were the strengthening of the authority of the state, the reform of local finances and of the civil and criminal codes, and the promotion of public works On the eve of the inauguration of the new parliament, the *Official Gazette* printed a decree modifying the official Italian coat of arms, which henceforth was to bear the Fascist lictors and fasces side by side with the royal coat of arms of the House of Savoy The smooth working of the Fascist machine was shown when Minister of Public Works Giusti was elected president of the Chamber by 348 votes out of 350 and Signor Federzoni, former Minister of Colonies, was elected president of the Senate by 166 votes against 33 blanks and 5 null or scattered votes

Premier Mussolini, on September 12, relinquished seven of the nine Cabinet portfolios he had formerly held Of nine new ministers appointed, seven were chosen from among his under-secretaries Alessandro Martelli, Minister of National Economy, and Giuseppe Belluzzo, Minister of Public Instruction, were retired, and their respective posts were renamed the Ministry of Agriculture and Forests and the Ministry of Public Education The new Cabinet was as follows: Premier and Minister of Interior, Benito Mussolini; Foreign Minister, Dino Grandi; Colonies, General De Bono; War, General Pietro Gozzera; Marine, Rear Admiral Giuseppe Sibani; Aviation, General Italo Balbo; Public Works, Michele Bianchi; Corporations, Giuseppe Bottai; Agriculture and Forests, Giacomo Acerbo; Public Education, Balbino Giuliano; Justice and Cults, Alfredo Rocco; Finance, Antonio Mosconi; Communications, Conte di Cortellazzo

On September 14, the Premier announced further changes in the organization of the Fascist party which made it more than ever an organ

of the state. The secretary-general was to be appointed by royal decree on the nomination of the head of the government, and the federal secretaries by the head of the government on nomination of the secretary-general The membership of the Fascist Grand Council was reduced from 56 to about 20 for the purpose of promoting efficiency and secrecy The Grand Council remained divided into the three main categories described above, under *Government* Under the bill providing for the change, Senator De Vecchi, Italian Ambassador to the Holy See, General Italo Balbo, Minister of Aeronautics, General De Bono, Minister of Colonies, and Michele Bianchi, Minister of Public Works, became members of the Grand Council for life Reviewing the accomplishments of the Fascist party, the Premier said its relations with the Church were based on the Fascist principle of "all in the state, nothing outside of the state and nothing against the state" Admitting that Fascism was based on dictatorship, he said that its watch-words "authority, order, and justice" were fast replacing the democratic slogan of "liberty, equality, and fraternity"

**ITALO-AMERICAN RELATIONS** The long-standing issue of dual nationality again came to the fore as a source of friction between Italy and the United States in 1929, after Fascist activities in the United States had aroused public resentment and focused American attention upon Italy's refusal to recognize the American citizenship of naturalized Italians or of persons born in the United States of naturalized Italian parents A number of such persons who visited Italy were at various times forced to undergo military training On November 3, the Italian Embassy in Washington issued a statement to the effect that henceforth American-born children of Italian parents, American citizens of Italian birth, and even citizens of Italy residing in the United States, might return to Italy without fear of compulsory conscription in time of peace Nothing was said as to their liability for military service in time of war About the same time, the Fascist League of North America, announced its disbandment It was charged, however, that Fascist opposition to the naturalization of Italian immigrants continued, and that the suppression of anti-Fascist criticism in the United States was systematically attempted by "business boycott, social pressure, personal violence," and terrorization

**OTHER EVENTS** Italy's demand for naval equality with France as a preliminary to any agreement at the London Naval Conference in January, 1930, caused widespread fears for the success of the conference The Italian policy with regard to the limitation of armaments, as announced by Mussolini, was that Italy would accept any reduction, however sweeping, providing equality with France was guaranteed and other countries reduced their armaments proportionately. In September, Italy signed the optional clause of the World Court statute (see *WORLD COURT*)

Antagonism between Italy and Yugoslavia again approached the danger point in October during the trial in Pola, Italy, of five Italian subjects of Slav birth who were accused of having shot at a line of voters in Pismo about to cast their ballots in favor of the Fascist government. A number of persons were wounded, one mortally. The leader of the defendants was sentenced to death and each of the other four to 30 years' imprisonment. While there was no accusation

against the Yugoslav Government, the defendants were accused of being members of a Yugoslav terrorist organization.

Alleged Italian propaganda in Malta led to friction with the British authorities there, who imposed new press restrictions and penalties ranging up to three years' imprisonment upon those "who help the enemies of his Majesty in whatever way or against the Maltese government." See VATICAN CITY for the religious aspect of this dispute. The policy of forcible Italianization of the former Southern Tirol continued and on October 1 bilingualism was reported to have been officially terminated in that territory. The protests formerly directed against Italian policies in the Tirol from Austrian sources were stilled by the necessity of securing Italy's consent to an Austrian international loan. See AUSTRIA, under *History*.

Reports of the repression of anti-Fascists in Italy and of retaliations by Italian expatriates continued to receive an airing in the foreign press. Early in the summer, the slaying of the counselor of the Italian Legation in Luxemburg and the explosion of a bomb sent to the Italian Consulate caused a clamor in the Fascist press for drastic measures against the anti-Fascists by foreign governments and the League of Nations. Professor Umberto Cosmo of the University of Turin was reported to have been sent to an Italian penal colony for writing a letter thanking Senator Benedetto Croce for the latter's opposition to the Lateran Treaty and Concordat in the Senate. The imprisonment and deportation of Freemasons, in particular, seemed to have increased during the year. The Italian official news agency admitted on August 8 that three prominent anti-Fascists, former Deputy Emilio Lussu, Prof. Carlo Rosselli, and Francesco F. Nitti—had escaped after two years' political imprisonment on Lipari Island. In Paris, where they had given out harrowing accounts of their sufferings, the three men received word that members of their families in Italy had been imprisoned by way of retaliation. The Special Military Tribunal for the Defense of the State on September 29 condemned Cesare Rossi, former head of the Fascist Press Bureau, to 30 years' imprisonment for alleged incitement to armed revolution. Rossi, one of those charged with complicity in the death of Matteotti (see 1924 YEAR BOOK), was not convicted. He escaped abroad, where he wrote articles accusing Mussolini of responsibility for the death of the Socialist deputy. He was arrested when he returned secretly to Italy. In October, the loss from the Italian Embassy in Berlin of the secret code by which the Italian Government communicated with its Ambassador to Germany was reported to have resulted in the exile to one of the political penal colonies of the secretary held responsible for the loss and the summary removal of other officials of the embassy.

Italy pursued with success its policy of "integral and effective occupation of the Libyan territories," receiving on June 13 the submission of important insurgent chiefs of the Senussi Society in Cyrenaica. Early in December, Italian Sahara troops under the Duke of Apulia captured Bich in the heart of the Senati region of Libya. Further progress in stamping out the Mafia in Sicily was reported. For Italian policies in the Balkans and central Europe, see AUSTRIA, HUNGARY, RUMANIA, JUGOSLAVIA, BULGARIA, GREECE, and TURKEY, under *History*.

ITURBI, José. See MUSIC, under *Artists*.

IVORY COAST. A French colony, forming a constituent part of the government-general of French West Africa, situated between Liberia and the British Gold Coast Area, about 121,590 square miles, population, estimated in 1920 at 1,724,545, of whom 1614 were Europeans. Binger-ville is the capital and has a European population of about 98. The principal commercial products are cacao, mahogany, palm oil and kernels, dried and smoked fish, cotton, and rubber. The production of cacao is rapidly increasing and in 1928 it constituted 42 per cent of the total value of the colony's exports. Some gold has been found. Imports in 1928, according to provisional figures, amounted to 235,089,000 francs (exchanging at \$0.0392), as compared with 193,305,000 francs in 1927, and exports were valued at 253,052,000 francs, as compared with 235,467,000 francs in the previous year. The budget of the colony in 1928 was fixed at 55,525,000 francs. In 1927 1087 vessels of 3,060,600 tons entered and 1084 vessels of 3,057,638 tons cleared the ports. Lieutenant-Governor in 1929, M. Laplaud.

IZETT. See CHEMISTRY, INDUSTRIAL, under *New Alloys*.

JAIL OUTBREAKS. See CRIME.

JAMAICA. A colony of Great Britain, consisting of the island of Jamaica, which is the largest in the British West Indies, and the following dependencies: Turks and Caicos Islands, Cayman Islands, Morant Cays, and Pedro Cays. Area of Jamaica, 4450 square miles, of the dependencies, 224 square miles. Population of Jamaica, according to the census of 1921, 858,118, including 660,420 blacks, 157,223 colored; 14,476 whites, 18,610 East Indians, and 3696 Chinese, estimated population at the end of 1927, 953,768. The movement of population in 1927 was Births, 32,910, deaths, 20,015, marriages, 4412. Kingston, the capital, had a population of 62,707 at the census of 1921. In 1927 there were 670 public elementary schools, with 125,739 pupils enrolled and an average attendance of 76,990. In 1927-28 the area under cultivation was 1,157,586 acres, apportioned as follows under tillage, 277,240 acres, sugar-cane, 43,605 acres, coffee, 19,195, bananas, 88,974, coconuts, 39,070, cacao, 4782; ground provisions, 50,238, mixed cultivation, 20,767, guinea grass, 106,202; commons, 774,144. The livestock included 115,753 cattle, 5064 sheep, and 36,084 horses and mules. In 1927 the imports were valued at £6,001,768 and the exports at £4,257,750. The principal exports were coconuts, logwood, logwood extract, sugar, coffee, rum, cacao, ginger, cigars, pimentos, oranges, and copra, the chief imports, boots and shoes, motor cars, cotton goods, fish, rice, flour, and hardware. The only rail transportation on the island is the Jamaica Government Railway, with a length of 210 miles. Government revenue in 1927-28, £2,275,094, expenditure, £1,980,888, public debt, £4,922,330. Governor in 1929, Sir R. E. Stubbs (appointed in 1925).

JAN MAYEN. An island in the Arctic Ocean annexed by Norway by an act of Parliament on May 8, 1929. Lying between Svalbard (Spitzbergen) and Greenland, it was discovered by the Dutch in 1611 and for many years has been used as a base by Norwegian whalers. See NORWAY.

JAPAN. A Far Eastern empire, consisting of the five main islands of Honshu (mainland), Hokkaido, Kyushu, Shikoku, and Taiwan (Formosa), together with some 600 smaller islands.

and island groups, the peninsula of Korea, or Chosen, and Karafuto (the southern half of the island of Sakhalin) Capital, Tokyo; reigning sovereign in 1929, Emperor Hirohito.

**AREA AND POPULATION.** The area of the Japanese Empire and the population at the censuses of 1920 and 1925 are shown in the accompanying table.

JAPANESE EMPIRE—AREA AND POPULATION

	Area, square miles	Population, 1920 census	Population, 1925 census
Japan proper	147,327	55,963,058	59,736,822
Chosen (Korea)	85,228	17,264,119	19,522,945
Taiwan (Formosa)	13,840	3,655,308	3,993,408
Karafuto	13,934	105,899	203,754
Total	260,329	76,988,379	83,456,929

\* Including Pescadores

The figures show a population increase of 6,468,550 during the five-year period, 1920-25. In addition, Japan had a 99-year lease of Kwantung (including Port Arthur and Dairen in Southern Manchuria) with a population in 1928 of 837,219, and mandate territory in the South Seas with a population of 56,294 in 1925. The population of Japan proper at the census of Oct. 1, 1929, was 62,938,200. During the five years, 1923-27 inclusive, the average annual number of births in Japan proper was 2,058,610 and of deaths, 1,234,639, or an excess of births of 823,971 each year. In 1925 55.8 per cent of the total population resided in cities of over 5000 inhabitants. Japanese residents abroad in 1927 numbered 673,941. In 1926 there were 31,474 foreigners residing in Japan. The populations of the leading cities at the census of 1929 (figures for the 1925 census in parentheses) were Osaka, 2,408,800 (2,104,804), Tokyo, 2,294,600 (1,995,567), Nagoya, 904,700 (768,558), Kyoto, 755,200 (679,903), Kobe, 755,200 (644,212), Yokohama, 543,500 (405,888). The density of population per square mile for the entire Empire in 1925 was 320 and for Japan proper, 405.

**EDUCATION.** Attendance at the elementary school course is compulsory for all between the ages of 6 and 14 years. In the school year 1925-26, there were 9,188,500 in the elementary schools, 598,258 in the secondary schools, 1,051,437 in preparatory technical schools, 58,696 in special schools, 49,634 in normal schools, 231,693 in technical schools, and 64,606 in the six imperial universities and the 26 other institutions of university rank.

**PRODUCTION.** Despite the strides made by Japanese industry, the country was still primarily dependent upon agriculture in 1929. Of the total area of 94,289,000 acres in Japan proper, only about one-sixth was cultivable, there being (in 1928) 7,286,000 acres of rice fields, 6,833,000 acres of upland farms, 4,315,000 acres of moors and pastures, and 21,053,000 acres of taxable forests. The fertile area is divided into small farms averaging about  $2\frac{1}{2}$  acres each and is intensively tilled but with largely primitive methods. About 54 per cent of the cultivated land is owned by large landowners and leased to tenants, who ordinarily secure only a bare subsistence. Rice is the largest agricultural crop of the empire and the principal diet of the people. Rough rice production in 1928 amounted to 534,246,000 bushels in Japan proper, a decrease of 3 per cent from the large yield of 1927, but 4 per

cent above the average for 1922-26. The domestic rice supply is insufficient for the demands of the population and an increasing amount is imported annually. The area and production of the chief crops in Japan proper in 1927 and 1928 is shown in the accompanying table.

CROP AREAS AND PRODUCTION, JAPAN PROPER

Crop	Area *		Production *	
	1927	1928	1927	1928
Wheat	1,161	1,198	29,321	31,186
Barley	2,743	2,240	82,485	83,505
Oats	302	285	12,372	11,618
Rice	7,777	7,822	550,179	534,246
Tea	106	106	81,497	86,171
Tobacco	91	92	147,985	147,159
Cocoons	.	.	753,316	775,889

\* Thousands of acres

\* Thousands of units—bushels except as indicated

\* Unit, pound

Crops were fairly satisfactory in 1928, but the price of agricultural products declined. There was an increase of 7 per cent in the wheat production, and a gain of 3 per cent in quantity and 11 per cent in value in the cocoon crop (775,000-000 pounds, valued at \$256,500,000). Sugar production in Taiwan was 565,200 metric tons in 1928-29 and 527,500 in 1927-28. Millet, rice, buckwheat, soy beans, potatoes, sweet potatoes, sugar cane, fruits, rapeseed, indigo, and hemp, are other crops. While the cultivation of leaf tobacco is growing rapidly, tea culture both in Japan proper and Taiwan shows no progress either in output or exports, due to the severe competition of India and Ceylon. Livestock in Japan proper on Jan. 1, 1928, included 1,474,000 cattle, 677,000 swine, 19,000 sheep, 195,000 goats, and 1,495,000 horses.

The extensive coastline of Japan and the prominence of fish in the national diet make the fishing industry a highly important one, from which over 2,000,000 persons derived a living in 1928. The fish catch in 1927 was valued at 207,239,000 yen (1 yen equaled approximately \$0.60) and prepared fishery products totaled 183,084,000 yen. About half the area of Japan proper is covered with forests, from which large quantities of timber are taken annually. The production of timber and bamboo in 1927 was valued at 198,730,000 yen. Camphor production is largely a Japanese monopoly, the annual yield averaging about 10,000,000 pounds, or 60 per cent of the world supply. The Taiwan forests furnish the bulk of the Japanese camphor output.

Copper is the only mineral found in Japan in sufficient quantities to more than supply the domestic requirements. The output of coal, iron, petroleum, and some other minerals is hardly sufficient for the needs of Japanese industry. The value of the mineral products of Japan proper in 1927 totaled \$225,737,000, divided as

JAPAN'S MINERAL AND METAL PRODUCTIONS

Product	1927	1928
Coal	1000 metric tons	33,531 33,860,181
Iron pyrites	metric tons	506,089 593,972
Crude petroleum	1000 bbls	1,645 1,781
Sulphur	metric tons	61,340 70,063
Gold	tray oz.	308,864 310,515
Silver	1000 troy oz.	4,531 4,802
Copper	metric tons	66,571 66,541
Pig iron	1000 metric tons	884 1,077
Steel ingots	do	1,400 1,704

follows. Coal, \$121,977,000, copper, \$22,704,000; gold, \$6,244,000; petroleum, \$5,910,000, and silver, \$2,585,000. The mineral and metal pro-

ductions of Japan proper in 1927 and 1928 are shown in the accompanying table

**MANUFACTURING** The continuation during the period 1920-26 of Japan's unprecedented industrial expansion is indicated by the fact that the number of factories worked by power increased from 30,128 in 1920 to 41,514 in 1926, while the number of factories worked by hand labor declined from 16,022 in 1920 to 10,392 in 1926. The textile industries, centered in Osaka, Nagayo, and Tokyo, are of primary importance, employing 998,447 persons in 1926. The manufacture of metals and metal products, machinery and vehicles, foodstuffs, clay products, paper, chemicals, lumber, and wood products, are other leading industries. In 1926 the main manufacturing industries and the central electric plants employed 1,875,195 persons and used 2,857,829 horse power in prime movers and 1,794,644 horse power in electric motors. Fifty-one per cent of all factory workers were women. Japanese industry and commerce is largely in the hands of a few large family groups. In 1929 nine of these families controlled and operated 144 companies with an aggregate paid-up capital of about 2,360,000,000 yen (approximately \$1,180,000,000). The readjustment of industry continued during 1928 through the restriction of manufacturing production by group agreements, joint-sales agreements, the reduction of capitalization, and numerous mergers. In 1929 business and industry were depressed, particularly during the last half of the year. The output of the principal manufactured products of Japan proper in 1927 was as follows: Cotton yarn, 953,277,000 pounds; spun silk, 13,851,000 pounds; wheat flour, 726,991 metric tons; cigarettes, 28,629,000,000; cut tobacco, 51,424,000 pounds; sake (rice wine), 259,217,000 gallons; printing paper, 765,654,000 pounds; cotton fabrics, \$313,007,000; woollen fabrics, \$113,171,000; porcelain earthenware, \$35,255,000; vegetable oil, \$18,929,000; mats and matting, \$10,653,000; lacquered wares, \$16,367,000.

**COMMERCE** The decline evidenced in the foreign trade in 1927 was continued in 1928, domestic exports of Japan proper totaling \$887,000,000, a decrease of 2 per cent from the 1927 figure, while imports totaled \$1,019,000,000, a decrease of 1 per cent. Imports into Chosen increased about 6 per cent and the exports declined slightly, while both imports and exports of Taiwan declined. The adverse balance of trade, which had been continuous since 1919, amounted to \$132,059,000 (224,000,000 yen) in 1928. In 1929 the unfavorable trade balance, estimated at about 68,000,000 yen, was less than for several years, as the lower exchange rate prevailing for some months during the year stimulated exports of raw silk and silk textiles to the United States and of cotton textiles to the Asiatic markets. Provisional figures placed the 1929 exports at 2,148,000,000 yen and imports at 2,216,000,000 yen. This represented an increase of about 20,000,000 yen in imports and of 177,000,000 yen in exports, the export increase being the largest in 10 years. The excess of imports for the empire amounted to approximately 170,000,000 yen, as compared with 335,000,000 yen in 1928. As the invisible favorable balance for 1929 was also estimated at 170,000,000 yen, Japan's net trade position was favorable for the first time in 10 years. Japan's invisible favorable balance of trade averaged over 100,000,000 yen annually. The values of the

principal import and export commodities of Japan proper in 1927 and 1928 are given in the accompanying table

JAPAN'S TRADE IN PRINCIPAL COMMODITIES,  
1927 AND 1928  
[In thousands of dollars—000 omitted]

	1927	1928
<i>Domestic exports</i>		
Raw silk	\$851,415	\$840,045
Cotton textiles	180,994	187,464
Silk textiles	66,192	62,217
Clothing and accessories	32,613	38,906
Sugar, refined	13,710	17,828
Drugs and chemicals	17,960	17,779

Ammonium sulphate	15,527	16,849
Rice and paddy	37,410	15,627
Automobiles and parts	8,667	14,965
Wool textiles	16,471	14,486
All other	298,053	323,370
<b>Total</b>	<b>\$1,038,137</b>	<b>\$1,019,810</b>

A feature of the import trade in 1928 was the large drop in imports of raw cotton, due to heavy stocks and restricted production of yarn. The United States continued to lead all other countries in Japan's foreign trade, furnishing 28.5 per cent of the total imports and taking 41.9 per cent of the total exports of Japan proper. The value of both imports from and exports to the United States, however, declined. In the same year, China supplied 9.7 per cent of the general imports and took 18.9 per cent of the exports, British India supplied 13 per cent of the imports and purchased 7.4 per cent of the exports, Great Britain furnished 7.5 per cent of the imports and took 3 per cent of the exports, and Germany furnished 6.1 per cent of the imports and took 0.6 per cent of the exports. Of the total imports in 1928, 13.6 per cent consisted of food, drink, and tobacco, 53 per cent of raw materials; 17.4 per cent of semimanufactures, and 15.1 per cent of manufactured articles. The corresponding percentages for exports were: Food, drink, and tobacco, 7.9; raw materials, 4.5; semimanufactures (principally raw silk), 41.7; and manufactured articles, 41.2.

**FINANCE** For the fiscal year ending Mar. 31, 1929, actual ordinary and extraordinary revenue totaled 2,005,691,105 yen, or 281,733,589 yen more than the budget estimate, while ordinary and extraordinary expenditures amounted to 1,814,855,012 yen, or 145,848,245 yen less than the budget estimate. The excess of revenue totaled 190,836,093 yen. Allowances for appropriations carried forward to 1929-30 reduced this surplus to 134,280,257 yen, of which 42,665,325 yen represented the surplus actually created during 1928-29. In 1927-28 the total revenues amounted to 2,062,755,337 yen, total expenditures to 1,765,713,120 yen, and the surplus, after deducting al-

lowances for estimates carried forward to 1928-29, to 256,218,444 yen.

The decrease of 57,000,000 yen in revenue, in 1928-29, as compared with the previous year, was due chiefly to a decline in extraordinary revenue of 77,000,000 yen, which was partly offset by an increase in ordinary revenue of 20,000,000 yen. The total of ordinary and extraordinary expenditures in 1928-29 was 49,000,000 yen greater than in 1927-28, due to an increase in the appropriations carried forward from the previous year, and expenditures for reconstruction works, and for the dispatch of troops to China which were not included in the budget estimates.

The ordinary and extraordinary budget for 1929-30, as originally approved, estimated expenditures at 1,773,000,000 yen (about \$870,543,000). With the coming into power of the Hamaguchi Ministry in July, 1929, however, the new government immediately reduced the budget by 92,000,000 yen (about \$45,172,000). For 1930-31 the new government's budget provided for appropriations of only 1,608,000,000 yen (about \$789,524,000), or a retrenchment of 165,000,000 yen, as compared with expenditures in 1929-30. Revenues for 1930-31 were estimated at 1,576,000,000 yen. Chief items in the 1927-28 and 1928-29 ordinary budgets are shown in the accompanying table. The 1928-29 budget figures do not include the sum of 11,929,355 yen added to the budget early in 1929.

#### GOVERNMENT RECEIPTS AND EXPENDITURES [Thousands of yen]

Item	1927-28 actual*	1928-29 budget estimates

\* Subject to revision

As a result of the Hamaguchi Government's retrenchment policy, commodity prices were lowered, foreign trade improved, and the government was able to announce on Nov. 21, 1929, that the gold embargo, which had been in effect since 1917, would be lifted early in January, 1930. In anticipation of this event the government amassed specie reserves abroad to the amount of 320,000,000 yen, and arranged for a credit of 100,000,000 yen through banks in America and Great Britain. Yen exchange rose from a low of \$0.43 in June to \$0.489 in November, 1929.

The national debt on Oct. 31, 1929, stood at 5,906,000,000 yen, of which 4,455,000,000 yen

represented domestic loans and 1,451,000,000 foreign loans. The total debt on Jan. 1, 1929, amounted to 5,800,000,000 yen. The government's specie reserve continued to decrease during 1928, amounting to 1,205,000,000 yen on November 30.

**COMMUNICATIONS.** During the year ending Mar. 31, 1928, 219 private companies operated 3413 miles of railway line with operating expenses of \$20,968,270 and a net revenue of \$16,230,576, while the Government Railways operated 8154 miles of line with operating expenses of \$140,430,000 and a net revenue of \$11,779,440. Interest charges and other deductions brought the net revenue for the government lines down to \$68,807,474. During the year new government lines and extensions under construction totaled 329 miles and projected extensions, 3430 miles. An electrification programme costing nearly 20,000,000 yen was carried out. Of the private lines, 83 received government subsidies.

Commercial aviation was advanced by the organization in 1928 of the Japan Air Transport Company, subsidized by the government to the amount of 20,000,000 yen. In 1927, 86 airplanes in the service of commercial airlines made 17,087 flights for a total distance of 878,230 miles.

The Japanese merchant marine on June 30, 1928, consisted of 2048 vessels of 4,139,815 gross tons. In 1928, 17,347 vessels of 52,272,000 net registered tons entered and 17,415 vessels of 52,395,000 net registered tons cleared the ports of Japan proper. The telegraph and telephone systems are government owned. In 1927 there were 31,897 miles of telegraph line and 2,167,927 miles of telephone wire.

**ARMY AND NAVY.** Military service is universal and compulsory. Liability commences at 17, but actual service begins at 20 years and lasts for 20 more. The peace strength of the active army in 1928 was 214,340 of all ranks. The military budget for 1928-29 amounted to 176,082,000 yen. See **MILITARY PROGRESS**.

The accompanying table from the *Statesman's Year Book* for 1929 shows the classification of the Japanese fleet for the three years ending with 1928.

#### JAPANESE FLEET

	Completed at end of		
	1926	1927	1928
Battleships and battle cruisers	10	10	10
Armored cruisers	7	7	7

**GOVERNMENT.** Executive power is in the Emperor who acts with the advice and aid of a ministry appointed by, and responsible to, himself, legislative power is in the Emperor and the Imperial Diet of two chambers, namely, the Upper House or House of Peers, composed of membership based on rank, wealth, and other qualifications, and numbering 407 members at the beginning of the year, and the Lower House or House of Representatives, elected for four years, unless sooner dissolved, and numbering 466 members after the election of February, 1928. Emperor in 1929, Hirohito, born April 20, 1901, succeeded his father, Yoshihito, Dec. 25, 1926. The cabinet

at the beginning of the year was composed as follows: Prime Minister and Foreign Affairs, Baron Tanaka; Home Affairs, Katsuke Mochizuki; Finance, Chuzo Mitsuuchi; War, General Shirakawa; Marine, Admiral Okada, Justice, Yoshimichi Hara; Education, Kazuo Shoda; Agriculture and Forestry, Teijiro Yamamoto; Commerce and Industry, Tokugoro Nakahashi; Communications, Fusanosuke Kuhara; Railways, Heikichi Ogawa.

### HISTORY

While internal politics in Japan pursued an unusually stormy course during 1929, resulting in the fall of the Tanaka Cabinet on July 2, the year was comparatively uneventful in the field of foreign affairs. Relations with China improved after the recognition of the Nationalist régime as *de jure* on May 30 and with the advent of the new cabinet. The Emperor ratified the Kellogg-Briand Peace Pact on June 27, and the nation showed a sympathetic interest in the success of the London Naval Conference, the invitation to attend which was accepted by the government on June 23.

**DOMESTIC POLITICS** The session of the Diet, which ended March 25 with Baron Gichi Tanaka still in power despite numerous demands for his resignation, was marked throughout by bitter political controversy. M. Motoda, Speaker of the House of Representatives, resigned during the session because of the alleged unparliamentary tactics of both the Government and the Opposition. A number of important bills governing domestic affairs, including a government bill, were vetoed in the House of Peers, among them being a tax-transfer bill, a peasant proprietorship bill, and bills for the control of religious organizations and for the establishment of smaller electoral constituencies.

The foreign policy of the Tanaka Cabinet was severely censured by the Privy Council, particularly the signing of the Kellogg-Briand Treaty without qualification of the preamble which declared that recourse to war was condemned by the contracting parties "in the name of their respective peoples." This was declared contrary to the Japanese Constitution, under which the Emperor "declares war, makes peace and concludes treaties." The Premier's failure to consult the Privy Council before signing the Tsinan agreement on March 24 (see CHINA, under *History*) was also criticized and on April 10 he formally apologized to the Privy Council. There was general dissatisfaction with the cabinet's militaristic policy toward China, but the immediate cause of Baron Tanaka's downfall on July 2 was his failure to publish the official report dealing with the mysterious death of Marshal Chang Tso-lin in June, 1928. The train in which the Manchurian war lord was fleeing from the Chinese Nationalist forces was bombed as it passed over a viaduct of the Japanese-controlled South Manchuria Railway and the Marshal died of the injuries he received. Charges of Japanese connivance at the Marshal's death led to an investigation by the government. Although publication of the report was withheld due to the opposition of the Ministry of War, it became known that the investigators had recommended the punishment of Colonel Kawamoto, officer in charge of the railway guard, and other high army officials. On July 1, the War Office announced that Colonel Kawamoto would be punished for having

turned over the patrolling of the viaduct on the night of the murder to Chinese guards and that General Muraoka had resigned the Manchurian command. The suppression of the report tended to confirm the charge that the government was involved in Chang's death, and sufficient pressure was brought to bear upon Baron Tanaka to bring about his resignation.

Yuko Hamaguchi, leader of the Minseito, or Liberal party, and former Minister of Finance and of Home Affairs, then formed a new cabinet composed as follows: Foreign Affairs, Baron Kijuro Shidehara; Home Affairs, Kenzo Adachi; Navy, Admiral K. Takarabe; War, General I. Ugaki; Finance, Junnosuke Inouye; Justice, Viscount C. Watanabe; Education, I. Kobashi; Communications, M. Kozumi; Agriculture and Forestry, C. Machida; Commerce and Industry, M. Tawara; Railways, R. Fugi; Overseas Affairs, G. Matsuda.

The Minseito party, of which Premier Hamaguchi was president, came into power with a programme of high tariffs and financial retrenchment, peaceful economic expansion abroad, the reduction of armament, and more friendly relations with China. In general, it favored the interests of the landowners and the population. It had only 172 seats in the House of Representatives, however, as against 220 by the Seiyukai (opposition party), 50 by the Shinto Club, 14 by the Independents, eight by Proletarian parties, seven by Keisei Isshin-kai, four by the Meiseikai, three by the Business Men's party, and one by the Kakushin Club. Although outnumbered in the House of Representatives by the Seiyukai opposition, the government proceeded energetically with its programme. It immediately reduced the budget, adopted a policy of reducing the national debt, and postponed new government enterprises (see under *Finance* above). Although retrenchment was recognized as an essential preliminary to the removal of the gold embargo, the economy measures adopted contributed to the depressed condition of business and industry and caused a general decline in profits and an increase in unemployment. On the other hand, foreign trade improved notably and yen exchange grew markedly finer. The new government appointed Viscount Minoru Sato to his former post as Governor-General of Korea, in which he had won wide recognition for his statesmanship and liberalism.

The action of the Shinto Club in joining the Seiyukai made it practically certain that the Hamaguchi Cabinet would be forced to appeal to the country early in 1930 for a majority to carry out its programme. The Shinto Club was organized after the 1928 elections among deputies who left the Minseito party. The hopeless position of the government in the Lower House was evidenced soon after the opening of the Diet in December, when the opposition nominee for Speaker was elected. In the meantime, evidences of widespread corruption among certain members of the former Tanaka Government had been brought to light which promised to aid the Liberals (Minseito party) in a general election. Heikichi Ogawa, Minister of Railways in the Tanaka Cabinet and vice president of the Seiyukai, was imprisoned on a charge of accepting bribes from promoters of railway projects. Several of his subordinate officials were also imprisoned for corruption. In December, General Hanzo Yamanashi, former Governor-General of

Korea, was indicted on a charge of accepting bribes.

With Ogawa in jail, the death of Baron Tanaka on September 29 left the Seiyukai without a leader. The place was filled by the election of Ki Inukai, a former Minister of Communications and leader of the Kokuminto, or Nationalist party, which dissolved in 1922.

Communist and other radical activities gave the government some concern during the year. In the spring both houses of the Diet passed a resolution approving the emergency imperial ordinance promulgated in June, 1928, which gave the courts the option of imposing the death penalty upon persons convicted of violating the so-called "peace preservation" law. The law prohibited any person from organizing or joining a society whose object was to alter the national constitution or destroy the system of private property. Ninety-nine Osaka Communists were sentenced early in the year to from two to eight years imprisonment for staging demonstrations at the general elections in 1928. A police roundup of Communists in April was repeated in October and November, when 825 persons were arrested.

**OTHER EVENTS.** Other developments during the year included the appointment of William R. Castle, Jr., former U. S. Assistant Secretary of State to succeed Charles MacVeagh as the American Ambassador at Tokyo, and the inauguration of direct diplomatic relations with Canada on October 21. On May 3, Yotaro Yamamoto, president of the South Manchuria Railway, laid proposals before the cabinet calculated to ease the tension between China and Japan over the latter government's control of the majority stock in the railway. He suggested that the government sell its stock to private investors, that all administrative functions of the railway zone be turned over to "a committee" of Kwantung, the territory in question, under lease to Japan, and that an advisory board of 12 be created to assist the president in administering the road. See CHINA, under *History*.

**BIBLIOGRAPHY.** Interesting books appearing during the year were, Kakujiro Yamasaki and Gotaro Ogawa, *The Effect of the World War Upon the Commerce and Industry of Japan* (Yale University Press, 1929), A. Morgan Young, *Japan in Recent Times* (New York, 1929).

**JAPANESE BEETLE.** See ENTOMOLOGY, ECONOMIC.

**JARNEFELT-PAKARINEN, MAIEKI A.** celebrated Finnish dramatic soprano, died in Abo, Finland, July 5. She was born in Joensuu, in 1871. After studying with Mme. Marchesi in Paris and Julius Hey in Berlin, she made her debut in Breslau and sang for several seasons in various German opera houses. The unusual success of her first appearance in Stockholm, in 1903, induced her to limit her engagements to the opera houses of Scandinavia and Finland, where she was regarded as the foremost of dramatic and concert singers. In 1893 she married the composer, Armas Jarnefelt, from whom she was divorced in 1908. Even after her marriage, in 1910, to Selim Palmgren, she continued to use her first husband's name on the stage.

**JEBEL SHAMMAR.** See ARABIA.

**JENKS, JEREMIAH WHIFFLE.** American economist, died Aug. 24, 1929, in New York City. He was born in St. Clair, Mich., Sept. 2, 1858, was graduated from the University of Michigan

in 1878, and studied in Germany for several years. In 1881 he was admitted to the Michigan bar. He taught Greek, Latin, and German in Mt. Morris College in 1879-80, and again in 1881-83. In 1886-89 he was professor of political science and English literature at Knox College, in 1889-91, professor of political economy and social science at Indiana University, and from 1891 to 1912, professor of political economy and politics at Cornell University. He was professor of government and director of the division of public affairs from 1912 to 1917, and after 1917, research professor of government and public administration and director of the division of Oriental commerce and politics in New York University. In 1899-1901 he was expert agent of the United States Industrial Commission and consulting expert of the U. S. Department of Labor on the investigation of trusts and industrial combinations in the United States and Europe. Following this, as a special commissioner of the War Department, he investigated questions of currency, labor, internal taxation, and police in the Orient. In 1903 he was employed by the government of Mexico as special expert on currency reform. In 1903-04 he served on the United States Commission on International Exchange, which was in charge of the reform of currency in China. In 1913 he founded the Far Eastern Bureau and was its director until 1921. During 1907-10 he served as a member of the United States Immigration Commission. After 1918, he was a member of the High Commission of Nicaragua and director of the Pacific Railways and the National Bank of Nicaragua. At the time of his death, he was president and chairman of the board of the Alexander Hamilton Institute. His published writings include *Henry C. Carey as Nationalist* (1885), *The Trust Problem* (1900), "Industrial Combinations in Europe" (vol. xviii, *Report of Industrial Commission*, 1901); *Report on Certain Economic Questions in the English and Dutch Colonies in the Orient* (1902), *Citizenship and the Schools* (1906), *The Political and Social Significance of the Life and Teachings of Jesus* (1906), *Life Questions of High School Boys* (1908), *Principles of Politics* (1909), *Governmental Action for Social Welfare* (1910), *The Immigration Problem* (with W. J. Lane, 1913); *The Testing of a Nation's Ideals* (with C. F. Kent, 1915), *Business and the Government* (1917), *Jesus' Principles of Living* (with C. F. Kent, 1920), *Great American Issues* (with J. H. Hammond, 1921), *We and Our Government* (with R. D. Smith, 1922), and "Science of Business" (vol. 1, *Modern Development, a Course*, 1927).

**JEWISH SOCIAL SERVICE.** See WELFARE WORK.

**JEWS.** That anti-Semitism exists in the United States is a fact, that official Jewry refuses to recognize its existence is another and probably more curious fact. The conduct of official Jewry (i. e., those persons interested in the synagogue, philanthropy, etc.) is based upon the presumption that American Jews form a religious and not a racial or cultural, group. Hence, official Jewry supports theological seminaries, settlement houses, and charities generally, but refuses to recognize the need for a Jewish university (though Jewish academic scholars are becoming extinct), an official census of Jews, or the creation of methods for making Jewish education a reality. On the theory that Jews form an in-

tegral part of American life, certain Jewish groups, notably the fraternal order B'nai B'rith, have been carrying on negotiations with Protestant bodies for the purposes of disseminating good will in the Protestant churches. Such a programme was inaugurated in 1924 with the Federal Council of the Church of Christ as joint sponsor and everything went on admirably until the question of proselytizing among Jews was reached. At this point in the spring of 1929, despite goodwill, the Council of the Protestant Home Missions Board flatly refused to surrender its right to convert Jews. So that official Jewry is to have good will—and home missions.

The increasing preoccupation with cultural matters shows a definite effort to break with the "melting pot" theory. Schemes for spreading Jewish education are appearing in increasing numbers and bureaus of Jewish education have sprung up in many cities. There is an earnest effort, among certain groups, to cope with the serious problems presented by the large number of unschooled Jewish children. Surveys have shown that more than 50 per cent of the children of school age (7 to 13 years), in most communities do not attend Jewish schools. By organization, propaganda, building funds, etc., strenuous efforts were being made to cope with the situation. Unfortunately, curricular advances have been negligible. The theological seminaries continue to serve as the founts of inspiration. Except for the Yiddishists (those people interested in Yiddish as a cultural medium) there is no lay group preoccupied with the collection of artifacts, preparation of scholarly theses, writing of texts—in short, that necessary spade-work that must be done before a cultural tradition can be erected.

The Jewish educational programme as carried on had little in it to attract cultured parents. There is no reason why a minority like the Jews in America cannot achieve a distinctive culture, even in the heart of a dominant alien civilization. In modern times, it has been done by the Irish in Great Britain, the Flemish in Belgium, the people of Provence in France, and the people of Catalonia in Spain. The dilemma is apparent, however, there are divided loyalties, and for most influential Jews the terms American and Jew are mutually exclusive. The reform—and wealthy—groups conceive of Jewish education as essentially a theological arm. They will support Jewish education, Hillel Foundations, Jewish Centres, etc., as long as their purposes are religious and American (i.e., teach citizenship, Americanize the alien, etc.). Once they become Jewish and lay, that is to say, really serious, they are shunned. This situation partially explains the insignificance of the American Jews as a cultural group despite their essentially middle-class position. In short, they have money and trained intelligence but can point to no distinctive achievement as Jews. It is doubtful whether this unfortunate state will be resolved unless the group decides that the only answer to anti-Semitism is the serious preoccupation with a distinctive group culture. This needs money and money in all likelihood will not be forthcoming.

**OTHER COUNTRIES** In Germany, events of the year indicated that anti-Semitism had not entirely abated. Largely due to the agitations of the so-called National Socialist party, there continued an organized effort to harass the Jews. There were reported desecrations of cemeteries,

the breaking into of synagogues, and attempts at incendiarism. In Bremen, a band of hooligans attacked a number of passersby whom they took for Jews. Several ritual murder scares also made their appearance in the country during the year.

The same tale is to be recounted of *Austrian* events for the year. In this country, the most prominent single phenomenon connected with Jewish life is anti-Semitism. There were riots at a number of the Austrian universities including Graz and Vienna. In *Hungary*, the new educational law, nullifying the "numerus clausus," was the cause for considerable excitement, particularly among student bodies. In some of the universities, newly admitted Jewish students, both men and women, were evicted, and the Ministry of Education was compelled to close for a short time three institutions in which these disorders had taken place. In *Rumania*, under the leadership of the Mannu peasant government, it would seem that definite efforts were made to check anti-Semitism. Government officials were demoted for failure to act in disorders and courts martial were ordered of local gendarmerie when it was reported that anti-Jewish riots in the L-mail district were not summarily checked. Following the election of the Mannu government,

Jewish deputies presented a memorandum on the following questions upon population desired immediate action: (1) Citizenship (2) The organization of Jewish communities and increased subsidies for the support of Jewish agricultural activities (3) A budget to cover the costs of maintaining Jewish secular schools (4) Extension of government support to Jewish private schools (5) The establishment of teachers' seminaries for training teachers for Jewish schools (6) Exemption of Jewish pupils in government schools from attendance on the Sabbath. It would appear that considerable dissension existed among the various Jewish groups in the country and that community action was impossible in most instances because of adherence of a sizable proportion to the discredited Briantian Liberal party.

In *Poland*, as in previous years, the Jewish group was engaged in combating anti-Semitism, endeavoring to secure legislation to remedy certain constitutional restrictions, and at the same time was waging a very definite struggle to maintain its economic existence. During the year, numerous minor occurrences took place which indicated that anti-Semitism had not yet abated in that country. In June, for example, charging that a group of Jewish high schools had mocked a Catholic procession, university students of Lemberg invaded the Jewish quarter and ran amuck for several hours. In the course of this raid, two synagogues were wrecked in addition to the buildings of the Jewish newspaper. During the year, reports indicated that the economic lot of Polish Jewry continued to be unhappy. Credit organizations reported that definite obstacles were being placed in the way of the Jews in the obtaining of credit, particularly at the hands of the State Economic Bank. One index of the burdens of the Jewish population is to be found in the number of suicides reported in 1928. Out of a total of 1680 suicides in the country, 891 were those of Jews, despite the fact that the Jews constitute only a little over 10 per cent of the population.

In *Russia*, as in Poland, the leading questions before the Jewish community were the mainte-

nance of an economic life, anti-Semitism, and the anti-religious attitude of the official government. During the year, the work of settling Jews on the land was continued with energy. However, the position of the declassified Jews of the cities was still a miserable one, and it was estimated by official sources that fully two-thirds of the Jews of the country were dependants. For example, in the summer of 1928, unemployment was twice as high among Jews as among non-Jews, no less than 40,000 unemployed Jews registered in Odessa labor exchanges in July. Led by Jewish communists, the government proceeded on its policy of stamping out Jewish religious observances. Agitation was conducted against attendance in the synagogue; and the government made efforts to enforce the law against the existence of religious schools.

**ZIONISM** The outstanding events of Zionist history were completion of the organization of the Jewish Agency and the crisis in Palestine affairs as the result of the rioting that took place in the fall of the year when Arab mobs attacked Jewish settlements (see **PALESTINE**). The final ratification of the pact between the Zionists and the non-Zionists took place at Zurich in August. At its first business session, the Jewish Agency Council elected Louis Marshall, the American leader, president, and Lord Melchett, the British leader, vice president. Felix M. Warburg of New York and Lord Melchett of London each subscribed \$500,000 toward the financing of the Palestinian corporation through which the Jewish Agency was to carry on its construction work. Despite the efforts of some non-Zionists to emphasize the religious basis of the Jewish Agency pact, the meetings of the Council indicated plainly that the placing of Palestine on a sound economic footing was the chief problem before the Jewry of the world. The Council of the Jewish Agency closed its session with the election of Baron Edmund de Rothschild as honorary president, Dr Chaim Weizmann, president; Louis Marshall, chairman, Lord Melchett, associate chairman, Felix M. Warburg of New York was chosen chairman of the Administrative Committee of 40, composed of 20 Zionists and 20 non-Zionists. American non-Zionists included in this committee were Dr Cyrus Adler, Dr Lee K. Frankel, James Becker, Meyer Elsasner, Alexander Kalen, Herbert H. Lehman, Louis Marshall, Felix M. Warburg. The American Zionist members elected to the Council were Morris Rottenberg, Judge William N. Lewis, Gedaliah Bublick, Rabbi Aaron Teitelbaum.

A meeting of the Jewish Agency Administrative Committee in London following the Palestine outrages (September 15) presented a series of demands to the British government in which it insisted that the Palestine Administration was to be held liable for compensating victims of the Arab attacks. The Agency also urged that the Jews be accorded every opportunity for self-defense and that there be established a legal method for forming such defense with Jewish volunteers. The Agency further requested that the Palestine Administration be instructed to place at the disposal of the Jewish Agency in Palestine a substantial sum for the purposes of immediate relief. A fourth resolution requested the allotment of a substantial number of immigration certificates for new Jewish immigrants. The news of the death of Louis Marshall, who had been largely responsible for effecting the pact

leading to the Jewish Agency, arrived during the sittings of the committee.

The thirty-second annual convention of the Zionist Organization of America met at Detroit, Michigan, June 30-July 2. The sessions were concerned with discussions of the Jewish Agency, the rôle of Hadassah, Avukah, Young Judaea, Keren Hayesod, American Zionist Commonwealth, and the United Palestine Appeal. The convention endorsed the Jewish Agency agreement, voted to continue *The New Palestine* (a publication), and gave its approval to the conduct of the various Zionist affiliated organizations. The record of the year had been one of recovery from the controversies of the previous period, and the healing process was accomplished with comparatively few difficulties. Strength was given to the administration by the appointment of D. I. M. Rubinow as executive director and the election of Dr Mordecai M. Kaplan to the chairmanship of the Administrative Committee. Mr Louis Lipsky was reelected president.

The sixteenth biennial Zionist Congress also held its meetings in Zurich, July 27-August 11. Some 320 delegates attended from most of the countries in the Western world. The chief subject on the agenda was the ratification of the pact between the Zionists and the non-Zionists leading to the creation of the Jewish Agency discussed above. The line-up at the . . . . . that the centre bloc had been considerably weakened over the past two years. The Laborites held 85 votes, the Mizrahi party (orthodox Zionists) 45 votes; the Zionist Revisionists and the Radical Zionists 30 votes. The presidential address of Chaim Weizmann, prophesied that a greater and speedier progress in the Palestinian work could be expected as the result of the ratification of the agency agreement. Dr Arthur Rabin at the second session warned the delegates that there were in operation certain tendencies that were menacing the continuance of the Jewish people as a group. Chief of these he declared were conversions to other faiths, intermarriage, and an unchanging mortality rate. A process of disintegration of Jewish culture and Jewish religion, particularly in Russia, was under way. Only Palestine constituted an exception to the prevailing tendencies, and it was in this country, small as it was, that real efforts were being made to revive the Jewish religion and Hebrew language.

A crisis threatened the meetings of the Congress when the American Zionists insisted that they be given an equal number of seats with American non-Zionists on the Council of the Jewish Agency. The demand was made by Louis Lipsky, president of the Zionist organization of America, and in this he was backed by Rabbi Abbi Hillel Silver and Judge William N. Lewis. A compromise was effected by which the American Zionists agreed to accept 18 seats on the Council instead of the 10 previously allowed them. It is to be noted, however, that the American non-Zionists are to have 44 seats. The upshot of the discussions was the acceptance by the Zionists of the Jewish Agency pact. The Revisionists, however, dissented and withdrew from the Congress as a result of what they considered a surrender of Palestine to the non-Zionists. The Congress also voted a budget of £750,000 for the next two years. The Congress terminated with the election of a coalition executive including two Laborites and two Mizrahi members headed

by Dr. Chaim Weizmann. The following was to be the composition of the executive of the Congress: Dr Weizmann of London, president; Louis Lipsky of New York, Dr. Selig Brodetzky, professor at the University of Leeds, Harry Sacher of Jerusalem, Col. Frederick H. Kisch of Jerusalem; Miss Henrietta Szold, formerly of New York, now of Jerusalem; Dr. Arthur Rupp of Jerusalem, Felix Rosenblueth of London, all General Zionists, Laborites Joseph Sprinzak of Jerusalem and S. Kaplanaky of Jerusalem; Miz-rachi, Orthodox Zionists, Lazarus Barth of Germany and Rabbi Meyer of Berlin, president of the Mizrachi Zionist Organization, formerly of New York but later of Jerusalem

PALESTINE ECONOMIC CORPORATION In November, following the proposal of the Zionist World Congress and the acceptance of the scheme by the Jewish Agency Council, a group of prominent American Jews laid the groundwork for the establishment of an American business corporation to further the economic development of Palestine. Prime movers in the project were Associate Justice Louis D Brandeis of the U. S. Supreme Court, Felix M Warburg, Lee H. Frankel and Bernard Flexner. This was the first public appearance Mr Brandeis had made, with regard to Zionist matters, since his accession to the Supreme Court bench. He and the others expressed their faith in the possibilities of the economic development of the country, believing that the outstanding successes Jews had met with in other countries could be repeated here. It will be recalled that at Zurich in August Mr Warburg and Lord Melchett had each already subscribed \$500,000 towards the capitalization of a Palestinian economic corporation.

STATISTICS There follows herewith a series of estimates of Jewish population in the more important countries of the world. This is the work of Dr H S Linfield and is reprinted from the *American Jewish Year Book* for 1929-30. The total number of Jews in the world in 1929 was estimated at 15,324,515 persons.

During the year ended June 30, 1928, 11,639 Jews were admitted to the United States (38 per cent of the total). Against these, there were recorded 253 departures, making a net increase of 11,386. A total of 898 Jews were debarked from admission, and 213 were deported. The following were the reported destinations of the newly arrived Jewish immigrants: California, 238; Connecticut, 135; Illinois, 759; Massachusetts, 364; Michigan, 655; Missouri, 115; New Jersey, 498; New York, 7100; Ohio, 303; Pennsylvania, 752; other States, 720. Of the total number of 11,639 Jewish immigrants, 4771 were from Poland, 1761 from Canada, 904 from

Russia, 754 from Rumania, and 3449 from other countries in Europe, Asia, Africa, Australasia, and countries of the Western Hemisphere. During 1928, a total of 4766 Jews entered Canada via ocean ports. (This includes 470 immigrants from the United States.) During 1927, a total of 5584 Jews entered the Argentine. During 1928, 2178 Jews entered Palestine and 2168 Jews departed from the country.

**JOAN OF ARC ANNIVERSARY.** See CELEBRATIONS

**JOHNS HOPKINS UNIVERSITY,** THE A nonsectarian institution of higher education for men (women are admitted to certain courses) in Baltimore, Md., founded in 1876. The enrollment for the autumn of 1929 was 6124, distributed as follows: School of higher studies of the faculty of philosophy, 486; school of higher studies in education, 59; school of medicine, 284; hygiene and public health, 1500; engineering, 318; business economics, 77; college of arts and sciences, 330; college for teachers, 1451; night courses for technical workers, 640; evening courses in business economics, 1201. The enrollment for the 1929 summer session was 1100. The faculty numbered 660. The productive funds amounted to \$25,538,424 and the income for 1928-29 from all sources was \$2,381,605. Important gifts to the university during 1929 included \$50,000 to establish the Wallace King visiting lectureship, \$3,000,000 for additional beds in the medical and surgical departments, \$600,000 for cancer research, \$120,000 to endow the Francis P. Garvan chair of chemical education, and gifts from individuals and companies in 22 States for the establishment of national fellowships in chemistry at \$1000 each per year. The Carnegie Out-Patient Dispensary and Diagnostic Clinic was dedicated in December, 1928, and the Wilmer Ophthalmological Institute and the Welch Medical Library in October, 1929. A new wing, costing \$500,000, also was added to the physiological building of the school of medicine, so as to enlarge the facilities of the departments of pharmacology, physiology, chemistry, and physics. In the autumn of 1929 the school of higher studies in education began operation as a separate unit of the university, similar to the school of higher studies of the faculty of philosophy, the degrees of M.Ed. and D.Ed. being offered. The main library contained 363,000 volumes and the new Welch Medical Library, 97,000 volumes. Joseph Sweetman Ames, Ph.D., succeeded Dr. Frank Johnson Goodnow as president in July, 1929.

**JONES, ERNEST LESTER** American engineer and superintendent of the U. S. Coast and Geodetic Surveys died Apr. 9, 1929, in Washington, D. C. He was born in East Orange, N. J., Apr. 14, 1876, and was graduated from Princeton University in 1898. After 10 years of business research and secretarial work, he became deputy commissioner in the U. S. Bureau of Fisheries (1913-15). He was appointed superintendent of the U. S. Coast and Geodetic Survey in 1915, becoming commanding director in 1920. He also served on the International Boundary Commission of the United States and Canada. Under his direction, an accurate charting of Alaska's coast line was made. In the World War, he was colonel of the Division of Military Aeronautics, and was decorated by the King of Italy, made an officer of the Legion of Honor, and was entitled for the Distinguished Service Medal. He wrote *Alaska*

*Investigations* (1914); *Hypsometry* (1915); *Elements of Chart Making* (1915); *Neglected Waters of the Pacific* (1916); *Safeguard the Gateways of Alaska* (1917); *Aerial Surveying* (1919); *Earthquake Investigation in the United States* (1925); *Tide and Current Investigation of the U. S. C and G S* (1926), published by the United States Government; *Surveying from the Air* (1922); *The Evolution of the Nautical Chart* (1924); and *Science and the Earthquake Perils* (1926).

**JONES, HENRY ARTHUR** English dramatist, died Jan. 7, 1929, in Hampstead, England. He was born in Grandborough, Buckingham, Sept. 20, 1851, and attended the grammar school in Winslow until he was 13, at which early age he was thrown upon his own resources. His knowledge of English and French literature and drama came from private study. Having early become interested in the theatre, in 1879 he produced the play, *A Clerical Error*. His first success came three years later with *The Silver King*. After this, his position as a dramatist was established, and he continued to write plays, some 60 in number, both comedies and tragedies, but all of a social nature. Among them are *Saints and Sinners* (1884), *Widowma* (1889), *Judah* (1890), *The Dancing Girl* (1891), *The Tempter* (1893), *Michael and His Lost Angel* (1896), *The Rogue's Comedy* (1896), *The Lovers* (1897), *The Mannequins of Jan* (1898), *Carnegie Sahib* (1899), *Miss Danc's Defence* (1900), *The Princess's Noce* (1902), *Whitewashing Julia* (1903), *Joseph Entangled* (1904), *The Heroic Stubbs* (1906), *The Hypocrites* (in America, 1906), *We Can't Be as Bad as All That* (1910), *Mary Does First* (1913), *The Lie* (in America, 1914), *Cock o' the Walk* (in America, 1915). He also wrote *Renaissance of the English Drama* (1895), *Foundations of a National Drama* (1913), *Shakespeare and Germany* (1916), *Patriotism and Popular Education* (1918), *My Dear Wells* (1921), and *What is Capital?* (2d ed, 1925).

**JONES LAW.** See PROHIBITION

**JUGOSLAVIA** The official name attached by royal decree on Oct. 3, 1920, to the Balkan state formerly known as the Kingdom of the Serbs, Croats, and Slovenes. Established at the close of the World War (Dec. 29, 1928), it comprised the formerly independent kingdoms of Serbia and Montenegro, Bosnia and Herzegovina, Croatia and Slavonia, former autonomous provinces of Austria-Hungary, portions of the Banat, Backa and Baranja, integral parts of Hungarian proper, Dalmatia, a former province of the Austrian Empire, and Slovenia, composed of portions of former Austrian provinces. Capital, Belgrade. In 1920, Alexander I.

**AREA AND POPULATION.** The 1921 census of Jan. 31, 1921, the first taken since 1910, was 96,134 square miles and the population 12,017,323, representing a density of 125 to the square mile. The population was divided by provinces as follows: Serbia, 4,129,638; Bosnia and Herzegovina, 1,999,857; Croatia and Slavonia, 1,421,429; Dalmatia, 621,429; Croatia, Slavonia, Medumurje, Kik, and Karst, 2,739,593; Slovenia, 1,056,464; and Banat, Backa, and Baranja, 1,380,413. The total estimated population on May 1, 1929, was 13,400,000. For the reorganization of the provincial administrative system in 1929, see below, under *History*. The majority of the inhabitants speak Serbian and Croatian. Other important linguistic groups are the Slovene and other Slavic lan-

guages, German, Rumanian, Hungarian, and Albanian. The principal cities, with the populations in 1921 and the estimated population for 1928 in parentheses, are Belgrade, 111,740 (300,000); Zagreb, 108,338 (140,000), Subotice 101,857 (120,000); Sarajevo, 66,317 (80,000), Skopje, 41,066 (80,000).

**EDUCATION** Education is compulsory and, in all the primary schools under the Ministry of Education, it is free. In 1927 there were 8968 elementary schools, with 18,201 teachers and 797,475 pupils, 174 secondary schools, with 3595 teachers and 83,399 students; 44 training colleges for elementary school teachers with 454 instructors and 7549 students, 155 civil schools, with 1423 teachers and 26,035 students, and 19 commercial schools with 159 teachers and 2535 students. There are three universities, with the following enrollment in 1927: Belgrade, 104 professors and 6289 students, Zagreb (Agram), 146 professors and 4215 students, Ljubljana, 78 professors and 1311 students.

**PRODUCTION.** Yugoslavia is rich in its resources of minerals, forests, and water power. In 1927 there were 15,796,000 acres of fertile arable land, or 26 per cent of the entire area, 10,777,000 acres of permanent meadow and pasture, 1,396,000 acres of orchards, shrubs, and bushes; and 18,745,000 acres of forests. Agriculture is the basic industry, engaging about 85 per cent of the population, followed by lumbering and cattle raising. Cereals constitute the principal crops. With the exception of wheat, the crop returns in 1928 were unsatisfactory, and wheat prices were unfavorable. The area and production of the principal crops in 1928 is shown in the accompanying table.

#### JUGOSLAVIA CROPS AREA AND PRODUCTION

Crop	Area <sup>a</sup>		Production <sup>b</sup>	
	1927	1928	1927	1928
Wheat	4,522	4,681	56,568	103,294
Rye	516	496	5,931	7,527
Barley	966	943	14,449	18,106
Oats	946	914	20,114	25,346
Corn	5,625	5,696	83,009	71,614
Potatoes	573	547	37,514	31,312
Sugar beets	106	143	599 <sup>c</sup>	952 <sup>c</sup>
Tobacco	27	27	14,626 <sup>c</sup>	12,900 <sup>c</sup>
Grapevines	441	416	75,400 <sup>c</sup>	114,080 <sup>c</sup>
Olive oil			963 <sup>d</sup>	1,557 <sup>d</sup>
Hemp fibre	72	70	69,198 <sup>e</sup>	40,342 <sup>e</sup>
Flax fibre	30	31	16,160 <sup>e</sup>	15,303 <sup>e</sup>

<sup>a</sup> Thousands of acres

<sup>b</sup> Thousands of units — bushels except as indicated

<sup>c</sup> Unit, metric ton      <sup>d</sup> Unit, gallon of wine

<sup>e</sup> Unit, pound      <sup>f</sup> Unit, gallon of oil

The scarcity of domestic feedstuffs adversely affected the livestock industry and exports of animal products declined. In 1927 there were 3,729,000 cattle, 2,700,000 swine, 7,736,000 sheep, 1,739,000 goats, 1,120,000 horses, 112,000 mules and asses, and 31,000 draught buffaloes in the country.

Unfavorable agricultural conditions in 1928 were partially offset by the favorable trend of industry. Lumber exports showed a further in-

crease and the production of leading minerals, particularly lignite, iron ore, and copper ore, was larger than in 1927. The normal lumber cut is about 530,000,000 cubic feet annually. Mineral production in 1927 and 1928 is shown here-with.

Coal production totaled 4,746,219 tons in 1927. Other minerals mined on a commercial scale are gold, chrome, antimony, and cement.

Besides lumbering, other important industries are flour milling, brewing and distilling, cotton spinning and weaving, sugar refining, tanning, bootmaking, pottery, iron working, and carpet weaving. The textile industry made considerable progress in 1928 and paper production exceeded the 1927 total.

#### JUGOSLAVIAN TRADE BY COMMODITIES

[Millions of dinars]

Commodity	1927	1928
<b>IMPORTS</b>		
Cotton—raw, yarns, tissues, etc	1,680.1	1,538.2

All others	1,797.8	2,058.9
Total	6,401.1	6,444.7
Equivalent in million dollars	112.6	113.4

**COMMERCE** In 1928, for the second consecutive year, the trade balance was unfavorable, the imports, valued at \$137,902,000, being 8 per cent larger than in 1927, while the exports, amounting to \$113,427,000, showed a gain of less than 1 per cent. The import increase was due largely to heavier purchases of machinery, tools, rails, productive equipment, and foodstuffs. Textile imports declined as a result of increased domestic production. Construction wood and wheat exports increased, while those of corn and wheat flour declined sharply. The values of the principal

#### MINERAL PRODUCTION JUGOSLAVIA

Product	1927	1928
Lignite 1000 metric tons	4,466	4,700
Copper (smelter) metric tons	12,900	15,086

Zinc (smelter) do	3,185	4,320
Bauxite . . . . . do	100,328	49,264
Iron ore . . . . . do	336,099	439,480

commodities entering the import and export trade in 1927 and 1928 are shown in the table on page 429.

While Czechoslovakia displaced Austria as the chief source of imports in 1928, supplying 18 per cent of the total, Italy was again Yugoslavia's principal customer, taking 26 per cent of all exports. Austria took 17.9 per cent of the exports, Germany, 12 per cent; Czechoslovakia, 9 per cent, and the United States, 0.9 per cent, while of the imports, Austria supplied 17.3 per cent, Germany, 13.6 per cent, Italy, 12 per cent, and the United States, 4.9 per cent. Imports from the United States increased from \$4,481,000 in 1927 to \$6,784,000 in 1928.

**FINANCE** For the fiscal year ending Mar. 31, 1930, receipts were estimated at 12,158,721,100 dinars and expenditures at 12,158,072,800 dinars (one dinar exchanged at \$0.0176). The 1928-29 budget estimated that revenues and expenditures would balance at 11,555,794,000 dinars, but preliminary reports indicated that both receipts and expenditures would fall considerably below estimates.

Actual receipts for the year 1927-28 totaled 10,772,036,400 dinars and actual expenditures 10,513,128,000 dinars, as contrasted with estimated revenues and expenditures of about 11,690,000,000 dinars. The principal items of expenditure in the 1929-30 budget included Debt service, \$68,000,000 dinars, national defense, 2,550,000,000, pensions, 1,032,000,000; education, 780,000,000, state enterprises, 4,320,000,000, all other, 2,600,000,000. Estimated sources of revenues included Direct taxes, 1,684,000,000, indirect taxes, 3,400,000,000, monopolies (gross), 1,805,000,000, state enterprises (gross), 4,329,000,000, all other, 835,000,000.

According to the Minister of Finance, the public debt on Mar. 31, 1929, was \$1,477,350,000 dinars (\$553,998,000), or a per-capita debt of 2349 dinars (\$41). Dinar exchange remained at approximately \$0.0176 during 1927 and 1928, despite the unfavorable trade balance. The legal stabilization of the currency planned for 1928 was not attempted due to the failure to secure a large foreign loan. Note circulation in 1928 averaged about 5,439,200,000 dinars as compared with 5,558,462,000 dinars in 1927.

**COMMUNICATIONS** With the exception of 300 miles of railway belonging to a private company, all the railway lines of Yugoslavia, totaling 6280 miles at the end of 1928 (5147 in 1924), were under the administration of the state. About 230 miles of additional line were under construction at the end of 1928. In 1928 railways carried 40,029,000 passengers, and 17,236,000 metric tons of freight. Receipts of 2,525,000,000 dinars for telegraph and telephone systems, which are government owned, had 58,509 and 98,700 miles of wire, respectively, in 1927 and their gross receipts were \$912,700 and \$1,985,000, respectively. The merchant marine in 1928 consisted of 145 vessels of 100 tons or more, with a gross tonnage of 260,912. Automobile transportation is increasing and in 1928 a regular passenger air service was inaugurated between Belgrade and Zagreb.

**GOVERNMENT** Under the constitution adopted June 28, 1921, executive power was vested in the King and legislative power in a single chamber of National Assembly, which consisted of 315 members. As a result of the election of Sept. 11, 1927, the party grouping in the National Assembly was

as follows: Radicals, 111; Independent Democrats, 24; Democrats, 61; National Agrarian party (Croat party), 60, Serb Agrarians, 9; Mohammedans, 13; Slovene Clerical party, 21; other parties, 10. The King in 1929 was Alexander I, born Dec. 17, 1888, who succeeded to the throne with full royal rights on Nov. 6, 1921. On Jan. 6, 1929, he dismissed Parliament, abolished the 1921 Constitution, and proclaimed a dictatorship. See below, under *History*.

### HISTORY

The parliamentary impasse reached toward the end of 1928 through Croatian and Slovenian opposition to Serbian domination of the Yugoslavian state (see 1928 YEAR BOOK) was ended on the night of January 5-6, 1929, by a royal decree announcing the dissolution of parliament, the suspension of the constitution, and the establishment of a military dictatorship under General Pera Zhivkovitch, acting on behalf of King Alexander. The King's proclamation declared that parliamentary government had been so abused "by blind party passions" as to prevent every useful development in the state.

"To seek to remove these abuses by fresh elections would have been a waste of time and valuable energy," the decree stated "By such methods, we have already lost many precious years. We must try other methods and tread new paths."

**THE DICTATORSHIP** General Zhivkovitch, who was commander of the Royal Guard, was made Premier and Minister of Interior in the new cabinet appointed by the King on January 6. Other members of the cabinet were: Deputy Prime Minister, N. Ouzounovitch; Foreign Affairs, Dr. Vojislav Marinkovitch; Transport and Communications, Father Anton Koroshetz; Defence, General Stevan Hajitch; Finance, Stanko Shverlyuga; Social Affairs, Commerce, and Industry, Dr. Matya Dimkovitch; Education, Bozho Maximovitch; Public Worship, Dr. Tugomir Alaourovitch; Justice, Dr. Milau Serslikitch; Public Health, Dr. Vrosh Krul; Mines, Forests and Agrarian Reform, Lazar Radivojevitch; Posts and Telegraphs and Public Works, Sveta Savkovitch; Agriculture and Irrigation, Prof. Otto Frangesh.

On February 17, the King issued another decree constituting a Supreme Legislative Council of 17 nominated members. It included 11 Serbs, four Croats, and two Slovenes. Its functions were to be largely advisory. The dictatorship immediately prohibited public assemblies (January 9) and announced a drastic press law under which three Zagreb newspapers had their editions confiscated on January 8 for printing an interview with Dr. Vlatko Matchek, the Croat leader. On January 13 two Turkish language newspapers printed in Southern Serbia were suppressed and the Budapest *Pester Lloyd*, semi-official mouthpiece of the Hungarian government, and the *Berliner Tageblatt* were ordered excluded from the kingdom. General Zhivkovitch, in an interview on January 10, announced that the aim of the new régime was to establish order and discipline, unify the laws, and reconstruct the country's economic life. Once this programme was carried out, he said, the democratic system of government would be reintroduced. King Alexander, on January 16, reiterated that his ultimate aim was "more just electoral laws, true parliamentarianism and real democracy." Dr. Matchek, while expressing the fear that the Serbian party

would attempt "to continue its old prejudicial policy toward the Croats," announced that his party was willing to give a new régime "a chance to lift Yugoslavia out of its present slough of despondency and inertia."

The dictatorship proceeded energetically with its programme. On January 19, the King signed a decree reorganizing and unifying the judicial system, on January 27, two other decrees greatly increased the powers of the Prime Minister and established a single penal code for the entire kingdom modeled upon those in effect in Hungary and Italy. Heavy penalties were prescribed for criticism of the government and for attacks upon "the sacred institutions of monarchy." In line with the decision to abolish all political parties of a racial or religious nature which were not definitely Yugoslav in character, the Croat Peasant party was officially dissolved on January 21 and the Radical, Independent Democrat, Serbian Peasant, and Socialist parties were dissolved three days later. Political clubs maintained by students were ordered immediately disbanded.

As it became evident that the policy of the dictatorship was one of unification and centralization rather than of federalism and autonomy, the Croats resumed their stubborn opposition. Dr. Mathek declared on January 22 that, "Croatia's relations to Serbia can be established only through a Croat parliament. We demand complete legislative and executive freedom, having only such public business in common with Serbia as is necessary for the conduct of foreign policy."

Meanwhile, the new régime put into effect badly needed administrative and political reforms. In April, the Ministries of Religion, Public Health, Posts and Telegraphs, and Agrarian Reform, were consolidated for purposes of efficiency, superfluous employees were dismissed, and there was a general improvement in the civil service. Croat newspapers, which had been tolerated at first, were gradually suppressed and army officers who appeared hostile to the dictatorship were retired, among them General Pesitch, chief of the general staff.

On May 20, Svetozar Pribitchevitch, former Minister of Education and leader of the Independent Democrats, was interned and two days later Dr. Mathek was arrested for having given an interview to an American newspaperman on the political situation in Yugoslavia. The censorship of political news grew increasingly rigorous. Unable to voice their protests within the kingdom, a number of the Croat leaders escaped to neighboring countries, where they carried on a campaign against the dictatorship. On August 8 the Zagreb chief of police forbade a projected public commemoration of the anniversary of the death of Stephen Radich, the former Croat leader. Pumea Ratchitch, who shot Radich in Palma in 1928, was brought to trial in May and sentenced to 20 years imprisonment—the maximum under Serbian law.

Apparently convinced that it would be impossible to create a united Yugoslav nation on the basis of existing traditional racial and religious divisions within his kingdom, Alexander on October 3 decreed the drastic reorganization of the internal administrative system. The official designation of the state as the Kingdom of the Serbs, Croats, and Slovenes was changed to that of Yugoslavia, the names of Serbia, Croatia, Slo-

venia, Dalmatia, Macedonia, Montenegro, Bosnia, and Hercegovina were ordered abolished along with the 33 former provinces and in place of the latter were established nine banats, cutting across the former regional boundaries and, with the exception of Littoral Province, bearing the names of the rivers flowing through or beside them. While the boundaries of Croatia and Slovenia were not materially altered, Bosnia was completely recast, its former compact block of Moslem inhabitants being distributed in small minorities among four banats. The areas, populations, and capitals of the nine new provinces, or banats, were given by the January, 1930, issue of *Foreign Affairs* (American) as follows.

JUGOSLAVIAN PROVINCES AREA AND POPULATION

Provinces	Capital	Population	Area in square miles
Drava	Ljubljana	1,040,000	6,151
Sava	Zagreb	2,320,000	14,242
Vrba	Banjaluka	850,000	7,935
Littoral	Split	800,000	7,495
Drina	Sarajevo	1,400,000	11,299
Zeta	Cetinje	740,000	12,476
Danube	Novi Sad	2,100,000	10,870
Morava	Nish	1,200,000	9,928
Vardar	Kopljue	1,405,000	15,272

The banats were given a considerable measure of autonomy, but the bans, or governors, who assumed their functions on November 11, were appointed by the Crown. Their powers included the naming and dismissing of all lower officials, and the control of the provincial finances, they were entrusted also with part of the work of the Ministries of Trade, Public Works, and Social Welfare. Belgrade remained a separate unit outside of the provincial administrative areas. A strictly nationalistic system of education replaced the former system of education in the confessional schools, the aim being to insure the bringing up of all children as Yugoslavs rather than as Serbs, Croats, Slovenes, or Slovenians. Finally, the Sokols, or combined athletic and political organizations, which played such a prominent part in the history of the South Slavs, were ordered abolished.

In the economic field, the dictatorship made less impression. The agrarian credit crisis continued and repeated efforts to secure the large foreign loan necessary to the stabilization of the currency proved unsuccessful. Some gain in national unity was reported toward the end of the year, but the drastic repression of opposition elements continued. More than 2000 Croats, among them Dr. Mathek, were arrested in December following the discovery of an alleged conspiracy to bomb special trains en route to the celebration of King Alexander's birthday on December 17. The deaths in prison of a number of those arrested were described as suicides by the police, an explanation which was received with general skepticism.

**FOREIGN RELATIONS** Relations with Italy continued strained. No steps were taken for the renewal of the five-year treaty of friendship with Italy, which expired on January 27. In April, there was a flare up on anti-Italian feeling following the publication of documents in the *Giornale d'Italia* implying that the Belgrade Government was preparing for guerilla warfare with Italy. The Yugoslav Foreign Office denounced the documents as forgeries from start to finish.

Meanwhile, there was anxiety in Belgrade as a result of Italy's success in virtually encircling Yugoslavia through understandings with Austria, Hungary, and Bulgaria. On May 21, the Little Entente treaties of alliance—including Yugoslavia, Czechoslovakia, and Rumania—were renewed after a conference of the Foreign Ministers of the three countries at Belgrade. The ratification by Yugoslavia in November of the so-called Pirot Convention covering the frontier dispute between Yugoslavia and Bulgaria was expected to aid materially in the settlement of that delicate problem. On September 9, Yugoslavia was elected to a seat on the Council of the League of Nations. For Yugoslavia's connection with the reparations and optants questions, see HUNGARY, under *History*, and REPARATIONS, see also ITALY, BULGARIA, and AUSTRIA, under *History*.

**KAISER WILHELM'S LAND,** *Kaiser-wilhelmsland*. A mandated territory under the control of Australia. It was a colony of Germany at the outbreak of the World War in 1914, but was shortly captured by Australian forces. It occupies the northern part of S. E. New Guinea. On Dec. 17, 1920, the League of Nations assigned it to Australia under a mandate. See GERMAN NEW GUINEA.

**KAMERUN,** *kame-ron'*, CAMEROON or CAMEROONS. The name applied to the territory between British Nigeria and French Equatorial Africa, extending from the Gulf of Guinea to the south shore of Lake Chad, formerly a German protectorate, but occupied by the British and French during the World War and divided in 1919 between France and Great Britain, the former getting far the greater part. Area, 200,725 square miles, population, 2,578,733.

**FRENCH KAMERUN.** At the time of the division of the former German protectorate in 1919 France received an area of 166,489 square miles (also exclusive of the area ceded to Germany in 1911, which, after the War, was annexed to French Equatorial Africa), population in 1926, 1,878,683, including 1570 Europeans. The seat of the Government is at Yaoundé, and the chief port is Douala. In 1925 there were 73 government schools with a total attendance of 10,549. The principal products are cacao, rubber, almonds, ivory, tobacco, palm oil, and palm nuts. In 1927 the imports amounted to 194,476,148 francs, and the exports to 160,797,099 francs. The general budget for 1927 balanced at 41,708,350 francs and there was a special railway budget of 16,000,000 francs. There were 369 miles of railway. The colony was created an autonomous territory by decree of May 28, 1921, and is under the administration of a French Commissioner-Commissioner in 1929, M. Marchand.

**BRITISH CAMEROONS.** Great Britain received about 34,236 square miles of Kamerun in the division of 1919. The population is estimated at about 700,050. Cacao, palm kernels, rubber, hardwood, and ivory are the principal products. In 1927 the imports were £318,457 and the exports £303,747. In the same year, 186 vessels of 284,247 tons entered the port of Victoria. The revenue and expenditure, now incorporated with those of Nigeria, amounted to £90,224 and £126,306, re-

spectively, in 1926-27. The Governor of Nigeria is the administrator of the British Cameroons. See NIGERIA.

**KANSAS. POPULATION.** According to the Fourteenth Census, the population of the State on Jan. 1, 1920, was 1,769,257. According to the State census taken in 1925, the population was 1,812,986. The estimated population on July 1, 1928, was 1,835,000. The capital is Topeka.

**AGRICULTURE.** The following table gives the acreage, production, and value of the principal crops in 1928 and 1929.

Crop	Year	Acreage	Prod Bu	Value
Wheat	1928	11,518,000	138,060,000	\$138,053,000
	1929	10,479,000	177,893,000	167,144,000
Corn	1928	6,108,000	106,808,000	79,033,000
	1929	6,634,000	179,118,000	116,427,000
Hay	1928	2,282,000	8,971,000	41,026,000
	1929	2,896,000	4,646,000	39,023,000
Oats	1928	1,197,000	28,249,000	12,995,000
	1929	1,301,000	37,729,000	15,846,000
Grain sorghum	1929	1,091,000	19,638,000	13,747,000
	1928	1,284,000	28,634,000	17,466,000
Potatoes	1929	47,000	4,375,000	6,344,000
	1928	54,000	7,600,000	8,402,000
Barley	1929	608,000	12,464,000	6,232,000
	1928	633,000	17,661,000	8,830,000

\* Tons

**MINERAL PRODUCTION.** Tenth of the States in 1927 in rank according to value of mineral production, Kansas produced in that year minerals to the total value of \$120,368,526; it had produced in 1926 to the total of \$165,060,612. The decline was due almost entirely to a fall in the price of petroleum, which consequently failed in 1927 to supply more than half of the total, as it had formerly done. Ascribable in part to the decrease in activity resulting from lower prices, there followed in 1928 a period of smaller petroleum production. The quantity produced in the State in 1928 was 38,332,000 barrels, in 1927, 41,069,000. The value of the product was 1928 (estimated), \$50,800,000, 1927, \$58,300,000. Natural-gas production, on the other hand, did not decline in 1927, attaining 42,646,000 M cubic feet, in value \$12,833,000, as against 38,095,000 M in 1926, with a value of \$12,547,700. The output of natural-gas gasoline, which was 36,095,200 gallons with a value of \$1,746,000 in 1927, was little changed for 1928, being 35,700,000 gallons, as to quantity, but attained the higher value (estimated) of \$2,378,000. Coal production again fell in 1928, it was estimated for that year at 2,809,724 short tons, in value \$6,801,000. For 1927 it had been 3,443,762 tons, in value \$9,648,000. The mine production of zinc in 1928 was 107,251 short tons, and in 1927, 109,427 short tons. The value of zinc mined was 1928, \$13,084,622, 1927, \$14,006,656. Lead mined was 25,276 short tons in 1928 and 28,463 in 1927, in value, \$2,923,016 for 1928 and \$4,554,080 for 1927. Cement production was active in 1928, the shipments reaching, for the year, 6,787,568 barrels, against 6,141,937 for 1927; shipments had the value, for 1928, of \$10,091,330, and for 1927, of \$9,939,412. The clay products of the State for 1927 were valued at \$3,805,509. Salt production in 1927 yielded 794,780 short tons, having a value of \$2,971,344.

**FINANCE.** State expenditures in the year ended June 30, 1928, as reported by the U. S. Department of Commerce, were for maintenance and operation of governmental departments, \$15,020,532 (of which \$654,570 was aid to local educa-

tion). for conducting public-service enterprises, \$439,056, for interest on debt, \$1,142,000, for permanent improvements, \$12,065,867, total, \$28,676,455 (of which \$12,649,825 was for highways, \$2,180,197 being for maintenance and \$10,469,428 for construction) Revenues were \$27,005,310 Of this, property and special taxes formed 34.7 per cent, departmental earnings and compensation to the State for officials' services, 12.1, sales of licenses and taxation of gasoline, 38.5 The valuation of property assessed for ad valorem taxation was \$3,683,648,778 The total funded or fixed debt outstanding was \$25,500,000, the net debt but slightly less

**TRANSPORTATION** The total number of miles of railroad line under operation on Jan. 1 1929, was 9345.34 There were built, in 1929, 2.63 miles of first, and 12.30 of second, track

**MANUFACTURES** According to the biennial Federal Census of Manufactures published by the Department of Commerce in 1929 and relating to the operations of 1927, there were in the State, in 1927, 1707 establishments. These employed 59,925,089 man-hours, whose wages for the year totaled \$59,925,089 Materials and supplies used in production cost \$518,141,326 Manufactured products attained the combined value of \$681,570,334

**EDUCATION** The movement for distributing State aid to the end of equalizing educational opportunity in schools throughout the State gained advancement through a recommendation to this purpose in the report of the State Tax Code Commission For the year ending with June 30, 1928, the school population of the State was estimated at 544,524 persons, between 5 and 21 years of age There were enrolled in the public schools 425,124 pupils, those of the public junior colleges and kindergartens not included The year's expenditure for public-school education totaled \$39,400,849 The monthly salaries of teachers averaged \$164.97 for men and \$139.81 for women

**CHARITIES AND CORRECTIONS** The State Board of Administration, starting with 1905, exercised centralized control over the State institutions of care and custody It had full charge of 16 State institutions These were State Penitentiary, Lansing, Reformatory (for prisoners from 16 to 21 years of age), Hutchinson, Boys' Industrial School, Topeka, Girls' Industrial School, Beloit, Women's Industrial Farm, Lansing, hospitals for the insane at Topeka, Oawatomie, and Lained, Hospital for Epileptics, Parsons, Home for the Feeble-minded, Winfield, State Orphans' Home, Atchison, School for the Deaf, Olathe, School for the Blind, Kansas City, Vocational School (colored), Topeka, Western University (colored), Quindaro, Tuberculosis Sanatorium, Norton

**LEGISLATION** The regular biennial session of the State Legislature was held, adjourning April 14 The Legislature did not carry out the purpose of the State administration to shape a new scheme of State taxation They did, however, provide for a referendum to be held in 1930, on the proposal to levy a State income tax The gasoline tax was increased by 1 cent a gallon, with a view to the completion of 2095 miles of State highway in the course of the ensuing two years Appropriations of nearly \$20,000,000 were made to cover the expenditures of the biennium A highway commission was created and two bodies that had been abolished by former legis-

lative action were resurrected, one being the public service commission and the other the tax commission There was also brought into being a new body, the State Commission on Labor and Industry, charged with directing workmen's compensation, factory and mine inspection, and the supervision of women's and children's labor An act was passed, retroactive for 6 years, to enable claimants to recover overcharges on railroad freight shipments Voters absent from their homes on primary or election day were empowered to cast their votes by mail

In the business field, the most important act of the session was the repeal of the State bank guarantee law, designed to put an end to a bank guarantee system that, like those of some other of the Mid-Western States, has failed to prove its merit upon long trial The repeal sought to authorize the banks' recovery of bonds that they had deposited under the original act, and this provision was later invalidated by the State Supreme Court The capital to be required of new State banks was raised to the minimum of \$100,000 in cities of 75,000 inhabitants or over, and proportionately elsewhere In the educational field, compulsory kindergartens were abolished, counties were enabled to put their scholars in the high schools of other counties, paying tuition therefor, when advisable, and school districts were allowed to maintain transport for pupils to and from school Conservancy districts were authorized for flood protection and the cleaning of streams, districts, on the other hand, were authorized for the purpose of expending flood waters in the western part of the State, to be used for irrigation Cities were permitted to establish municipal airports The organization of private banks was prohibited by act Mutual hail insurance companies were required to deposit \$20,000 each for the protection of policy-holders Counties were authorized to place highway construction on the county basis, doing away with township control of roads

**POLITICAL AND OTHER EVENTS** The resignation of Senator Curtis to become Vice President of the United States on March 1 created a vacancy in the State's delegation in the Senate This vacancy Governor Reed proceeded at the beginning of April to fill by appointing as Senator Henry J. Allen, former Governor and later director of publicity for the presidential campaign of Herbert Hoover Allen had been on former occasions an opponent of Curtis in the Republican field A tax code commission, created with a view to surveying the means for raising revenue required for the prosecution of highway improvement, issued in December a report recommending a general sales tax and a State tax on incomes A law of 1929 requiring commercial vehicles entering the State to have Kansas licenses was passed by way of reprisal for a similar course on the part of Oklahoma and a series of arrests and prosecutions followed in April, on both sides of the Oklahoma line The Forest, Fish, and Game Commission proceeded with its policy of creating lakes for sport, by starting on a project for a lake near Tonganoxie Private interests negotiated for lease of land at Kansas City along the public levee, for the erection of a \$1,000,000 grain elevator

**OFFICERS** Governor, Clyde M. Reed, Lieutenant-Governor, J. W. Graybill, Secretary of State, E. A. Cornell, Auditor, Will J. French, Treasurer, Tom B. Boyd, Attorney-General, Wil-

ham A. Smith, Superintendent of Public Instruction, George A. Allen, Jr.

**JUDICIARY** Supreme Court Chief Justice, William A. Johnston; Associate Justices, Rousseau A. Burch, John Marshall, John S. Dawson, W. W. Harvey, Richard J. Hopkins, William Easton Hutchinson

**KANSAS, UNIVERSITY OF** A State institution of higher education in Lawrence, Kans., founded in 1864. The 1929 autumn enrollment was 4378, of whom 129 were registered in more than one school, leaving a total enrollment of 4249. Of this number, 1586 were women and 2663 men, distributed as follows: Graduate school, 228, college of liberal arts and sciences, 2433, engineering and architecture, 598, fine arts, 342, law, 141; pharmacy, 70, medicine, 325, education, 95; business, 146. The 1929 summer session had an enrollment of 1787, of whom 963 were women and 824 men. The full-time faculty members numbered 248. The endowment fund amounted to \$236,000 and the income for the year, including the balance carried over from 1928, was \$2,484,951. There were 212,000 volumes in the library. Chancellor, Ernest Hiram Lindley, LL.D.

**KANSAS WESLEYAN UNIVERSITY.** A coeducational institution under the auspices of the Methodist Episcopal Church at Salina, Kans., founded in 1885. The enrollment for the autumn of 1929 was 600, distributed as follows: College of liberal arts, 290, college of music, 110, business college, 200. The 1929 summer session had an enrollment of 115. The faculty numbered 32. The endowment amounted to \$100,000, while the income from the General Fund was \$122,393. A gift of \$10,000, in addition to \$25,000 given in 1928 for the retiring of the bonded indebtedness of the university, was made by Walter P. Chrysler. There were 15,000 volumes in the library. The new administration building, containing administration offices, class rooms, and the Sams Memorial Chapel, was completed during the year at a cost of \$250,000. President, L. B. Bowers, A. B., D.D.

**KARAFUTO.** The name applied to the Japanese half of the island of Sakhalin (see SAKHALIN), which comprises that portion south of the 50th parallel of N. latitude. Area, approximately 13,934 square miles, population, according to the census of 1925, 203,504. The chief industry is the herring fisheries, although the colony is suitable for agriculture and pasturage. The herring catch averages more than 375,000,000 kilograms annually, the greater part of which is manufactured into fertilizer. The total value of fishery products in 1928 was 20,557,432 yen. The Japanese government supplies Japanese settlers with seed and domestic animals. There are also valuable forest lands and mines, the chief minerals being coal and alluvial gold. Oil production in 1928 totaled 539,481 tons. For the year ending Mar. 31, 1929, revenues totaled 32,646,370 yen and expenditures, 25,691,271 yen, leaving a surplus of 6,955,099 yen (exchange value of the yen in 1928 averaged \$0.4640). Governor in 1929, K. Kita.

**KEANE, THE MOST REV. JAMES JOHN.** American Roman Catholic archbishop, died in Dubuque, Iowa, Aug. 3, 1929. He was born in Joliet, Ill., Aug. 26, 1857, and was educated at St. John's University in Minnesota and at Grand Seminary in Montreal. In 1882 he was ordained Roman Catholic priest and in that year became assistant pastor of St. Mary's Church in St.

Paul, Minn., following which he was pastor of St. Joseph's Church in the same city. He was professor and bursar at St. Thomas's Seminary in St. Paul, from 1886 to 1888, and president from 1888 to 1892. He was pastor of the Church of the Immaculate Conception in Minneapolis (1892-1902) and was consecrated third bishop of the diocese of Cheyenne in 1902. In 1911 he was transferred to the archbishopric of Dubuque.

**KEEFE, DANIEL J.** An American labor leader, died in Elmhurst, Ill., Jan. 3, 1929. Born in South Chicago, in September, 1855, he began work in a shingle mill when 8 years old. He later became a lumber handler and a longshoreman. He was made president of the Lumber Unloaders' Association in 1882, and of the International Longshoremen, Marine and Transport Workers' Association in 1893, serving for many years. He was one of the first members of the executive committee of the National Civic Federation, and he was at one time sixth vice president of the American Federation of Labor. He also served on the Industrial Peace Commission at Washington in 1906. President Roosevelt appointed Mr. Keefe Commissioner General of Immigration, Dec. 1, 1908, a position which he held until May 31, 1913.

**KELLOGG-BRIAND TREATIES.** On January 19, the U. S. Senate ratified the Anti-War Pact by a vote of 85 to 1 (Senator Blaine). Ratification came as the result of a compromise in the Foreign Relations Committee by which a unanimous report of the committee was submitted to the Senate by Senator Borah which interprets the pact, but expressly states that it does not constitute a "reservation or reservations to the same." Twenty-five Senators had signed a round robin circulated by Senator Bingham of Connecticut, demanding that the Foreign Relations committee submit an "interpretative report," and a compromise was finally effected by which this report was issued with the non-reservation statement insisted upon by Senator Borah.

The report giving the "true interpretation" of the pact states:

1 The hope and belief that the pact will facilitate the use of peaceful means of settlement of international disputes

2 The understanding that the right of self defense is in no way impaired by the pact, and that each nation is free at all times and regardless of treaty provisions to defend itself

3 The Monroe Doctrine is included as a part of the national security of the United States and the right to maintain this Doctrine is included in our right of self defense

The report incorporates four statements "bearing on the question and as to the true interpretation of the Monroe Doctrine as it has always been maintained and interpreted by the United States." The first of these is a quotation from President Monroe's message to Congress of Dec. 2, 1823, which formulated the Doctrine as a prohibition of European intervention south of the Rio Grande. The second, third and fourth are statements of President Cleveland (message of December 17, 1895), Elihu Root (July 1, 1914), and Professor Theodore Woolsey (June, 1914) which justify President Monroe's declaration as inherent in the right of self-defense. No mention is made in the Senate report of the message of President Roosevelt of December 6, 1904, in which the right and duty of the United States to intervene in the affairs of Latin American States "in flagrant cases of wrongdoing and impotence" is added to the Doctrine as originally formulated by President Monroe. The "exercise of an international police power" by the United States under the Monroe Doctrine has become, since 1904, the chief cause of complaint against us in Latin America. Does the non-mention of President Roosevelt's interpretation in this latest definition of the Monroe Doctrine imply that a unilateral intervention

policy in Latin America for the United States is not consistent with the terms of the Anti-War Pact! If so, this will doubtless facilitate the adherence of the A. B. C. powers to the pact. The signature on January 5, 1929, of the arbitration and conciliation agreements of the Pan-American Arbitration Conference is another long step along this same road. Both of these developments should do much to better United States Latin American relations.

4 Finally, the Senate's report states that the Anti-War Pact provides no sanctions against a treaty-breaking State, "express or implied," and that the signatories are relieved of their obligations under the treaty as concerns the violating State. It is significantly silent in regard to the attitude the United States will take toward the application of League sanctions against an aggressor.

On Aug. 27, 1929, the following telegram was received by the Secretary of State from the Principal Secretary of State for Foreign Affairs of Great Britain, who was at the time attending the first reparations conference at The Hague:

On the first anniversary of the signature of the Pact of Paris for the Renunciation of War I send you my warmest greetings and congratulations. I believe that this day will be recognized by future generations as marking the beginning of a new epoch in the history of civilized mankind. The Pact of Paris is one of the foundation stones upon which we have now to build the structure of enduring peace and I am confident that it will be, in years to come, the source of undying honor to the government and people of the United States among the nations of mankind.

Arthur Henderson

On August 28, Secretary Stimson sent the following telegram to the American Ambassador at London:

Please convey to His Majesty's Principal Secretary for Foreign Affairs an expression of my sincere thanks for his thoughtful message of congratulation transmitted on the occasion of the first anniversary of the signing of the Multilateral Pact for the Renunciation of War.

Before the first anniversary of the signature of the Treaty for the Renunciation of War, which signature took place at Paris Aug. 27, 1928, the fifteen signatory States had deposited their instruments of ratification with the Government of the United States and had brought the Treaty into force (July 24, 1929), thirty-six of the forty-nine States invited to adhere to the Treaty had deposited their instruments of adherence and had become parties to the Treaty, legislatures or other constitutional authorities of four states (Costa Rica, Haiti, Switzerland, and Venezuela) had approved adherence to the Treaty, so that only formal deposit of instruments of definitive adherence at Washington remained in order to put the treaty in force as to them, seven states (Bolivia, Colombia, Ecuador, Mexico, Paraguay, El Salvador, and Uruguay) had signified their intention to adhere to the Treaty, and two states (Argentina and Brazil) had not signified their intention to adhere to the Treaty. Moreover, one state (Free City of Danzig), not included among those originally invited, had accepted the Treaty and had completed its adherence except for deposit of its instrument of adherence at Washington.

During August the following States deposited their instruments of definitive adherence at Washington and became parties to the Treaty for the Renunciation of War:

State	Date of Instrument	Date of Deposit
Greece	June 25, 1929	August 3, 1929
Honduras	June 29, 1929	August 5, 1929
Chile	July 22, 1929	August 12, 1929
Luxembourg	August 7, 1929	August 24, 1929

**KELMAN**, THE REV. JOHN Scotch Presbyterian minister, died in Edinburgh, Scotland, May 3, 1929. He was born June 20, 1864, and educated at Edinburgh University and New College. His study at New College was interrupted by three years of travel in Australia, where he attended Ormond College in Melbourne for one session. In 1890 he became assistant to the Rev. George Adam Smith in Aberdeen and in 1891 was ordained minister at Peterculter, Aberdeenshire. He was minister of New North Church in Edinburgh from 1897 to 1907 and minister of St. George's United Free Church, also in Edinburgh, from 1907 to 1919. In 1919 he came to New York as pastor of the Fifth Avenue Presbyterian Church, remaining until 1924, when he went to England to become pastor of the Farnham Presbyterian Church in Hampstead. Because of ill health, he retired in 1925. During the World War, he served with the Y. M. C. A. in France, for which he was made an officer of the Order of the British Empire. He was the author of a great number of books on both religious and literary subjects. Among them are *The Holy Land*; *The Faith of Robert Louis Stevenson*; *The Road, a Study of John Bunyan's Pilgrim's Progress*; *The War and Praching*, and *Prophecy of Yesterday and Their Message for To-day, A Study of Hellenism and Hebraism*, as represented by Thomas Carlyle, Matthew Arnold, and Robert Browning.

**KENNEDY**, THE REV. GEOFFREY ANKETELL STUDDERT, English clergyman, died Mar. 8, 1929, in Liverpool, England, at the age of 46. He was educated at Trinity College in Dublin and was ordained in the ministry in 1908. From 1914 to 1921, he was vicar of St. Paul's in Worcester, and after 1922, rector of St. Edmund the King. He was also a chaplain to the King of England and a messenger of the Industrial Christian Fellowship. During the World War, Mr. Studdert-Kennedy was one of the most popular of the army chaplains, winning the nickname "Woodbine Willie" by his habit of handing out to the British soldiers cigarettes of that brand. After the war, he was active in "....." to remedy the industrial troubles of "....." He wrote *Rough Rhymes of a Padre* (under the pseudonym "Woodbine Willie"), *The Hardest Part*, *Luck*, *Food for the Fed-up*, *The Wicket Gate*, and *The Word and the Work*.

**KENTUCKY** POPULATION. According to the Fourteenth Census, the population of the State on Jan. 1, 1920, was 2,416,630. The estimated population on July 1, 1928, was 2,553,000. The capital is Frankfort.

**AGRICULTURE.** The following table gives the acreage, production, and value of the principal crops in 1928 and 1929:

Crop	Year	Acreage	Prod. Bu.	Value
Corn	1929	2,938,000	80,795,000	\$73,523,000
	1928	3,029,000	86,638,000	63,972,000
Tobacco	1929	473,000	361,845,000	55,856,000
	1928	388,700	300,700,000	75,175,000
Hay	1929	1,272,000	1,802,000	28,116,000
	1928	1,302,000	1,712,000	27,852,000
Potatoes	1929	50,000	4,400,000	5,940,000
	1928	57,000	5,985,000	4,788,000
Sweet potatoes	1929	15,000	1,385,000	1,638,000
	1928	14,000	1,246,000	1,433,000
Wheat	1929	240,000	2,832,000	3,588,000
	1928	125,000	1,000,000	1,360,000
Oats	1929	290,000	6,235,000	3,679,000
	1928	305,000	7,930,000	4,520,000

\* Pounds. \* Tons.

**MINERAL PRODUCTION.** Kentucky, having outstripped Illinois in coal production in the troubled year 1927, took third place among the States of the Union as a coal producer and retained this position in 1928. The output of coal, which normally would contribute about three-fourths of the total value of a year's mineral production of all sorts, nevertheless fell somewhat in 1928, a year that brought labor war in the coal mines to a late and doubtful conclusion. Mining fell off in western Kentucky during the period of labor suspension, between the end of March and the middle of September, but remained normal in eastern Kentucky. It resulted that the coal production of the State attained the total for 1928, large under the circumstances, of 61,800,379 short tons, as against 60,123,998 tons for 1927. The value of coal mined was \$96,722,000 for 1928 and \$119,249,000 for 1927. Petroleum production rose once again, to 7,325,000 barrels, in value (estimated) \$11,830,000, for 1928, from 6,719,000 barrels, in value \$11,220,000, for 1927. The clay products attained the value of \$7,257,604 for 1927, as against \$7,076,858 for 1926. The yield of natural gas was 10,206,000 M cubic feet, in value \$3,277,000 for 1927, for 1926 it had been 10,410,000 M cubic feet, or \$3,378,000. Native asphalt was produced to the quantity of 344,220 short tons in 1927, as against 320,430 in 1926, and to the value of \$1,040,338 in 1927 and \$2,530,480 in 1926. The yield of stone attained \$2,803,779 for 1927, not counting fluor-spar, of which were produced 57,495 short tons, in value \$1,040,338. The total value of mineral products was \$152,614,177 for 1927, for 1928, \$146,768,273.

**FINANCE.** State expenditures in the year, ended June 30, 1928, as reported by the Federal Department of Commerce, were for maintenance and operation of governmental departments, \$18,834,199 (of which \$5,757,455 was aid to local public education), for interest on debt, \$628,216, for permanent improvements, \$16,176,079, total, \$35,638,494 (of which \$17,231,021 was for highways, \$2,411,292 being for maintenance and \$14,819,729 for construction). Revenues were \$33,832,940. Of these, property and special taxes formed 34.3 per cent, departmental earnings and remuneration for officers' services, 7.1, sales of licenses and taxation on gasoline, 39.5. Taxable property was valued at \$3,064,233,497. State taxation thereon was \$10,783,140. Funded State debt (not including warrants) was \$2,507,021 gross and \$2,354,119 net.

**TRANSPORTATION.** The total number of miles of railroad line under operation on Jan. 1, 1929, was 4036.78. There were built, in 1929, 4.52 miles of additional second track.

**MANUFACTURES.** According to the biennial Federal Census of Manufactures published by the Department of Commerce in 1929 and relating to operations of 1927, there were in the State, in 1927, 1851 manufacturing establishments. These employed 74,912 wage earners, whose wages for the year totaled \$83,858,007. Materials and supplies used in production cost \$250,632,957. Manufactured products attained the combined value of \$447,764,961.

**EDUCATION.** The facilities at the State university were augmented by the completion of dormitories, an auditorium and buildings for the training of teachers. The school population, as estimated for 1928, was 686,910. There were enrolled in the public schools of the State, in 1929,

581,511 pupils. Of these, 526,472 were in elementary, and 55,039 in high-school, grades. Expenditure for public schools totaled \$27,357,550; of this sum \$7,003,517 was listed as State expenditure. The salaries of teachers, by the year, averaged \$767 for elementary and \$1406 for high-school positions.

**CHARITIES AND CORRECTIONS.** The management of the State institutions for the care or custody of individuals rested in 1929, as previously, in a State Board of Charities and Corrections. This board was a statutory bipartisan body of eight uncompensated members, two necessarily women. It had as its principal agent a Commissioner of Public Institutions, who was its own nominee. The seven institutions under the board's management, with their respective average populations of the year ending June 30, 1929, were: Eastern State Hospital (mental), Lexington, 1460; Central State Hospital (mental), Lakeland, 1944; Western State Hospital (mental), Hopkinsville, 1685; State Reformatory, Frankfort, 2013; State Penitentiary, Eddyville, 868; Houses of Reform, Greendale (boys and girls), 616; Feeble-minded Institute, Frankfort, 520.

**POLITICAL AND OTHER EVENTS.** There was held on November 5 an election of members of the Legislature, which resulted in the loss of Republican control. William Harrison, Republican, was reelected Mayor of Louisville. At a special congressional election on May 28 to fill a vacancy in the third district, John W. Moore, Democrat, was elected to replace a Republican Governor Sampson carried on his efforts to bring the plan for State issue of textbooks to the schools into working order. Opponents of the scheme of uniform State textbooks brought suits against the law. The State Court of Appeals in one case sustained on June 20 the constitutionality of the law, but held that the textbook commission had adopted books at a faster rate than the law provided. In spite of difficulties as to revenue with which to pay for books, the Legislature of 1928 having voted no such revenue, the textbook commission advertised in July for bids on the supplying of books. Earlier advertisements for bids, thrown out by the courts, had sought that publishers supply certain "hybridized" texts, containing portions of two or more books, which the commission had sought to adopt. The antagonism to the Governor's course in this matter led to an effort to prosecute him criminally for receiving gifts from book publishers. He was indicted, together with another commissioner and numerous book companies, in Franklin County on September 20, and was brought to trial. The court held that the books "presented" were simply samples and instructed the jury to acquit.

The State Highway Commission issued bonds and notes to the total of \$10,767,000 for the acquisition or construction of 15 toll bridges. One of these bridges was to be built between Henderson and Evansville, over the Ohio River. Bridges at Clay's Ferry and at Rio and Munfordville were acquired. Doubt as to the amount of revenue to be derived from projected structures over the Ohio at Carrollton, over the Tennessee at Eggnor's Ferry, and over the Cumberland at Canton checked the proposal to issue bonds likewise for these projects, it appearing uncertain that the tolls would cover the financial charges. A contest between the State and fire insurance companies over an increase of 12½ per cent in the insurance rates, after a duration of three years,

was settled in May by the State's allowing the companies to retain collections under the increase up to Apr 1, 1927, while companies were to make a refund of part of the excess for the subsequent period. Power interests proposed to the Federal Power Commission a plan by which they would supply \$250,000 for improving the surroundings of Cumberland Falls as a public park, in return for the grant of a power development at the falls. The Isaac W. Bernheim Foundation was incorporated to acquire and hold some 13,100 acres in Bullitt and Nelson counties to be maintained as a forest and preserve.

OFFICERS Governor, Flein D Sampson, Lieutenant-Governor, James Breathitt, Jr., Secretary of State, Ella Lewis, Attorney-General, J W Cammack, Auditor, Clell Coleman, State Treasurer, Emma Guy Cromwell, Commissioner of Agriculture, Labor, and Statistics, Newton Bright, Superintendent of Public Instruction, W C Bell.

JUDICIARY Court of appeals: Chief Justice, Gus Williams, Associate Judges, William Rogers Clay, W F Griggs, R P Deitzman, M M Logan, William H Rouse, S S Willis.

**KENTUCKY, UNIVERSITY OF** A coeducational, State institution of higher learning in Lexington, Ky, founded in 1866. The enrollment in the autumn of 1929 was 2884, distributed as follows: Graduate school, 205, arts and science, 1118; agriculture, 244, engineering, 580, law, 90, education, 380, commerce, 580. There were 1501 students registered in the summer session of 1929. The faculty numbered 255 members. The productive funds amounted to \$184,075, and the income for the year was \$1,599,514. The library contained 95,005 volumes. President, Frank Le-Rond McVey, Ph D, LL D.

**KENYA COLONY AND PROTECTORATE** (formerly the EAST AFRICA PROTECTORATE) A British colony and protectorate in East Africa bordering on the Indian Ocean between the Umba and Dick's Head and extending inland as far as Uganda, a Crown colony and protectorate since 1920. Area, 225,100 square miles, population in 1926 estimated at 2,736,517, including 12,529 Europeans, 30,583 Asiatics, and 10,557 Arabs. The Juba River, formerly the northern boundary, and a strip from 50 to 100 miles wide on the British side of the river, was ceded to Italy on July 29, 1925. Nairobi, the capital, had 32,864 inhabitants, of whom 3612 were European. The largest town is Mombasa, with a population in 1926 of about 39,824, of whom 869 were Europeans. In 1925 there were 20 government schools in operation including 6 European, and over 900 mission and native schools. The agricultural products include rice, coconuts, cotton, sisim, groundnuts, cassava, and sugar cane in the low lying areas. In the highlands, where the temperature is moderate and the rainfall good, maize, coffee, wheat, sisal, and other crops of lesser importance are grown. In 1926 there were 2,756,000 sheep in the colony.

The merchantable forests extend over 4500 square miles, of which 316 square miles are tropical. The mineral resources consist of nation, diatomite, gold, graphite, marble, limestone, and manganese. They are not fully explored as yet, and only gold mining is carried on to any extent. There is a uniform customs tariff in Kenya, Uganda, and Tanganyika. Imports into Kenya and Uganda, exclusive of government stores, totaled \$5,748,000 in 1928 and \$7,697,180 in 1927.

Domestic exports in 1927 amounted to £5,397,216. The chief import was cotton piece goods and the chief export raw cotton. The tonnage of vessels entered and cleared in 1927 amounted to 3,615,935 in the same year, the government revenue for Kenya totaled £2,846,100, expenditure, £2,515,115, public debt, £10,000,000. The Kenya and Uganda Railway is the chief means of communication and is owned by the state. It operates 961 miles of main line and branches, as well as steamer service on lakes Victoria and Kioga, and a motor transport service. The colony is governed under the constitution of December, 1925, which provides for an executive and legislative council. Governor and Commander-in-Chief in 1929, Lieut-Col. Sir Edward W. M. Grigg.

**HISTORY** A constitutional union of Kenya, Tanganyika, and Uganda under a High Commissioner and the maintenance of effective Imperial control over the proposed union, especially in matters concerning racial relations, were recommended in the report of the so-called Hilton Commission on Closer Union of the Dependencies in Eastern and Central Africa made public in London on Jan. 17, 1929. The recommendations aroused fear among European settlers in the territories concerned that they would lose their autonomy in dealing with the natives. In October, Sir Samuel Wilson, Permanent Under-Secretary of State in the Colonial Office, who investigated the situation in British East Africa at the request of the Conservative government following the issuance of the Hilton Commission report, submitted supplementary recommendations. He suggested that the powers of the High Commissioner should be confined to the complete control over customs, railways, ports and harbors, posts and telegraphs, and defence, that he should be assisted by a Central Council whose authority would be restricted to the same subjects, and that everything else, including the control of native affairs, should be left to the local legislatures. The question of the appointment of a High Commissioner and of the powers which he should exercise were still under discussion at the end of the year. See TANGANYIKA and UGANDA.

**KENTON COLLEGE** A college of arts and sciences for men in Gambier, Ohio, established in 1824 by the Protestant Episcopal Church and associated with it. The enrollment is limited to 250. The number registered for the autumn term of 1929 was 256. The faculty numbered 22 members. The endowment funds amounted to \$1,671,000, and the income for the year was \$209,000. The value of buildings and equipment was \$1,755,000. Pierce Hall, including the Philander Chase Memorial Tower, was opened for use in September, 1929. The building, costing \$350,000, is the common and recreational center for students. The library contained 45,000 volumes. President, William F Pence, LL D, DD, LL D.

**KINDERGARTEN ASSOCIATION, NATIONAL** See NATIONAL KINDERGARTEN ASSOCIATION.

**KINGSLEY, JOHN STERLING** American biologist, died at sea, Aug 28, 1929. He was born Apr 7, 1853, in Cincinnati, N Y, and was graduated from Williams College in 1875, studying later at Princeton University and at the University of Freiburg. During 1876-78 he was curator at Peabody Academy of Science, assistant in the United States Fisheries Commission, 1877-80, and curator of the Worcester

Natural History Society, 1881-82. He became professor of zoology at Indiana University in 1887 serving two years. During 1889-91 he was professor of biology at the University of Nebraska and from 1892 to 1913, at Tufts College. From 1913 to 1921, he was professor of zoology at the University of Illinois, and from the latter year, emeritus professor. Professor Kummel edited the *Standard Natural History* (1884-86), the *American Naturalist* (1884-98), and the *Journal of Morphology* (1910-20). He wrote *Elements of Comparative Zoology* (1896), *Vertebrate Zoology* (1899), *Guides for Vertebrate Dissection* (1907), *Comparative Anatomy of Vertebrates* (1912, 3d ed., 1926), and *Vertebrate Skeleton* (1925).

**KIWANIS INTERNATIONAL.** An organization of clubs made up of not more than two of the leaders in each business and profession, united for the rendering of civic and social service to the community. Each club enjoys autonomy but at the same time functions in direct connection with district and international administrations. There are 29 geographical districts, each with a governor, in the United States and Canada. The first club was organized in Detroit, Mich., in January, 1915. By 1917 the organization had spread into Canada. The name "Kiwaniis" was coined to express the constructive, unselfish work of Kiwanians. The motto of the organization is "We Build," is also an expression of its aims are to crystallize community sentiment for municipal improvements, to cultivate public opinion for purer politics, and to promote community cooperation in all good things. At the close of the year 1929, the international organization consisted of more than 1830 clubs, with an approximate membership of 102,000. Some 40,000 civic and welfare projects were carried out by these organizations during the year. Horace W. McDavid of Decatur, Ill., was the international president for 1929-30; Fred C. W. Parker of Chicago, secretary; and Raymond M. Crossman of Omaha, Neb., treasurer. Headquarters are in the Federal Reserve Bank Building, 104 West Jackson Boulevard, Chicago.

**KLEE, EDWIN.** An American choral conductor, died in Philadelphia, December 18. He was born in Kaiserslautern, Dec. 15, 1869. Having received a solid musical education from his father, he studied for two years in Karlsruhe with Felix Mottl (1890-92), and then for another year in Munich under Ludwig Thuille and Josef Rheinberger. In 1894 he settled in Philadelphia as organist at the Church of the Advocate and conductor of the Kreuznacher Sängerbund. His exceptional talent as choral conductor attracted wide attention, when, at the end of the first year of his directorship, the society won the first prize at the National Singing Festival in New York (1895). This success led to his appointment as assistant conductor of the United Singers of Philadelphia and conductor of several smaller societies. After his election as regular conductor, he gave up the other societies and devoted his entire energy to the United Singers, who then carried off the first prize at several competitive festivals. While conductor of the Junger Männerchor in Philadelphia, he won the coveted Kaiser Trophy in 1912. Then the Arion of Brooklyn secured his services, with the result that at the next festival (1915) they carried off the same prize. During

1917-21 he was conductor of the New York Liederkrantz. After that, he lived in retirement in Philadelphia.

**KLENGEL, JULIUS.** A celebrated German cellist, died in Leipzig, in September. He was born in that city, Sept. 24, 1859. He studied at the Leipzig Conservatory under Hegar (cello) and Jadassohn (composition) and spent practically all his life as solo cellist of the Gewandhaus Orchestra and professor of that instrument at the Conservatory. His compositions consist of four cello concertos, two *Konzertstücke* for cello and orchestra, a suite for two cellos; about 40 smaller pieces for cello, a *Serenade* for string orchestra, two string quartets, a piano trio.

**KLOCKMANNITE.** See CHEMISTRY, under MINERALOGICAL CHEMISTRY.

**KNIGHTS OF COLUMBUS.** A fraternal society of Roman Catholic men, organized under a special charter granted by the General Assembly of the State of Connecticut in 1882. The order is composed of a supreme council, a board of directors, and State and subordinate councils. On June 30, 1929, there were 61 State councils and two territorial jurisdictions. The subordinate councils, numbering 2544, had a membership of 637,122, of whom 247,040 were insurance members and 390,082, associate members. These two classes were developed through deviation from one of the chief purposes of the organization, to urge Roman Catholic men to insure provision after death for those dependent upon them, expansion in membership permitting others to join the associate class with certain restrictions as to their rights. By the step-rate plan of insurance, adopted in 1902, every insured member on the average was to pay the cost of his own insurance at his own age. In 1929 two improvements in the insurance plan were adopted: the automatic assessment loan provision and the two-year rule covering hazardous and extra-hazardous occupations.

The four principles of the order—charity, unity, fraternity, and patriotism—emphasize to members the necessity of rendering service in time of illness, death, or distress, the gathering together of men for better citizenship, the value of mutual assistance, and loyalty to duly authorized civil government. Since the World War, the society has offered to ex-service men evening courses in academic, commercial, and trade or technical subjects free of charge and has conducted correspondence courses for ex-service men and other members of the order. Its programme of boy-guidance work was organized in 1922 at the request of the bishops of America. It includes a two-year course in boy-guidance work at Notre Dame University, established through the endowment of a chair by the order. Scholarships are furnished outstanding Catholic men graduates of colleges, who are particularly adapted to the work. The Circles of Columbian Squires, the junior order for boys between 14 and 18, in 1929 numbered 55 with a membership of 2210. The objectives of the junior order are to develop a programme of activities most suitable for boys of the middle adolescent group; to train Catholic boys for future leadership, and to develop them through the five-fold programme into high-type Catholic gentlemen.

The 1929 supreme convention was held August 20-22 in Milwaukee, with an attendance of approximately 1500 members. The supreme officers reflected were: Martin H. Carmody, supreme

knight; John F. Martin, deputy supreme knight, William J. McGinley, secretary; D. J. Callahan, treasurer, Edward F. Fahey, M.D., physician; Luke E. Hart, advocate; the Rev. John J. McGivney, chaplain, and David F. Supple, warden. The order publishes *Columbia*, a monthly magazine with a circulation of more than 700,000. The headquarters of the supreme council are in New Haven, Conn.

**KONEL.** See CHEMISTRY, INDUSTRIAL, under *New Alloys*

**KONGO, BELGIAN, and KONGO FREE STATE.** See CONGO

**KOREA or CHOSEN.** A peninsula of eastern Asia annexed by the Japanese Empire under the treaty concluded between Japan and Korea on Aug. 22, 1910, and incorporated as an integral part of Japan by an Imperial Rescript of 1919. Capital, Seoul.

**AREA AND POPULATION.** The area is given at 85,231 square miles, population at the end of 1928, 19,189,699, including 469,043 Japanese, compared with 17,255,949 in 1920. At the end of 1926, the largest cities with their populations were: Seoul, 306,363 (81,559 Japanese), Pusan, 106,323 (40,803 Japanese), Pyong-Yang, 114,471 (23,545 Japanese), Tai-Ku, 77,263 (23,513 Japanese).

**EDUCATION.** In 1926 there were for the education of the Japanese 456 elementary schools with 55,853 pupils, 11 middle schools with 4840 pupils, one medical school, one technical high school, 22 girls' high schools, with 6332 pupils, one commercial high school, one special school for law, and various kindergartens and private schools. For the education of the Koreans, there were 1311 common schools, with 391,058 pupils, 74 private common schools, with 16,592 pupils, 37 higher common schools, with 12,404 students, besides various industrial schools, and a medical and technical college. There is a university at Seoul with 467 students in 1927.

**PRODUCTION.** Agriculture is the principal occupation of the Korean people, and rice is the staple agricultural product, followed by barley, Italian millet, soy beans, wheat, and red beans. Methods of agriculture preclude the use of mechanical devices. The Korean's main beast of burden is his ox or cow. As a result of the encouragement given by the government to the breeding of cattle and the measures taken to prevent stock diseases, the number of cattle in Korea gradually increased from 900,000 in 1910, at the time of the annexation to Japan, to 1,594,894 in 1927. Of the 1927 total, 259,663 were slaughtered and 43,086 exported. In 1927 the rice crop amounted to 84,998,445 bushels, in the previous year the barley production was 35,410,630 bushels, agricultural products also included 21,757,685 bushels of soy beans, 157,489,981 pounds of upland American cotton, and 57,149,756 pounds of native cotton. Fruit growing and the raising of silk cocoons were extending progressively.

The principal native industrial products of Korea are textile fabrics, paper, pottery, metal ware, manufactured tobacco, brewed drinks, and leather. These industries are mostly carried on as subsidiary household industries. Pulp, cement, sugar, flour-milling, and silk-spinning factories have recently been introduced. The chief mineral products are gold, silver, zinc, copper, lead, iron, tungsten ore, graphite, coal, quartz, and kaolin.

**COMMERCE.** The total trade of Korea with Japan and foreign countries in 1928 amounted to 779,969,467 yen, of which 365,978,524 yen represented exports and 413,990,943 yen, imports. Exports were 2 per cent and imports 8 per cent higher than in 1927, when the total trade amounted to 762,341,709 yen. Exports to Japan were valued at 533,829,337 yen, or 91.2 per cent of the total, and imports from that country at 295,839,921 yen, or 71.5 per cent of the total. China ranks next to Japan in the volume of trade with Korea.

The principal imports in 1928 were cotton piece goods, millet, machinery, silk goods, timber, and fertilizers, the chief exports, rice, soy beans, raw silk, fish, pig iron, and fertilizers.

**FINANCE.** Actual ordinary and extraordinary revenue in the fiscal year ending Mar. 31, 1929, amounted to 238,152,294 yen and total expenditures to 217,690,321 yen, leaving a surplus for the year of 20,461,973 yen. The approved budget for 1929-30 provided for revenues and expenditures of 246,852,843 yen. The Hamaguchi cabinet, which assumed office in Japan in July, 1929, reduced the approved budget by 10,421,304 yen. The public debt on Mar. 31, 1929, stood at 553,034,204 yen. The finances of Korea form a special account in the budget of Japan.

**COMMUNICATIONS.** The length of railway lines open to traffic in Korea on June 30, 1929, totaled 2062 miles, of which 1622 miles were owned and operated by the Government and 440 miles by private interests. Under a 12-year construction programme adopted by the Japanese Diet, the government planned to build 860 miles of new line tapping the forest resources of the upper Yalu River district, the mineral resources of northern Korea and the marine products of southern Korea, and to purchase 210 miles of private railways connecting the government lines. A new line stretching 388 miles between Genzan and Kwamei was opened to traffic in September, 1928, and 60 miles of additional line were scheduled for completion in 1929. In the fiscal year ending Mar. 31, 1928, the government lines carried 20,058,401 passengers and 5,569,774 tons of freight, the total receipts amounting to 37,311,687 yen. In the same year there were 8511 miles of telegraph and 8266 of telephone line.

**GOVERNMENT.** Korea is governed as an integral part of Japan through a governor-general entrusted with large administrative powers. In 1929, Viscount Minoro Saito, former Governor-General of Korea, was reappointed to that post as the successor to General Hanzo Yamanashi.

**KOWEIT.** See ARABIA

**KU KLUX KLAN.** The year 1929 fairly may be said to mark the passing of the Ku Klux Klan as a national institution. In the spring of the year, the organization announced the closing of its Washington office and a return to Atlanta. Thus, the Ku Klux Klan again reverted to its status as a sectional organization.

**KULAKS.** See RUSSIA, under *History*.

**KURDISTAN, kōrd'-stān'.** A more or less vague term applied to a region in eastern Asia Minor comprising a portion of Turkey and the northern section of the vilayet of Mosul in the new independent state of Iraq (see MESOPOTAMIA). The inhabitants are Kurds, a semino-madic people related to the Persians in race and language. The population is estimated at 2,500,000. Shortly after the World War, there was an attempt to create an independent Kurdistan. The

movement was completely crushed by the failure of the Treaty of Sevres, after which the remaining Kurds divided in political allegiance to the Turkish, Persian, and Mesopotamian governments.

**KWANGCHOW-WAN**, kwangchō'wan. A small territory on the coast of the Chinese Province of Kwangtung, leased to France in 1898, and two small islands commanding the bay leased to her the following year. Area, about 190 square miles, population estimated at 250,000. In 1927 the imports were valued at 8,661,166 piastres and the exports at 7,559,613 piastres (the exchange value of the piastre in January, 1929, averaged \$0.4854). The chief imports are cotton yarns, matches, and petroleum, the chief exports, straw sacks, swine, cattle, and mats. The port is free and is regularly visited by vessels of a French steamship company. In 1927, 283 vessels of 189,661 tons entered. The local budget for 1928 balanced at 680,000 piastres. The administration is under the Governor-General of French Indo-China. See FRENCH INDO-CHINA.

**KWANTUNG**, kwant'ung, or KWANTAO. A territory at the southern part of the Liaoting Peninsula, leased to Japan by China, as a successor to Russia after the Russo-Japanese War. Area, about 538 square miles, population, Dec 31, 1928, 837,219, of whom 733,711 were Chinese. At the end of 1926, there were 52 elementary schools, with 23,121 pupils, for the instruction of Japanese, and 130 schools, with 21,545 pupils, for the instruction of natives. The agricultural products include rice, tobacco, hemp, and various grains and vegetables. The fishing industry is of importance. There is an abundance of salt which is the chief manufactured product. Trade is mainly with Japan and China. Imports in 1928 were valued at 168,524,899 haikwan taels and exports at 199,363,559 haikwan taels (the exchange value of the haikwan tael in 1928 averaged \$0.71). The seat of the administration and the chief port is Dairen, formerly Dalny. The budget approved by the Japanese Diet for the fiscal year ending Mar 31, 1930, estimated revenues and expenditures at 24,091,717 yen. The budget was later reduced by the new Hamaguchi cabinet and made to balance at 23,050,104 yen. In 1928 the Japanese-controlled South Manchuria Railway carried 9,514,049 passengers, and 19,323,514 tons of freight, earning a net profit of 74,281,024 yen (the exchange value of the yen in 1928 averaged \$0.1610). The railway has 691 miles of line. The territory is under a Japanese governor-general. Governor-General in 1929, K. Kinoshta.

**LABOR.** The reader is recommended to the following articles for discussions of the various aspects of the history of labor during the year: CHILD LABOR, COOPERATION; LABOR ARBITRATION AND CONCILIATION, LABOR LEGISLATION, MINIMUM WAGE, OLD-AGE PENSIONS, STRIKES AND LOCKOUTS, UNEMPLOYMENT; WOMEN IN INDUSTRY, WORKMEN'S COMPENSATION, and in articles on the respective countries. See also TRADE UNIONS and SOCIALISM for special aspects of the labor situation. In the article LABOR, AMERICAN FEDERATION OF, attention is given to the official history of the outstanding labor federation in the United States.

**LABOR, AMERICAN FEDERATION OF** The A. F. of L met in annual convention at Toronto, Canada, during October 7-18. The Executive Council's report epitomized the accomplishments of the organization during the preceding year and

at the same time indicated the character of the programme to be pursued for the year 1930. The 1929 membership was 2,933,545, an increase of 37,482 over 1928. If the 500,000 for whom dues had not been paid because of strikes and lockouts were added, the membership rolls would be swelled to 3,433,545. The Executive Council's report called upon the international unions to press their work in the South, demanded the application of the quota system to immigration from Mexico, Central America, and South America, stressed the dire effects of technological unemployment, even in such advanced industries as automobile manufacturing, attacked the widespread discrimination against middle-aged workers, and demanded the creation of a Federal employment service and the enactment of State old-age-pension laws. Fully a thousand men and women listened to the addresses of speakers and joined in the deliberations of the assembly. President Green spoke of the probability, in the near future, of the affiliation with the A. F. of L. of the Brotherhood of Railroad Trainmen with its membership of 185,000. Technological unemployment, according to the Trainmen's representative, has hit the railroad workers severely, for since 1920 fully 350,000 men on the railways have lost their jobs.

On October 10, speakers concerned themselves with the furtherance of cooperation between capital and labor. The Baltimore & Ohio R. R. scheme was described, particularly as it was being applied to the Canadian Railway system. On the other hand, the British fraternal delegates, J. T. Brownlie and James Bell, insisted that capital was according labor partnership in industry "not because of some intellectual reasons, but only because it was driven by great economic forces." The Executive Council's intention to minimize the Southern labor situation by calling upon the international labor unions to carry out the work was summarily checked.

It is important to note that the revolt, such as it was, did not come originally from the A. F. of L. delegates but from the liberal press. The horrors of Southern industrial strife had aroused the United States as had no other economic question in recent years. The unbelievably low wages, the wretched sweating, the complete domination by the industrialists of the local governmental machinery, brought home to the American public the realization that industrial feudalism still lived. On October 15, the A. F. of L. voted to raise a war chest for the purpose of bringing unionization into the South. The A. F. of L. was to raise the money and do the job itself instead of turning it over, in the textile regions for example, to the weak United Textile Workers of America. President Green, in reporting this decision to the delegates, evidently approved the justice of the criticism leveled at the A. F. of L.'s earlier policy, for he said "Then we will have answered those who say that for years we have neglected the South."

On October 16, Prime Minister Ramsay MacDonald addressed the convention. He called upon labor for the support of his peace programme on the ground that the working classes always shouldered the heaviest burdens in war. The Executive Council met with unexpected opposition on its anti-injunction resolution, when Andrew Furuseth, of the International Seamen's Union, attacked the A. F. of L. bill, which was a revision of a measure prepared by Senators

Walsh (of Montana), Norris, and Blaine and was to be introduced in Congress. It was an attempt to meet the objections raised against the defeated Shipstead Bill, which was so sweeping (it denied equity jurisdiction to the courts) that it met with defeat on the grounds of constitutionality.

The A. F. of L. measure aimed at the restriction of the equity powers of the courts. By its terms, injunctions can be granted only after trial has established that unlawful acts have been committed, that substantial injury to property will follow, and that there is no other adequate remedy at law. The following acts would no longer be unlawful: ceasing work, becoming a member of a labor organization, paying strike benefits, assembling to act or organize, combining to act or inviting others to do so, refusing to handle any material produced in whole or in part by non-union labor. Upon application for an injunction, the party to be enjoined would be notified and would have the right to cross-examine. Trials for contempt would have to be before a jury. Mr. Furuseth opposed the bill because he believed that trade-unionism was safe from the injunction only if the courts were denied entirely equity jurisdiction. Mr. Matthew Woll declared in reply that the bill would succeed in effectively limiting the equity power. The convention endorsed the bill, Mr. Furuseth being the only voice in the negative.

Other resolutions included Advocacy of compulsory State arbitration laws for men and women over 6 years of age; the Education Council was to draw up a model measure; reaffirmation of the A. F. of L.'s policy for the restriction of immigration from Latin-America and the Philippines; opposition to the conscription of labor in war time; reaffirmation of belief in the innocence of Mooney and Billings; support of an educational and organization campaign among Negro workers; approval of the Federal granting of charters to locals of the Brotherhood of Sleeping Car Porters; a veiled attack on the Conference for Progressive Labor Action (See SOCIALISM). William Green was elected president for his fifth term. The following vice presidents were elected: Frank D. Y. I. A. Rickert, Matthew Woll, James Wilson, James P. Noonan, John Coeheld, A. O. Wharton, and James N. Weber. Secretary Frank Morrison and Treasurer Martin Ryan also were elected. James Manning and

directly or indirectly more than 12,000,000 workers. During the fiscal year 1929, a total of 522 strikes and lockouts were referred to the Department of Labor for adjustment. These disputes were distributed in 28 different States and the District of Columbia, the great majority of them, however, being in the industrial States of the North. In Pennsylvania, there were 139 such disputes submitted for arbitration, in New York, there were 98; in Massachusetts and New Jersey, there were 41 each, Illinois had 36, and Indiana had 34. On the other hand, Delaware, Maine, and Oregon had but one each. Of these 522 cases in which the good offices of the Department of Labor were employed, 385 were adjusted; 40 were found impossible for adjustment, 21 were recorded as unclassified, 76 cases were pending at the close of the year. Of the cases pending at the close of the fiscal year 1928, 11 adjustments were subsequently made, making the total cases adjusted during that year 396.

#### SUMMARY OF WORKERS AFFECTED, BY MONTHS, FISCAL YEAR, 1929

Month 1928	Workers affected	
	Directly	Indirectly
July	51,464	11,165
August	10,076	6,909
September	42,598	68,240
October	14,497	34,193
November	11,045	6,394
December	4,247	2,064
Total	384,607	272,691
1929		
January	4,609	8,531
February	28,126	2,534
March	19,187	14,240
April	55,399	27,222
May	121,911	37,253
June	21,410	63,892

As a result of the continued success of the service, the Secretary of Labor in his annual report stated he was convinced "that the gradual reduction in the number of trade disputes was due in no small part to the constant circulation among the employers and employees of the commissions of conciliation." The following tables indicate the number of workers affected in the cases submitted for conciliation during the fiscal year 1929 and also a summary of the cases over the period 1914-1929 that received the Department's attention.

#### SUMMARY OF CASES, 1914-1929

Cases	1914	1915	1916	1917	1918	1919	1920	1921	1922	1923	1924	1925	1926	1927	1928	1929

Cases pending at end of last fiscal year and now adjusted, 11. Total number of adjustments, 396

Thomas E. Maloy were elected as the organization's fraternal delegates to the British Trades Union Congress. The 1930 convention was to be held in Boston.

**LABOR ARBITRATION AND CONCILIATION.** UNITED STATES The conciliation of the Department of Labor has continued, as a result of its trained staff and increasingly improving technique, to be of considerable assistance in the settlement of industrial disputes. Since the creation of the service in 1913, 9048 trade disputes had been submitted to the conciliators, involving

**CASES INVOLVING WAGES AND HOURS.** The U. S. Bureau of Labor Statistics made during the year a study of the results of arbitration cases involving wages and hours from the period covering 1865 to 1929. There was a total number of such cases of 423. In the pre-war period from 1865 to 1914, decisions were rendered in 54 cases, of which 43 were returned favorable to the workers (79.6 per cent.); nine were returned in favor of employers (16.7 per cent.); and two were mixed decisions. The war period, 1915 to 1920, showed a much higher favorable return, as

far as workers were affected. In these six years, of 98 cases considered, 92 were returned in favor of the workers (93.9 per cent), and only six were favorable to the employers (6.1 per cent). In the post-war period, 1921-1929, there was a total of 271 cases adjudicated, of which those favorable to the workers diminished considerably. Of the total, 164 or (60.5 per cent) were in favor of the workers, 95 (35.1 per cent) were in favor of the employers, and 12, (4.4 per cent) were mixed decisions. The character of the decisions was affected by the series of economic depressions that occurred after 1920. Thus, in 1921, decisions were, for the most part, adverse to the workers' demands. In 1922, 17 cases were adjudged in favor of the workers and 21, in favor of the employers. Similarly, in 1925, 20 cases were adjudged in favor of the workers and 16, in favor of the employers.

During the war period, 1915-1920, in view of extraordinary demands on industry and the unsettled economic conditions, there was an extraordinary growth in the development of arbitration machinery. During the war years proper (1917-18) governmental agencies were created for the adjustment of wages and the control of labor disputes. The following is a list of the Federal war agencies which, among other things, rendered decisions in matters arising out of industrial conflict:

Cantonment Adjustment Commission  
 Shipbuilding Labor Adjustment Board  
 Industrial Relations Division—Emergency Fleet Corporation  
 Marine and Dock Industrial Relations Division  
 National Adjustment Commission (longshoremen)  
 New York Harbor Wage Adjustment Board  
 President's Mediation Commission  
 Administrator of Labor Standards in Army Clothing  
 National Harness and Saddlery Adjustment Commission  
 Industrial Service Sections of Ordnance, Quartermaster, and Aircraft  
 Railroad Administration Board of Railroad Wages and Working Conditions  
 Fuel Administration  
 Food Administration  
 National War Labor Board  
 War Labor Policies Board

After the war, Federal agencies withdrew their activities, as far as private industry was concerned, but, because war conditions to an extent existed, more or less continuous action was necessary by some of the arbitration boards. At the early part of the liquidation of the war period, requests for wage reductions and the increase in hours came from the employers and, as was indicated above, in the year 1921 most of the cases were settled in their favor. In the post-war period, arbitration was resorted to frequently in the following industries: street railways, printing trades, electrical trades, and in the men's garment industry.

The most important development of the post-war period was the passage of the Railroad Labor Act of 1926 which abolished the Railroad Labor Board and set up a new machinery for mediation and arbitration. From 1926 to 1929, this new organization had arbitrated in 41 cases. The United States has had only two experiences with compulsory arbitration. These were with the Colorado Industrial Disputes Act passed in 1915 and the Kansas Court of Industrial Relations was created in 1920. Under the Colorado Act, employers and employees are compelled to give the State Industrial Commission 30-days' notice of an intended change affecting conditions of employment, particularly with respect to wages and hours.

The law made it unlawful for an employer to declare a lockout or for employees to go on strike before the Commission terminated jurisdiction. However, the Colorado commission has no compulsory powers. From 1915 to 1924, the Industrial Commission of this State passed on 1042 cases, of which 221 were ruled on in favor of the workers; 190 were ruled on in favor of employers; 334 resulted in mutual agreement; 297 had no record of any final outcome.

The Kansas Court of Industrial Relations was created in 1920 and required that all disputes in industries "affected by a public interest" be referred to the Court. The law also forbade strikes and lockouts in such industries. On Apr. 13, 1925, the Supreme Court of the United States declared unconstitutional the "compulsory arbitration" features of the law. From 1920 to Jan. 1, 1924, this Kansas Court had formally considered 55 cases, of which 27 involved disputes over wages and hours. Of these, five resulted in agreement reached out of court. In 14, the court granted increases in wages, in two, refused such increases, in three, granted decreases of wages, in three, granted decreases in hours. See 1925 YEAR BOOK.

AUSTRALIA The status of the arbitration situation in Australia in 1929 was as follows. Each of the six state parliaments has full authority to legislate on industrial matters within its own territory, and each (with the exception of Victoria, which has a system of wage boards) has created an Industrial Court. In addition, the Commonwealth has the Federal Arbitration Court for the prevention and settlement of those industrial disputes which extend beyond the limits of any one state. It has been possible for either employers or employees to bring an industrial dispute before the Federal Court by extending a disagreement beyond the boundaries of a single state. The result has been in the Commonwealth Court, particularly, of a slowing-up of the arbitration machinery, and in many cases, overlapping in duplication among Federal and State awards. The upshot has been that, in many industries, both Federal and State awards prevail, each prescribing different scales of remuneration or working conditions. Before 1929, the Commonwealth government made other efforts more completely to control the situation. In 1926 an amendment to the constitution was proposed, whose purpose was to give the Federal government more complete control of the situation, but this was rejected by a popular referendum. In 1928 a Federal act was passed seeking to give the Federal government more power to enforce its awards, but this did not seem to succeed in coping with the many difficulties of the situation.

In May, 1929, the then Prime Minister, Mr. Bruce, in addressing a gathering of the premiers of the separate states, called upon the state governments to transfer their industrial powers to the Commonwealth. They, however, refused to do so, and Mr. Bruce accepted the other alternative of transference of the Commonwealth powers to the separate states. In August, the Government introduced before the Federal Parliament a bill for the repeal of the Federal arbitration system. As a result largely of the opposition of the Labor party and due to disaffection among the Government's own ranks, the measure was defeated. The defeat of this important measure resulted in a dissolution of Parliament and the general election of October 12. In the election,

the Labor party captured 46 of the 75 seats of the House, the Nationalists securing 14, the Country party 10, the Independent Nationalists 3, and independents 2 See SOCIALISM

#### LABOR BANKS. See COOPERATION

**LABOR LEGISLATION.** In 1929 there were convened in regular session 48 legislatures, including two insular possessions and two territories, and the Congress of the United States. In addition, in several States, the legislatures met in special session The following is a digest of the labor legislation which was enacted during the year

Notable among new laws were the North Carolina workmen's compensation law; the establishment of old-age-pension systems in California, Minnesota, Utah, and Wyoming, the further regulation of private fee-charging employment agencies by nine States—(Alabama, Colorado, Iowa, Michigan, Minnesota, North Carolina, Oregon, Pennsylvania, and West Virginia, the redefinition of the Oklahoma coal-mine law with inadequate provision for rock-dusting of coal mines, and the acceptance by Connecticut, Maryland, Texas, and the District of Columbia of the provisions of the Federal vocational rehabilitation law Thirty-nine legislatures acted upon workmen's compensation

*Alaska* Workmen's compensation law reenacted with no important change other than provision for loss of hearing, teachers' retirement system established, method of paying Territorial employees regulated

*Arizona* Certain salaries made subject to garnishment, law and section of constitution regarding employment of United States citizens on public property amended, firemen's pension law enacted, mine inspectors' salary regulated

*Arkansas* Workmen's compensation law enacted for State highway employees, police pension law enacted, passage by Congress of Newton Bill for maternity protection urged, supervisor of children's and women's labor provided

*California* Laws requiring cash bonds required of employees, loggers' collection of wages amended, wage deductions because of tips given employees regulated, procedure for filing labor claims changed, committee created to investigate mechanics' lien laws, mechanics' lien law amended, amendments to private employment agency law include farm labor agency among definitions of employment agencies and require notice of refund of fee in case employment is not obtained within forty-eight hours, to be inserted in schedule of fees posted and in receipt given to applicant, child labor law amended, compulsory continuation school law amended, work in air pressure tanks and steam boilers regulated, foundry and metal shop sanitation law amended, weights which women employees are allowed to carry are reduced, weekly maximum compensation raised to \$25 and other sections of workmen's compensation law amended, enactment of Dale Lehlbach Bill requested, old age pension law enacted granting pension not over \$1 a day to citizens 70 years of age or over whose property does not exceed \$3000 in value, constitutional amendment for State employees' retirement system proposed, teachers' retirement law amended, law requiring payroll records and records of hours worked by female employees amended, definition of "mine" and "mineral" in coal mining law amended

*Colorado* Employers are forbidden to interfere with employees' political activities, law regulating payment of laborers' claims amended, lien law for wells, oil derricks, certain pipe lines, pumping stations, transportation lines, gasoline plants, and refineries enacted, amendment to employment agency law makes granting of licenses conditional upon character and suitability of premises, regulates advertising and requires monthly reports from agencies, factory inspection law amended, amendments to coal mine inspection law include raising of chief inspector's salary, provisions that black powder may be used only in that quantity and that firearms be carried out among at least 20 per cent of employees of a mine, workmen's compensation amendments include raising of limits on required medical attention and of weekly maximum to \$14, firemen's and teachers' retirement laws amended, group life insurance law amended.

*Connecticut* Law regulating assignment of future earnings reenacted; arbitration law reenacted, leaves of absence for State department employees authorized, bakery inspection law amended, amendments to workmen's compensation law include increase of compensation for loss of arm, firemen's and teachers' retirement laws amended, Federal rehabilitation act accepted

*Delaware* Lien law reenacted, creation of public employment bureau authorized, workmen's compensation law amended, mothers' aid law amended, children's bureau appropriation increased

*Florida* Vacations for certain county employees authorized, mothers' aid law reenacted, with no important changes

*Hawaii* Mechanics' lien law amended, minimum wage for laborers on public works raised, vacations for public employees shortened, United States citizenship required for public employees' law, quite amendments for public employees amended, laws for public employees amended

*Georgia* Workmen's compensation law amendment includes authorization of insurance commissioner to investigate and publish statistics relating to insurance rates (Session law volume not available)

*Idaho* Law providing for arbitration and mediation of labor disputes repealed, workmen's compensation law amendment includes provision that compensation for schedule losses to minors under eighteen be computed upon the basis of adult earning power, teachers' retirement fund abolished

*Illinois* Threshermen's lien law amended, child labor law amended, amendments to workmen's compensation law include raising of certain weekly maximums for disability and extension of schedule list, amendments to policemen's, firemen's and teachers' retirement laws enacted, commission created to report on a State employees' annuity fund, mothers' aid law amended, mining investigative commission created, certain salaries raised and terms decreased, certain salaries lowered, more mine drill teams provided for

*Indiana* Mechanics' lien laws enacted and amended, child labor law amended, amendments to workmen's compensation law include removal of double compensation for minors illegally employed, teachers' retirement law amended, appropriation for employment commission raised, amendment of rehabilitation law

*Iowa* Medical examination of applicants must not be required in industrial policies, amendments to employment agency law include requirement that applicants for licenses be of good moral character and citizens and that license fees be graduated, amendments to workmen's compensation law include raising of limitation on additional medical services, group insurance authorized, tax for mothers' aid law amended, certain counties, changes made in personnel of rehabilitation department

*Kansas* Salaries of certain policemen raised, workmen's compensation law amended, policemen's pension funds created in certain counties, firemen's relief fund law amended, commission of labor and industry created to take over administration of labor laws heretofore administered by the public service commission, number of deputy mine inspectors increased

*Maine* Mechanics' lien law amended, certain telephone exchanges exempted from law prohibiting six hours of continuous labor for women, certain exemptions made to Sunday rest day law, workmen's compensation law reenacted with no important changes, teachers' retirement law amended, mothers' aid law amended, duplication of certain death and injury reports no longer required

*Maryland* Appointment of social welfare survey commission directed, amendments to workmen's compensation law include empowering of commission to formulate and enforce safety regulations and appoint a safety director and two inspectors, Federal Vocational Rehabilitation Act accepted, retirement system for court clerks established, appropriation law amended

*Massachusetts* Law requiring weekly payment of wages amended, law regulating assignment of wages amended, mechanics' lien law amended, Sunday sale of bread, certain times permitted, vacation of certain policemen and firemen authorized, investigation of employment insurance directed, workmen's compensation law amended, certain State employees' retirement laws amended, study of certain salaries directed

*Michigan* Commissioner of banking given more authority over credit unions, garnishment and mechanics' lien laws amended, child labor law amended, private employment agency laws amended, amendments to law granting of licenses conditional upon good moral character, business integrity, and any reason within the purpose of the act and grading cost of licenses from \$5 to \$200; child labor law amended, law relating to fans and blowers amended, amendments to workmen's compensation law include provision that double compensa-

tion now be paid to illegally employed minors under eighteen years, teachers' retirement laws amended, mothers' pension law amended; appropriation for department of labor raised.

**Minnesota** Method of paying certain road laborers specified, amendment to employment agency law makes granting of licenses to employment agencies conditional upon suitability of premises and need for proposed employer, in addition to good moral character, as already provided, persons between ten and six years of age in certain performances authorized, law regulating location of motors and fire extinguishers in dry cleaning and dyeing establishments amended, workmen's compensation amendments include removal of ninety day limit on medical care, insurance carriers composing the rating bureau required to collectively insure risks rejected by three members of the bureau, old age pension system established granting pensions not over \$1 a day to citizens who are seventy years of age or over and whose property is worth not over \$3000, a compulsory state employees' retirement association is established providing for retirement annuities and benefits for permanent partial and total disability, retirement law for employees in certain departments of health amended, pensioning of certain police officers provided for, mothers' pension law amended.

**Missouri** Loan law amended, child labor law reenacted, forbidding all children under fourteen except those exempted by the old law to be employed in any gainful occupation and making other important changes, workmen's compensation laws amended, police pension system established granting pensions not over \$1 a day to deputy commissioners of labor increased.

**Montana** Maximum penalty for violation of certain hour laws raised, workmen's compensation amendments include reduction of waiting period if employee has dependents, revision of compensation for total disability, death cases and schedule losses to provide a sliding scale, firemen's pension law amended, vocational rehabilitation appropriation increased.

**Nebraska** Union labels authorized, compulsory school attendance law amended, workmen's compensation law amended, teachers' retirement law amended, Labor Department's appropriation increased, by amendment the Department of Labor, assisted by commissions of employers, employees and other persons created by the department from time to time directed to formulate, adopt, publish, enforce and inspect necessary safety codes, rules, and standards, subject to modification or repeal at any time in the department's discretion, Labor Department's appropriation increased, law regulating appointment of secretary of labor and use of appropriated monies amended.

**Nevada** Wages for unskilled labor on public works raised, payment of certain teachers' salaries authorized, law relating to employment of labor on public works amended, certain mothers' pensions raised, act accept ing Sheppard-Towner Act repealed.

**New Jersey** Certain wages may be paid by negotiable check; hour law for policemen amended, law regulating shifts in casual work amended, workmen's compensation law amended, trust funds may be created by corporations with a plan for payment of relief of employees, municipal employees retirement law amended, retirement systems for certain public employees created, police pension law amended, provision made for pension payments to dependents of deceased member transferred to membership in another fund, women's and children's bureau created, payment of certain salaries regulated.

**New Hampshire** Unless otherwise agreed to, 10 hours' actual labor will constitute a day's work, payment of compensation to State employees injured under certain circumstances authorized, mothers' aid allowance raised.

**New Mexico** Attachment law amended, wage assignment law enacted; workmen's compensation law reenacted bringing State and political subdivisions under the act, raising weekly maximums, funeral expenses, percent of wages in schedule cases and compensation for facial disfigurement, reducing waiting period and removing 10-day limit on medical attendance and raising cash limits.

**New York** Law regulating credit unions amended, mechanics' lien law amended, weekly rest day provided for policemen, certain registries for nurses exempted from employment agency law, employment bureaus for public school students authorized, partition law amended, occupational disease list extended and other workmen's compensation amendments enacted, labor insurance law amended, legislative commission created to investigate condition of aged and report to the Legislature on most efficient method of providing against old age dependency, retirement law for public employees amended, group life insurance law amended, grades for inspectors divided into eight, instead of six, and

salary of supervising inspectors raised, appropriation for State compensation insurance and Department of Labor raised and distribution changed.

**North Carolina** Mechanics' lien law amended, private employment agency law enacted without repeal of existing law, but new features provide for investigation of moral character of applicant for license and certain other changes made, workmen's compensation law enacted compulsory as to all public employees and elective as to all private employees in which five or more workers are engaged except agriculture and domestic service, and excluding casual workers, railway employees, convicts and persons selling agricultural products, limiting medical attention to 10 weeks, waiting period to seven days, and compensation for total and partial disability to \$6000.

**North Dakota** (Larnachment and mechanics' lien laws amended, mechanics' lien law repealed, amendments to workmen's compensation law include liberalization of certain benefit provisions, commission created to investigate teachers' retirement fund.

**Ohio** Payment of \$300 or less for wage assignments regulated, law regulating wage assignments amended, public utilities commission reorganized to promulgate and enforce all orders relating to the protection, welfare and safety of railroad employees, three additional occupational diseases made compensable, pension laws for certain public employees amended.

**Oklahoma** Child labor law amended, sections of coal mine law (subsequently repealed and reenacted) in so far as they relate to lead, zinc, and copper mines, are completely reenacted in a separate law directing inspectors to examine all mine conditions and order their correction, forbidding operators to employ boys under 16, women and girls except as clerks above ground, to have longer than an eight-hour day, and imposing a penalty for noncompliance with mine inspector's orders, coal mining code reenacted in inadequate law authorizing substitution of rock dust for water in sprinkling or spraying, requiring additional agents to secure certificates of competency, raising salaries of district mine inspectors and seven members of the State Mining Board, providing for an eight hour day, forbidding employment of boys under 16, women and girls except for office work, and making other changes in safety provisions, workmen's compensation law amended, salaries of labor commissioner, chief mine inspector, and district inspectors raised.

**Oregon** Law regulating credit unions amended, miners' lien law amended, farm laborers' lien law reenacted, arbitration law amended, certain exemptions made to law regulating hours on public works, amendment to employment agency law provides for investigation of character of applicant and of proposed premises and raises license fees and amounts of bonds, compulsory school attendance law repealed, authorization of commission to fix rate of contribution for maritime employment and pay compensation from accident fund to employees (and their dependents) of employers who contribute to the fund, as prescribed by the Longshoremen's and Harbor Workers' Compensation Act, appointment of committees to study needs of workmen's compensation law and report desirable amendments authorized, teachers' retirement law amended, mothers' aid law amended, constitutional amendment proposed (to be submitted to referendum in November, 1930) providing that State executive and administrative functions be performed by the governor and his department in counties of over 200,000 inhabitants, a civil service system was established, Bureau of Labor Statistics to be known as Bureau of Labor.

**Pennsylvania** Law regulating payment of labor on certain public works amended; mechanics' lien law amended, law encouraging cooperative associations repealed, governor is given power to suspend over industrial Police employment agency law incorporated new provisions of old law for regulation in first and second class cities in a State law reenacting existing State regulations, new law directing investigation of licensee-applicant's character and location of proposed agency, dividing licenses into three classifications, regulating emigrant employment agents and providing for many more inspections of agencies and fines for agencies operating without a license, certain child labor laws and wages regulating employment repealed, law regulating employment of females amended, boiler and elevator laws for other than first and second class cities reenacted, building safety law for cities not of the first or second class strengthened, law regulating labor in bakeries amended, amendments to coal mine law include provision that where rock dust has been substituted or used in conjunction with water, it must be used as specified, that telephones must be provided, so far as practicable, for all landings of shafts and strengthens other important provisions; workmen's compensation law amended, certain State employees' pension laws

amended, mothers' aid law amended, group insurance authorized, violators of labor law made liable for costs.

**Porto Rico** Certain drummaking establishments exempted from law requiring dispensaries, workmen's compensation amendments include creation of a workmen's compensation bureau to administer the State fund, certain State employees' pension laws amended, commission created to survey causes of industrial unrest, additional loan authorized to liquidate workmen's relief commission.

**Rhode Island** Reports of certain firms required in amendment to factory law, women working on shifts for a public utility exempted from hour regulations, workmen's compensation law amended, benefits for widows of firemen raised, changes in appropriations for Commissioner of Labor and factory inspectors made.

**South Carolina** Salaries of Commissioner of Agriculture, Commerce and Industries and factory inspectors raised.

**South Dakota** Procedure for filing claims on public works specified, workmen's compensation law amended, firemen's pension law amended.

**Tennessee** Workmen's compensation provided for State highway employees, fees no longer required for inspection of coal mines.

**Texas** Mechanics' lien law amended, public school teachers must be citizens, enforcing of laborers forbidden, law prohibiting blacklisting strengthened, child labor law amended, civil service commission created in certain counties, in first special session, Federal Rehabilitation Act accepted and law enacted regulating emigrant employment agents and requiring an annual license tax of \$5000 for the use of the State and \$2500 for the use of each county and a bonus given by agents conditioning the payment of valid debts in second special session mechanics' lien law amended and law regulating emigrant employment agents enacted in first special session reenacted so that agents must pay a State occupation tax of \$1000, a license of \$100 to \$300 for each county and annual license fee of \$10 to do business in any county named in license and must furnish a \$5000 bond to be liable for debts incurred.

**Utah** Mechanics' lien law repealed, minimum wage law for women repealed, part-time school law for minors amended, law requiring certain school records repealed, old age pension law enacted providing for a monthly pension not over \$25 a month to be granted to qualified applicants 65 years of age or over, who have been United States citizens for fifteen years and have a yearly income not exceeding \$300, firemen's pension law amended, appropriation for industrial commission increased.

**Vermont** Supervision of Public Service Commission extended, workmen's compensation law amended, teachers' retirement law amended, establishment of pension system for certain municipal employees authorized.

**Washington** Use of modern spark arrestor limited to spark emitting engines or boilers dangerously near inflammable material, amendments to workmen's compensation law, include extension of department's authority to make lump sum payments, policemen's and firemen's pension laws amended.

**West Virginia** Law requiring bonds of persons contracting for erection of public buildings amended, fine for Sabbath day labor raised, employment agency law reenacted and now provides for the maintenance of a State public employment bureau, requires applicants for private employment agencies' licenses to be citizens, have suitable premises, and not to have had a license previously revoked, forbids employment agents to misrepresent, requires agents to pay an annual license tax of \$200 and emigrant agents to pay \$5000, adoption of certain safety codes authorized and first aid equipment in factories required, amendments to coal mine law include raising of salary of chief of department of mines, workmen's compensation amendments include empowering of governor to appoint new compensation commission.

**Wisconsin** So called "yellow dog" contracts made null and void, law regulating hours on public works amended and study of hours of certain workers directed, law regulating devices to be used in cleaning and dyeing establishments amended, electric wiring law reenacted, workmen's compensation law amended, amendments to old age pension law provide that a majority and not two-thirds of the county elected board be necessary to adopt an old age pension system, certain public employees' retirement laws amended, study of a State employees' retirement plan directed, sections of any Federal Maternity Act accepted, sections of children's code reenacted, created or amended with slight changes in mothers' aid provision, group life insurance authorized, bureau of personnel created to replace civil service commission and take over the commission's administrative duties, certain appropriations increased.

**Wyoming** Necessity no longer a ground for employing a female at any time; law relating to shutters in coal mines reenacted, coal mine law amended in so far as certain specifications are concerned; amendments to workmen's compensation law include extension of list of extra hazardous employments, addition of restrictive hernia provision, compensation for disfigurement, and specification that every employer who refuses to make premium payments and against whom an award for compensation has been made shall be personally liable to the State for the benefit of the workmen's compensation fund, a State-wide old age pension system is established providing for the granting of pensions not over \$30 a month to qualified applicants who have attained the age of sixty-five, have been United States citizens for fifteen years and have an income not exceeding \$360 a year.

**United States** Inquiries on unemployment provided for in decennial census, small change made in Federal retirement law, Federal vocational rehabilitation accepted for the District of Columbia and appropriation authorized for this purpose.

**LABOR LEGISLATION, AMERICAN ASSOCIATION** FOR Founded in 1906, this membership organization of socially-minded economists, lawyers, journalists, labor leaders, and employers has worked along scientific lines, fearlessly attacking needless industrial evils from the general welfare viewpoint. It continues its work as the American arm of the International Association for Social Progress formed by the fusion of the three international organizations for labor legislation, unemployment, and social insurance. See SOCIAL PROGRESS, INTERNATIONAL ASSOCIATION FOR.

Progress of the Association was recorded in its substantial quarterly, *American Labor Legislation Review*, the December, 1929, issue of which contained a convenient annual summary and index of all new labor laws enacted in the United States. One of the most important activities of the Association during 1929 resulted in the passage of a workmen's-compensation law in North Carolina. Other activities in the line of workmen's compensation helped to bring about the liberalization of many State laws.

Other important measures in the field of labor legislation were sponsored by the Association. Efforts to bring about the regulation of private fee-charging employment agencies by raising the license fee and requiring that applicants for licenses furnish proof of good moral character, suitability of premises and need of proposed agency were followed by legislation in several States; in 1929 nine States reenacted or amended employment-agency laws on the basis of these proposals. The establishment of state old-age-pension systems also has been urged by the Association for many years; four States in 1929 followed those that had already provided for their aged dependents through the granting of pensions. The campaign for rock-dusting of bituminous coal mines to prevent coal-dust explosions resulted in encouraging increase in the number of coal mines adopting rock-dusting. Other measures urged by the Association and adopted in several States were the strengthening of hour regulations, mine and factory safety laws, measures for the mitigation of unemployment (with particular emphasis upon the long-range planning of public works) and the vocational rehabilitation of disabled workers.

The twenty-third annual meeting was at New Orleans, December 27-28, several sessions being held jointly with the American Political Science Association, the Association of American Law Schools and various local organizations. The chief subjects of discussion were workmen's compensation, employment problems of older workers,

labor injunctions and equity courts, proposals for stabilizing employment, and administration of labor laws. Among the speakers were. Murray W. Latimer, Eva Smith, Tracy Copp, Charles H. Behre, John B. Andrews, Morris E. Leeds, Edwin E. Witte, Noel T. Dowling, Letus N. Crowell, Isaac Heller, T. A. Wilson, John A. Lapp, and Walton H. Hamilton. The president in 1929 was Thomas I. Parkinson, the secretary, John B. Andrews, with headquarters at 131 East 23d Street, New York City. See LABOR LEGISLATION.

#### LABOR UNIONS. See TRADE UNIONS

**LABRADOR.** A large peninsula in British North America, forming the easternmost part of the North American Continent, lying between the Atlantic Ocean and Hudson Bay. It includes the northeast portion of the Province of Quebec in Canada and a small strip along the northeast coast dependent upon Newfoundland. In 1927 the dispute which had continued for 25 years between Newfoundland and Quebec over the ownership of the interior of Labrador was settled by the Privy Council. The decision gave the entire watershed of Labrador which drained into the Atlantic Ocean to Newfoundland. This area contains about 30,000 square miles of forests of commercial value. Consult 1927 YEAR BOOK under NEWFOUNDLAND. The population of Labrador in 1927 was 4054.

**LABUAN.** A small island off the northwest coast of Borneo, ceded to Great Britain in 1846. Area, 30 square miles, population, in 1927, 5996, mostly Malays from Borneo, with about 23 Europeans. Capital, Victoria, with a population of about 1500. Revenue in 1927 totaled 58,611 Singapore dollars, excluding 108,421 dollars received from opium sales; expenditures, 158,423 dollars (Singapore dollar had an average exchange value in 1927 of \$0.5604). Shipping entering and clearing the ports in 1927 totaled 282,000 tons. Trade in the same year amounted to \$5,500,000. The island is administered under the supervision of the Governor-General of the Straits Settlements.

**LACROSSE.** As there was no large league competition in lacrosse, the problem of picking the best teams for 1929 was difficult. The game is not popular outside of the colleges except in Olympic years, and it is a minor sport at the colleges, where major sports attract the best athletes. In 1929 the U. S. Naval Academy and Union College had the best records in the Eastern intercollegiate league ranks. Both twelve were strong and led the way for the other lacrosse-playing institutions. The Johns Hopkins University team, which had displayed such strength the preceding year in collegiate and international competition was not up to its usual standard and lost several games.

**LAFAYETTE COLLEGE.** An institution for the higher education of men in Easton, Pa., founded in 1826. The registration in the autumn of 1929 was 1024, the enrollment being restricted. The faculty numbered 95. The productive funds amounted to \$2,950,000 on July 1, 1929, and the income for the previous year was \$543,500. The number of volumes in the library was 75,000, accessions for the year being 4000. President, William Mathew Lewis, A. M., LL.D.

**LAMBERT, ALEXANDER.** An American pianist and teacher, died in New York, December 31. He was born in Warsaw, Nov. 1, 1802. After receiving his first musical instruction from his father, he entered the Vienna Conservatory in

1874, graduating four years later from the piano class of Julius Epstein. The next two years he spent in Berlin, assiduously practicing the piano by himself and studying composition with H. Urban. In 1881 he gave several successful concerts in New York, after which he made a tour of Germany and Russia, and then devoted several months of further intensive study of the piano under Liszt in Weimar. In 1884 he returned to the United States, touring the East and Middle West for three years with splendid success. Nevertheless, he suddenly abandoned the career of the virtuoso and settled permanently in New York as a teacher. There he founded, in 1888, the New York College of Music, which rapidly became nationally famous. In 1906 he sold his school and continued to reside in New York, much sought and highly esteemed as private teacher. Among his published works, the most important are *A Systematic Course of Study* (3 vols., 1907) and a *Brief Piano Method for Beginners*, which both attained wide popularity.

#### LAMBS. See LIVESTOCK.

**LANCIANI, lan-chi'né, RODOLFO AMENEO.** A noted Italian archaeologist and senator, died May 22, 1929, in Rome, where he was born Jan. 1, 1846. He studied at the Roman College and at the University of Rome. At the age of 20, he assisted in the excavations at Ostia and, from 1875 to about 1895, directed excavations in Rome. In 1872 he was secretary of the Municipal Archaeological Commission, and in 1875 vice director of the Museo Kircheriano. After 1878 he was professor of Roman topography at the University of Rome. He began his archaeological writing in 1867 with an article on the harbor of Claudius and Trajan at the mouth of the Tiber. In 1886-87 Professor Lanciani visited and lectured in the United States, collecting these lectures under the title, *Ancient Rome in the Light of Recent Discoveries* (Boston, 1888). Other important publications of his are *I commentarii di Frontino intorno le acque et gli acquedotti* (Rome, 1880), a study of the water-supply and distributing systems of ancient Rome, *Ricerche sulle XII regioni urbane* (Rome, 1890), *L'itinerario di Einsiedeln e l'ordine di Benedetto canonico* (ib., 1891); *Pagan and Christian Rome* (Boston, 1893); *The Ruins and Excavations of Ancient Rome* (ib., 1897); *The Destruction of Ancient Rome* (New York, 1899); *Forma Urbis Romae* (Milan, 1893-1901), a map of Rome showing the ancient monuments and excavations. *New Tales of Old Rome* (Boston, 1901); *Golden Days of the Renaissance in Rome* (ib., 1906); *Wanderings in the Roman Campagna* (ib., 1909). The degree of LL.D. was given Professor Lanciani by Aberdeen, Harvard, and Glasgow, that of D.C.L. by Oxford, and that of Ph.D. by Wurzburg and Rome.

**LANDS, PUBLIC.** The Commissioner of the General Land Office reported for the fiscal year ending June 30, 1929, a total of 190,031,722 acres of unappropriated public land in the United States, exclusive of Alaska. In addition, there were approximately 134,000,000 acres of public national forest lands and 20,232,398 acres of stock-raising homestead lands, which were subject to all the provisions of the mining laws, including the general mineral leasing act. Coal was reserved to the United States under patents issued for 10,569,606 acres; oil, gas, phosphate and other deposits under patents for 1,309,958 acres; and minerals reserved under various acts

other than the stock-raising homestead law in patents for 68,086 acres. This made a total of 356,211,771 acres, subject to all or some of the applicable public land laws.

During the year 1929, original disposition was patented on 2,494,647 acres, of which 1,418,471 acres were patented with all minerals reserved. There also were patented 1,890,026 acres under the homestead laws, not including as homesteads 2857 acres patented as soldiers' additional entries. The total area of public and Indian lands originally entered and allowed during the year was 4,612,722 acres, as compared with 3,726,421 acres in 1928. More than 25,000 filings were made in the district land offices and 500 filings in the General Land Office in Washington, involving land in States where district offices had been discontinued.

Total cash receipts from sales, leases, and other dispositions of public lands amounted to \$5,654,435 and from sales and leases of Indian lands, \$539,531, making an aggregate amount of \$6,193,966 for the fiscal year. Of this amount, \$3,884,878 was from bonuses, royalties, and rentals under the law providing for the leasing of mineral rights on the public domain, the largest receipts, \$2,835,871, being obtained from the leasing of mineral lands in Wyoming. The low price of oil, however, during 1929 not only discouraged production but necessarily resulted in diminished receipts for the quantity actually produced on government land, the decrease in royalties was estimated at almost \$800,000. The total receipts were distributed as follows: Reclamation fund, \$2,079,099, general fund, \$885,086, to public-land States and to certain countries within such States, \$2,132,033, to various Indian tribes, \$497,746.

Total expenditures for the conduct of the business of the General Land Office amounted to \$2,237,303, of which \$430,000 was for field-inspection service, employing seven division chiefs and 73 . . . . . For surveys and resurveys, a total . . . . . was appropriated, 2,593,034 acres being surveyed and 788,653 acres being resurveyed during the year. Survey of agricultural lands alone aggregated more than 3,000,000 acres, the more extensive areas being in Utah, New Mexico, Arizona, Montana, California, and Idaho. The field service also examined 15,948 cases to determine whether or not the laws were being complied with or, in some cases, whether fraud was being resorted to in the acquisition of these lands. Of these cases, 10,474 were reported favorably and 5447, adversely. As a result of these examinations, over 159,000 acres were restored to the public domain by administrative action and 1237 acres by decree of court. In all, 420 hearings were held, 29 indictments being secured and 33 cases being recommended to the Department of Justice.

More than 2400 permits to prospect for oil and gas were issued by the General Land Office up to Mar 11, 1928, when the oil-conservation policy was put into effect. During 1929, 123 coal, potash, and sodium permits were issued, 145 leases covering oil and coal were granted as a result of discovery by permittees, and 8906 oil permits were canceled for failure of the permittees to comply with the terms thereof. Under the Carey Act, pertaining to reclamation and irrigation of public lands, withdrawals, segregations, and patent applications aggregated 1,379,871 acres. Of the amount disposed of, 27,129 acres

were segregated, 5988 acres theretofore segregated were patented, 89,890 acres were canceled, and the remainder was disposed of by interlocutory or other actions. Swampland applications covered 397,320 acres, 11,033 acres being approved and patented and 142,833 acres being canceled. Public lands aggregating 12,090 acres in the Western States were withdrawn for use by the Department of Commerce as beacon sites and intermediate aviation landing fields. The total area included in stock driveway withdrawals at the close of the year amounted to 9,282,975 acres, 11 new driveways being established and 12 being modified.

Railroad and wagon-road listings and selections received during the year covered 161,493 acres; 230,418 acres were certified or patented in satisfaction of such grants, and 137,408 acres of selections were rejected. During 1929, 2181 town-lot cases were examined and 374 patents were issued; more than 60 town-site cases also were considered. The area of the 150 national forests in 1929 embraced 184,564,053 acres, of which 86 per cent was public land. The net increase in national-forest area over 1928 was 161,134 acres, 28,099 acres having been added from the public domain. Surveys made for the forest service aggregated more than 700,000 acres and resurveys, more than 320,000 acres. The Commissioner of the General Land Office in 1929 was C. C. Moore.

**LANGMUIR**, IRVING American chemist, see CHEMISTRY INDUSTRIAL

**LANGTRY**, Mrs LILLIE An English actress and "society beauty," died in Monte Carlo, Feb 12, 1929. Born, Emily Charlotte Le Breton, on the island of Jersey, Oct 13, 1852, she married Edward Langtry in 1874 and moved to London. There she became the toast of society and the theme of fashionable poets, she was called the "Jersey Lily," after a portrait by Millais, and she signed herself "Lillie." Her stage debut, in *She Swoops to Conquer*, London, December, 1881, was triumphant. She appeared at New York, Nov 2, 1882, and such was her popularity that she returned to America nearly every season until 1915. Although Mrs. Langtry was not considered a great emotional actress, she was apt in artificial parts, such as that in *The Degenerates*, by Sydney Grundy, and her charm always delighted her audience. After Mr. Langtry's death, 1897, she married Sir Hugo Gerald de Bathe in 1899.

**LANGUAGE** See PHONOLOGY, MODERN

**LANKESTER**, SIR EDWIN RAY British scientist, died in London, Aug 15, 1929. He was born in London, May 15, 1847, and was educated at St. Paul's School, at Downing College, Cambridge, and at Christ Church, Oxford. He received at Oxford the Radcliffe Traveling Fellowship in 1870, and became fellow and lecturer at Exeter College in 1872. From 1874 to 1890, he was professor of zoology and comparative anatomy at University College, London, in 1882, Regius professor of comparative anatomy at Oxford; and from 1898 to 1900, Fullerian professor of physiology and comparative anatomy in the Royal Institution of London. He was director of the natural history departments of the British Museum from 1898 to 1907, and on retirement was created a Knight Commander of the Bath. In 1884 he founded the Marine Biological Association and in 1892 he served as its president. He was elected a fellow in the Royal Society in 1875 and in 1885 was awarded a royal

medal He was chosen president of the British Association in 1906 He was also a member of the Institut de France and a foreign or corresponding member of most of the scientific academies of the world After 1869 he edited the *Quarterly Journal of Microscopical Science* He also contributed many scientific articles to many general works A prolific author, he wrote scientific books that were both technical and popular They include *A Monograph of the Cephalaspidian Fishes* (1870), *Developmental History of the Mollusca* (1875), *Degeneration* (1880), *Limulus, an Arachnid* (1881); *The Advancement of Science* (1889); *Zoological Articles* (1891), (edited) *A Treatise on Zoology* (1900-09), *Extinct Animals* (1905), *Nature and Man* (1905), *The Kingdom of Man* (1907), *Science from an Easy Chair* (1st series, 1910, 2d series, 1912), *The Diversions of a Naturalist* (1915); *Science and Education* (1919), *Secrets of Earth and Sea* (1920), *Great and Small Things* (1923)

**LATTER-DAY SAINTS.** CHURCH OF JESUS CHRIST OF A religious body commonly known as the Mormon Church, existing chiefly in the United States It was organized Apr. 6, 1830, at Fayette, N. Y., by Joseph Smith to whom is credited by his followers the discovery, through divine revelation, of a set of metal plates, buried in a hill, from which by a special power received from God he translated the text of the Book of Mormon, the special sacred book of the church The Mormon articles of faith include belief in God, Jesus Christ, and the Holy Ghost as individual beings, the punishment of men for their own sins, the atonement, divine authority, baptism, laying on of hands, prophecy, salvation for the dead, the Bible "as far as it is translated correctly," the common virtues, and obedience to constituted authorities The membership of the church is largely in the Mountain States, owing to the early migration of Mormons and their final settlement in Utah

The administrative divisions of the church are known as the general stake, ward, branch, and mission. A stake is a geographical division and comprises wards and branches, and is directed by a presidency of three A ward is frequently a part of a city, and is directed by a bishop and two counselors. The branch, similar to the ward, is directed by an elder In 1929 the church consisted of 101 stakes, 983 wards, and 74 independent branches The estimated membership was 656,000 There were 12 missions in America with a membership of approximately 94,000, the missions in Europe had a membership of 29,000 and those in the Pacific Islands of 16,000 A mission is directed by a mission president In 1929, 2197 missionaries were at work in various countries, 953 being outside the United States The general authorities who have jurisdiction over the entire church are the First Presidency, the Quorum of the Twelve Apostles, the Presiding Patriarch, the First Council of Seventy, and the Presiding Bishopric In 1929 these authorities were. First Presidency Heber J. Grant, president, Anthony W. Ivins, first counselor, Charles W. Nibley, second counselor Quorum of the

Twelve Apostles Rudger Clawson, president, and Reed Smoot, George Albert Smith, George F. Richards, Orson F. Whitney, David O. McKay, Joseph Fielding Smith, James E. Talmage, Stephen L. Richards, Richard R. Lyman, Melvin J. Ballard, and John A. Widtsoe, apostles Presiding Patriarch Hyrum C. Smith Seven Presidents of the First Council of Seventy Brigham H. Roberts, J. Golden Kimball, Rulon S. Wells, Joseph W. McMurrin, Charles H. Hart, Levi Edgar Young, Rey L. Pratt Presiding Bishopric Sylvester Q. Cannon, presiding bishop, David A. Smith, first counselor, and John Wells, second counselor

The church maintains seven temples which are devoted to sacred ordinances for the living and the dead, such as baptisms, endowments, and marriages It also maintains Brigham Young University (qv) at Provo, Utah, six junior colleges, two collegiate institutes, one high school, and 72 seminaries, small schools adjoining high schools and providing special religious instruction The Sunday schools in 1929 had an enrollment of 228,757 pupils and 27,804 officers and teachers Religion classes had an enrollment of 59,574 The auxiliary bodies included a women's relief society, numbering about 62,550 members, who care for the sick and poor The Melchizedek Priesthood, a senior order, had 75,318 members, and the Aaronic Priesthood, a junior order, 74,809 members The two mutual improvement associations, composed of young people, had an enrollment of 106,873 The primary association for those under 14 had 108,596 members The church holds two general conferences each year, one during the first week in April and the other, the first week in October, at which the work of the general authorities is reviewed

**LATTER-DAY SAINTS.** REORGANIZED CHURCH OF JESUS CHRIST OF After the death of Joseph Smith in 1844, several factions developed among the Latter-day Saints In 1852, in Wisconsin, some of these scattered congregations effected a partial reorganization, which was later completed under the name of the "Reorganized Church of Jesus Christ of Latter-day Saints," and which claims to be the true continuation of that established by Joseph Smith This claim has been successfully sustained in the Federal Court In 1860 these organizations were joined by Joseph Smith, the son of the prophet, who became presiding officer, a position which he held until his death in 1914, when his son, Frederick M. Smith, succeeded him The Reorganized Church holds the same faith and religious practice which Smith established, but rejects as false and inconsistent with Smith's revelation the doctrine of polygamy The membership as reported in 1929 was 106,501, including members throughout the United States and in Canada, Great Britain, Australia, Germany, Isle of Pines, Holland, Switzerland, Norway, Sweden, Palestine, South Sea Islands, Hawaii, and New Zealand The organization in 1929 comprised 760 churches, 6814 ministers, 730 Sunday schools, and 45,000 pupils, and maintained Graceland College in Lamoni, Iowa, the Institute of Arts and Sciences, homes for the aged and a sanatorium in Independence, Mo Its official periodical, the *Saints' Herald*, is issued weekly The office of the first presidency is in Independence, Mo

**LATVIA.** A Baltic republic formed after the World War from territories of the old Russian Empire Capital, Riga, on the Gulf of Riga.

**AREA AND POPULATION.** The total area, excluding inland lakes, is approximately 24,400 square miles, made up as follows. The former Province of Courland (about 10,435 square miles), the four southern districts of the Province of Livonia (about 8,715 square miles), and three districts of the Province of Vitebsk (5,292 square miles). According to the census of 1925, the population was 1,844,805, of whom 1,779,593 were Latvian citizens and 65,212, foreigners. The estimated population in 1928 was 1,890,500. From 1923 to 1927, the average annual number of births was 41,393 and of deaths, 27,732, the excess of births being 13,661. The chief cities with their populations at the census of 1925 are Riga, 337,700 (estimated at 338,997 in 1928), Liepau, 60,762, Dvinsk, 40,640, and Mitau, 28,321.

**EDUCATION.** In 1927-28 there were 1904 elementary schools, with 7542 teachers and 157,206 pupils. Most of these schools were supported by the state or municipal institutions, as were 82 of the secondary schools in the country. The remaining 56 secondary schools were supported by private persons or societies. In all secondary schools, there were 23,436 pupils and 2558 teachers. According to law, every national minority has a right to its own school, which may employ its own language in instruction, and the State contributes to such institutions in proportion to the percentage of total inhabitants. The number of students in the Latvian University in 1927-28 was 7561 and the number of professors, 320.

**PRODUCTION.** Agriculture is the chief industry of the country, although manufacturing has attracted an increasing proportion of the population. Of the total area of Latvia, 4,197,000 acres, or about 28 per cent, was arable land in 1927, 4,117,000 acres were pasture, and 4,399,000 acres woods and forests. The total value of the chief field crops produced in 1928 was 245,833,000 lats (\$47,466,000), as compared with 273,567,000 lats (\$52,798,000) in 1927. Most crops in 1928 were below average due to unfavorable weather conditions, the potato crops being less than half that of 1927. The area and production of the leading crops were as follows: Wheat, 164,000 acres, 2,490,000 bushels, rye, 637,000 acres, 8,459,000 bushels, barley, 362,000 acres, 3,275,000 bushels, oats, 590,000 acres, 10,037,000 bushels, potatoes, 193,000 acres, 11,593,000 bushels, flax, 170,000 acres, 32,275,000 pounds, hay and clover, 2,777,000 acres, 2,296,000 metric tons. Livestock in the country in 1928 included 961,000 cattle, 535,000 swine, 1,090,000 sheep, and 365,000 horses.

The output of manufactured products showed more than the usual increase in 1928, the total value rising to 430,000,000 lats (\$82,990,000), as compared with 314,271,000 lats (\$66,444,000) in 1927. Wood and metal working, printing, and the manufacture of food, drink, and tobacco, chemicals, textiles, and paper are the leading industries. Exports of manufactured products increased by 35 per cent in 1928, the value reaching \$10,500,000. While the number of workers employed in industry increased by 25 per cent during the year, there was considerable seasonal unemployment. The number of unemployed on Dec. 31, 1928, totaled 14,030.

**COMMERCE.** The volume of foreign trade showed a substantial increase in 1928, the value of imports increasing from \$48,248,000 in 1927

to \$59,468,000, or 23 per cent, and the value of exports from \$42,700,000 in 1927 to \$49,938,000, or 17 per cent. Lumber and butter composed more than half of the total exports, while shipments of manufactures increased 34 per cent in value as a result of larger foreign purchases of rubber goods, leather, paper, and linoleum. Foodstuffs, beverages, and tobacco represented 30.8 per cent of the imports, raw materials and semi-manufactures, 25.1 per cent, and manufactures, 43.3 per cent. Germany and the United Kingdom each took about 27 per cent of the exports and furnished 41 and 9 per cent, respectively, of the imports. Soviet Russia took 9 per cent of the exports. Exports to the United States amounted to \$904,800 and imports from that country to \$3,284,000, as against \$1,332,000 in 1927. In 1929 imports increased by 17 per cent to \$69,962,500, while exports rose by only 4 per cent to \$52,437,400, leaving an import surplus of \$17,505,100. Poor crops in 1928, shipping difficulties due to ice early in 1929, and the low prices obtained for agricultural products in foreign markets combined to bring about an adverse trade balance nearly double that of 1928.

**FINANCE.** The budgets for the fiscal years ending Mar. 31, 1929 and 1930, balanced at 164,110,000 lats (\$31,673,000) and 164,956,000 lats (\$31,836,000), respectively. For the year 1927-28, actual revenues totaled 178,162,000 lats (\$34,385,000) and actual expenditures, 160,092,000 lats (\$30,898,000). Receipts were 12 per cent above estimates, while expenditures were practically the same as forecast. According to preliminary returns, expenditures declined and receipts again increased in 1928-29, leaving a surplus of about 26,500,000 lats (\$5,114,000). The public debt on Jan. 1, 1929, stood at 82,240,000 lats (\$15,872,000), as against 84,110,000 lats (\$16,233,000) a year earlier. In addition, a \$6,000,000 loan was secured from the Swedish Match Trust in 1928 in return for a match monopoly. All but 637,550 lats represented the external debt, of which \$3,565,000 was borrowed in the United States and \$2,075,000 in Great Britain. The lat remained at the par value of \$0.1930.

**COMMUNICATIONS.** Of the 1776 miles of railway line in Latvia on Jan. 1, 1929, 1666 miles were government owned. In 1928 the railways carried 11,584,000 passengers and 3,613,000 metric tons of freight, earning gross receipts of 45,019,000 lats (\$8,689,000). The freight traffic showed a 21 per cent increase for the year. The state-owned telegraph and telephone system, in the same year, had 19,019 and 135,748 miles of wire, respectively.

The Latvian merchant marine on June 30, 1928, consisted of 98 vessels of 100 tons or more, with a total gross tonnage of 116,754 tons. Vessels entering Latvian ports in 1928 numbered 4335 of 2,015,000 net registered tons and the vessels clearing numbered 4338 of 2,015,000 net registered tons. The Latvian budget for 1930-31 provided 1,200,000 lats for the construction of a 1312-foot quay in the export harbor of Riga with modern equipment, and considerable sums for other improvements in the harbor.

**GOVERNMENT.** Under the constitution adopted by the constituent assembly, Feb. 15, 1922, executive power is vested in a President, elected by Parliament for three years, and legislative power in the Saeima, or Parliament, comprising 100 members elected for three years, by universal

suffrage (men and women), equal, direct, and secret ballot, on the basis of proportional representation. President in 1929, Gustav Zemgals (elected Apr 8, 1927), Prime Minister, Hugo Celmins (appointed Nov 30, 1928).

**HISTORY** The Socialist opposition attacked the Celmins Agrarian-Bourgeois coalition government on four grounds during 1929, forcing a revision of the cabinet membership toward the end of an otherwise uneventful year. The Socialists objected to the government's credit policy, the contemplated changes in the system of national defense, the method of revision of sickness-insurance funds, and the proposal to extend land grants to former German soldiers who assisted in driving the Bolsheviks out of Latvia after the World War Parliament was convened in extra session on August 16 to dispose of these questions. The prolonged controversy over land grants to former German soldiers was ended November 22, when Parliament voted 51 to 39 against the proposal. The German group thereupon withdrew its support from the coalition government and M. Berendt, Minister of Justice and a member of the group, presented his resignation.

The reforms within the army proposed by M. Osols, Minister of War, for a time threatened the downfall of the cabinet. The Socialists, though unsuccessful in an attempt to secure a vote of censure against the entire cabinet on this issue, forced the resignation of M. Osols and, on December 18, the portfolios of War and Justice were given to General Wasietis and M. Pabris, respectively, the new ministers being less objectionable to the Opposition than their predecessors. Other members of the cabinet were Minister for Foreign Affairs, A. Balodis, Interior, E. Laimins, Ways and Communications, M. Ozolins, Agriculture, A. Alberings, Education, E. Ziemelis, Public Welfare, V. Rubulis, Finance, A. Potrevics, State Comptroller, R. Ivanov.

A general strike was threatened for October 18, with the support of the Social Democrats, the Central Committee of the Trade Organizations, and the railway employees, as a result of the government's decision to reorganize the sickness-insurance fund without consulting Parliament. The Government served notice on railway employees that absence from work would be severely penalized and the strike failed to materialize.

**LAW ENFORCEMENT.** See **CRIME**

**LAWN TENNIS.** See **TENNIS**

**LAWRENCE COLLEGE.** A coeducational institution comprising a college of liberal arts and a conservatory of music in Appleton, Wis., founded in 1846. For the autumn term of 1929, 819 students were enrolled in the college and 181 in the conservatory. There were 65 members on the faculty of the college and 25 on the faculty of the conservatory. The endowment, exclusive of buildings and equipment, amounted to \$1,869,920, the income from endowment for 1929 was \$100,205. There were 53,000 volumes in the library exclusive of government documents. During 1929 a graduate school of paper chemistry was organized, with Dr. Otto Kress as technical director, the majority of the paper manufacturers of the State guaranteeing an annual minimum income of \$50,000. The Alexander Gymnasium, costing more than \$390,000, also was

completed. President, Henry Merritt Wriston, Ph D., LL.D.

**LEAD.** In 1929 the average price of lead, New York market, was 68 cents a pound, compared with 63 cents a pound in 1928. This increase of half a cent per pound in the price, together with a corresponding increase of 6 per cent in production, told the story of a prosperous year for the lead-mining industry. Increased demand from storage battery and lead-covered cable manufactures has been responsible for the improvement.

The recoverable lead which is contained in ore mined in the United States in 1929, exclusive of Virginia, was about 647,500 short tons, as compared with an output of 627,153 tons in 1928, an increase of 3 per cent, according to the estimate of the U S Bureau of Mines. The largest output came from the southeastern Missouri district and amounted to 201,700 tons, compared with 194,270 tons in 1928. The competition between Idaho and Utah for second place had been very close for two years, but Idaho definitely lead Utah in 1929 with 152,100 tons, compared with 143,400 tons. In 1928 these States produced 145,323 tons and 145,915 tons, with Utah slightly in the lead. The output of the Joplin district increased from 70,086 tons to 73,500 tons in 1929 and the production of all other important lead-producing States, with the exception of Colorado, increased. Colorado's production dropped from 26,751 tons to 24,900 tons. The price at Joplin of lead concentrates was \$85 a ton at the beginning of the year, rose to a high of \$105 a ton for the weeks of March 23 and March 30, from which it declined to \$85 a ton for the weeks of July 13 to August 31, inclusive, rose again to \$87 50 a ton for the weeks of September 7 to October 26, inclusive, and then declined to \$75 a ton, the low for the year, which held during the last eight weeks of the year.

LEAD PRODUCTION IN UNITED STATES  
[Short tons]

	1928	1929 *
Central States		
Tri-State district	70,086	73,500
Southeastern Missouri	194,270	201,700
Upper Mississippi Valley	1,706	1,600
Other	454	800
Western States		
Arizona	7,190	7,800
California	946	600
Colorado	26,751	24,900
Idaho	145,323	152,100
Montana	16,880	19,800
Nevada	7,874	8,200
New Mexico	7,805	11,000
Oregon	7	13
South Dakota	37	
Texas	348	500
Utah	145,915	148,400
Washington	542	400
Alaska	1,019	1,200
Total	627,153	647,500 *

\* Estimated.

\* Figures obtained from the Geological Survey, Department of the Interior.

\* Exclusive of total for Virginia, which the Bureau of Mines was not at liberty to publish.

The output of primary domestic desilverized lead in the United States in 1929 was about 382,000 tons, of soft lead about 250,000 tons, and of desilverized soft lead about 57,000 tons, making a total output from domestic ores of about 689,000 tons of refined lead, according to statistics compiled by the U S Bureau of Mines. Corre-

sponding figures in 1928 were 351,734 tons of desilverized lead, 225,003 tons of soft lead, and 49,465 tons of desilverized soft lead, making a total of 626,202 tons. The output of lead smelted and refined from foreign ore and bullion was about 103,000 tons, as compared with 154,869 tons in 1928. The total primary lead smelted or refined in the United States in 1929 was thus about 792,000 tons, as compared with a total of 781,071 tons in 1928—an increase of about 1 per cent. The output of primary antimonial lead in 1929 was about 26,000 tons, as compared with 33,058 tons in 1928.

Total imports of lead in ore, matte, bullion, or refined form were 236,968,747 pounds in 1929, compared with 313,174,919 in 1928. Exports also dropped, from 244,471,987 pounds in 1928 to 157,097,470 in 1929. Of this total, 106,006,202 was foreign pig lead that had been imported for refining.

The accompanying table shows the world's output of pig lead (in tons of 2000 pounds), as compiled by the American Bureau of Metal Statistics from direct reports from the several countries, with an estimate for the scattered production amounting to about 10 per cent of the total.

#### LEAD PRODUCTION OF WORLD, 1929 ESTIMATES

	Jan-Dec
United States *	692,233
Canada *	158,789
Mexico *	274,418
<b>Total North America *</b>	<b>1,125,440</b>
Peru	19,898
Germany	121,872
Italy	24,869
Poland *	37,766
Spain and Tunis *	115,100
Australia	194,048
Burma	89,972
Rhodesia	1,831
Elsewhere, est.	201,000
<b>World's total</b>	<b>1,931,796</b>
United States	692,233
Rest of world	1,239,563

\* Total North American production of crude lead is correctly stated, but the distribution by countries is not precise. So far as possible, pig lead produced in the United States from Canadian and Mexican ore is deducted and credited to its country of origin, but production from other foreign ores is not so segregated.

<sup>a</sup> Partial.

<sup>c</sup> Represents production of Polish Silesia.

Total world output for 1929 amounted to 1,931,796 tons, a monthly average of 160,983 tons against 1,821,080 tons and a monthly average of 151,757 tons in 1928.

The increase shown in Mexico's output is particularly remarkable in view of the low silver prices obtaining throughout the year and the revolution in the spring, which considerably hampered operations. Silver is in many cases responsible for the margin between profit and loss in Mexican lead-mining operations and a recession in price would normally affect output considerably. Further large increases in Mexican lead production do not appear probable, however, as several old properties were nearing exhaustion and prospecting for new mines was dormant.

A possibility existed that within three or four years Australia might usurp Mexico's rank as second among lead-producing nations. Three large lead mines were being equipped in Australia, of which the Mount Isa Mine, scheduled to start producing in 1930, probably could add 70,000 tons annually to the world's lead output. Expan-

sion also was being undertaken by American-controlled companies in South America. Increasing production from that continent was indicated for several years. See METALLURGY.

#### LEAGUE FOR INDEPENDENT POLITICAL ACTION. See SOCIALISM.

**LEAGUE OF NATIONS.** Economic, social and legal questions were the principal items on the League's programme for January. The Economic Committee continued its investigation of the various problems referred to it by the Economic Conference, the most-favored-nation clause, the reduction of customs tariffs, coal, sugar, treatment of foreigners. Its session was preceded by a meeting of coal technicians. The experts on customs nomenclature continued their work on a standard tariff nomenclature. Constituted under the Geneva Opium Convention of 1925, the Permanent Central Board held its first session, discussing methods of work and its relations with the various League organizations, gaining an insight into the work of the Advisory Committee on Traffic in Opium, which also met during the month.

Preparing for the First Conference for the Codification of International Law, the committee of Jurists met January 28 to consider information from 27 governments, concerning the questions on the Conference agenda. The Committee continued in session in February. At the request of Dr. Stresemann, the German Foreign Minister, the Secretariat placed the question of the protection of minorities on the list of provisional agenda for the Council meeting on March 4. Dr. Stresemann was thought to have particularly in mind the German minorities in territories immediately bordering the Reich. How deeply he felt was shown by his words at Lugano on December 15, which, it was claimed, were inaccurately reported by the general press. According to the *Augsburger Postzeitung* (December 16), Dr. Stresemann declared that the minorities question involved "the most sacred goods of mankind, school, language, and religion guaranteed by the League of Nations." "The education of children"; "protection of religion and language", "religion, faith and language, as foundation of the nation", were also expressions used by him.

Action by the Opium Committee of the League of Nations in rejecting, by a vote of 7 to 4, the so-called American plan for control of the drug was sharply criticized on February 1, by Representative Stephen G. Porter, of Pennsylvania. The rejected plan was attacked by Sir John Campbell, a Scotchman, representing India, and was defended by Stefano Cavazzoni, of Italy, whom Mr. Porter called "America's friend throughout the controversy." China, Italy, France, and Germany made up the minority.

The Council held its fifty-fourth session in Geneva during the first week in March. M. Scialoja, of Italy in the chair. For the most part, it was a meeting devoted to the slow advancement of matters in hand, rather than to the inauguration of new undertakings. More and more as the operations of the League developed, the meetings of the Council were occupied with the task of supervision, of passing upon the conclusions or proposals of other League commissions or bodies. Thus, at this meeting, the Council reviewed the work in hand of the Economic, Financial, and Mandates Commissions and of the Advisory Committee of Traffic and Opium.

New policy of importance was in the making in

two matters which came before the Council. In its hands was placed the text of the draft convention for financial assistance to victims of aggression. This measure was the complement of the provisions of the Covenant which promise security by combined action against an aggressor. It provides arrangements by which rapid and effective financial assistance would be given to a state attacked or threatened with attack in violation of a League pledge, limited in the sum of \$40,000,000. This financial aid would obviously be of small importance to a great power. To a small power it might bring the means necessary to sustain itself until other action of the member states became effective.

Following its ordinary procedure, the Council ordered the draft convention to be distributed to all members for comment, with the request that these states so instruct their delegates that the Assembly might pass effective judgment upon the proposal.

Out of the debate on Minorities, which claimed most of the Council's time, and into which entered impassioned feelings, came resolutions for further inquiry before change was made in the Council's procedure and policies. What there had been of anger, or mutual accusation in the previous airing of the difficulties gave way to thoughtful, quiet, mediating discussion around the Council table. A mood of combativeness was to some degree tempered into a mood of perceptiveness—which might be said to be the way of achievement for the League.

Delegate Dandurand, of Canada, made proposals for change in the handling of petitions made by minorities, so that fuller knowledge might be provided for fuller attention. Delegate Stresemann of Germany argued for both a change in the procedure for handling petitions, and for new means of assuring the constant proper appreciation of the minorities treaties—outside and beyond the actions on petitions. Delegates Zaleski, of Poland, and Titulesco, of Rumania, warned that the procedure adopted must be acceptable to the states bound by minorities treaties, and sought to limit the range of the inquiry that was on the rim of discussion. Chamberlain, by quiet analysis, Briand by swift, halting, half-bantering criticism, first in one direction, then in another, drew the Council together in a proposal for further study of substantial range—of how the minorities business of the Council could be more satisfactorily handled. To Adachi of Japan, was given the chairmanship of the Committee of Three entrusted with the task. Save when controversy had to have its play, the meeting wore an air of dispatch which was a sign of the competence of the Council and of the secretariat.

Great Britain, Finland, France, Germany, and Poland were represented by their foreign ministers. Of the eight states especially represented on the Council for the discussion of questions affecting their interests, five—Bulgaria, Greece, Hungary, the Serb-Croat-Slovene Kingdom, and Switzerland—sent their foreign ministers to the session.

As usual, the Council considered the work done by the League in various fields, arranging in each case to give effect to the decisions or recommendations of committees. It decided to create two new organizations—a committee of experts to follow the application and extension of the 1928 Convention on Economic Statistics and a com-

mission to inquire into opium smoking in the Far East; to convene two international conferences—one for June 10 in Geneva, to draw up an international agreement on cards for emigrants in transit, the other for November 5, to conclude a convention on the treatment of foreigners. The Council decided at a secret meeting, on March 8, to refer to the committee of jurists, entrusted with the task of revising the statutes of the World Court, the proposal made by Elihu Root as to finding a satisfactory formula, through exchange of views, on the fifth reservation made in 1926 by the United States as to entrance into the Court. Sympathetic references to Mr. Kellogg's note and to Mr. Root were made by all the Council members.

On March 11, the Root formula was taken up by the Committee of Jurists at its first session. The formula did not provide for a veto by the United States, but for withdrawal in case of American dissatisfaction. On March 12, a tacit agreement was reached, providing for an American "representative" empowered to receive immediate notice from the secretariat of the League of any proposal to ask the World Court for an advisory opinion and thus hasten American consent to it. An improved formula, drafted by Sir Cecil Hurst, of Great Britain, provided for notification by the Registrar of the Court, for a time limit and a stay of proceedings, in case such a request for an advisory opinion did come to the Court. Fears, however, were expressed by many of the Latin American Countries that the United States, in excluding all advisory opinions that might touch on the Monroe Doctrine, was unduly limiting the Court's competence. The vexed question as to whether unanimity or only a majority of the Council was needed for a request for an advisory opinion was ruled out of the discussion.

A second session of the Economic Consultative Committee marked the end of the second year of work on the programme bequeathed to the League by the Economic Conference. The committee reviewed the work of the past year and drew up a report containing its conclusions and recommendations on trade, industry, and agriculture. Special aspects of one of the main points of the programme of the Conference—the reduction of trade barriers—were dealt with at meetings of experts on customs nomenclature. A consultation of experts on beet growing marked the second stage of the Economic Committee's inquiry concerning the sugar problem.

The Health Committee sat from May 2 to May 8, when it reviewed the work of its commissions since its October session and noted that the Greek government had approved its plan for the reorganization of the Greek public-health services.

In April the Committee on Communications and Transit held its annual session, taking decisions in regard to the work of its technicians on maritime tonnage measurement, buoyage and lighting of coasts, river law, road traffic, and various other questions. It began its study of a question referred to it by the Council in its resolution of December concerning the state of the Polish-Lithuanian negotiations, and was able to vote that agreement had been reached regarding the jurisdiction of the European Commission of the Danube from Galatz to Braila, on the basis of a text prepared by a special committee of the League Transit Organizations.

On April 15 the sixth Session of the Preparatory Commission for the Disarmament Conference

opened and continued into May. Twenty-four states were represented, including the United States, Turkey, and Russia. During its three weeks' session, the commission began the second reading of the 1927 draft convention, drew up several new texts and proceeded to a thorough discussion of some of the principal questions raised in connection with the preparation of a disarmament convention, namely, effective, trained reserves and material. Naval disarmament was dealt with in an important statement by the American delegation to which the delegates of the principal naval Powers replied.

An examination of a draft convention and resolution deposited by the Soviet delegation led the commission to adopt a resolution concerning the "reduction" of armaments. Proposals from the Turkish and Chinese delegations were reserved for the Disarmament Conference. The commission adjourned to give the governments concerned time for a thorough examination of the American suggestions regarding naval disarmament. It asked these governments to inform their presidents of the progress of these negotiations so that they might convene the next . . . a full knowledge of the facts.

An international conference on counterfeiting of currency sat from April 9 to 20 and drew up a convention that was immediately signed by 25 of the 35 participants. The Economic Committee pursued its study of the most-favored-nation clause, the tariff question, coal and sugar, bills of exchange, safeguarding, etc., and a small committee of experts continued work on a standard customs nomenclature.

A commission, which consisted of the Child Welfare Committee and the Committee on Traffic in Women and Children, prepared two conventions on the assistance and repatriation of foreign minors for transmission to the Council, and studied the position of blind and illegitimate children, the cinematograph in relation to child welfare and the abolition of licensed houses.

Questions relating to a survey of international law and the publication of conventions were considered by a committee of the jurists, which examined over 450 conventions. The number of treaties registered with the League secretariat reached two thousand on April 25.

The fifty-fifth session of the Council came to an end at Madrid on June 15. Except for the session held at Lugano on account of Herr Stresemann's health in December, this was the first regular session to be convened anywhere but in Geneva since December, 1924. It appeared that as part of the arrangement by which Spain agreed to return to the League, the Council promised to hold one of its sessions in Madrid. This action not only satisfied the prestige of Spain, but worked also to the advantage of Primo de Rivera against whom several revolutionary efforts had recently been made, but whose position was strengthened, at least temporarily, by the visit of the League Council.

Apart from deciding to hold a conference at Geneva in the autumn to consider the Root-Hurst formula relative to the World Court, the most important action of the Council concerned the protection of minorities. This task was originally confined to the Council by about ten minority treaties negotiated between the principal allied powers and the governments of Central Europe and the Balkans at the close of the World War. The Treaties guaranteed to minorities cer-

tain rights in regard to the acquisition of citizenship and the protection of language, religion, and schools. A number of the Baltic States likewise made declarations promising protection to minorities in connection with their admission to the League of Nations. In the Geneva Convention of 1922, moreover, Germany and Poland accepted minority obligations in regard to Upper Silesia. About 20,000,000 people live under the protection of such treaties.

If a minority feels that its rights have been violated, it may petition the League Council through its government. Any member of the Council (but no nonmember) may ask the Council to take up the question and determine what action should be taken. The weakness of this procedure is that while a minority has the right to petition, the Council is not obligated to act, except at the request of a state member of the Council. This defect was overcome to a certain extent when the Council established a committee of three to determine whether or not a given minority petition should be placed before it.

In Upper Silesia, the minority situation had been particularly acute during two or three years. Ten petitions from this area came before the Council at its meeting in December, 1928. Following a rather violent exchange of views on the subject between Herr Stresemann of Germany and M. Zaleski of Poland, the former declared that he would place the entire minorities question before the March meeting of the Council. At this latter meeting, Senator Dandurand of Canada proposed that minorities should be required to attempt to settle their grievances directly before petitioning the League; but in case their attempts failed, they should then have the right of petition, by a committee of all members of the Council, instead of by the committee of three, and that decisions should be published if so desired. These proposals were aimed to offset the criticism that under existing procedure only a few members of the Council passed upon petitions, and that minorities were not informed of the action taken. In approving the Canadian proposals, Herr Stresemann suggested the establishment of a Permanent Minorities Committee.

These proposals were placed before a sub-committee which presented a report at Madrid. According to the press, this sub-committee rejected practically all of the Canadian proposals, but the Council finally arrived at a compromise whereby in exceptional cases the number of the minorities sub-committee might be increased from three to four, more frequent sessions of the committee were to be held, and greater publicity given to decisions.

It may have been the change of government in England which influenced the Council, in part at least, to go further in its decision than did the report of the sub-committee. On June 18, only a few days after he had become Prime Minister, Mr. MacDonald published an article in *The Sunday Times* (London) in regard to minorities, among which he included the inhabitants of Alsace-Lorraine and the Saar. The article raised a storm of protest in the French press. Whether or not Mr. MacDonald was discreet in publishing this article, it remained true that the minority question was one of the most burning issues before Europe at the time.

Before the session opened, the Spanish Premier, General Primo de Rivera, welcomed the members of the Council placing the Senate Palace at their

disposal. The President of the Council, M. Adachi, opened the public meeting with a speech expressing the Council's thanks for the hospitality of the Spanish government. He drew attention to the importance of Spain's cooperation in the League and the part played since the beginning by the Spanish representative. M. Quinones de Leon replied that his government greatly appreciated the honor of receiving the Council and desired fully to cooperate in the League's mission of peace and civilization.

In the course of the session, the Chilean representative, M. Villegas, informed the Council of the settlement of the Tacna-Arica dispute, which had for many years troubled the relations between his country and Peru. M. Adachi expressed the Council's satisfaction at the conclusion of a difference which had lasted for such a long time, and at the restoration of friendly relations between two important Latin-American countries.

The Council approved the agreement concluded in April by the German and Polish governments with regard to the interpretation and application of certain stipulations of the Upper Silesia Convention, and settled a number of petitions from German and Polish Upper Silesia. It approved an agreement for the liquidation of German property in Poland concluded during the session by Germany and Poland under the presidency of the Japanese representative.

Arrangements were made for the convocation of four international conferences, one to draw up a convention on the harmonization of laws, on bills of exchange and checks; another to examine customs, railway, and postal questions concerning the transport of newspapers and periodicals; the third, the first League Conference on the codification of internal law; and the fourth, to consider amendments to the statute of the Permanent Court of International Justice.

Features of the June Council session were the creation of a fiscal committee to promote agreements on double taxation and tax evasion, and to follow taxation questions, the communication to governments of draft convention on the return home of children and young people, and on assistance to foreign minors, the reference to the economic committee of the recommendations of the consultative committee on industrial agreements, the reduction of customs tariffs, and the cooperation of agricultural circles in the economic work of the League.

The Council ratified the report of a special committee approving the plans for the new League buildings.

An important item before the fourteenth session of the Health Committee was the report submitted on the appeal of the Greek government for the creation in that country of a new system of sanitary administration. A group of League experts had been in Greece for several weeks elaborating a project for new laws, a general central administration, a training school for personnel, and, in short, all the various elements needed to give Greece the most modern and up-to-date hygiene facilities. In addition, following a report by Surgeon General Cumming of the United States Public Health Service and Dr. C. E. Winslow of Yale, in regard to the methods in use in the United States for stimulating public interest in health administration, the committee took measures for a world study of this subject with the thought of giving it a world-wide impetus. The committee also took further action

with regard to the standardization of sera, which has developed very rapidly, and considered the relationship between public-health administrations and health-insurance organizations, infant welfare, sleeping sickness, occupational cancer, and the like.

In the refugee field, a special advisory commission decided that it was impossible at once to solve the many problems left over from the World War, and that the best course would be to extend the life of the League's refugee organization for ten years until all the million or more unsettled people have found permanent places.

From July 1 to 19, the Mandates Commission was in session. It examined eight annual reports from Mandatory Powers dealing with territories in Asia, Africa, and the Pacific, and studied a series of petitions and general questions.

The sessions of the various organs dealing with intellectual cooperation continued throughout July into August. The plenary session of the International Committee, which also sat as the Governing Body of the Institute of Intellectual Cooperation, was preceded by meetings of its Sub-Committee on Intellectual Property, University Relations, Arts and Letters, and Science and Bibliography. In the interval between these meetings and the plenary session of the committee, there was a meeting of representatives of National Committees on International Cooperation.

Delegates of forty-six governments met at Geneva on July 1 to revise the 1907 Hague code for war prisoners and the 1906 Geneva convention on sick and wounded with armies in the field. Objection was raised to the draft convention, drawn up by the Red Cross experts, which was laid before the conference, on the ground of its entering into so many details, and an American convention was proposed as a substitute, which would confine itself to general principles. By a narrow vote, however, it was decided to retain the Red Cross convention as a basis for discussion.

The Malaria Commission of the League's Health Organization accepted an invitation from the Government of India to study there the problem of malaria. Training courses in malaria fighting, organized under the auspices of the Health Organization at Hamburg, London, Paris, and Rome were to be attended by government officials from various European countries.

A new code on prisoners of war and a convention on the treatment of sick and wounded in time of war was signed on July 27 by thirty-two members, including the United States, of the diplomatic conference of forty-seven nations which had been sitting at Geneva for a month. The agreements were thought to be a great advance over the Hague convention of 1907 and the Geneva convention of 1906 which dealt with the same subjects.

During the latter part of August, there were meetings of the Council, the financial committee, the special commission for drafting a convention on the manufacture of arms, a conference of the signatories of the 1928 agreements on ludes and bones, and a delegation of the financial committee to study the gold question. The Council and the financial committee met on August 30, a few days before the opening of the Assembly.

The tenth session of the Assembly and the fifty-sixth and fifty-seventh sessions of the Council and the Conference for the revision of the Statute of the Permanent Court of International

Justice were the principal meetings held in September.

The Assembly sat from September 2-25. Delegates were sent by 53 of the 54 states members of the League, namely, Abyssinia, Albania, Australia, Austria, Belgium, Bolivia, British Empire, Bulgaria, Canada, Chile, China, Colombia, Cuba, Czechoslovakia, Denmark, Dominican Republic, Estonia, Finland, France, Germany, Greece, Guatemala, Hawaii, Honduras, Hungary, India, Irish Free State, Italy, Japan, Jugoslavia, Latvia, Liberia, Lithuania, Luxemburg, the Netherlands, Nicaragua, Norway, New Zealand, Panama, Paraguay, Persia, Peru, Poland, Portugal, Rumania, Salvador, Siam, Union of South Africa, Spain, Sweden, Switzerland, Uruguay, Venezuela. The Argentine Republic was not represented.

The Acting President of the Council, Ali Khan Foroughi (Persia) opened the session with a speech in which he drew the Assembly's attention to the coming into force of the Pact for the Renunciation of War as an Instrument of National Policy, and the General Act for the Pacific Settlement of International Disputes. The idea that violence must finally be banished from international life, as the sovereign force of justice had already handled it from private life, was an idea with which the Assembly was already familiar, and which, during the past ten years, had guided its patient constructive work. This idea was now definitely inscribed as the first great rule of international law and the consequences would be seen in every department of the League's work. He welcomed the Bolivian, Honduras, and Peruvian delegates who, for the first time in several years, took part in the work of the Assembly. M. J. G. Guerrero (Salvador) was elected President of the Assembly by 43 votes out of 51 cast. The Assembly then adopted its agenda and divided its work among the six following committees, to which each of the States represented at the Assembly was entitled to send one delegate.

**First Committee: Legal and Constitutional Questions** (Revision of the Statute of the Permanent Court of International Justice, progressive codification of international law, accession of the United States of America to the Protocol of Signature of the Statute of the Permanent Court, proposal to confer on the Permanent Court jurisdiction as a court of review in respect of arbitral tribunals established by States, ratification or conventions, amendment of the Covenant as a result of the Paris Peace, application of Article 19.)—Chairman M. Scialoja (Italy), Vice Chairman M. Lumburg (Netherlands).

**Second Committee: Technical Organizations** (Work of the Economic and Financial Commission, the Organization for Communications and Transport, the Health Organization, Intellectual Cooperation.)—Chairman M. Molle (Switzerland), Vice Chairman M. Colijn (Netherlands).

**Third Committee: Reduction of Armaments** (Progress of the Preparatory Commission, Draft Convention on Financial Assistance, Model Treaty to Strengthen Means of Preventing War, League communications, supervision of the private manufacture of arms.)—Chairman M. Benes (Czechoslovakia), Vice Chairman M. Gobian (Spain).

**Fourth Committee: Budget and Financial Questions** (Organization of the Secretariat, in particular amendments to the Staff Regulations, report by the committee of five on the new buildings.)—Chairman Count Molteke (Denmark), Vice Chairman M. Molle (Netherlands).

**Fifth Committee: Social and General Questions** (Traffic in opium and other dangerous drugs, protection and welfare of children and young people.)—Chairman Mr. O'Sullivan (Irish Free State), Vice Chairman Countess Apponyi (Hungary).

**Sixth Committee: Political Questions** (Mandates, Slavery, Refugees.)—Chairman M. Janson (Belgium), Vice Chairman Count de Penha Garcia (Portugal).

**General Committee.** The Chairman of the Committees are *ipso facto* Vice Presidents of the Assembly. The Assembly elected six further Vice Presidents who, with the chairman of the committees and the chairman of the agenda committees, constituted its General Committee. The six Vice Presidents constituted its General Committee. The six Vice Presidents elected by the Assembly were M. Briand (France), M. Stresemann (Germany), Mr. Adachi (Japan), M. Balodis (Latvia), Mr. Ramay MacDonald (British Empire), and M. Chao Chu Wu (China).

This year's discussion was particularly wide, embracing, as it did, the whole range of subjects within the League's purview, as well as the more important political events of the day, such as The Hague negotiations and their bearing on international relations, the Anglo-American negotiations for naval agreement; the preparation for a conference on the reduction of armaments, the development of the system of arbitration and security, the Covenant and the Paris Pact; the Palestine incidents, the protection of minorities, and the economic situation. It was also during the general discussion that M. Briand, put forward the idea of a federation of European States. He proposed that the delegates should submit this idea to their governments with a view to discussion at the next Assembly. The most important results of this session were obtained in the sphere of arbitration and the judicial organization of international relations, economic co-operation, the measures to combat the opium and drug traffic.

The first category includes the accession to the Optional Clause of the Court Statute of fifteen states, including three permanent members of the Council—France, Great Britain, and Italy, which thus recognized the compulsory jurisdiction of the Court for certain categories of disputes.

Another point which falls within this category is the adoption of two Protocols, one on the revision of the Statute of the Permanent Court of International Justice, the other on the accession of the United States to the Court Statute. The effect of these new accessions to the Optional Clause and the accession of the United States to the Court will be to increase the scope and the importance of the work of that organization. Amendments to the Statute are designed to make the Court a permanent judicial organization in the full meaning of the term, with judges who are specialists in international law.

It should, further, be mentioned that, during the general discussion, Denmark, Finland, France, Latvia, and Czechoslovakia, announced their intention of acceding to the General Act for the Pacific Settlement of International disputes, which was adopted by the 1928 Assembly and came into force in 1929, following the accession of Belgium, Norway, and Sweden.

The coming into force of the Pact for the Renunciation of War gave rise to the idea of reconsidering certain articles of the Covenant which did not seem to be in harmony with the Pact. The articles in question (Nos 12, 13, and 15) appear in theory to admit the possibility of resort to war. In view of the complexity of the question of amendments to the Covenant, the Assembly set up a special committee to study this matter during the coming year.

As regards two questions closely linked up with arbitration—security and disarmament—the Assembly took decisions concerning the establishment of a wireless station to insure independent League communications, the preparation of a

draft convention on financial assistance, the transformation into a general convention of the Model Treaty for Strengthening Means of Preventing War, and the necessity for hastening the work of the Preparatory Commission for the Disarmament Conference with a view to the convocation of the Conference.

As regards economic matters, the Assembly urged that energetic measures should be taken to better the situation which, in the absence of a systematic general application of the recommendations of the Economic Conference, had not, it considered, sufficiently improved. In the course of the general discussion on this point, the British Prime Minister advocated agreements to increase economic freedom, while the French Premier set forth the most striking aspects of the European problem. The German Foreign Minister pointed out that the economic organization of Europe was incompatible with present-day conditions, and the Belgian Foreign Minister launched the idea of a tariff truce, which was at once taken up and treated in greater detail by the president of the British Board of Trade.

This discussion resulted in the adoption of a programme which included a diplomatic conference for the conclusion of a tariff truce and, if necessary, for the establishment of a programme of negotiations for collective agreements to facilitate economic relations by all practicable means. In particular, the removal of hindrances to trade. Decisions also were taken with a view of accelerating the work on coal and sugar.

In the field of social work, the Assembly's discussion on the drug traffic may be regarded as one of the most important that has ever taken place on this subject. For the first time in the League's history, the principle of the limitation of drug manufacture was accepted. This limitation would be effected through an international conference which would fix the total quantity of drugs necessary for the medical and scientific requirements of the whole world, as well as the quotas to be manufactured by the various countries. The Assembly emphasized the vital necessity of the general ratification and application of the Opium Convention of 1925.

Poland, was reelected as a nonpermanent member of the Council, and Jugoslavia and Peru were elected as nonpermanent members. The Assembly and Council, voting simultaneously, elected Sir Cecil Hurst and M. Fromageot to succeed Lord Finlay and M. Weiss as judges of the Permanent Court of International Justice.

The fifty-sixth and fifty-seventh sessions of the Council were held from August 30 to September 6 and from September 13 to 25. The Persian representative, Ali Khan Foroughi, presided at both sessions. The principal business of these sessions was to prepare the discussion of the Assembly or to make arrangements for carrying out its decisions.

In the opinion of the Foreign Policy Association, the Tenth Assembly of the League was apparently one of the most important in League history. Fifty-three out of fifty-four member states sent delegates, the only absentees being Argentina. Twenty-two out of twenty-six European foreign ministers and seven prime ministers were present; at the first Assembly, there were only four prime ministers.

The most concrete gain registered at the Assembly relates to the acceptance of the Optional Clause of the World Court Statute, which pro-

vides for obligatory arbitration of legal disputes between nations. During the recent Assembly, this clause was signed by France, Great Britain, Canada, New Zealand, South Africa, and Irish Free State, India, Czechoslovakia, Italy, and Peru. All of the important countries of Europe were bound by the famous Article 38, the only great power within the League which had not accepted it was Japan. M. Briand announced that France would accept also the general act for the pacific settlement of disputes drawn up at the last Assembly. In order to close the "gap in the Covenant," the British Government proposed an amendment making it illegal for League members to go to war, even in cases where the Council failed to make a unanimous recommendation in regard to a dispute. This proposal was to be studied by a committee of eleven, which will report to the next assembly.

A bold effort to strengthen the peace machinery of the League was made by China. At the fourth meeting the Chinese delegate, Dr. Wu, asked that the Assembly proceed to make use of Article XIX of the Covenant, which permits the Assembly to advise reconsideration by League members of treaties "which have become inapplicable." Later the Chinese delegation proposed that a committee be appointed to decide how to apply Article XIX. The immediate object of this request was to secure the support of the League for China's campaign against the "unequal treaties." It was realized, however, that the establishment of this committee would constitute a precedent which might be used to disturb the European territorial settlement of 1919. After a rather tense discussion, which lasted until September 23, China abandoned its proposal for a committee, but in return the Assembly accepted a resolution to the effect that a member of the League might on its own responsibility place on the Assembly agenda the question of whether or not the Assembly should give advice in any particular case under Article XIX. The resolution declared that, if drawn up in the proper terms, the Assembly should discuss the application and, if it thinks proper, give the advice requested.

Perhaps the most spectacular, if not the most important, event of the Assembly was M. Briand's luncheon to the delegates of the European States, at which he launched his proposal for a United States of Europe. It was agreed at this luncheon that M. Briand should circulate a memorandum on the subject to the European governments and that, having received their views, he should make a report to be discussed by the European governments at the next Assembly. The idea of a United States of Europe was received with a great deal of sympathy, but at the same time several delegates made it clear that they could not support a union directed against other continents. In a speech of September 9, Herr Stresemann expressed opposition to any attempt to make Europe economically self-sufficing. He declared, however, that a European currency and postage stamp were long overdue. Mr. Graham, president of the British Board of Trade, stated that the advantage of any federation was that it secured free trade, but he too reminded his hearers that discrimination against countries or against continents would be contrary to the principles of the League.

Whether or not it was an outgrowth of this discussion, the French, British, and German delegates supported a resolution, which the Assembly

accepted, asking that an international economic conference be called in 1930 to negotiate an agreement providing that, for two years, tariffs should not be increased and that during this period negotiations should be carried on looking toward the eventual reduction of tariffs. Such an agreement should be open to non-members of the League but only on condition of reciprocity.

Another interesting debate dealt with the Bank of International Settlements contemplated by the Young Plan. Norway, Denmark, and Poland declared that this bank, under the control of the seven reparation Powers, might become a danger to other nations, they therefore proposed that the bank be placed under League supervision in accordance with Article XXIV of the Covenant. The proposal was opposed by the reparation powers on the ground that it would be unwise to link up the League with the reparation question, partly on the ground that any such link would further antagonize the United States. The resolution was finally withdrawn, on the understanding that the minutes of the League debates be placed before the committee organizing the bank. Denmark and Poland, moreover, reserved the right to raise the question again in the future.

After a preliminary press interview on September 2, in which he disclaimed any intention of doing anything to hurt the League, Premier MacDonald of Great Britain delivered his eagerly awaited speech to the Assembly on September 3 treating of disarmament and peace. "The problem of the League of Nations," he declared, "is a problem of security." The Kellogg Pact must be made the basis for future work. Articles 12 and 15 of the League Covenant should be revised in accordance with that pact. The British Government was pledged to "do everything it possibly can to hasten preparation for a disarmament conference." Agreement with America was Great Britain's special contribution to that end and was in no wise to be understood as an exclusive position toward other states, and was preliminary to a five-Power conference. Out of twenty points of agreement only three were "still outstanding." Mr. MacDonald also announced that his government had decided to sign the Optional Clause of the World Court agreement. Regard for the older nations of the East was recommended. The disorders in Palestine were declared to have no racial significance, but to be merely outbreaks of criminality and murder. Tariff barriers were deplored. Great Britain would now take the "risks of peace." Frequent applause interrupted the address, especially at the announcement concerning the Optional Clause. British Conservative comment was disturbed over a "too ready" pledge on this point, in view of the Dominions. Some French comment was unfavorable, expressing fear as to the consequences for France of an Anglo-American agreement on naval disarmament. On the day following his address, Mr. MacDonald and Foreign Minister Henderson, of Great Britain, conferred with Premier Briand, of France, for an hour and were reported to have agreed, with certain reservations, to a five-Power naval conference.

The Assembly closed its sessions on September 25 with the adoption of a budget of \$5,642,000 for the expenses of the League's secretariat, the International Labor Office, and the World Court for 1930. This was an increase of \$230,000 over last year, due to the great amount of new work

ordered by the Assembly. Fourteen League members, including Great Britain, France, and Italy, had signed the Optional Clause, accepting in advance the compulsory jurisdiction of the World Court. To the end of 1929, 43 members had signed, of which only 18 had ratified. A Liberian committee of three, consisting of a member of the League Council, a representative of the United States, and a representative of the Liberian government was decided upon in order to investigate the charges of slavery in Liberia made by Prof. Raymond Buell of the United States.

"A great debate," as it was styled, took place in the Disarmament Committee on September 19 as a consequence of the fourfold issue raised by Viscount Cecil of Great Britain with regard to (1) the application of the same principles to land, air, and sea disarmament; (2) the limitation of the strength of a force either by limiting its members or its training, or both; (3) the limitation of war material, and (4) agencies of control. In view of the concessions made by Lord Cushendun in the previous spring to the French demand for the exclusion of the question of trained reserves, the reopening of this question aroused special alarm. The debate appeared to swing between the two points of view on the one hand that any naval agreement would depend on the principles adopted for the handling of the question of land forces and material, and, on the other hand, the French contention that it was useless to be debating concerning matters of land disarmament before a settlement of the essentials of naval disarmament. The debate ended with a compromise resolution drafted by M. Politis of Greece which put the Assembly on record as favoring the view that land disarmament depends in substance on the success of naval agreement and that any five-Power accord is subject to the preparatory commission's approval.

In August, the United States Government transmitted for publication in the League's Treaty Series, the Treaty for the Renunciation of War which had just entered into effect. This treaty was of course formally registered with the League by the other signatories under Article XVIII of the Covenant, it is interesting, however, that its first transmission should have come from the state which took the initiative in this treaty but which is not a member of the League.

In less than ten years, over 2200 treaties have been registered and published by the League in some three score volumes. During August, the following registrations were noted: The Serb-Croat-Slovene State, treaty of conciliation with the United States; Latvia, extradition treaty with France; Belgium, legal competence as regards Holland; Holland, commercial treaty with Turkey and aerial navigation treaty with Great Britain; Siam, conciliation treaty with Holland; Great Britain, frontier treaty with Brazil, treaty with France over Senegal, and parcels-post treaty between the United States and the Straits Settlements; Hungary, the convention on import and export prohibitions; Italy, private international law agreement with Germany and commercial treaty with China, as well as other treaties by Norway, Denmark, Austria, Germany, Czechoslovakia, and Sweden.

The task of drawing up a draft convention for a tariff truce was scheduled for the Economic Committee, which began its sessions on October

24 Assurances were received from Lucius R. Eastman, American member of the committee, quoting Julius Klein, Assistant Secretary of Commerce, that American opinion, far from being hostile to the movement, would favor any step that Europeans took toward increasing their prosperity and buying power. The general trend of reports from other countries, including Great Britain, indicated opinion favorable to the truce. In October, the first meeting of the Fiscal Com-

of 10 per cent on hides and of 12½ to 15 per cent on leather. This rate of duty, however, failed to meet with the approval of the Senate, and hides and leather, as well as imported boots and shoes, were restored to the free list though no bill was enacted by the end of 1929.

The output of American tanneries by kinds of hides and skins represented was reported as follows by the Department of Commerce for 1929, 1928, and 1927.

## UNITED STATES LEATHER PRODUCTION

Kind		1929	1928	1927
Cattle (including kip side) *	equiv hides	19,146,582	20,288,793	21,820,368
Calf and whole kip	skins	15,867,726	15,617,325	16,986,711
Goat and kid	skins	55,684,501	54,854,035	50,735,866
Chabretta	skins	2,801,732	3,262,621	3,406,852
Sheep and lamb *	skins	38,980,687	39,015,490	36,061,677
Deer and elk	skins	965,417	859,189	887,910
Kangaroo and wallaby	skins	853,849	882,535	705,268
Seal	skins	243,979	192,214	351,331
Pig and hog	skins	706,115	522,391	447,869

\* The following procedure was used in the consolidation of production data. Sides of sole, harness, bag, car, and strap, skirting, collar, latigo, lace, upper, patent, glove, fancy, rawhide, cowhide, n e s, and rough leather were added together and divided by 2. To this quantity was added the actual number of rough belting butts, up holsters, grains, and machine buffed hides. The figures include buffalo hides. Curried belting butts, wetting leather, buffings, and splits were excluded. \* Includes skivers but excludes chamois and other feshers

mittee, created as a result of eight years of study for the purpose of considering the problems of double taxation, took place and agreements were reached to free visiting foreign motor cars from present tax difficulties in different countries and in regard to traveling salesmen, who were subjected to considerable inconveniences, while study was begun of the general principles governing the taxation of international trust and holding companies and the measures necessary to avoid the double taxation of various instruments of international trade, such as checks, bills of exchange, and letters of credit.

Two treaties of conciliation and arbitration between the United States on the one hand and Hungary and Rumania on the other were transmitted to the League in October by the American Minister at Berne.

The New League Building was to be located in Geneva in the beautiful Park Ariana—high up on wooded slopes, overlooking the lake, in scenic intimacy with the mountains, yet not more than fifteen minutes walk from the centre of the city. The site was given by the city, after a failure of the authorities to obtain the ground next to the International Labor organization, on the level of the lake. The newly selected site is more imposing than the original one, though not as convenient. The plan of the buildings was determined in an international competition. The most significant spots were to be the Council meeting room, the library, the radio station, and the airplane landing field.

See IRAQ, under History.

**LEATHER.** The leather industry remained in an unstable condition during 1929 on account of restricted consumption, owing to the policy on the part of shoe manufacturers of buying only enough leather to meet their immediate needs, and on account of the inability of producers to work their plants at full capacity. There also had been left over from the year previous a large amount of unsold leather which had to be realized and, in the endeavor to rid the market of this surplus, prices receded rapidly. For these reasons the Hawley tariff bill, passed by the House of Representatives on May 28, was regarded as a general panacea, as it proposed placing a tariff

Statistics from the Bureau of Animal Industry in 1929 indicated a decrease in the number of cattle, calves, goats, and hogs slaughtered in the United States and an increase in the number of sheep and lambs. The number of cattle slaughtered in 1929 was 8,324,067 as compared with 8,487,308 in 1928, the number of calves, 4,488,996 as compared with 4,679,022 in 1928, the number of hogs, 48,444,604 as compared with 49,795,408 in 1928, and the number of sheep and lambs, 14,023,362 as compared with 13,448,171 in 1928. See LIVESTOCK.

The imports of raw hides and skins in 1929 represented the largest volume since 1923 and were derived from widely scattered sources. South America, particularly Argentina, ranked as the chief source of imported cattle hides which in 1929 amounted to 265,628,593 pounds valued at \$42,615,807, as compared with 276,235,123 pounds valued at \$63,694,386 in 1928. Canada, Germany, Sweden, France, and Latvia were the chief sources of calf and kip skins, the imports in 1929 amounting to 56,067,066 pounds valued at \$16,367,176, as compared with 45,335,725 pounds valued at \$16,104,535 in 1928. New Zealand and Argentina were the principal sources of direct shipments of sheep and lamb skins, total imports in 1929 amounting to 65,478,195 pounds valued at \$21,904,919, as compared with 63,191,979 pounds valued at \$20,730,983 in 1928. Goat and kid skins came chiefly from British India, China, and Brazil and amounted to 100,108,170 pounds valued at \$47,500,323, as compared with 90,803,631 pounds valued at \$41,740,335 in 1928. Total imports of raw hides and skins during 1929 amounted to 515,680,184 pounds valued at \$137,308,664, as compared with 506,021,501 pounds valued at \$150,809,555 in 1928.

The exports of raw hides and skins from the United States in 1929 totaled 37,744,750 pounds valued at \$6,795,631, as compared with 46,419,438 pounds valued at \$11,062,502 in 1928. The exports of leather were valued at \$42,946,939, as compared with \$55,177,834 in 1928. The largest importers of calf and kip leather were the United Kingdom, Cuba, and Brazil; of goat and kid upper leather (including glazed kid), Belgium, Germany, Poland, the United Kingdom, Canada, and

of sole leather, the United Kingdom, China, and Japan.

The imports of leather in 1929 were valued at \$44,559,116, as compared with \$43,237,589 in 1928, an increase being noted in imports of goat and kid, calf and kip, rough tanned, and harness leather. Imports of upper leather included 276,104 pounds of reptile leather valued at \$4,346,808, 4,348,169 square feet of cattle, grains, and finished splits valued at \$744,881; 39,809,885 square feet of calf and kip leather valued at \$12,847,783, 2,061,324 square feet of sheep and lamb leather valued at \$420,728, 14,717,839 square feet of goat and kid leather valued at \$6,507,204; 25,744,840 square feet of calf and kip lining leather valued at \$3,754,957, and 3,948,092 square feet of patent leather valued at \$1,263,263. There also were imported 6,194,174 pounds of sole leather valued at \$2,497,728; 182,098 square feet of glove leather valued at \$59,142, 1,911,115 square feet of seal, sheep, goat, and calf leather, dressed and finished, valued at \$590,394, 294,263 pounds of skins for Morocco, tanned but unfinished, valued at \$330,017, 13,320,303 pounds of rough tanned leather valued at \$7,480,530, and 2,316,682 pounds of harness leather valued at \$980,482. The principal countries which supplied imports of leather were the United Kingdom, Canada, Germany, and France.

During 1929 the United States imported leather manufactured goods to the value of \$41,563,220, as compared with \$25,651,081 in 1928. The value of the leather gloves imported constituted \$16,550,530 of this amount, leather boots and shoes (free of duty), \$17,025,931, leather slippers (free from duty), \$1,432,705, dutiable footwear, \$314,289, bags, baskets, belts, etc., \$4,620,832, and miscellaneous goods, \$1,323,245. The exports of leather manufactures were valued at \$17,733,684, as compared with \$17,503,474 in 1928. See **BOOTS AND SHOES**.

**LEAVENWORTH PRISON.** See **CRIME**.

**LEBANON.** See **SIRIA**.

**LEBRO, LAKE OF.** See **ARCHAEOLOGY**.

**LEE, JAMES MELVIN.** An American editor, author, and educator, died in New York City, Nov. 17, 1920. He was born on May 16, 1878, in Port Crane, N. Y., and was graduated from Wesleyan University in 1900. He soon joined the staff of *The Union* (Springfield, Mass.), and in 1901-02 he was an English teacher at the Wesleyan Reserve Seminary. From 1902 to 1912, he was connected with various magazines, including *Bohemian Magazine*, *The Circle Magazine*, *Leslie's Weekly*, and *Judge*, which he edited during 1908-12. In 1910-11 he lectured on journalism at New York University and after 1911 was director of the department of journalism there. In addition to his teaching, he was editor-in-chief of *Administration* (1921-23), literary editor of *Editor and Publisher* (1922) and of *Three Am Dash* (after 1923). He wrote *How to be Self-Supporting at College* (1903), *Wordless Journalism in America*, cartoons (1915); *History of American Journalism* (1917), *Newspaper Ethics* (1915), *Instruction in Journalism in Institutions of Higher Education* (1918), *America's Oldest Daily Newspaper* (1918), *Opportunities in the Newspaper Business* (1919), *Business Ethics* (1925).

**LEE, WILLIAM GRANVILLE.** An American labor leader, died in Cleveland, Ohio, Nov. 2, 1929. He was born in La Prairie, Ill., Nov. 29, 1859, and was educated in the public schools. From 1879

to 1884, he was successively brakeman and conductor on the Atchison, Topeka & Santa Fe, the Wabash, the Missouri & Pacific, and the Union Pacific railroads. After an intermission of four years, when he was recorder of deeds in Ford Co., Kansas, he returned to railroad work as conductor on the Union Pacific (1885-05). In 1895 he was appointed first vice president of the Brotherhood of Railroad Trainmen and in 1909, president. Mr. Lee held the presidency until 1928, when he was defeated for reelection as president, but was chosen general secretary and treasurer of the organization. Under his 19 years of leadership, the Brotherhood of Railroad Trainmen grew in numbers, wealth, and influence. Mr. Lee's conservative but fearless handling of strikes and other difficult situations won for him the respect alike of the trainmen and of the railroad officials.

**LEES, THE MOST REV. HARRINGTON CLARE,** ARCHBISHOP OF MELBOURNE AND METROPOLITAN OF VICTORIA. Anglican archbishop, died Jan. 10, 1929, in Melbourne, Australia. He was born in England, Mar. 17, 1870, and was graduated from Cambridge in 1892. The following year, he was curate of St. Mary's Episcopal Chapel, Reading, and was ordained priest in 1894. He was chaplain of Turin (1895-97), curate of Childwall, Lancashire (1897-1900), and vicar of St. John's Kenilworth (1900-07). In 1906 he was sent as a missionary to South Africa, but returned to England the next year to become vicar of Christ Church, Beckenham, where he remained until 1919. At that time, he was also diocesan mission preacher at Rochester. From 1919 to 1921, he was vicar of Swansea, South Wales. In 1921 he was made Archbishop of Melbourne, and in 1922 was elected president of Melbourne College of Divinity. During the World War, he was honorary chaplain at the Kelsey Manor Military Depot (1914-18), and at Christ Church V. A. D. Hospital (1914-16), being mentioned in 1919 by the British Red Cross Society for his services. Among his writings are *King's Way*, *Joy of Bible Study*, *St. Paul and His Converts*, *Christ and His Slaves*, *Divine Master in Home Life*, *St. Paul's Friends*.

**LEEWARD ISLANDS.** A group of islands belonging to Great Britain in the West Indies, the most northerly group of the British Lesser Antilles, lying to the north of the Windward group and southeast of Porto Rico, comprising Antigua, Dominica, Montserrat, St. Kitts (with Nevis and Anguilla), and the British Virgin Islands. Total area, 715 square miles, population at the census of 1921, 122,242, as compared with 127,193 in 1911. The estimated population in 1928 was 123,000. The two largest islands with their area and population in 1921 were Dominica, 305 square miles and 37,059 inhabitants, Antigua, 108 square miles, but with Barbuda and Redonda, 170 square miles, with a population of 29,767. The chief towns are Roseau (Dominica), 7000 inhabitants, St. John (Antigua), 6997 inhabitants, and Basseterre (St. Kitts), 7736 inhabitants. The British Virgin Islands comprise all those in the group which do not belong to the United States, area, 58 square miles, population (1921), 5082. The staple products in most of the islands are sugar, cotton, and molasses. Cacao and onions also are grown. The culture of tobacco is successfully carried on in Dominica. On that island and on Montserrat, lime juice and the extract of lime are important products. In the calendar year 1927, exports totaled \$4,790,000 and

imports, \$4,153,000. In 1928 the receipts for Antigua, Montserrat, St Christopher, and Dominica totaled £278,000, the expenditures £277,000, and the public debt, £201,000. The islands are divided into five presidencies under a central government, at the head of which is a governor, who is also commander-in-chief, a Federal executive council, and a Federal legislative council. Lieut.-Col Thomas Reginald St Johnston was appointed governor in 1929.

**LEHIGH UNIVERSITY.** A nonsectarian institution for the higher education of men in Bethlehem, Pa., founded in 1866 and composed of the colleges of engineering, business administration, and arts and science. The enrollment for the autumn of 1929 was 1532, the largest autumn enrollment in the history of the university. The enrollment for the summer session of 1929 was 449. The faculty numbered 169, including 16 persons on the administration staff. The endowment amounted to \$5,136,999, while the total income for the year was \$1,140,874. There were 187,000 volumes in the library. President, Charles Russ Richards, Eng D., LL.D.

**LEHMANN, LILLY.** A famous German dramatic soprano, died in Berlin, May 17. She was born in Würzburg, Nov. 24, 1848, the daughter of Marie Loew, a singer and harpist of considerable reputation. When only six years old, Lilly began to study the piano, and from the age of twelve she acted as accompanist to her mother, from whom she also received her entire vocal training. On Oct. 20, 1865, she made her debut in Prague as First Page in Mozart's *Zeubersfote*. She then sang in Danzig and Leipzig, and in 1870 became a regular member of the Royal Opera in Berlin. There she soon established a great reputation as a brilliant coloratura singer. The summer of 1875 she spent in Bayreuth studying with Wagner the rôles of Woglinde, Helmwige, and the Forest Bird, which she created the following summer at the first Bayreuth Festival. After that, she returned to Berlin under a life contract. Short leaves of absence enabled her to accept engagements as guest at the principal opera houses of Germany, Austria, and Sweden, as well as Covent Garden. For the première of *Parasfal*, Wagner selected her as the leader of the sixteen Flower Maidens and entrusted to her the selection and training of the groups. Unfortunately, illness prevented her from assuming her own rôle at the first performance in 1882. In the mean time her fame as a great dramatic singer had spread, so that for the first season of German opera at the Metropolitan Opera House (1884-85), Dr. Leopold Damrosch offered her a contract which she was compelled to decline, because of her intendant's refusal of an extended leave. But the next year, when Anton Seidl began his brilliant career at the Metropolitan, she received the necessary leave, made her American debut as Carmen (Nov. 25, 1885), and five days later aroused boundless enthusiasm through her impersonation of Brünnhilde in *Die Walkure*. From that moment she was the idol of the New York public and remained so during her subsequent engagements until 1889.

In those seasons she sang the great dramatic rôles in the works of Beethoven, Mozart, Weber,

Verdi, and especially in those of Wagner, creating at the American premières the rôles of Isolde (Dec. 1, 1886) and Brünnhilde (*Siegfried*, Nov. 9, 1887, and *Götterdämmerung*, Jan. 25, 1888). As she had overstaid her leave in 1889, she found on her return to Berlin the doors of all German opera houses closed to her. Not until two years later, through the personal intervention of the Emperor, was the ban lifted, however, during that time the artist was not idle, but laid the foundation of her fame as one of the greatest interpreters of German *lieder*. In 1891-92 she sang again at the Metropolitan, but this time only in Italian and French operas with the brothers De Reszke and Lassalle. At the Bayreuth Festival of 1896 she was the Brünnhilde of the entire *Ring* cycle.

Her great admiration for Mozart made her not only an unsurpassed interpreter of that master's works, but led her to take an active part in the management of the annual Salzburg Festival, of which she became sole manager in 1905. In the full possession of her extraordinary powers she continued her dramatic career until 1914, when she bade farewell to the stage as Donna Anna in Mozart's *Don Giovanni* at the Salzburg Festival, but still appeared in recitals until 1921. After that, she taught in Berlin, almost to the day of her death.

In the course of her career she sang on the stage 170 rôles in 114 operas, in German, Italian, and French, while her concert repertory included all the standard oratorios and more than 600 songs. From all available records it appears that no singer ever rivaled her in extent or variety of repertory. Long before she ceased her public appearances, her fame as one of the world's greatest mistresses of song had been securely established. As a coloratura vocalist she equaled Patti or Melba, as an interpreter of Wagner she ranked with Materna, Sucher, or Klafsky. In her one person she combined in rare perfection all the supreme qualities of singer and actress: a glorious natural voice, faultless technique, fiery temperament, penetrating intelligence, queenly stage-presence, plasticity of pose, grace of movement. Not only was she a high priestess of art, but she also possessed, in an eminent degree, the gift of imparting the technique of her art to others, such as Olive Fremstad, Melanie Kurt, Geraldine Farrar, Marion Weed, and Florence Wickham. She is the author of *Meine Gesangs-kunst* (1902), *Studie zu Fidelio*, and *Studie zu Tristan und Isolde* (both 1904), also an autobiography, *Mein Weg* (1913, 2d ed., 1920).

**LEHMANN, RUDOLPH CHAMBERS.** An English journalist, politician, and oarsman, died Jan. 22, 1929, in Buckinghamshire, England. He was born near Sheffield, Jan. 3, 1856, and was educated at Highgate School and at Trinity College, Cambridge. In 1880 he became a barrister of the Inner Temple. He was active in Liberal politics, in 1901, was high sheriff of Buckinghamshire and from 1906 to 1911 was a member of Parliament from the Harborough Division, Leicester. He wrote on legal subjects, edited the London *Daily News* in 1901, and was a staff member of *Punch* from 1890 to 1919. While at Cambridge, he made a name for himself as an oarsman and in 1899 coached the Cambridge crew. He also coached the Oxford University crew from 1891 to 1903, and came to America to coach the crew at Harvard University in 1896-97. His books include a volume on rowing

in the *Isthmian Library* (vol. iv, 1897; with Dale, *Digest of Overruled Cases* (1887); *The Billbury Election* (1892), *Mr. Punch's Price Novels* (1893); *Annu Fugaces* (1901); *Adventures of Picklock Holes* (1901); *Crumba of Pity* (1901), *The Sun-Child* (1904); *The Complete Oarsman* (1908), *Memories of Half a Century* (1908); *Light and Shade* (1909); an edition of previously unpublished letters of Dickens, *Charles Dickens as Editor* (1912), *Sportsmen and Others* (1912), *The Spark Divine a Book for Animal Lovers* (1913).

**LEMONS.** See HORTICULTURE

**LENKER,** THE REV JOHN NICHOLAS An American clergyman in the Lutheran Church, died May 17, 1929, in Minneapolis, Minn. He was born in Sunbury, Pa., Nov. 28, 1858, and was graduated from Wittenberg College in 1879, from the Hamma Divinity School of Wittenberg in 1881, and studied at the University of Leipzig, in Germany, in 1882. Ordained in the Evangelical Lutheran ministry in 1880, he was a pastor in Grand Island, Nebr (1882-86), was with the Board of Church Extension of the General Synod of the Evangelical Lutheran Church in the United States of America (1886-94), was professor of church history, Old Testament exegesis, Hebrew, and German at Trinity Seminary, Blair, Nebr (1900-04). Moving to Minneapolis in 1904, the Rev. Lenker founded there the Luther Press, and founded and edited the *Northern Review* and *The Lutherans in All Lands* (quarterly). He was also pastor of the Pentecost English Evangelical Lutheran Church. He did extensive research work in Europe, Egypt, and Palestine, was president of the General Lutheran Missionary Conference, vice president of the American Lutheran Mission for Russia, and organizer of students' missionary societies in Norway, Sweden, and Finland. Dr. Lenker was a translator of the writings of Martin Luther, 13 volumes of the work having been published. In addition to translation, he wrote *Lutherans in All Lands* (1893, supplement, 1919), *Die Luthersche Kirche der Welt* (1901), and *Three-Language Education* (1914).

**LEPROSY.** An account of the work of the U. S. National Leprosarium at Carville, La. by Hopkins and Denney was published in the *Journal of the American Medical Association* for January 19. The total number based on the admissions and releases since 1894 was 718 and the leading foci are in Louisiana, California, New York, Florida, and Texas, although naturally the disease is indigenous only along the Gulf of Mexico. The large leper population of Louisiana dates only from the establishment of the national leprosy and amounted to 423 cases in 1929, but the number interned was only 287. The whites are more liable to contract the disease than the blacks, contrary to what has been supposed. Males are much more liable in this respect than females, while the social status represents a cross-section of the normal populace. The disease shows a considerable tendency to appear in near relatives. It may at times be shown that the incubation period is a long one—as much as six years—while the disease usually first manifests itself by spots on the face, there is no such thing as a prodromal stage nor is there an "initial lesion" as in syphilis and tuberculosis. The

"parole system" has been so perfected that but one paroled patient has developed a recurrence in the past seven or eight years.

**LESSING ANNIVERSARY.** See CELEBRATIONS.

**LEWIS, C. I.** See PHILOSOPHY.

**LEWIS, PAUL ADIN** An American pathologist, died of yellow fever, June 30, 1929, in Bahia, Brazil, where he had gone under the direction of the Rockefeller Institute for Medical Research to study that disease. He was born in Chicago, Ill., Apr. 14, 1879, and, after one year at the University of Michigan, studied medicine at the Wisconsin College of Physicians and Surgeons and at the University of Pennsylvania, receiving his degree from the latter in 1904. He became the same year resident in pathology at the Boston City Hospital. He was assistant in the anatomical laboratory of the Massachusetts State Board of Health (1905-08), was a fellow in comparative pathology at Harvard (1906-08), and on leaving there became an associate in pathology at the Rockefeller Institute in New York City. In 1910 he went to Philadelphia as director of the laboratory of Henry Phipps Institute, where he remained until 1923, meanwhile holding the professorship of experimental pathology at the University of Pennsylvania. He returned to the Rockefeller Institute in 1923 as an associated member attached to the department of animal pathology, near Princeton. The numerous papers published by Dr. Lewis cover several important and distinct fields in pathology and bacteriology.

**LEXICOGRAPHY.** See PHITOLGY, MODERN.  
**LIABILITY INSURANCE.** See AUTOMOBILES, INSURANCE.

**LIBBY, EDWARD NORTON** American physician and educator, died Nov. 6, 1929, in Jamaica Plain, Mass. He was born in Linnington, Me., July 17, 1868, and was graduated from Dartmouth College in 1892, receiving the doctor's degree in medicine in 1895. The same year, he began the practice of medicine in Boston, and for a number of years was senior visiting physician at the Boston City Hospital. At the time of his death, Dr. Libby was dean of Tufts College Medical School, where for many years he taught the theory and practice of medicine.

**LIBERIA.** A Negro republic on the west coast of Africa, reaching from the British colony of Sierra Leone on the west to the French Ivory Coast on the east, with about 350 miles of coast line, and extending inland at some points to a distance of 200 miles. Area, variously estimated at 35,000 to 45,000 square miles, and population, at 2,000,000 to 2,500,000, most of whom live in the interior. They belong to about 40 tribes and speak as many languages, though they fall into the six main stocks of Mandingos, who are Mohammedans, Gola, Kpweis, Gissi, Kru, and Greboes. The civilized inhabitants, reported at about 50,000, live along the coast, speak English, and are industrious. Capital, Monrovia, with 6000 inhabitants (including Kintown). The ports of entry are Monrovia, Robertsport, Marshall, Grand Bassa, Buchanan, River Cess, Liberian Gene, Saywolu, Greenville, Nana Cru, Grand Cess, Sasstown, Harper, Kabiakke, Half Cavalla, and Webo.

**PRODUCTION.** Agriculture, mining, and industrial resources are comparatively undeveloped. Although the soil is very fertile, cultivation is backward. Cacao and cotton are produced in

small quantities, but the staple product is native coffee. Other products include: Piassava fibre, palm oil, palm kernels, chillies, benne seed, rice, beeswax, and tortoise shell. The American tire manufacturer, Harvey S. Firestone, obtained a million-acre rubber concession from the Liberian government in 1926 and embarked upon a \$100,000,000 development programme. In 1929 it was reported that 30,000 acres had been planted to 6,000,000 rubber trees by a force of 10,000 Liberians under the supervision of about 90 American employees of the Firestone Plantations Company. The wages paid by the company to Liberian workers in 1928 amounted to about \$1,024,000. A number of other concessions were obtained by European and American concerns. The mineral resources include: Gold, copper, tin, zinc, monazite, lead, corundum, lignite, and iron. The last named is worked by natives. Some diamonds have been found.

**COMMERCE** In 1925 the value of imports was \$2,115,021 and of exports \$1,911,053. In 1928 the imports from the United Kingdom were valued at £211,299 and exports to the United Kingdom, at £63,666. The chief exports are coffee, cacao, palm kernels, piassava fibre, palm oil, ivory, rubber, ginger, and rainwood. The chief imports are rice, cottons, haberdashery, salt, provisions, arms and ammunition, hardware, tobacco, ready-made clothing, glass, earthenware, rum, gun, building timber, dried and preserved fish, and beads.

**FINANCE** The budget for 1925-26 provided revenues of \$962,570 and expenditures of \$939,978. The public debt in the same year was slightly in excess of \$2,000,000. Under the terms of a \$5,000,000 loan obtained from American capitalists in 1927, government finances are supervised by a financial adviser appointed by the President of the United States.

**COMMUNICATIONS.** There are no railways in Liberia and only about 250 miles of highway suitable for motor traffic. Other roads were under construction in 1929. In 1925, 904 ships of 2,082,852 tons entered and cleared the ports of the republic. There is direct cable communication with Europe and America and a wireless station at Monrovia.

**GOVERNMENT.** The constitution is modeled after that of the United States. Under it, executive power is vested in the President, who is assisted by a cabinet of six ministers, and legislative power in the Congress made up of the Senate and House of Representatives. Qualifications for the franchise are Negro blood and ownership of land, although the natives are not disfranchised, they take no part in political affairs. The official language of the administration is English. President in 1929, Charles D. B. King (elected for the term 1928-1932); vice president, Allen N. Yancy.

**HISTORY** Charges that slavery existed in Liberia and that a system of forced labor was in operation on the Firestone and other foreign concessions with the approval of the Liberian government caused the government in 1929 to request the appointment of an international commission to investigate the situation. The commission of three members, appointed by the United States, the League of Nations, and Liberia, respectively, was empowered by the government to summon witnesses in connection with the inquiry and to make recommendations to the Government of Liberia as it saw fit. In December, 1929, Charles S. Johnson was appointed as the American member

of the commission and a Norwegian judge, Mr. Meek, was appointed on nomination by the League Council. The inquiry was to last four months.

**LIBRARY ASSOCIATION, AMERICAN.** The official organization of librarians in the United States and Canada, founded for the purpose of promoting library service and librarianship. In 1876 its membership was 103, in 1929 it was more than 12,000. The activities of the association are carried on by its officers, by its 67 voluntary committees engaged in studying the problems of book buying, book selection, cataloguing, library work with the blind, and the foreign born, etc., by its boards, by hundreds of volunteer workers, and by the members of the headquarters staff, which numbered more than 60 in 1929, including the executive assistants to the A. L. A. committee on library extension, the board on the library and adult education, and the board of education for librarianship.

The association publishes books and pamphlets on library work, buying-lists for libraries, etc. More than 1,000,000 copies of A. L. A. publications were distributed during 1929, most of which were sold. Important publications of the year included *Budgets, Classification, and Compensation Plans for University and College Libraries*, the report of the A. L. A. Committee on Classification of Library Personnel, *College and Reference Library Yearbook, No. 1, Children's Library Yearbook, No. 1, Guide to Reference Books*, fifth ed., *The Public Library in the United States*, by Arthur E. Bostwick, and *School Library Yearbook, No. 3*. The association also published nine courses of *Reading with a Purpose* in 1929: *The Human Body and Its Care*, by Morris Fishbein, *Journalism*, by Willard G. Bleyer, *Economics*, by Walton H. Hamilton, *Mental Hygiene*, by Frankwood E. Williams, *Advertising*, by Ernest E. Calkins, *Romance of Modern Exploration*, by Fitzhugh Green, *Salesmanship*, by John A. Stevenson, *Capital and Labor*, by John A. Fitch, and *Home Economics*, by Helen W. Atwater. Each course consisted of an essay, followed by a list of five or six books recommended to the reader in case he wished to read further on the subject. Of the 50 courses published since 1925, more than 600,000 copies had been sold by the end of 1929. It was also estimated that 100,000 persons had read the prescribed books listed. The association issues two periodicals: *The Bulletin of the American Library Association*, a monthly publication which includes the conference proceedings and the handbook, and *The Booklist*, which is issued ten times a year as a guide to the selection and purchase of current books.

The fifty-first annual conference of the association, held during the week of May 13, 1929, in Washington, was attended by more than 2700 members. The John Newbery Medal, given annually for the most distinguished children's book of the year by the section for library work with children of the A. L. A., was awarded to Eric Kelly for his book, *The Trumpeter of Krakow*. The usual meetings of college, school, county, reference, children's, agricultural, and hospital librarians were held. There were round-table discussions on adult education, library extension, religious books, small libraries, radio broadcasting, moving pictures in connection with the work of the library, and library work with the blind and with the foreign born. Meeting with the as-

sociation were the American Association of Law Libraries, the American Library Institute, the Bibliographical Society of America, and the Special Libraries Association. President Hoover was elected honorary member of the association, and Dr. Tietse Pieter Sevensma, librarian of the League of Nations, was made a corresponding member.

Officers elected for 1929-30 were Andrew Keogh, librarian, Yale University, president; Everett R. Perry, librarian, Public Library, Los Angeles, first vice president, Jennie M. Flexner, Public Library, New York City, second vice president, Matthew S. Dudgeon, librarian, Public Library, Milwaukee, treasurer; Linda A. Eastman, librarian, Public Library, Cleveland, and Judson T. Jennings, librarian, Public Library, Seattle, as members of the Executive Board, and John W. O'Leary of the National Bank of the Republic, Chicago, trustee of the endowment fund. The headquarters of the association are at 520 North Michigan Avenue, Chicago.

**LIBRARY PROGRESS.** The year 1929 in library progress was marked by the establishment of five new State library-extension agencies and the passage of State legislation pertaining directly to the work of libraries. An appropriation of \$4500 was granted to the Colorado Library Commission, formed from two older bodies, and one of \$2000 to the New Mexico Library Extension Service. Similar bodies were organized in Montana, South Carolina, and West Virginia without appropriation. In Mississippi, \$5,000 for each of the years 1928 and 1929 was granted to the State Library Commission, appointed in 1926 without appropriation. A Wyoming State Library Association was formed in October. Mrs. Clare Ausherman of Cheyenne, the State librarian, being elected the first president. Among the laws passed during the year, indicative of library progress, was a law in Illinois permitting an increased tax levy, one in Indiana providing for a State library and historical building, one in Minnesota amplying the law providing that, in cities and villages of less than 2000, the school board may maintain a public library, and one in New Jersey permitting the library board in cities of the first class to pension the librarian after 25 years of service at the age of 70.

Among the States which passed new laws permitting counties to establish libraries were Arizona, Colorado, Delaware, Oklahoma, and Tennessee, the latter State replacing a law the constitutionality of which was questioned. Southern library development was promoted by grants to certain counties from trustees of the recently established Julius Rosenwald Fund, the grants always being conditional upon local library support. Among the first counties to receive such grants were Webster Parish, La., Davidson and Mecklenburg Counties, N. C., and Hamilton County, Tenn. The further extension of county libraries was discussed at an important conference held in Chicago in December, 1928, when 40 representatives from the U. S. Bureau of Education, the U. S. Department of Agriculture, universities, colleges, educational foundations, farmers' organizations, farm papers, and industries definitely related to rural life met with the American Library Association's Committee on Library Extension. The interest expressed by rural leaders enforced the conclusion that the county library, under trained librarians and ade-

quately supported by public funds, best served rural communities and that all national and State agencies concerned with rural progress shared the opportunity and responsibility for furthering county library development. During the first nine months of 1929, 12 new county libraries were reported, making a total of 276 in the United States.

The expansion of the public-library system during the year was marked along several lines. In the field of adult education, public libraries continued to develop and enlarge their services, 34 readers' advisers in as many libraries being employed to give consulting service, supplemented by suitable books. Educational surveys were made by some libraries and directories of educational opportunities for adults published. Many public libraries continued their work with the *Reading with a Purpose* courses, published by the American Library Association. See **LIBRARY ASSOCIATION, AMERICAN**.

A study of factors contributing to good reading habits and those governing the lack of such habits, undertaken by the American Library Association and the American Association for Adult Education, was completed in 1929 and published under the title, *The Reading Interests and Habits of Adults: Readable Books in Many Subjects*, prepared by Emma Felsenthal under the direction of the American Library Association, also was published as an aid to librarians seeking books in simple, non-technical language for the reader of limited cultural background.

In the public libraries of the 37 leading cities of the United States, 114,000,000 books were circulated during 1929, over 1,000,000 more than were circulated the previous year. The Chicago Public Library lent the largest number of books, 14,128,771, New York, excluding Brooklyn and Queens, was second with 10,877,171, and Los Angeles third, with 8,414,000. Cleveland had the largest per-capita circulation, 8.055, followed by Milwaukee, 7.524, and Rochester, 7.441.

Library schools continued to grow in strength and in number, those at McGill University, the New Jersey College for Women, and Syracuse University being accredited by the Board of Education for librarianship of the American Library Association in 1929, making a total of 18 schools so recognized. Textbooks on basic subjects in library training are being published under the direction of the Board of Education for Librarianship. *Circulation Work in Public Libraries*, by J. M. Flexner, has been completed, *Reference Work*, by J. I. Weyer, was on the press, and the following books were under revision: *Selection and Acquisition of Books for Libraries*, by F. K. W. Drury, *Introduction to Cataloguing and the Classification of Books*, by Miriam Mann, *The Library in the School*, by L. I. Luge, and *Library Service to Children*, by E. L. Power. Fellowship grants were offered by the Carnegie Corporation of New York for study and research in library problems, and the Caroline M. Hewins Scholarship was offered for the first time to young women preparing for work with children in public libraries.

School library work also showed great progress. Courses for school librarians were started at McGill University library school and at the new library school at the University of Minnesota; a five-year, state-wide demonstration of school library service was begun under the Louisiana Library Commission; a revised edition of

the *Teachers College Measuring Stick* was issued, California school librarians published a handbook and a list of books for senior high schools, and marked development of methods of training for teacher librarians was shown in New York State. The Ontario Library Association, for the first time, turned its attention to school library work. Typical of progress in certain cities was the development of curriculum construction, library organization, and administration in Denver, the central cataloguing department in Los Angeles, the new quarters in Long Beach, and the central school library department in San Francisco.

In the field of bibliography, the first and second parts of the preliminary edition of the *List of Serial Publications for Foreign Governments*, containing records of serials of the Pan-American states, other than the United States, and of the British overseas empire, except Canada, were completed, and records of serials of Switzerland, Belgium, and the Netherlands were begun. A grant of \$35,000 was made by the Rockefeller Foundation for the preparation of the *Union List of Volume Manuscripts of Foreign Origin* before 1500 in American libraries. The *Union Catalogue of Unusual Books in American Libraries* at the Library of Congress was increased to 5,551,406 locations, and a supplement to the *A L A Index, or Union Catalogue of Serials in American Libraries*, was initiated. The Smithsonian Institution continued the work of compiling American titles for the *International Catalogue of Scientific Literature*. The Pan American Union, in carrying out the resolution of the Havana Conference, organized a Bibliographical Pan American Conference to be held in Havana in 1930, as part of this, an extended programme of bibliographical effort in this field has been prepared.

The formation of an International Association of Librarians at the first world Library and Bibliographical Congress at Rome and Venice in June, 1929, greatly strengthened international library relations. Among the 70 American librarians present at the conference were: Andrew Keogh, president of the American Library Association, Herbert Putnam, W. W. Bishop, and Carl H. Milan. South African library development has been made possible by a grant of £13,000 from the Carnegie Corporation of New York, the grant being the result of recommendations made by Milton J. Ferguson, State Librarian of California, and S. A. Pitt, city librarian of Glasgow, Scotland, after a survey made in 1928, authorized by the corporation. The appointment of Señor Joaquín Díaz Mercado, as member for Mexico to the A. L. A. Membership Committee, and of Miss Annie S. Cutter, as guest of honor at the sixty-first anniversary celebration of the founding of the National Library of Mexico, furthered cooperation between Mexico and the United States.

A number of large sums of money were either given or voted for libraries and library work in 1929, including \$1,750,000 given to the University of Michigan by W. W. Cook of New York for the erection of a new law library, \$500,000 provided for the Yale University library fund by Otto T. Barnard, \$400,000 given to Fisk University for a new library by the General Education Board, and \$50,000 donated to the St. Louis Public Library by George T. Steedman for the establishment, housing, and upkeep of an architectural library. Severe losses sustained by the West Palm Beach and Lake Worth libraries in

the Florida hurricane were partially regained by use of a balance remaining from the \$25,000 flood rehabilitation grant of the Carnegie Corporation in 1928. The Bureau of Social Hygiene financed the prison library research conducted in Massachusetts for one year by the A. L. A. Committee on Institution Libraries. A grant of the Carnegie Endowment for International Peace enabled two official delegates to attend the International Library Congress in Rome and permitted the American Library Association to finance extensive exhibits in Geneva, Seville, Rome, Venice, and Kyoto.

Several new university libraries were completed or begun during the year. The University of North Carolina dedicated its new \$625,000 library on Oct. 19, 1929. Lehigh University began the construction of a \$500,000 addition to its library, Loyola University began a \$300,000 building, the gift of Edward Cudahy, and the universities of Cincinnati, Rochester, and Fisk also began new structures. Among the memorial libraries which were dedicated were the B. J. Jones Library at Aliquippa, Pa., costing \$392,000, the Laughlin Memorial Library at Ambridge, Pa., costing \$300,000, the Louis Latzer Library at Highland, Ill., costing \$100,000, the Rauh branch of the Indianapolis Public Library, and the Warner Library at Tarrytown, N. Y. A \$500,000 public library was in process of building at Richmond, Va., and the following libraries were under construction or completed: the San Antonio, Texas, Public Library, the Indiana State Library, Indianapolis, the Michigan State Normal College Library, Ypsilanti, the State Normal College Library, Kent, Ohio, the Teachers College Library, Memphis, Tenn., the Battle Creek College Library, Battle Creek, Mich., the Boys' and Girls' Library, Kenosha, Wis., and the Howe Military School Library, Howe, Ind.

**LIBYA.** The name of a former Italian colony on the north coast of Africa. In 1919 for administrative and military purposes, it was divided into Cyrenaica and Tripolitania. The pacification of the entire region was virtually completed in 1929 and the government resumed its policy of economic development and Italian colonization. While the soil is light, friable, and in appearance sandy, it has proved capable of producing good crops of many kinds. See ITALY, under *History*, and articles on CYRENAICA and TRIPOLITANIA.

**LIEB, JOHN WILLIAM.** An American engineer, died Nov. 1, 1929, in New Rochelle, N. Y. He was born in Newark, N. J., Feb. 12, 1860, and was graduated from the Stevens Institute of Technology in 1880. Thomas A. Edison put him in charge of the installation of electric equipment of the Pearl Street Edison Station, and he was appointed first electrician of the Edison Electric Illuminating Company, New York (1882). For the Italian Edison Company, he installed the Edison underground system in Milan, Italy (1883) and, while there, also installed the trolley system. The King of Italy created him a Knight Commander of the Order of the Crown of Italy. He returned as first electrician to the Edison Electric Illuminating Company, in New York, later becoming vice president and general manager of the New York Edison Company. Mr. Lieb assisted in many of the early experiments and tests in electric lighting. He promoted technical education and the work of various technical associations, lectured at universities, and wrote extensively on electricity. He won the Edison

Medal in 1923 for his work in developing the electric central station. Mr. Lieb possessed a notable Leonardo Da Vinci library and documents dealing with the artist's researches in natural science and engineering.

**LIENHARD**, Konrad, FRIEDRICH A German journalist and poet, died Apr 30, 1929, in Eisenach, Germany. He was born Oct 4, 1865, in Rothbach, Alsace, and studied theology and philology at the universities of Strassburg and Berlin. After two years (1890-92) as a private tutor, he traveled in Norway, Scotland, France, and Italy, after which he did editorial work in Berlin for the *Deutsche Zeitung* and for *XX. Jahrhundert*. He edited *Der Turner*, a magazine published in Weimar. His works include poetry, dramas, novels, and essays. Among his writings are the lyrics *Lieder eines Elsässers* (1895, 2d ed., 1897) and *Gesammelte Gedichte* (1902, 2d ed., 1906), the dramas, *König Arthur* (1899), *Heinrich von Ofterdingen* (1903, 3d ed., 1911), *Wieland der Schmied* (1905, 2d ed., 1910), the series of essays, *Weg nach Weimar* (1904 et seq.), *Oberlin*, a novel (1910, 13th ed., 1912). His later works include *Der Einsiedler und sein Volk* (1914), a volume of short stories, *Lebensfrucht*, his collected verse (1915), *Jugendjahre*, recollections of his youth (1918), *Der Meister der Menschheit* (1919), *Wer zuletzt Lacht* (1921), *Aus Tausend Tagen* (1924). He was an honorary president of the Shakespeare Gesellschaft and in charge of the Goethe Archives in Weimar.

**LIGHT** See PHYSICS.

**LIGHTHOUSES.** The outstanding event of the year in this field was the holding in London of the first International Lighthouse Conference. The famous Corporation of Trinity House, the present-day successor of the ancient monastic order of the Trinity which was given lighthouse privileges in Great Britain over 400 years ago, called the first meeting of this kind, during

July. Some 20 foreign countries were represented. The lighting problem was discussed with reference to the selection of an illuminant. This depends upon the intensity desired, which in turn depends upon the system used, that is, whether a small number of powerful lights or a large number of smaller lights are employed. French practice follows the former plan and economic considerations also make incandescent gas a suitable illuminant for French lights. On the other hand, the general trend has been toward the electric incandescent bulb. Other items of discussion were fog signals, floating aids (ships and buoys) and wireless beacons. See current issues of *Engineering* (London).

Modern electrical equipment is increased application and is steadily increasing the menace of fog and thereby assuring the safety of shipping entering American ports. In the U. S. Lighthouse Service in June 30, 1929, at the close of the fiscal year, there were 10,001 separate aids to navigation at sea—an increase of 304 over the previous fiscal period. During the year, 123 new automatic marine lights on fixed structures were established and 54 lights were changed from attended to automatic. At the end of the fiscal year, the total number of automatic lights on fixed structures was 1467 and, in addition, there were 942 buoys with automatic lights—a total of 2409.

The extension and improvement of automatic lighting apparatus has been an outstanding feature of the U. S. Lighthouse Service activities during recent years. The radiobeacon system, Commissioner of Lighthouses George R. Putnam stated in his report, was further extended during the year, and its effectiveness and amount of service increased. Ten additional radiobeacons were established and 12 stations were under construction. There was a total of 64 of these beacons in operation at the end of the year. Systematic arrangements for the elimination of interference between radiobeacons were put into

SUMMARY OF AIDS TO NAVIGATION AND CHANGES DURING FISCAL YEAR

Class	1929		Total, June 30—	
	Estab- lished	Discon- tinued	1928	1929
<b>Lighted aids</b>				
Lights (other than minor)	107	47	2,248	2,308
Lighthouse stations		1	46	45
Gas buoys	70	48	554	576
Gas buoys, with whistles or bells	42	10	334	166
Minor lights	288	218	3,182	3,462

<b>Total</b>				
<b>Grand total *</b>	<b>1,193</b>	<b>807</b>	<b>18,607</b>	<b>19,001</b>
<b>Aids to air navigation</b>			<b>1,263</b>	<b>1,440</b>

\* Gas buoys with whistles and bells are counted only once in the grand total.

Not included in further statistics of this report. The number of aids shown includes beacon lights, radio beacon stations, and radio communication stations only. There were also 6300 boundary lights and 1455 obstruction lights in operation June 30, 1929.

effect with successful results. These include synchronization of adjacent stations through automatic clock control to prevent overlapping, and the use of different frequencies for adjacent groups of stations. Many construction projects were completed by the Lighthouse Service or in progress during the period covered in Commissioner Putnam's report. The most important of these was the construction of the primary light and fog signal on Lansing Shoal, near the northern end of Lake Michigan, which was nearly completed at the end of the year, the light being in commission and the lightship withdrawn. The similar station at Poe Reef, Mich., in the Straits of Mackinac will probably be placed in commission in the early part of the fiscal year 1930. Other important construction projects were in progress from Massachusetts to Washington and from Alaska to Louisiana.

Under the Air Commerce Act, the Airways Division of the Aeronautics Branch of the Commerce Department was made part of the Lighthouse Service, functioning under the supervision of the Assistant Secretary of Commerce for Aeronautics. Much progress was made during the fiscal year in extending airway facilities throughout the country. More than 4200 additional miles of airways were lighted, covering 17 different routes. At the close of the year, 10,183 miles of airways were provided with aids to navigation, including 1406 lighted beacons and seven radio ranges.

Ambrose Lightship, the famous beacon marking the entrance to New York Harbor, was moved one and an eighth miles south and a little east of its former position on December 11. The advantages of the new position were that ships are guided well south of a bank only 40 feet deep in places, and that they need not change course between the light and the entrance to Ambrose Channel. The new position is directly in line with the centre line of the channel.

**LIME.** The sales of lime by producers in the United States in 1929 amounted to 4,260,000 short tons, valued at \$33,387,000, according to estimates of the United States Bureau of Mines. This was a decrease of 4 per cent in quantity and 8 per cent in value, as compared with sales of 4,458,412 tons, valued at \$36,449,635 in 1928. The estimated sales of hydrated lime, which are included in these figures, amounted to 1,527,000 tons, valued at \$12,566,000, a decrease of 5 per cent in quantity and 7 per cent in value from 1,612,818 tons, valued at \$13,540,215 produced in 1928. The average unit value of all lime showed a decrease from \$8.18 a ton in 1928 to \$7.84 in 1929. There was general report of poor demand for lime in 1929, especially for the lime sold for construction, and to a less extent for agricultural lime. Demand for chemical lime, although in some cases reported as poor, was reported by the larger number of producers as the same or better than in 1928. Lower or the same prices were reported by the larger number of producers, with a few reports of higher prices.

Sales of lime in 1929 for construction were estimated at 1,760,000 tons, compared with 1,986,465 tons, valued at \$17,706,420 in 1928, for agriculture, the sales are estimated at 300,000 tons in 1929, against 333,910 tons, valued at \$2,287,558 in 1928. Sales of chemical lime were estimated at 2,220,000 tons for 1929, compared with 2,138,037 tons, valued at \$16,455,667 in 1928. Included in the estimated sales of chemical lime in 1929 are sales of refractory lime (dead-burned dolomite) amounting to 483,000 tons, valued at \$3,857,000. In 1928 this product amounted to 448,761 tons, valued at \$4,283,036.

Of the 23 States leading in production of lime in 1929, 12 showed decreased output, 8 increased output, and 3 showed an output of practically the same as for 1928. Of these same States, 19 showed a decrease in value and 4 an increase in value as compared with 1928. Ohio, the leading State, and Pennsylvania, the second State, in lime production, apparently each decreased in production by 6 per cent. There was a decrease of 9 per cent indicated in the output of hydrated lime in Ohio and of 5 per cent in Pennsylvania.

LIME SOLD BY THE PRODUCERS IN THE UNITED STATES IN 1928 AND 1929

	1928		Hydrated lime	1929 (estimated)		Hydrated lime
	Total lime			Total lime		
	Short tons	Value	(short tons)	Short tons	Value	(short tons)
Ohio	1,013,676	\$9,919,596	874,644	956,000	\$7,800,000	614,000

\* Included under "Undistributed."

The table on page 466 compares the estimated sales of lime by the producers in 1929, by States, with the sales in 1928.

**LINDBERGH, COL. CHARLES A.** See **AERO-NAUTICS**.

**LINGUISTICS.** See **ANTHROPOLOGY**.

**LINSEED.** See **FLAX**.

**LIONS CLUBS, INTERNATIONAL ASSOCIATION OF.** An organization of business and professional men's clubs united in one association for the purpose of promoting good government and good citizenship, encouraging efficiency, and promoting high ethical standards in business and in the professions. In 1917 the Business Circle of Chicago issued a call to approximately 150 business organizations, inviting them to send representatives to a meeting in Chicago on June 7. More than 20 delegates, representing 50 clubs, attended this meeting and voted to form an association; the name "Lions" was adopted. Additional Lions Clubs have been organized by choosing one man from each business or profession in the community.

On Nov. 30, 1929, the number of clubs was something more than 2000 and the membership in round numbers, 72,000. Within the two years preceding that date, approximately 875 new clubs had been formed. At the 1929 convention, held June 18 to 21 in Louisville, Ky., Ray L. Riley, state controller of California, was elected international president. The vice presidents chosen were Earle W. Hodges of New York City, Julien C. Hyer of Fort Worth, Texas, and Robert L. McKeever of Washington. Melvin Jones of Chicago has been secretary-treasurer since the organization was founded. Denver was selected as the convention city in 1930. *The Lion* is the official magazine of the association. Headquarters are in the McCormick Building, 332 South Michigan Avenue, Chicago.

**LITERATURE, ENGLISH AND AMERICAN.** The book-club idea, described in previous YEAR BOOKS, spread during 1929 to England, where a book-selecting committee was organized under the leadership of Hugh Walpole. American book clubs, in order to keep better in touch with foreign writing, added foreign authors to their selecting committees as advisory members. Nevertheless, all was not smooth and easy with them. A couple of American publishers during the year declared war against the book clubs by refusing to submit books to their committees, but the fighting publishers won no recruits, though they were somewhat feebly indorsed by booksellers, and membership lists of the clubs continued to grow, though slowly. The ground of the publishers' attack seemed to lie in the very heavy discount exacted by the clubs, which seriously reduced the return to publishers and authors on club editions. No one denies, however, that the total return is greater when a book is adopted by a book club. The booksellers' objection, rather contradictorily, seemed to lie in their inability to sell books not adopted by the clubs. Apparently adoption by a book club carries with it a heavy bookstore sale. The objectors claimed that too many good books go unnoticed by the public because of the extra impetus given a few books. However that may be, one saw during 1929 no diminution in the number of books presented to the public. In fact, the impression is strong that publishers in 1929 were exceedingly energetic and ambitious.

A striking interest in the World War will be noticed under almost every heading below. The

generation that fought it was at last completely articulate in almost every country, and the generations that merely endured it were avid still for knowledge of it. Of course, there had been war books ever since 1914, but 1929 produced a remarkable quantity and quality.

**FICTION.** The outstanding novel of the year, the world over, was *All Quiet on the Western Front*, by Erich Maria Remarque, translated from the German by A. H. Wheen. But among novels written originally in English, Ernest Hemingway's *A Farewell to Arms*, about love and war in Italy, was nearly as highly regarded. It is vivid, bitter, and soft beneath hardness. Evelyn Scott showed the madness of war, the Civil War this time, by a series of sketches or stories in *The Wave*. John Cowper Powys published a sombre story of Dorsetshire life, *Wolf Solent*, filled with feeling for nature. In *Dodsworth*, Sinclair Lewis created two full-length Americans, man and wife, against a European background. With delicate and beautiful irony Richard Hughes told of children and pirates in *The Innocent Voyage*. John Galsworthy's *A Modern Comedy*, including the previously published *The White Monkey*, *The Silver Spoon*, *Swan Song*, and two short stories, marked an end to his studies of the Forsytes. In Susan Ertz covered a long life, ending at the present. Joan Lowell's *The Cradle of the Deep* was published as a fiction, then admitted to be fiction, and finally parodied in Corey Ford's *Salt Water Taffy*. D. H. Lawrence's *Lady Chatterley's Lover*, published in Florence, was refused admittance to England or America. William T. Scanlon's *God Has a Mercy on Us*, about the Marines, and Mary Lee's *It's a Great War* divided a \$25,000 prize for war novels. Miss Lee dealt with a woman's experiences amid the fighting. Lynd Ward's *God's Man* was a curiosity—a novel in woodcuts. Hugh Walpole's *Bans Frost* concerned a literary genius. H. G. Wells wrote a scenario for a movie, *The King Who Was a King*. It was not very interesting. *Harriet Hume*, by Rebecca West, was a rather obscure fantasy, technically exciting.

Additional war novels included Richard Aldington's *Death of a Hero* and George Blake's *The Path to Glory*. Historical novels included *Dido, Queen of Hearts*, by Gertrude Atherton, *The Laughing Queen*, by E. Barrington, about Cleopatra, *Bird of God*, by Virginia Herch, about El Greco, *Stone Daughters*, by John P. Fort, frontier America, *Wandere*, by Phoebe Fenwick Gaye, Napoleonic wars, and *The Issue of This Jest*, by James Stuart Montgomery. Among romantic novels were Percival Christopher Wren's *Soldiers of Misfortune*, L. H. Myers' *The Near and the Far*, Grace Zaring Stone's *The Heaven and Earth of Donna Elena*, Louis Golding's *The Prince or Somebody*. The public appetite for stories of crime and mystery continued unabated, increased perhaps. Among such books *The Bishop Murder Case*, by S. S. Van Dine, *The Dartmouth Murders*, by Clifford Orr, *The Bowery Murder*, by Willard K. Smith, *Shadowed*, by Hilaire Belloc, and *Little Cresset*, by W. R. Burnett, may be mentioned. No doubt a hundred others were just as good. The thin, bright stream of fantasy carried such barques as Robert Nathan's *There is Another Heaven*; Alired Noyes's *The Sun Curr*; Helen Beauchamp's *The Love of the Foolish Angel*; Con O'Leary's *This Delicate Creature*.

Some critics say the novel is moving in the direction of fantasy. There was not much evidence

of it this year. Instead, J. B. Priestley's *The Good Companions* was in the Dickens tradition; Henry Handel Richardson's *Ultima Thule*, the third part of a tetralogy, was grim cold realism; Edith Wharton's *Hudson River Bracketed* was like other Wharton books Edmund Wilson's *I Thought of Daisy*, imitated Proust, Thomas Wolfe's *Look Homeward, Angel*, imitated Joyce Brothers and Sisters, by I. Compton-Burnett, and *The Sound and the Fury*, by William Faulkner, dealt with incest J. L. Campbell's *The Miracle of Peille* portrayed a saint. In short, all tastes in style or matter could be satisfied by the year's fiction.

Other important novels were: Henry Williamson's *The Pathway*, Arnold Bennett's *Accident*, light stuff, Sheila Kaye-Smith's *The Village Doctor*, "Elizabeth's" *Eruption*, Mazo de la Roche's *Whitecoats of Jalna*; Anne Parrish's *The Methodist Funn*, Rex Stout's *How Like a God*, Stark Young's *River House*, Ellen Glasgow's *They Stopped to Folly*, Thomas W. Higginson's *Hunky*, Anne Douglas Sedgwick's *Dark Hester*, Eleanor Carroll Chilton's *The Burning Fountain*; Du Bose Heyward's *Mamba's Daughters* and *The Half-Pint Flask*, John Rathbone Oliver's *Victor and Victim*, Graham Greene's *The Man Within*, Peador O'Donnell's *Adriano*, John Erskine's *Sincerity*, Sylvia Townsend Warner's *The True Heart*, Charles Morgan's *Portrait in a Mirror*, Zona Gale's *Borgia*; Liam O'Flaherty's *The House of Gold*, David Garnett's *No Love*, Booth Tarkington's *Young Mrs. Greeley*, Sarah Gertrude Millin's *The Fiddler*, Jesse Lynch Williams's *They Still Fall in Love*, Pitts Sanborn's *Prima Donna*; Gerard Hopkins's *Seeing's Believing*, Walter D. Edmunds's *Rome Haul*, Edna Bryner's *While the Bridegroom Tarnished*, Nella Larsen's *Passing*, Takashi Ohta and Margaret Speiry's *The Golden Wind*, Lorna Rex's *Six Mrs. Greenes*, Helen Grace Carlisle's *See How They Run*, Percy Crosby's *Shippu*, Mariast Chapman's *Homeplace*, Agnes Smedley's *Daughter of Earth*, Joanna Cannan's *Sheila Both-Ways*, Helene Mullins's *Convent Girl*, William M. John's *Seven Women*.

Theodore Dreiser published, in two volumes, studies of the sex called, *A Gallery of Women*. Other collections of short stories included *Awake and Rehearse*, by Louis Bromfield, *An American Asquith*, by Morley Callaghan, *Slaves of the Gods*, by Katherine Mayo, about India again, *Weather-ghosts*, by Percy Mackaye, Southern mountaineers, *Barbarian Stories*, by Naomi Mitchison, ancient life, *Night Club*, by Katherine Brush, modern life, *The Slower Judas*, by G. B. Stern, *Procession*, by Fannie Hurst, *Poor Women*, by Norah Hoult; *The Mountain Tavern*, by Liam O'Flaherty.

Noteworthy among translated fiction was the rush of war books from the German. Remarque's success was mentioned above. There were also Ludwig Renn's *War*, the anonymous *Schlump*, Ernst Junger's *Storm of Steel*, and Ernst Glaeser's *Class of 1902*. Other important translated novels were Sigrid Undset's *The Snake Pit* and *In the Wilderness*, Julian Green's *The Dark Journey*, André Gide's *The School for Wives*, Marcel Proust's *The Captive*, Knut Hamsun's *Chapters the Last*, Emil Ludwig's *Diana*, Alexis Kivi's *Seven Brothers*, Valentine Kataev's *The Embassadors*, Colette's *Cheri*, André Maurois's *Atmosphere of Love*, Arne Garborg's *Peace*, Hermann Sudermann's *The Wife of Steffen Tromholt*;

Eduardo Zamacois's *Roots*; Gladkov's *Cement*; Guglielmo Ferrero's *The Seven Vices*; Maurice Bedell's *Molnoff*; Susanne Trautwein's *The Lady of Laws*.

**POETRY.** Though the poetry list for 1929 was not so distinguished as for 1928, it contained many books of high interest. Robert Bridges' *The Testament of Beauty* was a long and profound philosophical poem; Lola Ridge's *Freehead* dared to treat of the Crucifixion, and succeeded; Elinor Wylie's *Angels and Earthly Creatures* thrillingly gave us a woman in love, in *Panases*, D. H. Lawrence vented several hates; he also published his *Collected Poems*, Edith Sitwell indulged in satire in *Gold Coast Customs*, Joseph Auslander wrote *Letters to Women*, mainly dead poetesses, and *Hell in Harness*, Edwin Arlington Robinson's *Cavender's House* was intellectualized narrative, Merrill Moore's *The Noise That Time Makes* was a fascinating book of unconventional sonnets, *Further Poems of Emily Dickinson*, edited by Martha Dickinson Bianchi added to her already great reputation, Leonie Adams's *High Falcon* won praise.

Other important books of poetry were *Dear Judas*, by Robinson Jeffers; *Near and Far*, by Edmund Blunden, *The Heart's Journey*, by Siegfried Sassoon; *This Delicate Love*, by Winifred Welles, *Twelve Idylls and Other Poems*, by Lascelles Abercrombie, *Blue Jumata*, by Malcolm Cowley; *Every Soul is a Circus*, by Vachel Lindsay; *Now the Sky*, by Mark van Doren, *Earth-bound and Other Poems*, by Helene Mullins, *A Cedar Box*, by Robert Nathan, *Prophet and Fool*, by Louis Golding; *Compass Rose*, by Elizabeth Coatsworth, *Collected Poems, 1911-1926*, by Robert Graves, *Poems*, by Sir Arthur Quiller-Couch, *The Cry of Time*, by Hazel Hall, *The Devil is a Woman*, by Alice Mary Kimball, *The Last Nail and Manhattan Men*, by Alfred Kreymborg, *Sarah Simon*, by Hervey Allen. Among the anthologies were *A Comprehensive Anthology of American Poetry*, by Conrad Aiken, *Chief Modern Poets of England and America*, by Gerald De Witt Sanders and John H. Nelson, *An Anthology of Revolutionary Poetry*, by Marcus Graham. Two translations were of interest, *The Jade Mountain*, from the Chinese, by Witter Bynner and Kiang Kang-hu; and *Others Abide*, by Humbert Wolfe, from the Greek Anthology.

**DRAMA.** The theatre season 1928-29 was generally supposed to be bad, which perhaps accounts for the short list of important plays published in 1929, but among them is R. C. Sherriff's *Journey's End*, indubitably the greatest play brought forth by the World War, John L. Blunden's *Berkeley Square*, a moving drama of time-transference, John Galsworthy's *Ends and The Roof*, Eugene O'Neill's *Dynamo*, an unsuccessful attempt to dramatize the search for God in an age of machinery.

Also there were St. John Ervine's *The First Mrs. Fraser*, brilliant comedy, Monckton Hoffe's quiet *Many Waters*, John Drinkwater's *Bird in Hand*, comedy of "humour", Preston Sturges's gay *Strictly Dishonorable*, Padraic Colum's *Balloon*, Frederick Londale's *Canaves Sometimes King*, A. A. Milne's *Toad of Toad Hall*, vol. ix of the *Dramatic Works of Gerhart Hauptmann*. Collections included S. Marion Tucker's *British Continental Plays*, Montrose J. Moses' *Modern Plays from the Restoration to 1820*, and Curtis Canfield's *Plays of the Irish Renaissance*. See THEATRE.

**ESSAYS** Though the heterogeneity of this section cannot be disguised, a few groupings are possible. Mainly sociological in subject matter were *The Modern Temper*, by Joseph Wood Krutch, studies in pessimism; *The Ordeal of This Generation*, by Gilbert Murray, rather optimistic; *Our Business Civilization*, by James Truslow Adams, finding faults in American life, *The Way the World Is Going*, by H. G. Wells, just what one would expect, and *Adam, the Baby, and the Man from Mars*, by Irwin Edman, pleasant, facile, not deep. Dealing mainly with religion; *The Thing*, by G. K. Chesterton, Roman Catholicism, *Labels and Labels*, by W. R. Inge, Anglicanism, and *If I Could Preach Just Once*, by thirteen authors, including some skeptics. Intended to be humorous were *Is God Necessary?* by James Thurber and E. B. White, *By Way of Introduction*, by A. A. Milne, *On Straw and Other Concepts*, by D. B. Wyndham Lewis. Of literary interest were six volumes of *The Private Papers of James Boswell from Malahide Castle*, edited by Geoffrey Scott, very grand and expensive, *The Missing Muse*, (1910), by Philip Guedalla, *The Eighteen-Seventies*, edited by Harley Granville Barker, *Nolon and Oranus and Other Greek Essays*, by Alfred Zimmern. Essays mainly descriptive were *Hello Towns*, by Sherwood Anderson, *Swords and Roses*, by Joseph Hertzogheimer, *Old Familiar Faces*, by Meredith Nicholson. Others: *Conservatio Medici and Other Papers*, by Harvey Cushing, *The Omnibus of Crime*, by Dorothy L. Sayer, *The Pillow Book of Sei Shonagon*, translated by Arthur Waley, *The New American Canon*, edited by Alfred Kreyenborg, Lewis Mumford, and Paul Rosenfeld, which included short stories and poems. Among the collections were *Once and For All*, by David McCord, *The 100 Best English Essays*, by Lord Birkenhead, *Essays Toward Truth, Second Series*, by Kenneth Allan Robinson, William Benfield Pressey, and James Dow McCallum, and *Contemporary Essays*, by Odell Shepard.

**CRITICISM AND THE HISTORY OF LITERATURE** The year was notable for the number of important works on poetry, such as *The Profession of Poetry*, by H. W. Garrod, *The Good Estate of Poetry*, by Chauncey Brewster Tinker, *The Cycle of Modern Poetry*, by G. R. Elliott, *Our Singing Strength*, by Alfred Kreyenborg, *The Garment of Praise*, by Eleanor Carroll Chilton and Herbert Agar, *Poetry and Mathematics*, by Scott Buchanan, *Armour for Aphrodite*, by T. Sturge Moore; *A New Approach to Poetry*, by Elsa Chapin and Russell Thomas, *Medieval Culture*, by Karl Vossler, about Dante, translated by William Cranston Lawton, *Potable Gold*, by Babette Deutsch; *anarchism is not enough*, by Laura Riding; *The Real Rhythm in English Poetry*, by Katherine M. Wilson, *New Light on "Piers Plowman"*, by Allan H. Bright, *Blake's "Tanner"* and *"Leprecher"*, by Joseph H. Wicksteed, *John Donne, Craftsmen*, by Pierre Legouis.

There were many important general works: *Practical Criticism*, by I. A. Richards, Louis Caraman's *Criticism in the Making*, June E. Downey's *Creative Imagination*, A. C. Bradley's *A Miscellany*, E. E. Kellett's *The Whirligig of Time*, Henry Seidel Canby's *American Estimates*, Oliver Elton's *A Survey of English Literature, 1730-1780*, Alfred Noyes's *The Opalescent Parrot*, Prosser Frye's *Visions and Chimeras*, Harvey Wickham's *The Impurians*, Burton Rascoe's *A Bookman's Daybook*.

Books on the drama and theatre included. Ashley Thorndike's *English Comedy*, F. W. Bateson's *English Comic Drama 1700-1750*, Bonamy Dobree's *Restoration Tragedy, 1660-1720*, Sheldon Cheney's *The Theatre*, Kenneth Macgowan's *Footlights Across America*, Andrew F. Malone's *The Irish Drama*. Fiction was considered in Edwin Muir's *The Structure of the Novel*, Ford Madox Ford's *The English Novel*, and Gorham B. Munson's *Style and Form in American Prose*. About foreign writers were *French Novelists*, *Manners and Ideas*, by F. C. Green, and *Modern Spanish Literature*, by L. A. Warren.

**BIOGRAPHY AND AUTOBIOGRAPHY** During 1929 there were the usual floods of biography of all kinds of people. American political personages were portrayed in Thomas Beer's *Hanna*, Paxton Hibben and C. Hartley Gattian's *The Peerless Leader*, William Jennings Bryan, M. R. Werner's *Byron*, *The Autobiography of Calvin Coolidge*, *Up to Now*, the autobiography of Alfred E. Smith, Willis Fletcher Johnson's *George Harvey*, Col. T. Bentley Mott's *Myron T. Herrick*, *Friend of France*, Allan L. Benson's *Daniel Webster*, Thomas Boyd's *Mad Anthony Wayne*, John Pell's *Elhan Allen*, Frederick Palmer's *Clark of the Ohio*, Bernard Fay's *Franklin*, Denis Tilden Lynch's *An Epoch and a Man*, about Van Buren; Capt. B. H. Laddell Hart's *Sherman*, Lloyd Paul Striker's *Andrew Johnson*, Philip Alexander Bruce's *The Virginia Plutarch*. One may learn about American literary persons from Lewis Mumford's *Herman Melville*, a splendid work, Newton Arvin's *Hawthorne*, Phillips Russell's *Emerson*, the *Wicest American*, Jacob Zeitlin and Homer Woodbridge's *The Life and Letters of Stuart P. Sherman*, M. A. De Wolfe Howe's *James Ford Rhodes*, *American Historian*, Lorette Woodworth Reese's autobiography, *A Victorian Village*.

The Christian Science Church strongly opposed the distribution of Mrs. Eddy's *Biography of a Virgin Mind*, by Edwin Flinden Dakin. Some books dealt with unheard-of people, such as *Grandmother Brown's Hundred Years*, by Harriet Connor Brown, *The Life of an Ordinary Woman*, by Anne Ellis, and *My Home and I*, by Mary Eliza Starbuck, the last two, autobiographies. Other Americans were considered in Herbert Asbury's *Carrie Nation the Woman with the Hatchet*, Frank Lewis Dyer, Thomas Cummertown Martin, and William Henry Meadowcroft's *Edison*, Paul de Kruif's *Seven Iron Men*, Arthur D. Howden Smith's *John Jacob Astor*, John K. Winkler's *John D., a Portrait in Oils*, Francis Wilson's *John Wilkes Booth*, *Midstream*, by Helen Keller, was a continuation of an earlier autobiography. Frederick A. Pottle's *Stretchers* was war autobiography. Muriel Draper's *Musow at Midnight* gave a number of interesting character sketches, as did Rollo Walter Brown's *Lonely Americans*, F. W. Howe's *Plain People*, Gamahel Bradford's *As God Made Them*, and *An Autobiography of America*, edited by Mark van Doren. Vols. II and III of the *Dictionary of American Biography*, edited by Allen Johnson, were published.

One of the most successful and widely read biographies was *Henry the Eighth*, by Francis Hackett. Henry's daughter had two books, *Queen Elizabeth*, by Katherine Anthony, who also published *Catherine the Great*, and *The Monmouth Regiment*, by Christopher Hollis, who also published *Dr. Johnson*. Books about other English political figures were *The Letters and Friend-*

ship of Sir Cecil Spring-Rice, edited by Stephen Gwynn; *Memories of an Old Parliamentarian*, by T. P. O'Connor, *After Thirty Years*, by Viscount Gladstone, about his father; *Field Marshal Earl Haig*, by John Charteris; *Richard Burdon Haldane, an Autobiography*, Lord Lansdowne, by Lord Newton, *The Letters of Disraeli to Lady Chesterfield and Lady Bradford*, edited by the Marquis of Zetland, *For the Defence the Life of Sir Edward Marshall Hall*, by Edward Marjoribanks, and *Marlborough*, by Donald Barr Lindsey *Three Persons*, by Sir Andrew Macphail, was about Colonel House, Field Marshal Wilson, and T. E. Lawrence.

The following English literary persons were written about *Outright to Three Moore and Ten, 1853-1863*, by David Alec Wilson, *Samuel Richardson*, by Brian W. Downes, *Alice Meynell*, by Viola Meynell, *The Life of Lady Byron*, by Ethel Colburn Mayne, *Coleridge, the Sublime Somnambulist*, by John Champentier, *Swinburne*, by Samuel C. Chew, *Dante Gabriel Rossetti*, by R. L. Megroz, *The Life of George Meredith*, by Robert Esmonde Sencourt; *A Life of Charles M. Doughty*, by D. L. Hogarth, *Mr. Gay*, by Oscar Sherwin, *Barrie the Story of a Genius*, by J. A. Hammerton, *Hartley Coleridge*, by Earl Leslie Giggles, *Elizabeth Barrett Browning Letters to Her Sister, 1846-1859*, edited by Leonard Huxley, *Further Correspondence of Samuel Pepys, 1662-1674*, edited by J. R. Tanner, *Undertones of War*, autobiography by Edmund Blunden, *Goodbye to All That*, autobiography by Robert Graves.

Other English biographies of interest were *The Adventures of an Outlaw*, by Ralph Rashleigh, edited by Lord Birkenhead, *Twelve Bad Men*, by Sidney Dark, *Captain Scott*, by Stephen Gwynn, *Memories of J. M. Dent*, by Hugh A. Dent, *The Farringdon Diary*, vol. viii and last, edited by James Grieg.

About French people Georges Clémenceau's autobiography, *In the Evening of My Thought*, translated by George N. Thompson, and John Heard, Jr., vol. iii of *Memoirs of Raymond Poincaré*, translated by Sir George Arthur, *King Spider*, Louis XI, by D. B. Wyndham Lewis, *Marshal Foch*, by George Grey Aston, *The Intimate Journal of George Sand*, edited and translated by Marie Jenney Howe, John Garber Palache's *Marie Antoinette, the Player Queen*, *François Rabelais*, by Samuel Putnam, *Francis Rabelais*, by Albert Jay Nock and C. R. Wilson; *La Fayette*, by Brand Whitlock, *Richelieu*, by Hilaire Belloc, *The Incredible Marquis (Dumas, père)*, by Heibert Gorman.

Other biographies include that remarkable collection *Walter Holtho's Twelve Against the Gods*, Joseph Redlich's *Emperor Francis Joseph of Austria*, Weiwei Hegemann's *Frederick the Great*, Herbert Eulenberg's *The Hohenzollerns*, *Letters of the Tsar to the Tsaritsa*, translated by A. L. Hynes; *Diary of Tolstoy's Wife, 1860-1891*, translated by Alexander Werth; *Tolstoy the Inconstant Genius*, by Alexander I. Nazarov; *Ibsen, the Master Builder*, by A. E. Zucker, Nobel, by Ragnar Sohlman and Henrik Schmul; *Wolfgang Amadeus Mozart*, by Dyneley Hussey, *William, Prince of Orange*, by Marjorie Bowen, *Karl Marx*, by Otto Rühle; *The Life of Alcibiades*, by E. F. Benson; *The Son of Apollo*, Plato, by Frederick J. E. Woodbridge; *Casanova*, by S. Guy Endore.

THE FINE ARTS. Important works on painting included Mary Hamilton Swindler's *Ancient*

*Painting*; R. H. Wilenski's *An Introduction to Dutch Art*; Ernest H. Short's *The Painter in History*, Ruth de Rochemont's *Evolution of Art*, Anita Brenner's *Idols Behind Altars*, about Mexican art, *The Frescoes of Diego Rivera*; Mary Cecil Allen's *Painters of the Modern Mind*; Aldo de Rinaldis' *Painting of the Secento*, John Rothenstein's *A Pot of Paint*, Osvald Siren's *Chinese Paintings in American Collections*, Tancred Borenius and E. W. Tristram's *English Medieval Painting*, Sir Dominic Ellis Colnaghi's *A Dictionary of Florentine Painters*.

Among general works were *Art in America*, by Suzanne La Follette, *Art Nonsense and Other Essays*, by Eric Gill, *The Gothic North and These Sad Ruins*, by Sacheverell Sitwell, *The Principles of Christian Art*, by Percy Gardner. About sculpture A. M. Rindge's *Sculpture*, Stanley Casson's *Some Modern Sculptors*; Joseph Hudnut's *Modern Sculpture*, Ludwig Bachhofer's *Early Indian Sculpture*, A. W. Lawrence's *Classical Sculpture*. About architecture Le Corbusier's *The City of Tomorrow*, W. A. Starrett's *Skyscrapers and the Men Who Build Them*, Arthur Stratton's *The Styles of English Architecture*, D. S. Robertson's *Greek and Roman Architecture Besides, Magic Spades, the Romance of Archaeology*, by R. V. D. Magoffin and Emily C. Davis, and *German Illumination*, by Adolph Goldschmidt.

RELIGION. *The History of Christianity in the Light of Modern Knowledge*, a collective work, was perhaps the most noticed book in this field during 1929. Edward Scribner Ames's *Religion* was a new statement of its nature and purpose. J. Middleton Murry's *God* grew out of highly charged personal experience. Other religious books were Charles Francis Potter's *The Story of Religion*, Charles Gore's *Jesus of Nazareth*, Walter E. Bundy's *Our Recovery of Jesus*, Reinhold Niebuhr's *Leaves from the Notebook of a Tamed Cynic*; Bernard Iddings Bell's *Beyond Agnosticism*, Hartley Burr Alexander's *Truth and the Faith*, James Sheerin's *The Universal Prayer*, C. H. Dodd's *The Authority of the Bible*, Emilie Baumann's *Saint Paul*, Ernest R. Tristram's *Unravelling the Book of Books*, Peter Ainslee's *The Scandal of Christianity*, sectarianism, Harry Elmer Barnes's *The Twilight of Christianity*, E. Boyd Barrett's *While Peter Sleeps*, Conrad Henry Moehlman's *The Catholic-Protestant Mind*; Horatio W. Dresser's *Outlines of the Psychology of Religion*, Karl Adam's *The Spirit of Catholicism*, and Jacques Maritain's *Three Reformers*.

SOCIOLOGY. Much distinguished work was done in this field. Walter Lippmann's *A Preface to Morals* discussed man's ethical dilemmas today, searchingly and wisely. Robert S. and Helen M. Lynd made scientific observations of American life in *Middletown: a Study in Contemporary American Culture*. Stuart Chase's *Men and Machines* showed the effects of machinery on society. There was much discussion of marriage. Bertrand Russell's *Marriage and Morals*, G. V. Hamilton and Kenneth Macgowan's *What is Wrong with Marriage?*, a statistical study, Robert C. Binkley and Florence Williams Binkley's *What is Right with Marriage?*; Edward Westermarck's *Marriage*, Iia S. Wile and Mary Day Winn's *Marriage in the Modern Manner*, Ursula Parrott's *Ex-Husband*, and its anonymous burlesque, *Ex-Husband*, "Juanita Tanner's" *The Intelligent Man's Guide to Marriage and Celibacy*. About

Forel's *The Social World of the Ants*; Erik Norden-sköld's *The History of Biology*, translated by Leonard Buckwell Eyre, F. Ward Jones's *Man's Place Among the Mammals*, Paul Kipper's *Animals Looking at You*, a remarkable collection of pictures, Samuel Christian Schmucker's *Heredity and Parenthood*. There were also A. S. Eddington's short lecture, *Science and the Unseen World*; James Kendall's *At Home Among the Atoms*; Willem J. Luyten's *The Pageant of the Stars*; and Eugene van Cleeff's *The Story of the Weather*.

**TRAVEL AND THE OUTDOORS.** Some delightful books were to be met with in this line. Commander Edward Ellisberg tells the thrilling story of submarine-mining in *On the Bottom*. A. J. Villiers's *Falmouth for Orders* tells of one of the last voyages of a sailing vessel. Laurence J. Keating, in *The Great Mary Celeste Hoax*, clears a mystery of the sea. *The Last Stand of the Pack*, by Arthur H. Carhart and Stanley P. Young, tells of the extermination of North American wolves. The more usual, yet always interesting, sort of travel book was represented by: Grace Flandrau's *Then I Saw the Congo*, E. Alexander Powell's *The Last Home of Mystery, Nepal*; Douglas Goldring's *People and Places*, Sir Hugh Clifford's *Bushwhacking and Other Asiatic Tales and Memories*, Sir Baldwin Spencer's *Wanderings in Wild Australia*, Webb Waldron's *Blue Glamor*, André Gide's *Travels in the Congo*, translated by Dorothy Bussey, Emil Ludwig's *On Mediterranean Shores*, translated by Eden and Cedar Paul, *Altai-Himalaya*, by Nicholas Roerich; *Deep Song*, by Irving Brown; *Days in the Sun*, by Martin Nexö; *A Baghdad Chronicle*, by R. Levy; *The Holy Cities of Arabia*, by Eldon Rutter; *Mountains, Gold, and Cannibals*, by Doris R. Booth; *New Worlds to Conquer*, by the popular and too-successful Richard Halliburton; *The Red Star of Samarkand*, by Anna Louise Strong; *Red Tiger*, by Phillips Russell; *Four Faces of Siva*, by Robert J. Casey; *Paris in Profile*, by George Slocombe; *Deep-Sea Bubbles*, by Henry H. Bootes; *The Pedro Gormo*, by Capt. Harry Dean and Sterling North; *The Book of Puka Puka*, by Robert Dean Frisbie; *East for Pleasure*, by Walter B. Harris; *Isles of the Egean*, by V. C. Scott O'Connor; *To the Mountains*, by Anthony Bertram; *Impressions of Soviet Russia*, by John Dewey; *The South Polar Trail*, by Ernest E. Mills Joyce; the informing and scientific *Ends of the Earth*, by Roy Chapman Andrews; *The Outermost House*, by Henry Beston, about life on a Cape Cod beach; *Four Months' Camping in the Himalayas*, by W. G. N. Van der Sleen, translated by M. W. Hoper; *Eve in Egypt*, by Jane Starr.

Among volumes relating directly to sport, the following might be mentioned: *Athletics*, by D. G. A. Lowe and A. E. Porritt; *Modern Athletics*, by G. M. Bulter; *The Way of a Man with a Hor*, by Geoffrey Brooke; and *The Hunting of the Buffalo*, by E. Douglas Branch.

**LITHUANIA.** One of the Baltic republics formed out of the territory of the former Russian Empire at the close of the World War. Capital, Kovno, although Vilna, which was transferred to Poland by the Council of Ambassadors in 1923, was still claimed by Lithuanians in 1929 as their capital city.

**AREA AND POPULATION.** The eastern boundary of the country was defined in a treaty with Russia, July 12, 1920, on the north, the Lithuanian-Latvian frontier almost coincides with the former boundary between the provinces of Cour-

land and Kovno, on the south, the boundary was still undetermined in 1929. In that year, the area was 21,490 square miles and the estimated population 2,316,615. The Memel district, with a population of 170,000, was transferred to Lithuania by the Council of Ambassadors on Feb. 16, 1923, just a month before Vilna was awarded to Poland. Other important cities, with the estimated populations on Jan. 1, 1929, were Kovno, 96,536; Memel, 36,633; Shavli, 22,500; and Poneviej, 20,142. During the period 1924-28, the average annual number of births and deaths were 64,664 and 36,329, respectively.

**EDUCATION.** In 1928 there were 2401 primary schools with 3466 teachers and 124,578 pupils, and 159 secondary schools with 23,112 pupils. Nine teachers' training colleges had 1319 students in 1928 and the University of Kovno had 258 professors and instructors and there were 3580 students.

**PRODUCTION.** Agricultural crops and timber constitute the main products of the country, which is preponderantly rural in its development. In 1927 there were 6,515,000 acres of arable land or about 47 per cent of the total, while 3,477,000 acres were devoted to permanent meadow and pasture, 310,000 acres to orchards, shrubs, and bushes, and 2,188,000 acres to forests. The harvest in 1928 was about the same in quantity, though of poorer quality, than in the preceding year. The area and production of the chief crops in 1928 were as follows: Wheat, 395,000 acres, 6,327,000 bushels, rye, 1,161,000 acres, 12,718,000 bushels, barley, 418,000 acres, 6,910,000 bushels, oats, 719,000 acres, 13,377,000 bushels, potatoes, 301,000 acres, 35,262,000 bushels, flax, 237,000 acres, 77,162,000 pounds, clover and prairie hay, 2,202,000 metric tons. Cattle and dairy farming is carried on to a considerable extent. In 1928 the livestock in the country included 1,199,300 cattle, 1,000,400 swine, 1,467,800 sheep, and 611,400 horses.

The production of cut lumber in 1927 totaled 52,184,500 cubic feet, in 1928 the match output was 64,000,000 boxes. Plywood, pulpwood, and chemical pulp were exported in greatly increased quantities in 1928. Of the 7300 industrial enterprises in the country in the same year only 75 employed 50 or more workmen. Most industries were concerned with the handling of forest products, others with the manufacture of shoes, leather products, textiles, tobacco, spirits, and flour. The peat output in 1928 amounted to 67,000 metric tons.

**COMMERCE.** Imports in 1928 were valued at \$29,109,000 and exports at \$25,688,000, as compared with imports of \$26,569,000 and exports of \$24,593,000 in the previous year. The excess of imports in 1928 was almost double that of 1927. The principal import commodities were cotton cloth, sugar, metal wares, coal and coal products, fertilizers, herrings, iron, machinery, and automobiles. Leading exports were flax fibre, butter, wood pulp, swine, eggs, flax tow, boards, veneer, pulp wood, cattle hides, and meats. Live animals represented 13.6 per cent of the total value of exports, foodstuffs, 21.9 per cent; raw materials, 61.8 per cent, and manufactures, 2.7 per cent, while of the imports live animals constituted only 0.03 per cent, foodstuffs, 17.4 per cent; raw materials, 26.9 per cent, and manufactures, 55.6 per cent. Germany supplied 60.4 per cent of the imports and took 57.7 per cent of the exports; the United Kingdom supplied 6.6

per cent of the imports and purchased 20.3 per cent of the exports. The United States furnished 7 per cent of the imports, valued at \$2,048,000.

In 1929 exports rose to \$32,980,000 and imports to \$30,640,000, leaving a favorable balance of \$2,340,000, the marked increase in exports being due primarily to large sales of cattle and dairy products, chiefly to Germany.

**FINANCE** Actual revenues in 1928 amounted to 319,821,000 lits (\$31,982,000) and actual expenditures to 280,481,000 lits (\$28,048,000), the lit having a par value of \$0.10. The 1928 figures represented a considerable increase over those for 1927 when revenues amounted to 269,360,000 lits and expenditures to 230,903,000 lits. The budget for 1929 estimated receipts at 300,863,000 lits and expenditures at 259,966,000 lits. On Jan. 1, 1929, the external debt amounted to 86,846,000 lits (\$8,670,000), of which \$6,202,000 was due to the Government of the United States and \$120,000 to the British government. The internal debt was negligible.

**COMMUNICATIONS** The railroads, all of which are state owned, totaled 974 miles in 1928 and during the same year carried 5,264,000 passengers and 1,600,000 metric tons of freight, the gross receipts amounting to \$3,934,000. The telephone and telegraph systems, also government owned, had 28,675 and 3720 miles of wire, respectively, in 1927. There were also 25,461 miles of highways and 586 miles of waterways navigable for steamboats.

**GOVERNMENT** According to the constitution of May, 26, 1928, executive power is in the President of the Republic, elected for seven years, who acts through a responsible ministry, and legislative power is in a diet elected for five years by universal, equal, direct, and secret suffrage. President in 1929, Antanas Smetona, Prime Minister, Augustinas Valdemaras.

**HISTORY** The year 1929 was marked by the continuance of the dispute with Poland over Lithuania (see 1927 YEAR BOOK) and of the disturbed internal conditions chronic since the establishment of the Republic. It brought to an end the personal dictatorship of Augustinas Valdemaras, who resigned with his entire cabinet on September 19, after ruling the country as Prime Minister since the *coup d'état* of Dec. 17, 1926.

Early in the year the Premier foiled a plot to overthrow him hatched by General Plechavičius, head of the general staff of the army and leader of the coup which placed Valdemaras in power in 1926. The general appeared to have the support of the bulk of the army in his demand that the Premier settle the dispute with Poland, cancel a newly signed trade agreement with Germany, and return to constitutional methods of government. With the support of a Fascist organization called the "Iron Wolves," the Premier caused the arrest of General Plechavičius and eighteen associates, proclaimed martial law in Kovno, and prevented a threatened outbreak by the army. General unrest manifested itself, however, in repeated riots and on May 6 an attempt was made to assassinate Premier Valdemaras. The government responded with wholesale arrests and with the execution of a number of students alleged to have been implicated in the attempted assassination. Martial law continued in force and on May 6 the Premier announced his intention of dissolving the Social Democratic party in Lithuania. It was reported that 14 So-

cial Democrats were condemned to be executed in July. Opposition to the dictatorship in university circles caused the Minister of Education to inform the authorities at Kovno University on August 5 that all professors at the institution would be replaced by new appointees on September 1.

The fall of the dictatorship was attributed to disagreements within the Valdemaras cabinet. Another explanation advanced was that the Premier, having assumed control of the treasury during the summer as a result of the illness of Finance Minister Tubelis, was willing to retire. There were reports of a deficit of some \$200,000 in the treasury. President Smetona called J. Tubelis, the former Minister of Finance, to head the new cabinet. It included the following other members of the extreme conservative nationalists: J. Misteikis, Interior, A. Zilinskas, Justice, K. Šakenis, Education, J. Alekša, Agriculture, V. Vaitakis, War, and Wilešchis, Communications. All except the latter two held the same posts in the Valdemaras cabinet. The new Premier on September 26 announced that his policy included a gradual return to normal constitutionalism and gradual modification of the military censorship.

Opposition by the military clique to Minister of Interior Misteikis forced his resignation on November 23. He was succeeded by Senator Kavetakis. On October 20, Dr. D. Žaunius, a former associate of Valdemaras, was named Minister for Foreign Affairs. The country's policy toward Poland and the other Baltic states remained unchanged and it became increasingly evident that the new régime intended to follow much the same course as its predecessor. On December 4, the Kaunas District Court reversed the decision of the district commander dissolving the Social Democratic party.

The continued friction between Lithuania and Poland was illustrated by additional measures taken by Lithuanian commanders on July 6 to close the Polish frontier. A note addressed by Lithuania to the League of Nations, charging Poland with fomenting trouble in Lithuania and with responsibility for the attempted assassination of Premier Valdemaras in May, was made public July 19. Poland categorically denied the charges. There were frequent clashes between Lithuanians and Poles in connection with timber transports on the Memel River. See POLAND.

**LITTLE AMERICA.** See POLAR RESEARCH.  
**LIVER TREATMENT.** See ANEMIA, PER-  
NICIOUS.

**LIVESTOCK.** Conditions of the livestock industry of 1929 were not quite so favorable as in 1928, though both production and profits to producers were on the whole satisfactory. The total numbers of meat animals slaughtered on farms, as well as by packers, were estimated at well over 100,000,000 head. Prices to producers were well maintained, high average prices being paid for superior grades. Packers, however, reported smaller profits. The most satisfactory prices were received during the first 6 months of the year, after which there was a sharp break in beef and pork prices while lamb showed a gradual decline from a high average of about \$17 per 100 pounds in April to about \$12 at the close of the year. Fluctuations in the lamb market were somewhat erratic, but the general average price for the year was \$14.30, as compared with \$14.60 per 100 pounds for 1928. Some of the largest profits on

record were made from lamb-feeding operations in case of early spring marketing. When the 1929 crop of lambs came to market, price levels could not be maintained. From April to August, market supplies were 9 per cent heavier than in 1928 and 33 per cent greater than in 1924.

The meat animals slaughtered under Federal inspection in 1929 averaged slightly heavier than the animals slaughtered in 1928, but the total numbers and total dressed weights of cattle, calves, and hogs were somewhat less in 1929, as shown in the following table. There were, however, slightly more sheep slaughtered in the current year and the total dressed weight of lamb was about 4 per cent heavier.

MEAT SLAUGHTERED AND STORED UNDER FEDERAL INSPECTION IN THE UNITED STATES IN 1929, WITH COMPARISONS

	Cattle	Calves	Hogs	Sheep and lambs
Number slaughtered				
1929				
1928	8,324,067	4,488,996	48,441,604	14,023,362
3 year average *	8,467,308	4,679,922	49,795,408	13,488,171
Total dressed weight of slaughtered animals	9,389,146	4,902,806	44,688,359	13,110,696
1929—lbs				
1928—lbs	4,274,949,000	452,613,000	8,430,318,000	545,491,000

\* Average for the same period of 1926, 1927, and 1928.

<sup>b</sup> 78,438,000 lbs. fresh, and 26,901,000 lbs. cured beef.

<sup>c</sup> 147,276,000 lbs. fresh, 477,877,000 lbs. cured pork, and 81,501,000 lbs. lard.

<sup>d</sup> 77,051,000 lbs. fresh, and 21,862,000 lbs. cured beef.

<sup>e</sup> 151,811,000 lbs. fresh, 518,228,000 lbs. cured pork, and 85,217,000 lbs. lard.

<sup>f</sup> 68,124,000 lbs. fresh, and 24,121,000 lbs. cured beef.

<sup>g</sup> 118,372,000 lbs. fresh, 437,035,000 lbs. cured pork, and 61,355,000 lbs. lard.

Cattlemen generally prospered during the year, but those who purchased feeders at high prices in the fall of 1928 and marketed them during the slump in the early spring of 1929 suffered losses. On the whole, cattle have maintained relatively good prices since the fall of 1927, when the decrease in the beef-cattle population resulted in a deficiency of domestic supplies. The prevailing high prices of cattle attracted larger imports of canned beef from Argentina and fresh beef from New Zealand. During 1928 the shortage of beef was particularly pronounced in the shortage of the better grades, but the increased average dressed weights of the carcasses in 1929 was an indication of the attempts to pay more attention to finish and quality in beef production. The prices received for finished beef were not an indication of the profits from the business, as feeder cattle were purchased at higher prices and feed prices were high. The kinds of cattle slaughtered in 1929 indicated some tendency toward increased cattle production. The number of calves slaughtered was less than in 1928 and the calf crop was probably as large in 1929 as in 1928, but there was also a decrease in the slaughtering of heifers and cows.

Pork production in the United States is on a tremendous scale, more than 8,000,000,000 pounds being slaughtered annually under Federal inspection in addition to the large numbers of hogs slaughtered on farms. Nearly one-seventh of the pork slaughtered under Federal inspection including lard is exported. Foreign demand was strong because of a decreased production in several of the northern European countries. With a tendency toward increased hog production in these countries, it was expected that American pork products would meet stronger competition

in the near future. According to the June and December Pig Surveys of the Bureau of Agricultural Economics of the United States Department of Agriculture, the total pig crop of 1929 was about 74 per cent smaller than the crop of 1928.

Notwithstanding reduced hog slaughter during 1929, stocks of pork in storage were greater during 7 months than in 1928 and the amounts of lard in storage were greater during 10 months than in the corresponding months of 1928. The pig survey of December, as reported by farmers, showed an increase of 6 per cent in the number of sows that were to be bred for farrowing in the spring of 1930 in the United States as a

whole and 5 per cent for the corn belt. This was interpreted to indicate practically no change in the production.

The exports of pork products and lard were fully 10 per cent heavier than in 1928. Some indication of shifts in the pork products exported was evident. In recent years there has been considerable interest in the production of the type of Wiltshire side that is in demand by the English market, which continues to be by far the largest importer of American pork products. In 1929, there were 5,039,434 pounds of Wiltshire sides exported, as compared with 931,112 pounds in the corresponding period of 1928. Compared with the total exports of pork products, the exports of Wiltshire sides are relatively insignificant, since 138,423,370 pounds of bacon, 125,796,826 pounds of ham, and 44,787,116 pounds of pickled pork, in addition to a considerable amount of fresh pork, were exported during 1929. The trend toward increased production of Wiltshire sides is significant. Packers are giving every encouragement to the breeding and development of the longer and leaner type of hog which will meet this demand. A decreasing demand for lard by Germany and the United Kingdom, although more lard was imported by these countries in 1929 than in 1928, tends to make the extreme lard hog less desirable and gives cause for payment of a premium for the meatier type of hog.

Conditions in the poultry industry were relatively favorable in 1929 and good prices were received for both poultry and eggs, though supplies of poultry were rather large and prices low during the last third of the year. Stocks of eggs were low on Dec. 1, 1929, there were only 2,630,000 cases in storage, as compared with 3,542,000 cases in storage on the same date in 1928 and 3,320,000

for the previous 5-year average. The turkey crop was about 9 per cent larger in 1929 than in 1928, resulting in some reduction in prices for the holiday season. The year was favorable for turkey production and there was a tendency to expand the industry in the Western States, where production is on a large scale. The importation of frozen and dried eggs showed decreases as compared with 1928. There were, however, small increases in the importation of both yolks and albumen.

The United States imports considerable amounts of fresh, cured, and canned meats annually. Owing to the domestic accumulation, the importation of all fresh meats except lamb and mutton was less in 1929 than in 1928. During the latter year, the fresh beef imports amounted to 50,000,000 pounds, but less than 38,000,000 pounds were imported in 1929. Veal importations in 1929 were about 60 per cent of those in 1928 and pork imports were little more than half those in 1928. Imports of lamb and mutton increased from 3,200,000 pounds in 1928 to 4,800,000 pounds in 1929. Importations of canned meats showed a considerable increase on account of the relatively high prices which prevailed in domestic markets. In 1928 but 55,155,841 pounds of these products were imported, as compared with 89,831,947 pounds in 1929.

The United States being an exporter of pork products largely to Great Britain and Germany, the pork situation in those countries is of much interest. Great Britain imports the largest amount of American pork, but the products from the United States are in competition with Danish pork products. The Danish spring pig crop was heavy and the bacon exports from Denmark to Great Britain exceeded those of 1928. An increase in the numbers of breeding animals in Denmark also points toward an increased pork production. The imports of Germany were 50 per cent heavier during the year than in 1928, as a result of a decreased local pork production.

Beef and lamb prices in the United States are influenced by importations from South America and New Zealand. Estimates of the U. S. Department of Agriculture showed that there were increases in the cattle, sheep, and hog production in Argentina. Beef production in New Zealand for the season ended Oct. 1, 1929, was less than half that for the previous year and exports to the United States were about two thirds those for the previous year. Although lamb and mutton production in New Zealand decreased about 3 per cent, as compared with 1928, exports to the United States were more than double those of the previous year.

It is of interest that in the United Kingdom—the largest importer of meats in the world—an effort was made in October, 1929, to retain a larger part of the beef trade in the London area by grading and marking domestic beef as "Home Killed." A similar movement was meeting with much favor in the Birmingham area and in Scottish centres.

**TRENDS IN RESEARCH.** Newer investigations of livestock production were being so planned that the results might be analyzed in economic terms, as well as in terms of the livestock product produced. With this tendency, more attention was given to the quality of the product. Quality was of primary interest in the studies of meat, egg, and wool production. A national cooperative project for the study of factors influencing the

quality and palatability of meats was started in 1925 by the United States Department of Agriculture in cooperation with a number of the State agricultural experiment stations. The preliminary studies were necessarily somewhat superficial, but attention was directed toward the development of sound measurements for determining quality in meats, and progress was made in developing chemical and physical tests of a fundamental character which were basic for further advance in this field of inquiry. Detailed technical studies also contributed to the knowledge of histological differences between meats showing variations in tenderness and palatability. Studies were under way at the different institutions dealing with the influence of age, breed, sex, and feeding on the quality of beef with a less number of comparable experiments with pork, lamb, and goat meat. The soft pork investigations which have been going on for a number of years were incorporated as a part of the quality-of-meat studies on July 1, 1929.

The interest of pork producers in products desired by the English market has already been mentioned and the Minnesota, North Dakota, and Wisconsin agricultural experiment stations particularly studied the relative merit of different types of hogs for the production of Wiltshire sides. The Iowa and Illinois experiment stations carried on tests of the ability of different types of swine to make rapid and economical gains. There is no test for estimating breeding qualities in meat animals comparable to the advanced registry systems which have become so well established as tests for dairy cattle. Consequently, attempts were made at the Iowa and Minnesota experiment stations to develop a method for measuring the ability of four pigs from individual litters to make rapid and economical gains and produce high-grade carcasses. This was patterned after the Danish system of recording the performance of individual litters when fed under comparable conditions.

Nutrition investigations continued to constitute a considerable portion of the research in the field of livestock production. Particular interest was shown in studies of mineral supplements to common rations. Here, again, the results were frequently measured in terms of the quality of the products, for example, the influence of mineral supplements, sunshine, and ultraviolet radiation on thickness of egg shells, growth of chicks, qualities of calves and pigs produced by breeding stock subjected to these conditions, growth of calves, pigs, lambs, and poultry, and growth and quality of wool were among the subjects investigated.

The Fourth World Poultry Congress was to be held from July 22 to 30, 1930, at the Crystal Palace, London, followed by tours of the British Isles.

**CHANGES IN PERSONNEL.** The more important changes in personnel included the resignations of Prof. George S. Templeton, head of the Animal Husbandry Department at the Mississippi Agricultural Experiment Station, Prof. M. F. Gaines, professor of animal husbandry at Pennsylvania State College, and Prof. H. A. Bittenbender, chief in poultry husbandry at Iowa State College, all to engage in commercial work. Prof. A. D. Buchanan succeeded Professor Templeton, and Professor Bittenbender was succeeded by Prof. H. O. Henderson. The death of Frank Kleinheinz, a shepherd, and assistant professor of the Uni-

versity of Wisconsin for 38 years, occurred late in 1928.

**BIBLIOGRAPHY.** Among the more important recent livestock publications are the following; W. J. Robbins, S. Brody, A. G. Hogan, C. M. Jackson, and C. W. Green, *Growth* (New Haven and London, 1928); J. R. Orr, *Minerals in Pastures and their Relation to Animal Nutrition* (London, 1929); A. H. Sanders, *A History of Aberdeen-Angus Cattle* (Chicago, 1928); H. B. Smith, *The Sheep and Wool Industry of Australia and New Zealand* (Melbourne, Auckland, and London, 1929); H. Girard and G. Jannin, *Le Mouton de Rapport* (Paris, 1928); R. Morrison, *The Individuality of the Pig, Its Breeding, Feeding, and Management* (New York, 1928); G. W. Little, *Diet for Dogs* (New York, 1929). M. W. Meek, *The Standard of Perfection for American Domestic Rabbits* (Los Angeles, 1928); E. Brown, *Poultry Breeding and Production*, 1, II (London, 1929); R. H. White, *Poultry Science and Practice* (New York and London, 1929); B. M. Patten, *The Early Embryology of the Chick* (Philadelphia, 1929); L. E. Cline, *Turkey Production* (New York and London, 1929); and Chas. R. Moulton, *Meat through the Microscope* (Chicago, 1929).

**LOEB, SOPHIE IRENE SIMON** An American newspaper writer and sociologist, died Jan. 18, 1929, in New York City. Sophie Simon was born in Russia, July 4, 1876, and brought to the United States at the age of 6. She was educated in the high school of McKeesport, Pa., and in 1896 was married to Anselm Loeb from whom later she was divorced. In 1910 she was appointed a member of the staff of the New York *Evening World*, where she wrote articles describing the problems of the poor of New York's lower East Side. As a member of the New York State Commission for Widows' Pensions, she studied the relation of the child and the state in England, Scotland, France, Switzerland, Germany, and Denmark, writing a report for the New York Legislature in 1914, and leading the campaign which resulted in New York State's widows' pension law. She also led campaigns for penny lunches in public schools, the 80-cent gas rate for Brooklyn, N. Y., and a motion-picture law for New York State, making the buildings sanitary and fireproof. Among the many social reforms in which Mrs. Loeb led, or joined in leading, were the regulation of public vehicles by a commission, and securing of an ordinance prohibiting the rental of hack stands in public streets, investigation of the New York Public Service Commission in 1916, resulting in the appointment of a new commission, mediation in the New York taxi-cab industry strike in 1917, securing passage by the New York Legislature of a bill opening schools for community forums and civic centres, examination by a New York State commission of laws relating to child welfare and establishment of the first child-welfare building in the world (1921). Her chief interest was the welfare of children and much of her work was done as president of the Child Welfare Board of New York City. She was the author of *Epigrams of Eve* (1913); *Everyman's*

*Child, Century Fables of Everyday Folks; Epigrams of What Eve Said.*

**LOUBET, 160<sup>th</sup>, ÉMILE** A French statesman, seventh President of the French Republic, died Dec. 30, 1929, in Montélimar, France. He was born Dec. 31, 1838, in Marsanne, Drôme, the son of a peasant proprietor, and was educated in law at Paris. Going to Montélimar to practice his profession, he became mayor of the city in 1870, holding that office until 1899. In 1870 he was elected to the Chamber of Deputies, where he belonged to the radical Republican group. He was elected to the Senate in 1885, and in 1887 he entered the cabinet of M. Tirard as Minister of Public Works. During 1892 he was Premier and Minister of the Interior, and was president of the Senate in 1896 and again in 1898. From 1899 to 1906, he was President of the Republic. Acting in accordance with the constitutional restrictions placed upon the French President, M. Loubet took small share in the foreign and domestic politics of the Republic during his Presidency. He was, however, an adviser to his ministers and supported the developments of this period. An anti-clerical policy was begun which led to the Church Separation Law of 1905. At that time, the decision in the case of the French soldier, Dreyfus, which had been the cause of so much internal strife in France, was revised, Loubet being in favor of the revision. With the encouragement of President Loubet, Foreign Minister Delcassé established cordial relations with Russia, Italy, and Great Britain, with the latter coming to the Anglo-French Agreement of Apr. 8, 1904.

**LOUISIANA. POPULATION.** According to the Fourteenth Census, the population of the State on Jan. 1, 1920, was 1,798,509. The estimated population on July 1, 1928, was 1,950,000. The capital is Baton Rouge.

**AGRICULTURE.** The following table gives the acreage, production, and value of the principal crops, in 1928 and 1929.

Crop	Year	Acreage	Prod Bu	Value
Cotton	1929	2,050,000	810,000 *	\$67,230,000
	1928	1,990,000	691,000 *	61,844,000
Corn	1929	1,180,000	21,476,000	19,328,000
	1928	1,242,000	21,114,000	19,847,000
Rice	1929	472,000	19,352,000	18,965,000
	1928	487,000	18,750,000	16,975,000
Potatoes	1929	81,000	1,875,000 *	2,867,000
	1928	41,000	2,870,000 *	2,870,000
Sweet potatoes	1929	80,000	7,440,000	6,324,000
	1928	74,000	6,660,000	5,661,000
Hay	1929	307,000	352,000 *	4,689,000
	1928	315,000	349,000 *	6,354,000
Sugar cane	1929	173,000	2,765,000 *	
	1928	115,000	1,860,000 *	

\* Bales \* Tons

**MINERAL PRODUCTION.** Petroleum, which supplies the chief part of the value of the State's mineral product was less actively produced in 1928. The quantity produced of that year was 21,626,000 barrels; that of 1927, 22,818,000. The value of the product was, for 1928, \$25,500,000 (estimated); for 1927, \$29,740,000. An increase in the output of natural gas occurred in 1927, the quantity produced in that year being 186,961,000 M cubic feet, as against 157,423,000 M in 1926. Gasoline from natural gas attained for

1928 the quantity of 55,500,000 gallons, and for 1927, of 44,844,000; in value, \$3,489,000 for 1928 and for 1927, \$2,442,000. The salt production was, 1927, 606,110 short tons; value, \$2,167,220; for 1928, 630,780 tons; value, \$2,405,351. The total value of the State's yearly mineral product was, for 1927, \$51,266,921; for 1928, \$62,203,543.

**FINANCE** State expenditures in the year ended Dec 31, 1928, as reported by the U S Department of Commerce, were for maintenance and operation of governmental departments, \$19,545,818 (of which \$5,494,571 was aid to local education), for conducting public-service enterprises, \$66,054, for interest on debt, \$790,903, for permanent improvements, \$8,510,745, total, \$28,913,520 (of which \$10,771,509 was for highways \$3,223,615 being for maintenance and \$7,547,894 for construction). Revenues were \$28,232,870 Of this, property and special taxes furnished 35.8 per cent, departmental earnings and compensation to the State for officials' services, 4.8, sales of licenses and taxation of gasoline 42.2 The gasoline tax yielded \$3,277,405 The valuation of property assessed for ad valorem taxation was \$1,733,552,714 The total funded or fixed State debt was \$17,096,180, both gross and net

**TRANSPORTATION** The total number of miles of railroad line under operation on Jan 1, 1929, was 4771.96 There were built, in 1929, 29.28 miles of additional second track

**MANUFACTURES** According to the biennial Federal Census of Manufactures published by the Department of Commerce in 1929 and dealing with operations of 1927, there were in the State, in 1927, 1624 manufacturing establishments. These employed 82,415 wage earners, whose wages for the year totaled \$79,073,477 Materials and supplies used in production cost \$427,994,341 Manufactured products attained the combined value of \$638,361,215

**EDUCATION** Efforts of the State to reduce illiteracy were active in 1929 According to a statement of State Superintendent Harris in the *Journal* of the National Education Association, instruction was furnished in the course of the year to 50,000 or more adult illiterates, such as would enable them to read and write The requirements for teachers' certificates were raised by the State Board of Education to two years of college study, of which a proportion was to have been devoted to professional training and practice teaching The requirement was to become effective on September 1, 1931 In the academic year 1927-28 there were registered, in the public schools of the State, 415,481 pupils, of whom 209,648 were white and 145,833 were colored Of the white pupils, 226,533 were in elementary and 43,115 in high-school grades, of the colored, 141,763 in elementary and 4570 in high school Expenditures for public-school education in that academic year were current, \$18,175,601, total, including debt service and outlay, \$32,010,298.

**CHARITIES AND CORRECTIONS** A State Board of Charities and Corrections, while not exercising direct administrative functions, supervises State institutions It is composed of six members and the Governor as ex-officio chairman The chief charitable and penal institutions in 1929 were Charity Hospital, New Orleans, Charity Hospital, Shreveport; Central Louisiana Hospital (mental), Pineville, East Louisiana Hospital, Jackson, State Colony and Training School for Feeble-minded, Alexandria; State School for

Deaf, State School for Blind, State School for Blind Negroes, State Penitentiary, Baton Rouge; Soldiers' Home of Louisiana, New Orleans, and Louisiana Training Institute (correctional), Monroe.

**LEGISLATION** The State Legislature met in regular session in January and was summoned together again in special session by Governor Long, convening on March 18. The course of legislative work was interrupted by a bitter political conflict between Governor Long and the majority of both houses In February, the Governor was authorized by the Legislature to borrow \$1,460,000 for the immediate execution of certain State obligations The failure of revenue measures satisfactory to him occasioned his calling the special session of March His proposal of a tax on oil raised his opponents in the House

The House instituted impeachment proceedings The impeachment resolution introduced March 26 put forward 19 charges, these included intimidation, bribery, misappropriation, illegal destruction of the old governor's mansion and incitement to assassination. The House brought indictment on certain of these charges, including the bribe count The Senate opened the trial on May 14 On May 16, just in advance of the prosecution's presentation of its first witness, a supporter of the Governor introduced in the Senate a resolution to adjourn, since die Those favoring the impeachment were unable to muster the convicting vote on this preliminary trial of strength, and the adjournment was taken, the trial thus coming to an end

**POLITICAL AND OTHER EVENTS** Strife between Governor Long and his antagonists in the State government interfered in divers ways with the course of State business The State Highway Advisory Board appointed by the Governor to supervise the expenditure of \$30,000,000 of funds to be raised for the creation of paved roads was called upon to state its plans and policy in March Its proposed functions clashed with those of the State Highway Commission Charges relating mainly to other than highway matters were brought against the Governor, and he was impeached and brought to trial (see *Legislation*) but no verdict was reached An organization known as the Constitutional League of Louisiana undertook in June to conduct a political fight against Long His partisans on their side sought to effect the recall in local elections of his opponents in the Legislature A committee of bankers and business leaders of the State appealed to Long in July to bring to an end the political disturbances that, it was alleged, were discouraging the intention of a chemical company to establish a \$20,000,000 plant in the State, as well as driving off prospective capital investments generally. The Governor undertook accordingly on July 21 to give up his project for imposing an occupational tax and to cease seeking the aid of his opponents. The occupational tax had been regarded as likely, if enacted, to damage the interests maintaining petroleum refineries at Baton Rouge and New Orleans. The State Conservation Commissioner, V. K. Irion, was ousted by court order on December 2, after long litigation

A stubborn strike of street car employees in New Orleans caused trouble throughout the summer The New Orleans Public Service Company attempted to resume service on July 5 and offered its striking employees a new contract

Rioters put an end to the attempt to keep up service. Thereafter the traffic of the city sought jitney automobile transportation. The acting mayor and councilmen, however, determined to enforce a dormant ordinance against jitney traffic. Stickers took this as a hostile move. On August 13, a mob invaded the City Hall, under the pretext of presenting a petition on the subject, and bent and broke the mayor. Some of the councilmen were beaten and a police captain suffered serious injuries. Two weeks later the operation of jitneys was resumed by force of a court order. A plan for arbitration was signed on September 6.

The State severance-tax law, imposing a special tax on petroleum, was sustained in the United States Circuit Court of Appeals on August 9, in a suit of the Ohio Oil Company to have it declared unconstitutional. The law provided for taxes by the barrel, at different rates for divers sorts of oil. A number of test suits were brought against the Federal authorities in charge of work under Federal control, on the part of interests seeking to maintain claim to compensation for liability to the flooding of lands as a result of the works to be erected. An order of the Federal District Court, rendered in one such case on December 14, halted work in the LeBoeuf Basin.

OFFICIALS Governor, Huey P. Long, Lieutenant-Governor, Paul N. Cyr, Secretary of State, J. J. Bailey, Treasurer, H. B. Conner, Auditor, L. B. Bayard, Jr., Attorney-General, Percy Saint, Superintendent of Education, T. H. Harris.

JUDICIARY Supreme Court, Charles A. O'Neill, Chief Justice, Associate Justices, Ben C. Dawkins, Winston Overton, John St. Paul, Wynne G. Rogers, John R. Land, H. F. Brunot.

**LOW, SIR A (LEROU) MAURICE** A British journalist and writer on economic subjects, died in Washington, D. C., June 17, 1929. He was born in London in 1860. He was educated at King's College in London, in Austria, and after coming to America studied at Dartmouth College, where he received the M. A. degree. In 1896 he became chief American correspondent for the London *Morning Post*. During the Spanish-American War, he was a correspondent in Cuba. In 1900 he investigated for the U. S. Department of Labor certain phases of English labor legislation, and in 1903 English trade unions and industry. He was knighted in 1922. He was the author of *The Supreme Surrender* (1901), *Protection in the United States* (1904), *American Life in Town and Country* (1905), *A Short History of Labor Legislation in Great Britain* (1907), *The American People, a Study in National Psychology* (1909, vol. 1, 1911), *Woodrow Wilson, an Interpretation* (1918).

**LUCAS, FREDERICK AUGUSTUS** An American museum director, died Feb. 9, 1929, in Flushing, N. Y. He was born in Plymouth, Mass., Mar. 25, 1852. From 1871 to 1882, he was an assistant in Ward's Natural Science Establishment in Rochester, N. Y. He served in the U. S. National Museum as an osteologist from 1882 until 1887, then as assistant curator in the division of comparative anatomy until 1893, and, finally, as curator from 1893 to 1904. He was curator-in-chief of the museum of the Brooklyn Institute of Arts and Sciences from 1904 to 1911, and director of the American Museum of Natural History in New York from 1911 to 1923. In 1924 he was

made an honorary director there. He was at one time a member of a commission making fur-seal investigations in the Pribilof Islands. His writings include many papers on the anatomy of birds, on fossil vertebrates, and on museum methods. He also wrote *Animals of the Past* (1901), *Animals before Man in North America* (1902).

**LUMBER PRODUCTION.** See FORESTRY.

**LUTHERAN CHURCH.** A church made up of groups of religious bodies, acknowledging "the Holy Scriptures . . . as the only source and infallible norm of all church doctrine and practice" and declaring the Unaltered Augsburg Confession and Luther's Small Catechism to be "a pure exposition of the Word of God." Its membership is chiefly in central and northern Europe and in the United States and Canada. The following organizations in the United States bear the Lutheran name: United Lutheran Church in America, Evangelical Lutheran Joint Synod of Ohio, Evangelical Lutheran Synod of Iowa and Other States, Lutheran Synod of Buffalo, Evangelical Lutheran Augustana Synod, Norwegian Lutheran Church of America, Lutheran Free Church, Evangelical Lutheran Church (Eelken Synod), Church of the Lutheran Brethren, United Danish Evangelical Lutheran Church in America, Danish Evangelical Lutheran Church in America, Icelandic Evangelical Lutheran Synod of North America, Finnish Evangelical Lutheran Church of America (Suomi Synod), Finnish Evangelical Lutheran National Church, Finnish Apostolic Lutheran Church of America, Evangelical Lutheran Synod of Missouri, Joint Evangelical Lutheran Synod of Wisconsin, Slovak Evangelical Lutheran Synod of America, Norwegian Synod of the American Church, Lutheran Church, and Negro Mission. . . . cal Conference.

A trend toward consolidation of synods and general bodies was evident in the merger June 5, 1929, of three synods of the United Lutheran Church, the Evangelical Lutheran Ministerium of the State of New York, the Evangelical Lutheran Synod of New York and New England, and the Synod of New York, forming the United Lutheran Synod of New York, with 390 churches, 454 clergymen, and 208,008 baptized members. The merger of three independent general bodies, the Joint Synod of Ohio, the Synod of Iowa, and the Synod of Buffalo, was to be consummated in August, 1930, at Toledo, Ohio.

The outstanding event of the year was the Second World Convention of Lutherans held in Copenhagen, Denmark, June 20 to July 4. This convention was organized in 1923 at Eisenach, Germany, as an outgrowth of the relief work of American Lutheran churches following the World War, to effect greater cooperation among all Lutherans. Dr. John A. Morehead, executive director of the American National Lutheran Council, New York, was elected president of the executive committee of continuation work. There were 147 official representatives from 21 countries, the American delegation numbering 30. The main subject of discussion was Luther's Small Catechism, the quadricentennial of which was celebrated throughout the year. Important addresses included "The Lutheran Conception of the Relationship between Christianity and the World," by the Rev. G. M. Bruce, Lutheran Theological Seminary, St. Paul, Minn., "Luther as a Christian Personality and His Significance for

Northern Europe," by the Very Rev Nathan Soderblom, D.D., Archbishop of Upsala, Sweden, "The Origin and the Significance of Luther's Catechisms," by Prof. M. Reu, D.D., Wartburg Seminary, Dubuque, Iowa. "The Chief Problems of Lutheran Missionary Work That Arise from the Present Situation," by Dr. F. H. Knubel, president of the United Lutheran Church in America, "The Chief Problem of the Japan Lutheran Church and Its Solution," by the Rev. H. Inadomi, Kumamoto, Japan. "The Duty of the Present Generation to Transmit Its Heritage of Faith by Training the Next Generation," by the Rt. Rev. Dr. Marahrens, Bishop of Hanover, Germany, and "What Does Lutheranism Offer as Its Distinctive Gift to Christendom?" by the Rt. Rev. Sam. Stadenier, D.D., Bishop of Vaxjo, Sweden. The convention prepared the way for the celebration in 1930 of the four hundredth anniversary of the Augsburg Confession, the basis of doctrinal unity in Lutheran churches throughout the world.

The general growth of the church during the year in the United States and Canada is indicated in the following statistics from the Lutheran World Almanac for 1930: 31 Pastors, 11,626, congregations, 16,881, baptized members, 4,223,179, confirmed members, 2,811,282, and communing members, 2,241,706. Sunday schools numbered 11,785 with 128,203 officers and teachers and 1,252,138 pupils. Church property was valued at \$351,891,503, while congregational expenses amounted to \$46,275,760, congregational benevolences to \$13,061,809, and total expenditures to \$59,158,715. Outside of the United States and Canada, the American bodies listed 3867 congregations, 474 pastors, 314,511 baptized members, 203,119 confirmed members, 189,102 communing members, 3033 Sunday schools, 5581 Sunday-school officers and teachers, 154,451 Sunday-school pupils. The valuation of church property was \$3,886,787, congregational expenses, \$314,349, benevolences, \$137,544, and total \$4,022,803. It was estimated that throughout the world there were 70,000 Lutheran churches, with 49,000 pastors and a baptized membership of 81,023,180.

In 1929 the Lutheran organizations in the United States maintained 34 theological seminaries, 37 colleges, and 97 academies, with a total enrollment of 34,806 students, 7256 instructors, endowment amounting to \$13,701,213 and property value of \$39,589,497. Lutheran mission institutions, such as deaconess motherhouses, hospices, hospitals, old-people's homes, orphanages, immigrant and seamen's homes, and homes for defectives numbered 373, with an endowment of \$4,466,180 and a property value of \$42,568,002, during the year they sheltered or ministered to 5337 children and 430,756 men and women. The work of the foreign missions boards was carried on in India, Africa, Japan, China, New Guinea, Argentina, and British Guiana, the foreign staff numbering 802 and the native staff, 5715. The income for foreign missions in 1927 (the latest year for which statistics were available) was \$2,039,374, while expenditures amounted to \$1,045,289. Baptized converts numbered 189,780, and 61,164 pupils were enrolled in 1448 mission schools of . . . . The total value of mission property, . . . . 15 hospitals and 42 dispensaries, was \$1,111,000.

Important cooperative groups of Lutheran laymen include the American Federation of

Lutheran Brotherhoods, the Lutheran Student Association of America, and the National Lutheran Educational Conference. Clerical inter-synodical organizations include the National Lutheran Inner Mission Conference, the American Lutheran Statistical Association, the Lutheran Foreign Missions Conference of America, the Lutheran Publishing House Managers' Association, the National Lutheran Editors' Association, and the Zion Society for Israel. Official periodicals are the *Lutheran* (United Lutheran Church), *Lutheran Standard* (Joint Ohio Synod), *Lutheran Companion* (Augustana Synod), *Lutheran Church Herald* (Norwegian Church), *Lutheran Herald* (Iowa Synod), *Lutheran Witness* (Missouri Synod), *Northwestern Lutheran* (Wisconsin Synod), and *Ansager Lutheran* (United Danish Church).

**LUXEMBURG**, lûks'em-bûrg. A small state of western Europe, bounded by Germany, France, and Belgium, neutralized by the Treaty of London, 1867, occupied by the Germans during the World War, restored to independence after the Armistice. Area, 899 square miles, population (in December, 1927), 285,524, as compared with 263,824, Dec. 1, 1916, and 260,767 in 1922. Capital, Luxembourg, with a population in 1927 of 52,440, ruler in 1929, Grand Duchess Charlotte.

The great majority of the population is Roman Catholic. Luxembourg is a country of small landowners and of farmers tilling their own holdings. The total area of land devoted to agriculture was about 394,000 acres in 1926. The principal foodstuffs raised in the grand duchy are potatoes and cereal grain . . . . rye, wheat, barley, and oats. The . . . . oats covers the largest area of land and is followed in importance by potatoes. The leading industry of the state, however, is mining and the production of iron and steel. The mineral resources of Luxembourg include comparatively extensive non-ore mines, as well as slate, lime, dolomite, quartzite, and stone beds. The production of pig iron which in 1913 was some 2,510,000 gross tons, in 1928 had reached 2,770,061 tons. In 1928 the production of steel, which had amounted to 2,231,000 tons in 1926, was 2,567,080 tons. Brick, printing, leather, and glove industries are also relatively important. Separate figures on foreign trade have not been available since the economic union in 1922 with Belgium. The budget estimates for 1928 were Revenue, 270,249,192 francs, expenditure, 261,335,689 francs. The public debt on Dec. 31, 1927, amounted to 432,649,255 francs. In 1928 there were 342 miles of railways.

Under the constitution as amended in 1919, sovereign power rests in the nation and the representatives are elected on the basis of universal suffrage and proportional representation. The Grand Duchess Charlotte Aldegonde, born Jan. 23, 1896, succeeded to the throne Jan. 9, 1919. The Minister of State and President of the Government in 1929 was M. Bech (appointed July, 1926). The other members of the cabinet were: Director-General of Justice and Home Affairs, M. Dumont; Public Works, Trade, and Industry, M. Clemang; Finance and Social Welfare, M. Dupong.

**LYNCHINGS.** At the close of the year, the National Association for the Advancement of Colored People reported that 12 lynchings had occurred in 1929 as compared with 11 in 1928. Four mob murders took place in Florida, 2 each

in Mississippi, North Carolina, and Texas, and 1 each in Kentucky and Tennessee. Of the 12 persons lynched, 4 were white, and of these 1 was a woman, Mrs. Ella May Wiggins, textile worker of Gastonia, North Carolina. In only 3 out of the 12 lynchings, were attacks upon women given as the causes, the other occasions leading to the mob murders were a dispute over the price of blackberries, altercation about work followed by stabbing, associating with a white woman, and writing to a white woman. The record showed that not a single lyncher had been punished during the year. The North demonstrated that it did not have to go to school to Southern mobs when intent on lynching. In August, a North Platte, Nebraska, mob, seeking vengeance against a Negro slayer of a police officer, not only trapped the murderer and fired the building in which he was hiding, but turned against the whole Negro population of the city and drove some 200 persons out of their homes without giving them an opportunity to collect even their household goods.

**LYNN, MASSACHUSETTS, ANNIVERSARY** See CELEBRATIONS.

**LYON, HENRY WARE.** Rear admiral, U.S.N., Ret., died in Washington, D.C., Nov. 22, 1929. He was born Nov. 8, 1845, in Charlestown, Mass., and entered the U.S. Naval Academy in 1862. He was an executive officer on the flagship, *U.S.S. Trenton*, when on Mar. 16, 1889, that ship was sunk in a hurricane which destroyed the German and American fleets anchored in the Samoan Islands. After this catastrophe, he salvaged the *U.S.S. Albatross*, which he brought to Honolulu. He also served afloat in the Spanish-American War. In 1906 he was promoted to the rank of rear admiral and in 1907 he was retired.

**MACAO, mak'ao.** An island at the mouth of the Canton River, in China, which with the two adjacent islands of Tarpa and Coloane, constitute a province of Portugal. Area, 4 square miles; population, according to the census of 1920, 83,984, of whom 3816 were Portuguese and the remainder for the most part, Chinese. The trade is chiefly in transit and is mainly in the hands of the Chinese. In 1926-27 the revenue was estimated at 3,029,210 escudos and the expenditure at 3,321,742 escudos (one escudo exchanged at \$0.05 in 1927). Imports in 1927 amounted to 24,831,894 patacas and exports to 10,226,008 patacas (one pataca equals approximately \$0.48). The city of Macao is divided into two parts, inhabited respectively by Chinese and non-Chinese, each under its own administration.

**MACARA, SIR CHARLES WRIGHT.** A British cotton manufacturer, died in Hale, Cheshire, Jan. 2, 1929. Born at Strathmiglo, Fifeshire, Jan. 11, 1845, he studied privately and at Edinburgh. Entering the cotton-manufacturing industry, Sir Charles served as chairman of the Manchester & District Cotton Employers' Association, 1892-1920, and was influential in preparing the Brooklands Agreement which ended the 20 weeks' cotton strike, begun in November, 1892. He subsequently presided over numerous labor conferences, formulating a plan to adjust wages according to the prosperity of the industry. He was also president of the English Federation of Master Cotton Spinners' Associations, 1894-1914, and first president of the Manchester Cotton Association and of the Cotton Employers' Parliamentary Association. He was chairman of a group of representatives of various organiza-

tions, formed in 1902, which effected relief from shipping rings and excessive railway rates on cotton shipping. Sir Charles was also chairman of the Committee of International Federation of Master Cotton Spinners' and Manufacturers' Associations, 1904-15. Having been partially responsible for the government's establishing an Industrial Council in 1911, he was made a member of that body. He was president of the Employers' Association, 1912-16, and chairman of the provisional emergency cotton committee formed in September, 1922, to deal with difficulties continually arising within the industry. Sir Charles was created a baronet in 1911, and was awarded membership in the French Legion of Honor, the Ordre de Léopold, the Gran Cruz del Merito Agrícola, the Order of the Red Eagle, and the Order of the Crown of Italy. Being associated with a number of life-saving organizations, Sir Charles wrote numerous articles on lifeboat work, as well as on commercial and philanthropic subjects. He also wrote *Social and Industrial Reform* (1918), *In Search of a Peaceful World and Recollections* (1921), *Getting the World to Work* (1922), *The New Industrial Era* (1923), *Trade Stability and How to Obtain It* (1925), and *Modern Industrial Tendencies* (1926).

**MACDONALD, SIR HUGH JOHN.** A Canadian lawyer and statesman, died Mar. 20, 1929, in Winnipeg, Canada. He was born Mar. 13, 1850, in Kingston, Ontario, and was educated at Queen's College and at the University of Toronto. He was called to the bar in 1872 and began the practice of law in Toronto (1872-82). Moving to Winnipeg, he became a member of the law firm Macdonald, Tupper & Co. He was a Conservative member of the House of Commons for Winnipeg (1891-93 and 1896-97), Minister of the Interior in the cabinet of Sir Charles Tupper in 1896, and Premier of Manitoba for ten months in 1900. He resigned as Premier to contest the Federal seat of Brandon and, on defeat, formed a new legal firm, Macdonald, Haggart & Co. He practiced law until appointed chief police magistrate in Winnipeg in 1911. He became Queen's Counsel in 1890 and was knighted in 1913. He served in the Canadian Army during the Fenian Raid (1866), the Red River Expedition (1870), and the Northwest Rebellion (1885).

**MACDONALD, J. RAMSAY.** See GREAT BRITAIN, under *History*, also UNITED STATES.

**MCELROY, JOHN.** An American editor, died in Washington, D.C., Oct. 12, 1929. He was born in Greenup Co., Ky., on Aug. 25, 1846, and very early learned the printing trade, working in St. Louis and Chicago. During the Civil War, he served as acting sergeant-major of the 16th Illinois Cavalry and was taken prisoner. After the war, from 1868 to 1874, he was a reporter on Chicago papers. In 1874 he became editor of the *Toledo Blade*, and in 1884, managing editor of the *National Tribune*, which he was editing at the time of his death. He was many times commander of the Kit Carson Post of the G.A.R., and three times commander of the Department of the Potomac, and senior vice commander-in-chief of the central organization. He was the author of a number of books about the Civil War, among them, *Andersonville* (1879), which recounts his experiences in that Southern prison.

**MCGILL UNIVERSITY.** A coeducational institution of higher learning in Montreal, Quebec, founded in 1821. The enrollment for the

autumn session of 1929 was 2909, distributed as follows: Arts, 1028; applied science, 340, medicine, 469; commerce, 248, graduate school, 174, music, 144, dentistry, 38, law, 93, physical education, 33, pharmacy, 22, social work, 29, graduate nursing, 36, library school, 18, music, 193; agriculture and household science, 149. The registration in the French Summer School of 1929 was 208. The number of members on the teaching staff was 505.

Among the appointments to the faculty during the year were: F. C. Harrison, dean of the faculty of graduate studies, F. M. G. Johnson, director of the department of chemistry, Douglas Clarke, director of the conservatorium, F. Clarke, professor of education in the faculty of arts, C. W. Hendel, Macdonald professor of moral philosophy, Georges Edouard Lemaitre, assistant professor of Romance languages; Justice Surveyer, professor of criminal law and procedure, O. S. Tyndale, professor of civil procedure, F. R. Scott, associate professor of Federal and constitutional law, T. W. L. MacDermot, assistant professor in the department of history, J. W. Scott, assistant professor of biochemistry, F. P. Chambers, assistant professor of architecture, Leslie K. Thomson, professor of fuel engineering. Among those lost by death were the Hon. Mr. Justice John Edward Martin, professor of commercial law, D. B. MacTaggart, professor of medical jurisprudence, Etienne S. Bieler, assistant professor of physics, A. Mackenzie Forbes, clinical professor of orthopedic surgery, the Hon. Sir Charles Davidson, emeritus professor of criminal law, J. Alexander Hutchison, emeritus professor of surgery, William de Montmolin Maile, emeritus professor of civil law, the Hon. Mr. Justice J. Emery Robidoux, emeritus professor of law, Francis J. Shephard, emeritus dean of the faculty of medicine and professor of anatomy.

The productive funds of the university amounted to \$18,193,720, and the income for the year was \$2,121,900. The library contained 300,000 volumes. During 1929 a library school was established with the requirement of one year of arts work for admission and afterwards a year of specialized work in library administration. The department of architecture was changed into the school of architecture, and a department of fuel engineering was established in the graduate school. Principal, Sir Arthur William Currie. (CUMG, KCB, LLD)

**McGRATH, SIR PATRICK THOMAS** Journalist and public official of Newfoundland, died June 14, 1929. He was born Dec. 16, 1868, in St. John's, Newfoundland, where he was educated at the Christian Brothers' Schools. In 1889 he became a reporter for the *St. John's Evening Herald*, becoming editor in 1894, and in 1912, when the *Herald* combined with the *Chronicle*, he was made president of the united company. In 1894 he became Newfoundland correspondent for the *London Times*, and he wrote extensively for British and American publications. Sir Patrick was also active in the political life of Newfoundland, being assistant clerk in the Newfoundland House of Assembly from 1897 to 1900, and chief clerk, 1900-11. He was president of the Legislative Council of Newfoundland during 1915-19, and again from 1925 to the time of his death. He often acted as Newfoundland's official representative, serving as the colony's secretary in connection with the visit of the Dominions Royal Commission to Newfoundland in 1914, assisting

in the preparation of the colony's case regarding French and American fishery disputes, and acting as agent for Newfoundland in the dispute with Canada respecting the boundary of Labrador in 1926. He was knighted in 1918.

**MACLEAN, WILLIAM FINDLAY** A Canadian journalist and legislator, died Dec. 7, 1929, in Toronto. He was born in Ancaster, Ontario, and was educated at University College, Toronto. In 1880 he founded and became editor-in-chief of the *Toronto World*, an Independent Conservative newspaper, and the first in Canada to be sold for one cent. The Sunday issue of this paper was also the first of its kind in Canada and was published in defiance of the Scotch Presbyterian Sabbath tradition. Mr. Maclean was an independent in politics. From 1892 to 1904, he was a Conservative member of the Canadian House of Commons, but then, being unrecognized by his party, he became an Independent Conservative. Among the measures which he advocated were public ownership of railways and hydroelectric services, a national reserve bank system for Canada, complete home rule for Canada, and reform of the Canadian Senate. In 1921 the *Toronto World* ceased to be published, and in 1926 Mr. Maclean retired from political life.

**McNARY-HAUGEN BILL.** See AGRICULTURAL LEGISLATION.

**MADAGASCAR.** An island belonging to France lying off the southeast coast of Africa, from which it is separated by the Mozambique Channel, about 240 miles wide at its narrowest point. The island, whose area is estimated at 241,094 square miles, has over 3000 miles of coast, and is 980 miles long with a greatest breadth of 360 miles. The population, according to the census of 1926 (including the Mayotte and Comoro Islands), was 3,213,112, of whom 3,591,943 were Malagasy, 18,040 were French, and 11,359 foreigners. Capital, Tananarive, with a population in 1926 of 70,847.

The Hova, or Merina, is the most industrious and enterprising, as well as the largest, Malagasy tribe. Its language is the prevailing dialect. Other large towns with their populations in 1926 were Antsahabe, 19,130, Majunga, 16,570, Tamatave, 15,022, and Nosy Bé, 14,022. Tamatave is the principal port on the east coast. Education is compulsory from 8 to 14 years of age. On Sept. 15, 1925, there were 991 official schools for European and native children, with 90,833 pupils and 1739 teachers, and 517 private schools, with 49,750 pupils and 1144 teachers.

Production, etc. Cattle breeding and agriculture are the chief occupations of the natives of Madagascar. In 1926 there were 3,334,000 acres of land under cultivation. The forests contain valuable woods and gums, resins, dyewoods, and textile plants abound. In 1925 there were 7,659,000 cattle, 386,000 swine, 116,000 sheep, 63,000 goats, and 2900 horses. The acreage and production of the principal crops in 1927-28 were as follows: Corn, 201,000 acres, 5,166,000 bushels; rice, 1,483,000 acres, 51,440,000 bushels; potatoes, 54,000 acres, 4,078,000 bushels; tobacco 16,000 acres, 22,046,000 pounds; coffee, 45,000 acres, 9,259,000 pounds. Other products are rice, manioc, lima beans, vanilla beans, cacao, cloves, sugar cane, peanuts, and coconuts. Local manufacturing industries are relatively small, including rice milling, sugar grinding, meat packing, and the manufacture of straw hats, simple textiles, mats, lace, etc. The graphite mines are im-

portant and gold, mica, phosphates, and columbite are mined commercially. In addition some iron, copper, and other minerals have been found.

**COMMERCE** Provisional statistics for 1928 placed the imports at 686,445,000 francs (\$28,509,000) and exports at 483,596,000 francs (\$18,957,000). These figures represented an 18 per cent increase in the value of imports and a 28 per cent increase in exports over 1927. France's share of the total trade amounted to 77 per cent of the imports and 80 per cent of the exports. Cotton fabrics were the leading import and vanilla beans the leading export.

**FINANCE** The ordinary budget for 1929 balanced at 242,338,000 francs (\$9,500,000), the major items of expenditure being Railways, 38,513,000 francs, native medical assistance, 19,596,000 francs, and public works, 68,650,000 francs. Local revenue is derived chiefly from direct taxation, including a poll tax ranging from 10 to 30 francs on all persons from 16 to 60 years of age. Tax receipts in 1928 totaled 69,791,000 francs. The bonded debt, all of which was contracted for construction purposes, was reported at 78,113,000 francs at the end of 1928. The French franc, which is the unit of currency on the island, has a par value of \$0.392.

**COMMUNICATIONS** The railways, which are government owned, included 430 miles of line in 1928 and in the same year carried 1,184,286 passengers and 270,000 metric tons of freight, the gross receipts being 3,698,000 francs (\$1,360,000). A new line to the Puanaraitoa and Manakara was being built in 1929. In 1927 the government-owned telegraph system, with 8710 miles of wire, earned gross receipts of 4,638,000 francs (\$181,800), and the telephone system, with 4032 miles of wire, earned gross receipts of 850,000 francs (\$33,320). A total of 5773 vessels of 2,521,000 net registered tons entered, and 6000 vessels of 2,545,000 net registered tons cleared, the ports of the island during 1926 (including those in the coastwise trade).

**GOVERNMENT** The colony is under a governor-general aided by a consultative council of administration. Governor-General in 1929, Marcel Olivier (appointed in 1924). Dependent upon Madagascar are the small islands of Nosy Bé, Diego Suarez, Ste Marie, and the Comoro group. See also ANTHROPOLOGY, under *Old-World*.

#### *Ethnography*

**MAGMAS.** See GEOLOGY.

**MAGNETIC RESEARCHES.** See CARNEGIE INSTITUTE OF WASHINGTON.

**MAHER, NICHOLAS D.** An American retired railroad president, died in Roanoke, Va., Sept. 24, 1929. He was born in Blairsville, Pa., Apr. 20, 1854, and educated at Mt. St. Mary's College, Emmitsburg, Md. In 1871 he began work as a surveyor for the Pittsburgh, Virginia & Charleston. In 1883 he was first connected with the Norfolk & Western Railroad as chief clerk to the general manager. With the exception of short periods, Mr. Maher remained with the Norfolk & Western until retirement in 1924, rising through the positions of general manager, second vice president, and first vice president to the presidency in 1918, from which he retired on May 1, 1924.

**MAINE** Population. According to the Fourteenth Census, the population of the State on Jan. 1, 1920, was 768,014. The estimated population on July 1, 1928, was 795,000. The capital is Augusta.

**AGRICULTURE** The following table gives the acreage, production, and value of the principal crops in 1928 and 1929.

Crop	Year	Acreage	Prod. Bu.	Value
Potatoes	1929	173,000	47,644,000	\$57,173,000
	1928	181,000	39,820,000	15,928,000
Hay	1929	1,234,000	1,596,000 *	17,625,000
	1928	1,248,000	1,597,000 *	18,185,000
Oats	1929	122,000	4,880,000	3,416,000
	1928	120,000	4,200,000	2,940,000

\* Tons

**MINERAL PRODUCTION** The production of stone, which contributes somewhat less than one-half of the yearly mineral product of the State, was active in 1927. There were produced 355,800 short tons of stone, as against 311,830 for 1926, in value, \$2,447,044 for 1927 and for 1926, \$2,380,593. Lame production rose from 116,566 short tons for 1927 to 122,000 (estimated) for 1928, in value, from \$1,230,356 to \$1,240,000 (estimated). The other chief mineral industries were manufacture of clay products, totaling \$680,730 for 1927, production of slate, \$561,242 for 1928, \$540,952 for 1927, feldspar, \$209,380 for 1927, and sand and gravel. The total value of the mineral products of the State for 1927 was \$5,475,605, for 1926, \$5,785,619.

**TRANSPORTATION** The total number of miles of railroad line under operation on Jan. 1, 1929, was 2198.46. There was built, in 1929, 0.73 mile of additional first track.

**MANUFACTURES** According to the biennial Census of Manufacturers, published by the U. S. Department of Commerce in 1929, there were in the State, in 1927, 1426 manufacturing establishments. These employed 68,142 wage earners, whose wages for the year totaled \$74,212,035. Materials and supplies used in manufacture were of the total value of \$208,805,679. The manufactured products attained the value of \$372,094,474.

**EDUCATION** An extension of the minimum length of the school year to 32 weeks, from 30 weeks, was placed in the front rank of the year's developments in education in Maine, by State Commissioner of Education Packard, writing in the *Journal of the National Education Association*. The compulsory membership of public school teachers in a contributory pension system was also effected. This institution, created by statute, was known as the Maine Teachers' Retirement Association System. The Retirement Association had previously functioned with an optional membership, but had, up to 1929, less than 100 members. The law of 1929 required all teachers who had entered service on or after July 1, 1924, to join on beginning the seventh year of teaching in the State. The age at which the older teachers might obtain pensions for disability under the previous law was reduced to 50 years, from 60. The number of persons of school age in the State in 1929 was estimated at 245,934. There were enrolled in the public schools, in the academic year 1928-29, 162,710 pupils. Of these, 135,866 were in the elementary and 26,844 in the high-school grades. The year's expenditures for education totaled \$11,215,198. Salaries of teachers averaged, in 1928, \$880 a year in the elementary grades and \$1518 in the secondary.

**CHARITIES AND CORRECTIONS** The State Department of Public Welfare, created by statute in 1913 and originally named the State Board of Charities and Corrections (renamed in 1927) held in 1929 the function of inspection of all charitable

and correctional institutions supported in any part by the State, it also administered the State law for the aid of mothers and acted as a board of childrens' guardians, with regard to neglected children. The State institutions of care and custody as to which it reported were, the three State hospitals for the insane, at Augusta, Bangor, and Pownal, sanatoria at Greenwood Mountain, Fairfield, and Presque Isle, Reformatory for Men, South Windham, Reformatory for Women, Skowhegan, State School for Boys, South Portland, State School for Girls, Hallowell, Maine School for the Deaf, Portland; Military and Naval Orphan Asylum, Bath; State Prison, Thomaston. The population of all these institutions in 1927 was slightly over 4000.

**LEGISLATION** The State Legislature met in regular biennial session in January. Its chief labor was the passage of measures to permit under strict limitations the exportation from the State of hydroelectric power, forbidden by the twenty-year-old Fernald Law. To this end was passed the Smith-Carlton Law, repealing the Fernald Law. It was submitted to the popular vote in a referendum on September 9, and was then defeated. An issue of \$15,000,000 of State bonds for purposes of highway and bridge construction was enacted, and was approved at the September referendum. The increase of the gasoline tax to five cents, from four, was proposed by the Legislature, but defeated by the popular vote. The method of filling vacancies in the Governor's council was altered, and the alteration received popular approval. Provision for a bond issue of \$1,200,000 for a highway or highway-and-railroad bridge over the Penobscot at Bucksport was made and was confirmed by popular vote. Less conspicuous than the power legislation but of permanent importance to the State was the remodeling of the judicial system, effected by two acts. One of these reduced the number of Supreme Court justices to five by process of leaving vacancies when they might occur and increased the number of the Superior Court bench to seven. The second act fixed trial terms for Superior Court. The general scheme of the change was to limit the Supreme Court to appellate and equity actions and relieve it of trial work.

**POLITICAL AND OTHER EVENTS** The act repealing the Fernald Law, the previous law to prohibit the export of power from the State (see *Legislation*, above) was passed subject to a referendum vote. The repealing act met with lively opposition from the former Governor Ralph O. Brewster in the popular campaign. The repeal was defeated at the polls on September 9 by 62,248 votes, approximately, to 54,249. A bond issue for highway and bridge construction was approved, an increase in the gasoline tax, defeated, a change in the method of appointment of the Governor's Council, approved. The second annual State Economic Conference met in Lewiston in November and gave considerable attention to the prospects of the State's recreation, trade, and fisheries. According to a member of the State Fisheries Commission, the yearly catch of lobsters had reached in 1929 a figure in excess of 12,000,000 and nearly 5000 licenses to lobster fishermen were issued. An addition of some three square miles to the Acadia National Park, on the Maine coast, was made by gift. The State Forest Commission reported in April that the white birches of the State were endangered by the saw-fly leaf miner. In a quarry at Albany was discovered a beryl deposit which

included three phenomenal crystals of pale green beryl, about 14 feet long and 4 feet thick, the largest known.

**OFFICERS** Governor, William Tudor Gardiner, Secretary of State, Edgar C. Smith, Treasurer, William S. Owen, Auditor, F. D. Hayford, Attorney-General, Clement F. Robinson, Commissioner of Education, Bertram E. Packard.

**JUDICIARY** Supreme Judicial Court: Chief Justice, Luere B. Deasy, Associate Justices, Guy H. Sturgis, Charles P. Barnes, Charles J. Dunn, Norman L. Bassett, William R. Partangall, Frank G. Farrington, Superior Court Justices, William H. Fisher, George H. Worster, Arthur Chapman, Harry Manser, George L. Emery, James H. Hudson, Sidney St. F. Thaxter.

**MAINE, UNIVERSITY OF** A coeducational State institution of higher learning in Orono; founded in 1865. The enrollment for the college year 1929-30 was 1484 and for the summer session of 1929, 294. There were 224 members on the faculty in the autumn of 1929, divided as follows: Teaching and administration, 150, agricultural extension service, 48, and experiment station, 26. The productive funds of the university amounted to \$885,050 and the income for the year was \$980,679. The library contained 92,000 volumes. A new home economics building and a new dormitory for women, the first of a series of four units in the university's building programme, were under construction in 1929. President, Harold Sherburne Boardman, ChE, D Eng., LL D.

**MAIZE.** See CORN.

**MALACCA.** One of the STRAITS SETTLEMENTS. Consult that article.

**MALAY STATES.** See FEDERATED MALAY STATES.

**MALDIVES ARCHIPELAGO.** See CEYLON.

**MALTA.** An island in the Mediterranean Sea, forming, with the adjacent islands of Gozo and Comino, a British colony. It is situated 58 miles south of Italy and 180 miles from the African coast. Area of the island of Malta, 95 square miles, total area with Gozo and Comino, 122 square miles. Population, 1927, 192,460. On Jan. 1, 1927, 227,440. Valletta is the chief town and port. There were 115 public schools with 24,496 pupils at the beginning of the school year 1927-28, a university with 164 students, a lyceum for boys with 300 students, two secondary schools, and 25 technical manual schools. Farming is the principal occupation. The chief products include wheat, potatoes, onions, barley, tomatoes, favae, cotton, grapes, and other fruits. The value of agricultural produce in 1927-28 was £907,494. Stock raising and fisheries are important. The manufactures include lace, cotton, cigarettes, and filigree. The imports normally exceed exports, although invisible items of trade tend to balance the island's annual account. The imports in 1927 were valued at £4,285,436 and the exports at £1,006,881. Most of the imports come from Great Britain and British possessions. The revenue in 1927-28 was £823,138 and the expenditure, £887,523. Executive power is vested in the governor, who is also commander-in-chief, and legislative power in a Legislature of two Chambers, Governor and Commander-in-chief. In 1929, Gen. Sir John Du Cane (appointed Mar. 16, 1927), Prime Minister, Police, and Posts, Lord G. Strickland, Health, R. V. Galea, Education, A. Bartolo, Justice, A. Parnis; Industry and Com-

merce, W. Salomone; Public Works, E. P. Vassallo; Treasury, Col. A. Samut.

**HISTORY.** The development of an agitation among the Italian population of the island for union with Italy led to a clash in 1929 between the Maltese Government and the Roman Catholic ecclesiastical authorities of the island, who were accused of supporting the effort to undermine British authority. An acrimonious correspondence ensued between Lord Strickland and Cardinal Gasparri, the Papal Secretary of State, after the Maltese Government had refused to issue a passport to a monk ordered to Sicily by the Italian Superior of his monastery. The Government contended that he was a British subject who was being sent away against his wishes and for political reasons. The matter was brought to the attention of the British Minister to the Vatican State and was aired in the British House of Commons. The British officials of Malta sought to check Italian propaganda by new press regulations and by providing severe penalties, up to three years' imprisonment, for those "who help the enemies of His Majesty in whatever way or against the Maltese Government." See ITALY and VATICAN CITY, under *History*.

**MALTA FEVER.** In a brief article which appeared in the *Health News*, published by the New York State Department of Health, for August 5, Dr. Theobald Smith presented a synopsis of present knowledge of Malta, otherwise known as undulant fever. Incidentally, he asked whether the recent appearance of the disease in the United States was genuine or only apparent. Has the bacterium which causes it appeared in North America *de novo* or have its effects been in some way masked or latent? The organism which is the cause of infectious abortion in cattle closely resembles the cause of Malta fever, but there are slight differences and the two cause quite different clinical pictures. When this cattle plague was first recognized in the United States the incidence was widely diffused, but in the meantime it was largely reduced by the activity of the Federal Government. In other words, it is far older than Malta fever in man, for it goes back something like forty years as against six years for the human disease. There is as yet no evidence that the latter was ever derived from the cattle disease. The European Malta fever is chiefly transmitted by goats' milk and infected goats have been seen in Utah and some of the Southwestern States, but the disease as such has occurred chiefly in the northern United States. It seemed certain that cattle do not cause Malta fever and the pig was under suspicion, or rather the porcine strain of the organism.

**MAN, EARLY HISTORY OF.** See ANTHROPOLOGY  
**MANAGER PLAN.** See MUNICIPAL GOVERNMENT

**MANCHURIA**, man-chō'-rē-ā. A vast region comprising one of the Chinese Outer Territories, situated between the Province of Chihli in China proper and the Amur River and extending eastward from the Hingan Mountains to Korea and the Ussuri River. It is divided into the three provinces of Fengtien (now Liao-Ning by Nationalist decree), Kirin, and Heilung-kiang. The total area is estimated at about 363,610 square miles. A census completed by the research office of the South Manchuria Railway Company in 1927 reported the population of Manchuria at 27,490,000. This is probably as nearly correct a figure as can

be ascertained. The population at that time was increasing by about 1,000,000 annually through immigration from China proper. Capital, Mukden, with a population of about 250,000. Other important cities are Newchwang, 65,000; Yingkow, 60,000; An-tung, 74,600; and Chang-chun, 80,000. The soil of Manchuria generally is of great fertility and the region possesses immense potential agricultural, timber, and mineral wealth. The area under cultivation in 1928 was estimated at 81,718,945 acres, of which 19,193,765 acres were devoted to soy beans and 7,241,087 acres to wheat. The production of the principal crops in tons in 1929 was estimated as follows: Soy beans, 5,351,000; other beans, 415,000; kaohang, 5,136,000; millet, 2,692,000; upland rice, 1,787,000; lowland rice, 161,000; corn, 1,776,000; wheat, 1,552,000; all other, 2,000,000 tons. The cultivation of sugar beets and the breeding of livestock are of growing importance. The forests of Manchuria were estimated at 45,000,000 acres in 1929. While industrially undeveloped, there are in the larger cities modern flour mills, bean-oil mills, soap works, sugar refineries, saw-mills, distilleries, breweries, glass factories, and tanneries. Manchuria was fairly prosperous in 1928, due to good harvests and the extension of the area under cultivation by new settlers. Railway mileage was extended, freight traffic increased, and an extensive building programme was undertaken in Mukden. In 1929 the dispute with Russia over the Chinese Eastern Railway hindered business throughout most of the year and many business failures were reported.

During the fiscal year ending Mar 31, 1928, the combined import and export trade of Manchuria amounted to 662,000,000 Haikwan taels, or an increase of 15,000,000 taels over the total for the previous year and double the value of the trade ten years ago (one Haikwan tael in 1928 was equivalent to \$0.71). Manchurian railways carried 2,000,000 tons more cargo than in the fiscal year ended Mar 31, 1927. In 1928 the South Manchuria Railway, which had 691 miles of line, carried 9,514,049 passengers and 19,323,514 tons of freight. The gross receipts totalled 118,639,089 yen and the net earning was 74,281,024 yen, as compared with 68,008,345 yen in the previous year. In 1927 the Chinese Eastern Railway had revenues totalling 59,974,512 rubles and expenses of 43,971,301 rubles, leaving a net earning of 16,003,301 rubles (one ruble was equivalent to \$0.515). Railroad construction under way in Manchuria in 1929 threatened to greatly reduce the importance of the Chinese Eastern Railway to that region. The Peiping-Mukden Railroad had been extended north to intersect the Chinese Eastern at Tientsin and Hailin. Chinese railroads financed by Japan were pushing through eastern Manchuria to a new Japanese port in northern Korea, which was intended to compete with Vladivostok and Dairen, and a Chinese railroad had been extended 150 miles north of Harbin.

**HISTORY.** The conflicting interests of China, Japan, and Russia in Manchuria were generally recognized as the gravest menace to peace in the Far East, at the Kyoto Conference of the Institute for Pacific Relations Observers in Manchuria late in the year reported that the Nationalist Government of China exercised only nominal control, that the power of the Mukden Government was disintegrating, with Kirin practically an independent province under its governor, Chang Tso-Hsiang, and that banditry and lawlessness in

outlying regions were growing more pronounced. For the Sino-Russian dispute over the Chinese Eastern Railway and other developments, see *CHINA*, under *History*. See also *RUSSIA* and *JAPAN*, under *History*. Consult *Diplomatic Events in Manchuria*, by Sir Harold Parlett, Oxford University Press (1929).

**MANDATES.** See *LEAGUE OF NATIONS*; *IRAQ MANGANESE*. A decline in the prices received for manganese ores which lasted throughout 1929 indicated the international competition that looms imminent in production of this steel alloy. Early in the year, Brazilian and Indian ores were sold in New York on the basis of 34 to 35 cents per unit of manganese content in ores of better than 47 per cent grade. At the close of the year, the prevailing quotations were 31 to 34 cents. In Russia, the most important producing nation, the Soviet government had taken over the Tshiatursi deposits, relinquished by American interests, and planned to increase output from its present level of 1,200,000 tons annually to almost double that figure. India, which ranks after Russia, had piled up a tremendous surplus stock and at the close of the year mining was reported to have virtually ceased. In South Africa, a large, low-cost deposit was being prepared for an eventual production of 400,000 tons annually. And in the United States, where manganese producers were successful in the attempt to retain the tariff, three new plants were put in operation that had an annual capacity of more than 200,000 tons. Additional large iron-ore deposits were developed, but research on metallurgical treatments was necessary to make exploitation profitable. World production in 1929 was about 3,500,000 tons annually, but the potential producing capacity would, within a year or two, greatly surpass this figure.

**MANITOBA**, mān'itō'ba. The most eastern of the Prairie Provinces of Canada, situated west of the Province of Ontario and Hudson Bay and east of the Province of Saskatchewan, extending from the American boundary north to latitude 60°. Area, 251,832 square miles, population, according to the census of 1921, 610,188, 1926, 639,056, 1929 estimate, 663,200. Capital, Winnipeg, with a population in 1926 of 191,998 (Greater Winnipeg, 280,000). Brandon, 16,443. St. Boniface, 14,187. Portage la Prairie, 6513. The movement of population in 1927 was Births, 11,129, deaths, 5294, marriages, 4712. In 1927-28 there were 4096 teachers and 148,763 pupils in the 3987 public class rooms. There are 43 high schools, 10 junior high schools, 12 collegiate departments, and 16 collegiate institutes. For higher education, there is the University of Manitoba at Winnipeg, with 2747 students enrolled for the full courses in 1927-28.

The estimated area of arable land in Manitoba is 25,000,000 acres, of which about 30 per cent is under cultivation. Mineral production, consisting mainly of building materials and gypsum, was valued at \$4,119,656 in 1928. Forestry and fisheries are other important resources. In 1929 the gross industrial production was estimated at \$165,000,000. Revenues in 1928 totalled \$10,741,076 and expenditures, \$11,243,093. The funded debt on April 30, 1928, was \$77,050,650. Railway mileage in 1928 totalled 4697 miles.

The government consists of a lieutenant-governor appointed by the Governor-General of Canada and the Legislative Assembly consisting of 55 members elected for five years. Manitoba is represented in the Dominion Parliament by six

members in the Senate and 17 in the House of Commons, Lieutenant-Governor in 1929, J. D. McGregor; Premier, President of the Council, Treasurer, John Bracken, Education, R. A. Hoey, Agriculture, Immigration, and Railways, A. Prefontaine, Lands Commissioner, Provincial Secretary, Mines and Natural Resources, Donald McKenzie; Health and Public Welfare, Edward W. Montgomery; Public Works, W. R. Clubb, Attorney-General and Minister of Telephones, W. J. Major, Municipal Commissioner, D. L. McLeod. As a result of the elections of August, 1927, the party grouping was as follows: Progressive (Government), 29, Conservative, 16, Liberal, 7; Labor, 3; Independent, 1.

For the transfer to Manitoba of its natural resources formerly held by the Dominion Government, see *CANADA*, under *History*.

**MARIA CHRISTINA.** Queen Mother of Spain, died in Madrid, Feb. 6, 1929. She was born in Gross-Seelowitz, Austria, July 21, 1858, the daughter of Archduke Karl Ferdinand and Archduchess Elizabeth Francisca Maria. Entering a convent, Maria Christina became an abbess, but in 1879 she married Alphonse XII, King of Spain whose first wife, Queen Mercedes, had died without heir. At the death of the King, in 1885, she ruled for her infant daughter, Mercedes, who was succeeded in 1886 by a posthumous son, Alphonse XIII. Maria Christina remained Queen Regent until her son became of age, May 17, 1902. It was during her regency that the Spanish-American War took place, 1898. After Alphonse XIII reached his majority, the Queen Mother remained in seclusion with the royal family, occupied with the up-bringing of her grandchildren, and the affairs of the Roman Catholic Church.

**MARIETTA COLLEGE.** A nonsectarian, co-educational college in Marietta, Ohio, founded in 1835. The total registration for the autumn term of 1929 was 360 students, of whom 224 were men and 136 were women. The faculty numbered 38, eight new members having been added in 1929. The productive funds amounted to \$1,271,811, and the income for the year to \$155,752. The alumni contributed \$5633 to the current expenses of the college through the Marietta Fund. The library contained approximately 96,000 volumes. President, Edward Smith Parsons, L. H. D., LL.D.

**MARQUETTE UNIVERSITY.** An institution of higher learning for men and women, under Roman Catholic direction, in Milwaukee, Wis., organized as a college in 1881 and chartered as a university in 1907. It comprises the following colleges and schools, for which registrations of regular students in the autumn of 1929 was as fol-

lows Graduate school, 226; liberal arts, 917; business administration, 299; dentistry, 182; applied science and engineering, 524; journalism, 138, law, 242; medicine, 324, music, 24; speech, 8 (with 870 students enrolled in speech courses from other schools and colleges of the university). In addition, there were 274 students in night courses in business administration, 11 in dental hygiene, 518 in high school, 139 in academic music, 63 in nursing, and 408 in teachers' courses, making a grand total of 4361 in the university. The registration for the 1929 summer session was 777. The faculty in the autumn numbered 355 members, excluding 25 high-school and 5 academic music instructors. Endowment funds amounted to \$5,480,201, including community endowment of \$1,800,000, being the amount required to yield a sum equal to the annual value of the services of the Jesuit instructors and administrative officers. The income for the year amounted to \$1,024,841, from the following

sources: Endowment income, \$187,808; tuition, \$678,174; private benefactions for increase of plant, \$67,131; for increase of endowment, \$62,959, miscellaneous, \$28,767. The university also had the services of Jesuit instructors and administrative officers who received no compensation other than maintenance, the value of their services over the cost of their maintenance in 1928-29 being estimated at \$93,000. The library contained 47,700 volumes. President, the Rev. William M. Magee, S.J., A.M., LL.D.

**MARRIAGE AND DIVORCE.** Preliminary figures issued by the United States Census Bureau for 1928 showed a decrease in the number of marriages over the previous year. There were 1,201,053 marriages performed in the country in 1927, as against 1,182,497 in 1928, thus making a decrease of 18,556, or 1.5 per cent. The number of marriages per 1000 of the population in 1927 was 10.12, in 1928 it was 9.85. In the latter year, there were 195,939 divorces granted

TABLE I—MARRIAGES IN THE UNITED STATES, 1927 AND 1928

\* A minus sign denotes decrease.

in the country, making a rate of 1 63 per 1000 of the population, in 1927 the number of divorces totaled 192,037, making the rate 1 62 Divorces in the single year interval increased 3902, or 2 per cent Decrease in the number of marriages performed showed a wide range throughout the country In Florida, the number of marriages decreased 15 per cent; in California, 12 2 per cent, in Louisiana, 7 6 per cent, in Rhode Island, 6 4 per cent, in Massachusetts, 4 4 per cent, in New York, 3 7 per cent, in Pennsylvania, 4 9 per cent, in Wisconsin, 5 2 per cent, and in West Virginia, 4 8 per cent On the other hand, certain States showed sizable increases In Nevada, there was an increase of 73 8 per cent, largely due to the change in the California law which required three days' notice before the issuance of a license The same law caused an increase of 29 1 per cent in Arizona Other increases were the following Vermont,

8 4 per cent, New Jersey, 2 8 per cent; Michigan, 2 8 per cent, North Dakota, 7 5 per cent, Texas, 3 1 per cent, Oregon, 3 6 per cent

The rate of marriages per 1000 of the population ranged from 4 73 in Delaware and 5 4 in Wisconsin, to 1 69 in Mississippi and 53 8 in Nevada The following were the rates for the more populous States of the country Massachusetts, 6 8, New York, 9 9, Pennsylvania, 6 9, Ohio, 8 7, Illinois, 10 8; California, 10 3 In the country as a whole, there were six marriages to one divorce in 1928 The range was from 52 5 for the District of Columbia and 21 6 for New York State (in each of which there is only one cause for divorce) to 14 marriages for each divorce in Georgia down to 1 6 marriages for each divorce in Nevada

Throughout the country, there was an increase of 2 per cent in the divorces in the one-year interval The individual States showed wide ranges

\* A minus sign denotes decrease    (b) Less than one tenth of 1 per cent.

There were decreases of 30.8 and 12.3 per cent in the District of Columbia and Florida, respectively, as against increases of 32.9 and 54.1 per cent in Nevada and Vermont. Law changes are responsible for the figures cited in Nevada, the residence requirement was changed from six to three months, in Vermont, all divorces granted after July 1, 1927, were to be final only after the elapse of six months following the decree. Therefore, the figures for 1927 stand for the divorces of the first six months of the year. The decrease in the District of Columbia was due to the tying up of one of the courts in 1926 with the result that the 1927 total contains many of the suits of the previous year.

The tables on pages 486 and 487 present marriage and divorce data for the individual States for the years 1927 and 1928.

**GREAT BRITAIN** Figures issued by the Registrar General's Office show a great increase in divorces for the year 1928. The total number of decrees nisi made absolute for that year was 4018, a gain of 838 over 1927. In 1925 the number of divorces granted was 2673. Reasons advanced for the mounting total of divorces are the following: the regulation of publicity, lower costs, and declining living standards.

**MARSHALL, LOUIS** An American lawyer and Jewish leader, died in Zurich, Switzerland, on Sept. 11, 1929. He was born in Syracuse, N. Y., Dec. 14, 1856, was graduated from the law school of Columbia University, and in 1878 began the practice of law in Syracuse but later located in New York City becoming a member of the law firm Guggenheimer, Untermeyer & Marshall. In 1902 Mr. Marshall was instrumental in improving the housing conditions in the lower east side of New York City, and also succeeded in bringing about reforms in 1908, as chairman of the Immigration Commission. Acting as mediator of the cloakmaker's strike in 1910, he prepared a protocol of settlement which afterward was the basis of numerous strike adjustments. He led the movement for the abrogation in 1911 of the Treaty of 1832 with Russia, under which the Russian Government had been able to discriminate against Russian Jews who were naturalized citizens of the United States. In 1919 he was a member of the arbitration board which settled the strike of New York clothing workers. He served as a member of constitutional conventions in New York in 1890, 1894, and 1915. In 1920-21 he was president of the Jewish Relief Committee, which, with kindred organizations, collected \$75,000,000 for the relief of Jewish war sufferers. He was president of the committee which urged treaties with Poland, Rumania, Yugoslavia, Czechoslovakia, and other countries guaranteeing equal rights to all racial, religious, and linguistic minorities. On his seventieth birthday, he received a testimonial signed by 8000 persons in 348 cities in the United States and by officials and municipalities in many foreign countries, in recognition of his attainments and achievements. He founded the Jewish Protector and Aid Society, was director of the Educational Alliance and Dropsie College, Philadelphia, and was a trustee of Syracuse University after 1910. In addition to being an able lawyer, Mr. Marshall was a leader of the Jewish people and was prominent in adjusting the disputes between Henry Ford and the Jews, when Ford apologized for articles in his *Dearborn Independent*. At the time of his death, he had just attended the Zionist Congress in

Zurich, acting as chairman of the Jewish Agency Council meetings, in which the Zionists and non-Zionists united to carry on the work of establishing the Jewish national home in Palestine.

**MARTINIQUE**, *mar'tînek*. One of the Lesser Antilles group of the West Indies, forming a colony of France Area, 385 square miles, population, in 1927, 234,695. Capital and chief port, Fort-de-France, with a population of 43,338. Sugar, rum, cacao, coffee, tobacco, pineapples, and bananas are the chief products of the colony. Sugar production in 1928 was 39,035 metric tons. Imports in 1927 were valued at 212,594,604 francs and exports at 220,373,089 francs. Trade increased in 1928, according to preliminary figures. The export trade is confined to France and French colonies. Exports of sugar and rum constituted nearly 90 per cent of the value of all exports. The budget for 1927 balanced at 66,103,756 francs. In the same year, 550 vessels of 1,040,764 tons entered, and 560 vessels of 1,053,861 tons cleared, the ports of the island. The colony is administered by a governor, a general council, and an elected municipal council, it sends one senator and two deputies to the French Parliament. Governor in 1929, L. Gehlms, appointed in 1927.

**MARYLAND** POPULATION According to the Fourteenth Census, the population of the State on Jan. 1, 1920, was 1,449,661. The estimated population on July 1, 1928, was 1,616,000. The capital is Annapolis.

**AGRICULTURE** The following table gives the acreage, production, and value of the principal crops in 1928 and 1929.

Crop	Year	Acreage	Prod. Bu.	Value
Corn	1929	525,000	19,162,000	\$16,867,000
	1928	530,000	19,345,000	17,024,000
Wheat	1929	541,000	9,468,000	11,172,000
	1928	530,000	8,745,000	11,106,000
Hay	1929	423,000	652,000 *	8,919,000
	1928	413,000	759,000 *	10,239,000
Tobacco	1929	32,000	25,600,000 *	6,018,000
	1928	31,000	28,460,000 *	5,586,000
Potatoes	1929	40,000	4,000,000	4,800,000
	1928	47,000	5,405,000	2,702,000

	1928	10,000	1,500,000	1,200,000

\* Tons    † Pounds

**MINERAL PRODUCTION** Coal continued in 1927 to hold the most important place in the list of the State's mineral products, and furnished over one-fourth of the entire value of yearly mineral production. The quantity of coal mined in 1928 was 2,686,979 short tons, to the value of \$4,954,000. In 1927 were mined 2,814,842 tons, having a value of \$5,817,000. Next in importance were the State's clay products. These reached, for 1927, the value of \$2,503,935, for 1928, \$6,073,247. The decline for 1927 was more apparent than actual, for the figures relating to 1927 did not include the value of pottery, which had been included in those for 1926. The production of pig iron, though secondary, was on the increase, attaining 845,564 long tons for 1927 and 971,832 for 1928. Stone production was 1,124,110 short tons for 1927, 1,432,290 for 1926, in value, \$2,039,243 for 1927 and for 1926, \$2,117,102. Sand and gravel contributed materially to the total value of minerals produced, which was \$20,469,294 for 1928 and \$24,066,966 for 1926.

**TRANSPORTATION** The total number of miles of railroad line under operation on Jan. 1, 1929, was

1427 35 There was no reported construction of new line in 1929

**MANUFACTURES** According to the biennial Federal Census of Manufactures published by the Department of Commerce in 1929 and relating to operations of 1927, there were in the State, in 1927, 3205 manufacturing establishments. These employed 171,111 wage earners, whose wages for the year totaled \$141,902,797. Materials and supplies used in production cost \$564,120,437. Manufactured products attained the combined value of \$943,410,896.

**EDUCATION** The State made in 1929 what Superintendent of Schools Cook, in the *Journal of the National Education Association*, called its first adequate appropriation for the Maryland Teachers' Retirement Fund. The number of persons of school age (5 to 18 years) in the State, in the academic year 1928-29, was given as 425,114. There were enrolled in the public schools 273,532 pupils. Of these, 233,599 were in elementary, and 39,933 in high-school-grades. Expenditures for public-school education were current, \$17,777,827, total, including debt service and outlay, \$22,752,686. Salaries of teachers, by the year, averaged \$1470.

**CHARITIES AND CORRECTIONS** The Department of Charities and Corrections, the central organization of the State with regard to authority over institutions for the care and custody of individuals, supervises institutions, public and private, investigates applications for State aid, and administers certain of the laws covering the placement of children. Not to count State-aided institutions, there were in 1929 the following institutions supported entirely by State appropriations: Maryland Penitentiary, Baltimore; House of Correction, Jessups; Crownsville State Hospital, Crownsville; Eastern Shore State Hospital, Cambridge; Rosewood State Training School, Owings Mills; Spring Grove State Hospital, Catonsville; Springfield State Hospital, Sykesville; Maryland Tuberculosis Sanatorium, Henryton; and Mount Wilson (two branches). Maryland School for the Deaf, Frederick; Maryland Training School for Boys, Loch Raven; Montrose School for Girls, Woodensburg.

**LEGISLATION** The State Legislature convened in regular biennial session in January and adjourned April 1. There was enacted a bill authorizing the State to issue \$4,000,000 of its bonds to defray the cost of certain important pieces of contemplated road construction, including the widening of the Washington-Baltimore Boulevard. A measure for the recodification of the tax laws was passed. The State adopted a system of inheritance tax that concurred with the Federal system and thus came under the benefit of the Federal provision for the repayment of inheritance-tax receipts to the States, up to 80 per cent. Among measures affecting the State debt, additional to the main highway bond measure, were those authorizing \$1,500,000 of bonds for bridge construction, \$1,500,000 to match Federal contribution to post-road construction and \$3,761,000 as a general construction loan. It was prohibited by act to introduce evidence illegally obtained, in the prosecution of misdemeanors in the State courts. Provision was made for the vocational rehabilitation of the disabled. A tax of 2½ per cent on gross receipts was removed from the outright banking part of the business of trust companies.

A State waterfront commission was created,

with the duty to study means for preventing erosion and other deterioration of waterfront property in the State. The establishment of credit unions was permitted. Dealers in foods were enabled to take liens on the wages of non-paying purchasers, up to 10 per cent of such customers' wages. The city of Baltimore was authorized to reduce the tax on gross receipts of the United Railways, and borrowing authority sought by the city was granted, as to \$2,000,000 for building and maintenance of streets and \$1,500,000 to provide school facilities for handicapped children. A measure to put an end to the payment of informers' fees in all sorts of cases save for infraction of the fish and game laws was enacted, but vetoed. Vetoed also was a bill for the regulation of commission merchants dealing in farm products.

**POLITICAL AND OTHER EVENTS** Promise of an end to what had been known as "the oyster war" was brought by the attainment in July of an understanding between Maryland and Virginia on the subject of the respective rights of the two States in the oyster fisheries of adjacent waters. Governor Ritchie's budget provided a moderate sum for State aid to the projected construction of an \$11,000,000 bridge over Chesapeake Bay from Annapolis, by a private company. The projected bridge over the Potomac from Great Falls, Maryland, to a point in Fairfax County, Virginia, received the approval of the War Department in May. At Bethesda, in April, was unveiled the easternmost of the series of 12 statues, spanning the country, to the pioneer mothers of the days of migration by wagon.

At Baltimore was celebrated, September 12-15, the 200th anniversary of the founding of the city. The ceremonies included a military parade, a historic pageant and procession, and a concert at the Stadium. A new terminal of the Western Maryland Railway Company at McComas Street was opened in September. It was constructed by the Port Development Commission of Baltimore, at a cost of \$8,500,000, as part of its programme of \$50,000,000 of expenditure for port improvements, and was leased to the railroad. A plan was prepared in September, by which the Pennsylvania Railroad was to obtain a franchise needed for the execution of improvements connected with the electrification of its line and the construction of new tunnels, the plan included a new station.

**OFFICERS** Governor, Albert C. Ritchie, Secretary of State, David C. Winebrenner, 3d; Treasurer, J. M. Deuns, Auditor, Edmund R. Stewart, Comptroller, William S. Gordy, Jr., Attorney-General, T. H. Robinson, Superintendent of Schools, Albert S. Cook.

**JUDICIARY** Court of Appeals, Chief Judge, Carroll T. Bond, Associate Judges, John R. Pattison, T. Scott Offutt, William H. Askins, Francis N. Parke, Hammond Urner, W. M. Digges, D. Lundy Sloan.

**MARYLAND, UNIVERSITY OF.** A coeducational, State institution of higher learning at College Park and Baltimore, Md., founded in 1867. The enrollment for the autumn term of 1929 was 2683, distributed as follows: Agriculture, 146, arts and sciences, 613, dentistry, 349, education, 132, engineering, 271, graduate school, 117, home economics, 73, pharmacy, 355; law, 104; medicine, 419; and nursing, 104. The enrollment for the 1929 summer session at College Park was 721. The faculty in 1929 num-

hered 524 The total income from appropriations and other receipts amounted to \$2,415,728. The library contained 56,821 volumes. During 1929 a new dental and pharmacy building, costing with equipment more than \$500,000, was erected. President, Raymond A. Pearson, D. Agr., LL.D.

**MASSACHUSETTS. POPULATION** According to the Fourteenth Census, the population of the State on Jan. 1, 1920, was 3,852,356. The population by the State census of 1925 was 4,144,205. The estimated population on July 1, 1928, was 4,290,000. The capital is Boston.

**AGRICULTURE** The following table gives the acreage, production, and value of the principal crops in 1928 and 1929:

Crop	Year	Acreage	Prod Bu	Value
Hay	1929	478,000	705,000	\$13,442,000
	1928	472,000	782,000	13,889,000
Oranberries	1929	18,900	395,000	5,234,000
	1928	18,900	385,000	5,025,000
Tobacco	1929	7,400	10,730,000	4,764,000
	1928	7,800	9,468,000	3,227,000
Corn	1929	42,000	1,638,000	2,211,000
	1928	45,000	1,890,000	2,457,000
Potatoes	1929	14,000	1,862,000	3,352,000
	1928	15,000	1,620,000	1,458,000

\* Tons    \* Barrels    \* Pounds

**MINERAL PRODUCTION** Stone continued the leading mineral product with regard to yearly value extracted. There were produced in 1927 2,629,890 short tons of stone, in value \$7,291,969, for 1926 the quantity was 2,089,340 tons, the value, \$6,216,793. The lime production was 189,343 short tons for 1927, in value \$2,325,031. It declined to 163,000 tons (estimated) for 1928, valued at \$1,954,000 (estimated). Sand and gravel also were produced in considerable amounts and the needs of the large cities supported an important coking industry. The clay products of the State attained for 1927 the value of \$2,398,474, for 1926, of \$3,971,586. The total value of the mineral product of the State was, for 1927, \$16,295,373; for 1926, \$16,786,577.

**FINANCE** State expenditures in the year ended November 30, 1928, as reported by the U. S. Department of Commerce, were: for maintenance and operation of governmental departments, \$41,533,191 (of which \$2,519,981 was for local education), for conducting public-service enterprises, \$184,281, for interest on debt, \$1,466,824, for permanent improvements, \$8,585,695, total, \$51,769,991 (of which \$12,376,511 was for highways, \$6,570,751 being for maintenance and \$5,805,760 for construction). Revenues were \$59,348,470. Of these, property and special taxes formed 47.9 per cent, departmental earnings and remuneration for officers' services, 7.0, sale of licenses, 28.1. The State funded debt of November 30, 1928, was outstanding, \$36,190,313, net of sinking funds, \$20,439,543; it included \$8,346,000 of highway and harbor-improvement debt, but did not include the contingent debt resting directly on cities of the metropolitan district. On a property valuation of \$7,161,309,871, there were levied in the year State taxes of \$8,500,000.

**TRANSPORTATION** The total number of miles of railroad line under operation on Jan. 1, 1929, was 2014.75. There was no reported construction of new line in 1929.

**MANUFACTURES** According to the biennial Census of Manufactures published by the U. S. Department of Commerce in 1929, there were in the State, in 1927, 10,037 manufacturing establishments. These employed 578,068 wage earners,

whose wages for the year totaled \$705,929,549. Materials and supplies used in manufacture cost \$1,678,812,411. The manufactured products attained the total value of \$3,317,851,888. For the year 1928, the Massachusetts Department of Labor and Industries reported that manufacturing establishments numbered 9971, wage earners employed by them, 540,927, that wages paid totaled \$670,003,291, that materials used cost \$1,663,155,564, and that the manufactured products attained \$3,224,227,651.

**EDUCATION** It was required by a regulation of the Board of Education that those seeking a diploma to teach in the State, by study in the State normal schools, must take at least a three years' course in order to qualify. The maximum level of retirement pensions for public school teachers was raised by enactment. There were enrolled in the public schools, in the academic year 1928-29, 744,246 pupils, and the average membership for the year was 699,071 pupils. Of those enrolled, 521,868 were in elementary, 92,452 in junior high, and 129,926 in high-school grades. Expenditure for public-school education totaled \$78,351,194. The yearly salaries of teachers, principals, and supervisors included averaged \$1878.

**CHARITIES AND CORRECTION** Central authority over institutions for the care or custody of individuals was divided among four State bodies under the system that obtained in 1929. The Department of Public Welfare, headed by a commissioner, Richard K. Conant, and an advisory board of seven members, administered mothers' aid and relief to persons without legal settlement. It had care of dependent, delinquent and neglected children. Housing and town planning operations, private charitable corporations, infirmaries, homes for the aged, maternity hospitals and boarding homes for infants came under its supervision. It expended during the year about \$5,000,000 in assistance of various sorts to some 70,000 persons, including 3208 mothers and 9534 children aided under the Mothers' Aid Law. It had 6135 State minor wards in its custody on December 1, and exercised parole functions over 3152 children from the State training schools. State institutions under its control, with their populations of Dec. 1, 1929, were: State Infirmary, Tewksbury, 2606; Massachusetts Hospital School, Canton, 272; Lyman School for Boys, Westborough, 506; Industrial School for Girls, Lancaster, 293; Industrial School for Boys, Shirley, 295. Under the Department of Mental Diseases were insane hospitals at Worcester, Taunton, Northampton, Danvers, Westborough, Medfield, Palmer, and Boston, likewise State schools at Waltham, Wrentham, Griffin and Belchertown. The Department of Public Health supervised State sanatoria at Rutland, North Reading, Lakesville, and Westfield and the Norfolk State Hospital. The Commissioner of Correction had charge of the State Prison, Charlestown, Reformatory, Concord Junction, Reformatory for Women, Frammingham, State Farm, Bridgewater.

**LEGISLATION** The Great and General Court of Massachusetts convened in its 146th session on January 2 and adjourned on June 8. Its prolonged session was largely taken up with the disposition of the municipal-railway problem of Boston and with other concerns of that city. The Boston Elevated bill, passed in the closing hours of the session, created a metropolitan transportation district, composed of the com-

munities served by this railway system, including Chelsea and Revere. It provided as the ruling council of this district a body made up of mayors and of chairmen of boards of selectmen, and allowed each community one vote for every \$100,000,000 of valuation, administrative direction was to be by a board of 5 unpaid trustees. The district was to take over the Boston subways, subject to consent of the Mayor and Council of Boston, and to acquire from the State the Cambridge tunnel. The disposal of the Boston Elevated was left to determination by a referendum among the voters of the district, to be held in 1930, on the triple proposal of return to private control, extension of public control, or public ownership. Another act made provisions for an East Boston vehicular tunnel, to cost \$16,000,000. A city traffic commission and a Board of Port Authority for Boston were established. The expenditure of \$5,000,000 was authorized for addition to the Suffolk County Court House. The report of a special interim commission on the tax system was received, but the legislators took no conclusive tax action, as plans for a graded income tax, which was contemplated, were judged to require constitutional amendment, thus calling for preliminary passage of amendment proposals by two legislatures, whereas the same Legislature was to sit again in 1930 in any case. There was passed, over the Governor's veto, an increase of salaries of the members of the General Court to \$2000 a year, from \$1500. In the field of traffic regulation, there was passed a Right of Way Act giving the right of way at intersection to the vehicle first entering a prescribed intersection space, and thus varying from the general rule elsewhere giving right of way to the vehicle from the right. In the social field, an act rendered future assignments of wages invalid unless accepted in writing by employers. An attempt to enact a non-contributory old-age pension failed. Automobile drivers who had caused fatal accidents were debarred from obtaining operating licenses for ten years, and upon the occurrence of a second such accident, permanently. The pollution of beaches by the discharge of petroleum or other oil was rendered subject to a fine of \$500. A State industrial commission, with duty to promote industrial advancement, was created.

**POLITICAL AND OTHER EVENTS** In the municipal elections of November 5, James M. Curley, Democrat, was for the third time elected Mayor of Boston, defeating Daniel H. Coakley and the candidate of the Good Government Association, Frederick W. Mansfield. In Cambridge, Richard M. Russell was elected mayor, defeating Mayor Quinn, who had served seven terms. A movement was undertaken after the retirement of Calvin Coolidge from the Presidency to have him made United States Senator from Massachusetts, and Senator Gillett expressed his readiness to retire from his seat if Mr. Coolidge would become a candidate for it in 1930. Mr. Coolidge did not express himself as favoring the proposal. Opponents of the State prohibition law gathered signatures well in excess of the required 20,000, to a petition for Legislative action or, alternatively, a State referendum on its repeal in 1930. The petition was filed with the Secretary of State. The spirit of antagonism between the liberal and the stricter element in the population was evidenced on March 17, when Senator Heflin of Alabama, visiting Brockton to address a local

branch of the Ku Klux Klan, was jeered and pelted with mud.

Difficulties over the administration of the State law imposing compulsory automobile insurance took the form of increase in the insurance rates, imposed by the Insurance Commissioner. The insuring companies, though dissatisfied with the working of the law, opposed the effort of the Registrar of Motor Vehicles to obtain by petition a direct vote of the people on a plan to establish direct State insurance. A decision of the United States Supreme Court, rendered on May 27, found against Massachusetts, with regard to its method of reckoning corporations' income from tax-free securities, in computing their levies under the State's corporate excise tax. The Legislature's commission on taxation prepared a report summarized as altering the fiscal system in many respects and particularly as striving to extend the taxation of intangible property.

In Boston the activities of the Watch and Ward Society and of others favoring a strict repression of publications and plays deemed obscene continued. Voltaire's *Candide* was excluded as not a fit book for sale. The July issue of *Scribner's Magazine* was barred from sale. A production of the play *Strange Interlude* was forbidden and the production was removed to Quincy. A criminal conviction was imposed on a bookseller in December by an East Cambridge court for selling a book by D. H. Lawrence. Work on the tunnel under the towns of West Boylston, Holden, Rutland, and Oakham, to carry water to the Metropolitan District water system from the Ware and Swift rivers progressed, at the end of July, 9 miles of this tunnel were reported as having been dug and cement-lined. Connecticut, in its effort to prevent the diversion to this tunnel of water that would otherwise pass down the Connecticut River, sued for an injunction from the United States Supreme Court to prevent the board of Army Engineers from approving the diversion, but the Court refused, in April, to enjoin.

**OFFICERS** Governor, Frank G. Allen, Lieutenant-Governor, William S. Youngman, Secretary of the Commonwealth, Frederic W. Cook, Treasurer, John W. Haigis, Auditor, A. B. Cook, Attorney-General, Joseph E. Warner, Commissioner of Education, Payson Smith, Commissioner of Public Welfare, Richard K. Coiant.

**JUDICIARY** Supreme Judicial Court Chief Justice, Arthur Prentice Rugg, Associate Justices, John Crawford Crosby, Edward Peter Pierce, James Bernard Carroll, William C. Waite, George A. Sanderson, Fred Tarbell Field.

**MASSACHUSETTS AGRICULTURAL COLLEGE.** A State institution for agricultural training in Amherst, Mass., founded in 1867. The enrollment for the summer session of 1929 was 152 students and for the autumn of 1929, 592 students, distributed as follows: Seniors, 115, juniors, 115, sophomores, 160, freshmen, 200, specials, 2. There were 190 faculty members, including 108 resident-teaching, 60 experiment-station, and 22 extension-service, members. The income for 1929 was received from the following sources: State appropriation, \$992,910, Federal appropriation, \$161,958, and endowment and trust funds, \$139,260. There were 90,000 volumes in the library. The curriculum was re-organized in 1929 on the basis of five major fields of specialization: Agriculture, horticulture, home

economics, physical and biological sciences, and social sciences. A new building was constructed as a laboratory for horticultural manufactures, and the alumni of the college conducted a campaign to raise \$350,000 with which to build a physical education building. President, Roscoe W. Thatcher, D. Agr., LL.D.

#### MASSACHUSETTS BAY TERCENTENARY. See CELEBRATIONS.

**MASSACHUSETTS INSTITUTE OF TECHNOLOGY.** A nonsectarian institution for technical education in Cambridge, Mass., founded in 1861. The enrollment for the autumn of 1929 was 3006, including 445 graduate and eight unclassified students. For the summer session, the enrollment was 1571. There were 220 members of the faculty and 295 others on the staff of the institute. The productive funds amounted to \$30,100,000, and the income for the year was \$3,275,000 received from various sources, as follows: Funds, \$1,675,000; student fees, \$1,175,000; miscellaneous, \$425,000. The book value of land and buildings in Boston and Cambridge was \$13,863,000. The library contained 260,000 volumes. An aeronautical engineering laboratory was completed in 1929. President, Samuel Wesley Stratton, D. Eng., D. Sc., LL.D., Ph.D.

**MATERNITY PROTECTION.** It will be interesting to watch the progress of this work in each State of the United States, with the lapse of the Shepherd-Towner Act in 1929. These columns have reviewed annually the activities of local units in the protection of mothers and infants, made possible as a result of the Federal grants-in-aid. Under the Shepherd-Towner Act, 45 States and Hawaii were matching the appropriations of the Federal Government for the creation of health centres, visiting-nurse services, conferences, and demonstrations. The Children's Bureau, in reviewing the history of the act up to the close of the fiscal year 1928, sees the tendency increasing of putting the maternity and infancy work on a permanent, locally-supported county-wide basis. If this is an indication, it is possible to predict that the removal of Federal aid will not cause the abrupt cessation of one of the most important pieces of social work undertaken by public authority in recent years. The Children's Bureau finds that during the year 1927-28, 211 new counties inaugurated programmes and 171 counties in 23 States underwrote their programmes from their own local funds. During the period being reviewed, 29 States reported that nurses were working in counties, communities, or cities. As a result of the fiscal decentralization above referred to, the establishment of permanent centres for prenatal and child care in smaller communities has resulted. During the fiscal year 1927-28, 322 new permanent centres were established in which facilities for prenatal and child-health work were being provided. More than 313,000 infants and pre-school children and more than 20,000 expectant mothers were examined by physicians, dentists, or nurses at the various types of conferences held in the 45 States and the Territory of Hawaii, cooperating under the Maternity and Infancy Act.

In addition, the work performed included more than 700,000 visits of instruction to homes by nurses, the distribution of more than 6,000,000 pieces of health literature, the delivery of more than 23,000 talks on health subjects, and the creation of a large number of formal classes

for adults and young girls for instruction in subjects relating to maternal and infant care. In Pennsylvania, 19,219 children were examined at conferences, in New York, 13,841. In Alabama, Indiana, New Jersey, North Carolina, and Utah, more than 10,000 children were examined. In New York, 4324 expectant mothers were examined, while Georgia was second, with the examination of 2998. The work has enlisted a large roll of full-time paid and volunteer workers. In the 45 States and Hawaii cooperating under the act, the total number of workers was 1000, of whom 353 were full-time paid employees. Twenty States reported 7000 volunteer assistants, including physicians, nurses, dentists, and lay persons.

An interesting development under the programme has been the preoccupation by most of the States with the problems presented by special groups in the community. Michigan, New Jersey, New York, and Pennsylvania concerned themselves with the regulation and supervision of white midwives working among immigrant mothers. In Rhode Island, staff workers met incoming steamers and created contacts with newly arriving foreign mothers and babies. In the Southwest, special attention was being paid to the problems presented by the growing Mexican populations. In Arizona, New Mexico, California, and Texas, by the dissemination of texts in Spanish and through visiting nurses, Mexican groups were being served in larger numbers. Certain States have done special work with Indian groups in cooperation with the United States Indian Service. In Hawaii, health conferences at the clinics that have been established have succeeded in reaching the following groups: Hawaiians, Filipinos, Japanese, Chinese, Portuguese, and Americans. Almost all of the States having Negro populations have inaugurated programmes for the improvement of the hygiene and care of Negro mothers and babies. Negro midwives have been instructed and supervised, and visiting Negro nursing services have aided greatly in the raising of the living, sanitation, and health standards among their own people.

**SPAIN.** In March, 1929, a decree was issued establishing a compulsory maternity insurance system in this country. Under it, women during confinement were to receive medical attention, maternity and welfare institutions for their service were to be maintained, and provision was included for the granting of allowances to women during the compulsory period of rest preceding and following confinement. The beneficiaries, under the decree, are all female wage earners who are subject to the compulsory old-age pension insurance act. The benefits include medical attention and cash benefits to be paid for six weeks before and six weeks after confinement. Cash benefits are made only in the cases of those persons who have been insured for at least 18 months under the old-age-pension system. The maternity insurance system was to be built up from contributions made by each insured woman, by the employers, and by State subsidies.

**MATTHEWS, math'uz (JAMES) BRANDER.** American critic, author, and educator; born in New York City, Mar. 31, 1829. He was born in New Orleans, La., Feb. 21, 1852, and was graduated from Columbia College in 1871 and from the Columbia Law School in 1873. Admitted to the bar in 1873, he practiced law for two years before turning to writing. From 1892 to 1900, he

was professor of literature at Columbia University, and from 1900 to his retirement in 1924, professor of dramatic literature. It was in this field that Professor Matthews later was best known. At Columbia University, there is the Brander Matthews Dramatic Museum, a collection made by him of model stage sets showing the history and progress of the drama. He spent much time in London and Paris, being as familiar with the drama of these cities as with that of his own New York. He was considered an authority on French drama and wrote *French Dramatists of the Nineteenth Century* (1881) and *The Theatres of Paris* (1880). Professor Matthews did much of his writing in the late Victorian period, having as friends William Dean Howells, Rudyard Kipling, Mark Twain, and others of that day. His name is associated with a number of literary movements. He was one of the founders of the Authors Club and of the Players Club, and an organizer of the American Copyright League. During 1922-24 he was chancellor of the American Academy of Arts and Letters and in 1906, first chairman of the Simplified Spelling Board. The French Government bestowed upon him the ribbon of the Legion of Honor in 1907 and made him an officer in 1922. His works include *Americans and Britishisms* (1892); *Aspects of Fiction* (1896, rev. in 1902); *An Introduction to the Study of American Literature* (1896); *His Father's Son*, a novel (1895); *Vignettes of Manhattan* (1894); *Studies in Local Color* (1898); *A Confident To-morrow* (1900); *Margery's Lovers* (1884); *In the Vestibule Lined* (1892) and *The Decision of the Court* (1893), comedies, *Parts of Speech, Essays on English, The Philosophy of the Short Story* (1901), *Actors and Actresses of the United States and Great Britain* (5 vols., 1886), with Laurence Hutton, *The Development of the Drama* (1903), *The Short Story* (1907), *Americans of the Future and Other Essays* (1909), *Moliere His Life and Works* (1910), *Shakespeare as a Playwright* (1913), *On Acting* (1914), *The Oxford Book of American Essays* (1914), *These Many Years* (1917), *Playwrights on Playmaking* (1923).

**MAURITANIA.** A French colony in French West Africa, consisting of eight districts; having the status of a colony since Jan. 1, 1921. Area, 347,400 square miles, native population, 289,184, mostly Moorish Mohammedans, European population, about 300. The budget for 1927 was 11,725,800 francs. The colony is under a lieutenant-governor, subject to the Governor-General of the French West Africa. Lieutenant-Governor in 1929, M. Choteau, appointed in 1928. See FRENCH WEST AFRICA.

**MAURITIUS,** *ma-ree'ee-us*. An island possession of Great Britain in the Indian Ocean situated 500 miles east of Madagascar. With its dependencies of Rodrigues, Diego Garcia, the St. Brandon group of six islands, and other small islands, it forms a colony of the British Crown. Area of Mauritius, about 720 square miles, population, according to the census of 1921, 385,074. The estimated population in 1927 was 401,693. Capital, Port Louis, with a population of 54,114 in 1927 (including suburbs). In recent years the greater part of Port Louis has passed from the hands of the Europeans to Asiatic or Chinese hands. The movement of population in 1927 was Birth rate, 36.7 per thousand (exclusive of Indians), death-rate, 23.6 per thousand (also ex-

clusive of Indians). Primary education is free but not compulsory. At the end of 1927 there were 57 government schools, 94 aided schools, and 3 technical schools. The average attendance in government schools in 1927 was 9861, in aided schools, 13,370, more than three-fourths of whom were in Roman Catholic schools. In 1927 the exports were valued at £3,774,203 and the imports at £3,679,042. The staple exports are sugar, copra, aloe fibre, and coconut oil. The principal participants in the foreign trade are the United Kingdom, India, and Burma. Revenue in 1920-27, 14,682,807 rupees, expenditure, 16,461,002 rupees (one rupee exchanged at \$0.363 in 1927). Vessels entered in 1927, 224 of 622,936 tons, vessels cleared, 226 of 625,524 tons. Railway mileage, 144, of which 24 miles are narrow gauge. There is cable connection with Australia, South Africa, and the islands of Madagascar, Zanzibar, and Réunion. The colony is under a governor aided by an executive council and a council of government, the latter having a minority of elected members. The Governor in 1929 was Sir Herbert James Read.

**MAX,** *mak's*, PRINCE OF BADEN. A German statesman, died in Constance, Germany, Nov. 5, 1929. He was born in Baden-Baden in 1867, studied law and entered the army, from which he retired without active service. From 1907 to 1918, he was president of the First Chamber of the Baden Diet. In October, 1918, with collapse threatening the country, he was called to be Chancellor of Germany, a post which he held for five weeks. He it was who signed the request for the Armistice and proclaimed the Kaiser's abdication. He was bitterly attacked by Nationalists for having acted with undue haste. In his *Reminiscences and Documents* (1927, Eng. trans., 1928), he sought to defend himself against the charges made by Ludendorff and other monarchists.

**MAXWELL,** *ANNA CAROLINE*. An American superintendent of nurses and hospital organizer, died Jan. 2, 1929, in New York City, and buried with military honors in Arlington National Cemetery in Washington. She was born in Bristol, N. Y., Mar. 14, 1851, and entered the nursing profession about 10 years after the Civil War. She had her first training in the matron's course at the New England Hospital in Boston, and later studied at the Boston City Hospital. In 1881 she assumed charge of the training school for nurses at the Massachusetts General Hospital, remaining there for eight years. She established in 1892 the Presbyterian Hospital School of Nursing in New York City, and was at its head until her resignation in 1921. During the Spanish-American War, Miss Maxwell received the title "The American Florence Nightingale" because of her work in connection with epidemics in the war camps. She was herself director of the staff of nurses at Chickamauga Park, Ga. When the American Red Cross was re-organized shortly after this, she was active in securing the inclusion of nurses in the work of the society. At the time of the World War, she was in charge of the Presbyterian Hospital overseas unit and went twice to France to aid in organizing the nursing service of the A. E. F., for which she was decorated with the Médaille d'Hygiène Publique by the French government. The nurses home of the Medical Center, opened in New York City in 1928, was named the Anna C. Maxwell Hall as a tribute to her service.

**MAXWELL, GEN., THE RT. HON. SIR JOHN GREENFEL** English army officer, died Feb. 21, 1929, in Cape Town, South Africa. He was born July 12, 1859, was educated at Cheltenham College, and in 1879 joined the 42d Highlanders. He served in the Egyptian War of 1882 and was staff captain in the Nile Expedition in 1884-85. With the Egyptian Field Force in 1885-86, he was present at the engagement at Gimis, where he won the D. S. O. He commanded the 14th Brigade in South Africa in 1900-01, where he was also Military Governor of Pretoria. For this service, he was twice mentioned in despatches, won the King's and Queen's medals, and was made Knight Commander of the Bath and Commander of St. Michael and St. George. In 1908-12 he commanded the English Forces in Egypt, and again in 1914-15, the opening years of the World War, for which he was made Knight Commander of St. Michael and St. George. On his return to England in 1916, Sir John was made commander-in-chief of the Forces in Ireland, with full powers as a military governor, to put down the Sinn Féin Rebellion. His fearless and severe methods restored order in Dublin within a week and he was made Knight of the Grand Cross of the Bath. From 1916 to 1919, he was commander-in-chief of the Northern Command, and in 1920 he was a member of Lord Milner's mission to Egypt. In 1922 he was promoted to the rank of general and retired. His long and successful career as a soldier brought him honors and decorations from several European countries.

**MAYBACH, M<sup>r</sup>DR., WILHELM** A German engineer and inventor, died Dec. 29, 1920, in Stuttgart. He was born Feb. 9, 1846, in Heilbronn. From 1872 to 1882, he was at the head of the construction department of the Deutz Gas Engine Works. Associated there with the inventor Daimler, he made several contributions to internal-combustion-engine and motor-car development, among them a design for a benzine-driven engine (1874). Taking over the technical management of the Daimler Motor Company at Daimler's death in 1900, he built the Mercedes car (1901), in which he made a number of improvements. He retired from the motor-car industry in 1907. Associated later with Count Zeppelin in the building of airships, Maybach made an important contribution in the 12-cylinder airship motor constructed with the aid of his son Karl. The Maybach engines were used in airships during the World War. It was the engine used in the Graf Zeppelin in its round-the-world flight in 1929.

**MAYNARD, CHARLES JOHNSON** American ornithologist, died Oct. 15, 1929, in West Newton, Mass., where he was born May 6, 1845. He was educated at the common schools and began the study of nature on his mother's farm when a child. In 1875 he was elected vice president of the Nuttall Ornithological Club of Cambridge, Mass., and was the founder and editor of the *Nuttall Bulletin*, an ornithological paper. From 1910 to 1919, he was instructor of economic bird study in the Massachusetts Agricultural College. Mr. Maynard's special field of investigation was the vocal organs of birds, the discovery of the vocal organs of the American bittern being attributed to him. He was the author of a number of books growing out of his work, among them *Naturalists' Guide, Birds of Eastern North America, Bulletin of New England Field Directory of the Birds of Eastern North America,*

*Atlas to the Directory of the Birds of Eastern North America; Records of Walks and Talks with Nature* (12 vols.).

**MAYOTTE (ma-yô't')** AND COMORO ISLANDS. An archipelago midway between Africa and the northern end of Madagascar, belonging to France and administered by the Governor-General of Madagascar. Total area, about 790 square miles, population in 1921, 109,860, in 1925, 119,305. The area of Mayotte is 140 square miles, and the population (1925) about 12,674. Vanilla is one of the chief products, others are sugar, cacao, aloes, and perfumes. The chief imports are cotton fabrics, metals, and rice; the principal exports, hides, sugar, copra, and vanilla.

**MEASLES.** Professor Fischl of Prague having expressed the opinion that the disease, measles, may have undergone some changes in its type, a number of distinguished pediatricians were interviewed and their opinions were published in the *Deutsche medizinische Wochenschrift* for September 20. Fischl believes the disease to be milder than formerly and sometimes without rash, contagion is less marked, there are more abortive cases. Most of the opinions are adverse, no such changes in type having been observed while others partially support Fischl's claims. Klotz of Lubeck no longer sees a 3- to 5-year recurrence of measles incidence such as formerly obtained, but otherwise notes no differences. Fischl sums up the change of type in the words, "Measles has changed from a facultative to an obligate disease," but none of his colleagues will go so far. The individual variations of incidence may be explained without such a sweeping generalization. The change, if any, may be only transitory and only an observation period of many years could decide so momentous a question. Fischl's views might lead to the abolition of compulsory notification, and he moreover seems opposed to the use of convalescent serum on economic grounds at a time when health officers throughout the world are seeking how to obtain sufficient supplies for control of the disease. The subject of measles pneumonia does not appear to have been included in the discussion.

**MEAT.** See LIVESTOCK.

**MECHANICAL ENGINEERS, THE AMERICAN SOCIETY OF** An organization founded in April, 1880, to promote the art and science of mechanical engineering and the allied arts and sciences. It includes 16 professional divisions organized on the basis of a common interest in a branch of engineering within the scope of the society. Aeronautics, applied mechanics, fuels, hydraulic, iron and steel, machine-shop practice, management, materials handling, national defense, oil and gas power, petroleum, power, printing industries, railroad, textile, wood industries. In 1929, 70 local sections had been established in industrial centres throughout the United States, and 96 student branches had been formed in engineering colleges and technical schools. At the beginning of its new fiscal year on Oct. 1, 1929, the total membership of the society was 19,437.

The fiftieth annual meeting was held in New York City Dec. 2-6, 1929. The discussions at this meeting centred around such topics as hydraulic power, applied mechanics, machine-shop practice, fuels, materials handling, cutting metals, economics of delivery vehicles, mechanical springs, lubrication, steam-tables research, production management, central-station power, railroads, oil and gas power, boiler-feedwater studies, acro-

nautics, textiles, rail-motor cars, refrigeration, furniture production, education and training for the industries of non-college type. The celebration of the fiftieth anniversary of the founding of the society was to be held April 5-9, 1930, in New York City at the headquarters of the society and at the offices of the *American Machinist*, in Hoboken, N. J., at the Stevens Institute of Technology, its birthplace, and in Washington.

In association with representatives of many other organizations, a large number of members of the society have contributed to the advancement of the profession through the work of the technical committees on power test codes, boiler codes, standardization, safety, and research, all of which cover the field of mechanical engineering in its broadest aspects. During 1929 eight standards and codes were completed and issued in pamphlet form. Other publications of the society were *Mechanical Engineering*, the monthly journal, *Transactions*, containing the year's papers of specialized interest and issued yearly in 36 sections, the annual *Record and Index*, containing annual reports, necrology, and an index to all publications of the society for the year, the *Engineering Index*, a comprehensive index to the engineering literature of the world, *Mechanical Catalogue*, formerly the Condensed Catalogues of Mechanical Equipment, and the *A S M E News*, the semi-monthly newspaper. Among the books published under the auspices of the society during 1929 were *Hydraulic Laboratory Practice*, edited by John R. Freeman, *Dictionary of Aeronautical Terms*, *Biography of Robert Henry Thurston*, by W. F. Durand, and the *Lincoln Arc-Welding Prize Papers*.

The officers and council members elected for 1930-31 were President, Charles Piez, past presidents, W. F. Durand, W. L. Abbott, Charles M. Schwab, Alex. Dow, Elmer A. Sperry, vice presidents, Robert L. Daugherty, William Elmer, Charles E. Gorton, Paul Doty, Earnest L. Jahneke, Conrad N. Laner, Ralph E. Flanders, managers, Frederick H. Dorney, William A. Hanley, Harvey N. Davis, Charles M. Allen, Robert M. Gates, Ely C. Hutchinson, James D. Cunningham, Clarence F. Hirschfeld, Harold V. Coes, treasurer, Erik Oborg, secretary, Calvin W. Rice. Headquarters are at the Engineering Societies Building, 29 West 39th Street, New York City.

**MEDARY**, MURTON BENNETT. American architect, died in Bala, Pa., Aug. 7, 1929. He was born in Philadelphia, Feb. 6, 1874, and in 1890-91 was a student at the University of Pennsylvania. From 1895 to 1905, he was associated with Field & Medary, architects. During 1905-10 he practiced alone, and in 1910 entered the firm of Zantzeiger, Borie & Medary. He was appointed a member of the National Commission of Fine Arts by President Harding in 1922, and a member of the National Capital Park and Planning Commission by President Coolidge in 1926. Secretary Mellon appointed him a member of the Board of Architectural Consultants of the United States Treasury Department in 1927. He was also consulting architect for Cornell University, Mount Vernon on the Potomac, and the Roosevelt Memorial Association. Mr. Medary was a member of the American Institute of Architects, of which he was president in 1926-28. In March, 1929, he was presented with the gold medal of the Institute.

**MEDICAL ASSOCIATION, AMERICAN.** A union of the constituent, or State or Territorial, medical associations, founded in 1847 "to promote the science and art of medicine and the betterment of public health." The legislative powers of the association are vested in a house of delegates which is empowered to transact all business not provided for in the by-laws and elects the general officers and the board of nine trustees. Members of the association must be members of constituent associations, and these members, in good standing, constitute the scientific assembly of the American Medical Association, which meets annually to present and discuss subjects pertaining to the science and art of medicine. This assembly is divided into 16 sections, each having its own officers who serve for a year. Some of the sections are practice of medicine, surgery, general and abdominal, preventive and industrial medicine and public health, radiology; nervous and mental diseases, pathology and physiology, obstetrics, gynecology and abdominal surgery, orthopedic surgery, urology, diseases of children, ophthalmology, pharmacology and therapeutics, dermatology and syphilology, and gastro-enterology and proctology.

The 1929 annual convention met in Portland, Oreg., July 8 to 12, with an attendance of about 4000. At this meeting 15 sections of the scientific assembly were in session, and leading authorities and investigators in the field of medical science announced and discussed the latest discoveries and methods in treating the sick. The 1930 annual convention was scheduled to meet in Detroit, Mich., June 23 to 27. The membership of the association in 1929 totaled 96,490. The officers for 1929-30 were President, Malcolm L. Harris, Chicago; president-elect, William Gerry Morgan, Washington; vice president, Ernst A. Sommer, Portland, Oreg.; secretary and general manager, Olin West, Chicago; treasurer, Austin A. Hayden, " and editor, Morris Fishbein, Chicago. The publication is the *Journal of the American Medical Association*. The headquarters of the association are at 535 North Dearborn Street, Chicago, Ill.

**MEDICINE, PROGRESS OF.** The choice of subjects discussed in the present volume is practically the same as in recent years. With a few exceptions, they are diseases, notably those which present problems of public health and organized private benevolence. Subjects outside the domain of disease which receive attention comprise vitamins and internal secretions (see INSULIN, SECRETIONS, INTERNAL, and VITAMINS).

Two articles on surgical subjects are SURGERY AND WOUNDS. Discussions of acute transmissible diseases will be found in articles on BOTULISM, ERYSIPELAS, INFECTION PARATYPHOID, MALT FEVER, MEASLES, MENINGITIS, PNEUMONIA, SMALLPOX, TYPHUS, TYPHOID, TYPHUS, and YELLOW FEVER, while corresponding articles on chronic communicable diseases are LEPROSY, SYPHILIS, TRICHINOSIS, and TUBERCULOSIS. Of chronic diathetic diseases, the following are represented: ANEMIA, PERNICIOUS, CANCER, DIABETES, and RICKETS. There are separate articles on ANGINA PECTORIS, ARTERIOSCLEROSIS, and HEART, DISEASE OF—all of which have to do with the circulatory system, while the nervous system is represented by EPILEPSY and INSANITY.

**APPENDICITIS, GALLSTONE DISEASE, and GOITER** are typical surgical afflictions. The article on **BEBI BEBI** throws doubt on the position of this affliction as a deficiency disease.

**MENINGITIS, EPIDEMIC.** According to editorials in the *Journal of the American Medical Association* for June 15 and August 10, there was an increasing incidence of epidemic cerebrospinal fever on the Pacific coast which may be due to infected passengers on the Pacific steamers. Thus, an outbreak occurred among incoming Filipino steerage passengers although this importation was being prevented by preventive measures by health officers and the steamship companies. The outbreak among the Filipinos could probably be traced to the Shanghai epidemic of the winter and spring of 1928-29. As a result of the steerage outbreak, the steerage capacity of the steamships was reduced 75 per cent, effective in July. Money was needed for increased quarantine facilities in San Francisco and Seattle. Thus far, only American shipping companies were concerned and it remained to be seen what other nations would do in this particular. So rapid are the developments of modern sanitation that it is impossible for private institutions to keep pace with them, especially since it often means more or less hardship and expense.

**MERRILL, GEORGE PERKINS** American geologist, died in Auburn, Me., Aug. 15, 1929. He was born in that city on May 31, 1854, and was graduated from the University of Maine in 1879. He studied in 1879-80 at Wesleyan University, where he was also assistant chemist, and at The Johns Hopkins University in 1886-87. In 1881 he was assistant in the geological department of the U. S. National Museum in Washington, D. C., becoming head curator of geology in 1897. From 1893 to 1915, he was professor of geology and mineralogy at George Washington (formerly Columbian) University. He was expert special agent of the Twelfth Census in stonequarry statistics. His works include *Stones for Building and Decoration* (1891, 3d ed., 1903), *A Treatise on Rocks, Rock-Weathering, and Soils* (1897; 2d ed., 1906), *The Non-Metallic Minerals* (1904, 2d ed., 1910), *The Fossil Forests of Arizona* (1911), *The First 100 Years of American Geology* (1924), contributions to dictionaries and encyclopedias, and scientific papers dealing more particularly with meteorites and petrography.

**MESSAGE, ANDRÉ.** A distinguished French composer and conductor, died in Paris, Feb. 24, 1929. He was born in Montluçon, Allier, Dec.

30, 1853. After graduating from the Ecole Niedermeyer in Paris, he continued to study under Saint-Saëns. In 1874 he became organist at St-Sulpice, then was conductor at Brussels for some time, returning to Paris as organist at St-Paul-St-Louis. The success of several light operas led to his appointment in 1898 as conductor at the Opéra Comique. During 1901-07 he was artistic director at Covent Garden, and from 1908 to 1914, first conductor and, with Broussan, director of the Grand Opéra. In 1908 he also was elected Marty's successor as conductor of the famous Concerts du Conservatoire, with which organization he made a most successful tour of the United States (50 concerts) in 1918-19. On his return to Paris, he resigned the conductorship of this orchestra, was conductor again at the Opéra Comique for one season (1919-20), and then became musical director at the Casino in Cannes. In 1907 he was made an officer, and in 1927, a commander, of the Legion of Honor. As a composer, he cultivated almost exclusively the opera and ballet. His principal operas (premieres at Paris, unless specially noted) are *La Fauvette du Temple* (1885), *La Béarnaise* (1885), *Le Bourgeois de Calais* (1887), *Isoline* (1888), *Le Mari de la Reine* (1889), *La Basoche* (1890), *Miss Dollar* (1893), *Madame Chrysanthème* (1893, Chicago, 1920), *Mirette* (London, 1894), *Le Chevalier d'Hamenthal* (1896); *La Française en Loterie* (1896), *Les petites Michu* (1897), *Comique* (1898), *Les Dragons de l'Impératrice* (1905), *Fortuno* (1907), *Béatrice* (Monte Carlo, 1914), *Monsieur Beaucaire* (Birmingham, April, 1919, New York, December, 1919), *La petite Fonctionnaire* (1921), *L'Amour masqué* (1923).

**METABOLISM STUDIES.** See FOOD AND NUTRITION.

**METALLURGY.** Of chief interest to metallurgists during the year 1929 was the pronounced advance made in the development of new alloys and their adaptation to industry, the wider application of chromium and cadmium plating, and the increasing production and use of zinc of a purity not heretofore attained commercially, a purity that makes possible its use in die casting and for other purposes for which zinc was not hitherto acceptable. The technology of ore dressing, concentration, hydrometallurgy and pyrometallurgy remained substantially unchanged, though numerous advances in the refinements of practice continued to be made.

**ORE DRESSING.** Common practice in primary breaking is divided between the use of jaw crushers and gyrators, with cone crushers or rolls used for reduction from 8 or 10 inches down to less than an inch. Cone crushers are ordinarily used in new installations. For primary grinding, rolls may be used as one stage in the process, though the finely crushed ore is usually next treated in ball or rod mills. For fine grinding, the ball or tube mill has no competitors. Classifiers are ordinarily used in closed circuit with the grinding mills, and screens with the crushing machinery. No new principles have been evolved in the construction of any of these types of machinery, though new attainments in respect of size were reached. For instance, a 54-inch gyratory, weighing 350 tons and with a capacity of crushing 10,000 tons a day to 6 inches was built, the same company also undertaking to build a 56 x 72-inch jaw crusher, next to the largest jaw-type breaker yet constructed. Vibrating screens

with electric vibrating equipment four times as powerful as any hitherto used in mining work were built, and a double-deck screen, with the deck movements opposed and balanced, was put on the market. Heavier wire cloth for screening was developed, both in the finer meshes and for severe service on trommels. Following experimental installations of ball mills 10 feet in diameter, several additional mills of this extreme size were put into operation, and improvements were made in more efficient linings and discharge media. The advantages of bowl classifiers in close sizing of ball mill products were generally realized and their installation was much more common than formerly. The tendency to an increased amount of stage grinding, with classification at each stage, continued, with three stages common in large flotation plants.

Added refinements were made in selective flotation through the use of new reagents, new types of machines, more closely regulated feed, and increased knowledge of the mineralogical composition of the ore to be treated. As reagents, the xanthates of the higher alcohols were coming into use and sulphiding was often resorted to where some of the valuable mineral was oxidized. Or the oxide may first be reduced to metallic copper by heating with salt and charcoal, a process that has been evolved for African use, and flotation subsequently applied. The various patents covering cells in which the air is admitted freely from submerged pipes were combined and the so-called matless cell further developed by one manufacturer with excellent results, though flotation cells with mechanical impellers and with porous canvas mats were still favored by many, even for new installations. In determining the proper flotation treatment of an ore, the microscope was being increasingly used, especially at the larger plants that maintain research staffs. Exceedingly valuable knowledge as to the degree of sulphiding necessary is also thereby gained. A very important factor of flotation pulp, through determination of the so-called pH factor was also becoming general in well-run flotation plants.

**HYDROMETALLURGY** The cyanide process is so well standardized for the treatment of gold and silver ores that little change is registered from year to year. Some amalgamation was still used on free-milling ores, but by far the greater tonnage was leached in cyanide solution and precipitated with zinc dust. Sometimes flotation concentration preceded cyanide treatment, either the concentrate being cyanided or the tailing, in which latter case the concentrate was sent to a smelter. The recovery of cyanide in usable form from waste solutions containing simple alkaline cyanides and alkaline-zinc cyanides was done at several plants, and its recovery from more complex compounds with sulphur and base metals other than zinc was a promising avenue of research already partially explored. Thus may the effect of cyanides be partially overcome.

Of chief interest in the leaching of copper ores is the decision of the Inspiration Company to segregate the sand and slime for separate treatment. Leaching by percolation of the acid through the ore bed will be greatly improved, so far as the sand is concerned, and methods more appropriate to slime treatment, including agitation, can be applied to the other constituent of the ground ore.

Considerable advance was made in treatment

of zinc concentrates, both by hydrometallurgical and pyrometallurgical methods. A new electrolytic plant using the Tainton process was completed at East St. Louis, Ill., during the year, and all refineries brought their commercial product up to a purity of 99.98 per cent or better.

The copper refining capacity of the world further was increased by the building of the Nichols plant at El Paso, Tex., which went into service at the end of 1929, with a capacity of 100,000 tons a year. A new refinery with a capacity of 120,000 tons a year was under construction at Copper Cliff, in Ontario. Both of these plants use the multiple process, a distinguishing feature of the construction being the use of lead-lined reinforced concrete tanks for the electrolytic cells. The tanks at El Paso are built en bloc, while those at Copper Cliff are of sectional construction. Concrete tanks were also finding increasing favor in the new construction at the older refineries.

**PYROMETALLURGY** Reverberatory practice in copper smelting continued to be divided between side and centre charging, though the Carson litigation was at an end and operators were privileged to use either method. Where exceedingly fine material is fed, centre charging is perhaps in better favor than side, owing to the difficulty of keeping such fine material banked along the side walls for their protection. Also, the centre-charged furnace, using a deep bath, results in a somewhat lower copper content in the slag, if properly run. On the other hand, more care must be exercised in the operation of a centre-charged furnace and the side walls of the furnace are of more expensive construction. One company standardized on walls of magnesite brick, with water-cooling. A new furnace at the Calumet & Hecla smelter, for melting native copper ore and concentrate, was 70 x 22 feet inside dimensions, and was charged along the centre line for the entire length, whereas most centre charging was done over only about one-third of the furnace length, as measured from the firing end.

Natural gas has received additional attention as a fuel, inasmuch as it is being piped to smelting and refining centres that formerly depended upon coal or oil for fuel. The Great Falls, Mont., copper refinery succeeded in establishing a successful technique using gas for fuel in the anode and wirebar furnaces, and the El Paso Smelting Works went over to natural gas during the year, for firing its reverberatory furnaces and roasters. The principal problem lay in developing a satisfactory burner suitable for the large volumes of gas that must be used, but this has been solved. A luminous flame is apparently not necessary.

Progress continued to be made in the technique of casting anodes at the copper smelters, rather than melting up cakes of blister at the refineries. One process developed by the Phelps Dodge organization is a continuous process, in which the converter copper is transferred to a heat-insulated vessel, blown and poled to eliminate impurities, and cast into anodes. Other smelters in that district perfected a somewhat different type of procedure. It was the expectation that nothing but anodes would be received at the new El Paso refinery.

One other feature of the furnace work at this refinery is worthy of note. The plan to preheat the air used for combustion. To do so, a portion of the hot exit gases going to the waste-heat boilers were to be bled off to carbonium pre-

heaters. An appreciable saving of the fuel required per ton of copper melted was expected.

Lead smelting developed little that is new, though a better understanding of what goes on in a lead furnace was brought about by the researches of the staff at the U. S. Bureau of Mines station at Salt Lake City. Several detailed studies of lead blast-furnace practice were issued by that station.

Zinc smelters have learned how to handle fine concentrate with little trouble. It is first roasted in multiple-hearth furnaces, then sintered in straight-line Dwight-Lloyd machines, usually by the Baclen process. Dust losses are taken care of, usually, by Cottrell electrostatic precipitation equipment. Retorts are made either of carborundum, clay, or silica flour, each being in favor for certain classes of work. The new vertical continuously operating retorts, known as the Singmaster, Breyer & Bunce furnace, have proved a commercial success, a product of 99.96 per cent purity having been put on the market, produced by the use of this equipment. These retorts are high and of large diameter, built up like a chimney out of carborundum brick. Coke is added to the charge by mixing with the roasted ore, which is then briquetted.

In the realm of iron and steel metallurgy, progress was made in the separation of manganese from iron by the Bradley process, working siliceous manganoferous iron ores, and in concentrating the laterite ores of Cuba. The application of sintering to ore and concentrates continued to increase. The European practice of firing coke ovens with blast-furnace gas alone, thus economizing on the coke-oven gas, was applied commercially at the Chicago plant of the Youngstown Sheet & Tube Co. The trend in blast furnaces toward the large hearth continues, unit furnaces now usually having a capacity of 1000 tons in 24 hours. This is accomplished by providing a capacity of about 30,000 cubic feet between the centre line of the tuyeres and 2 feet below the stock line. Blast-furnace gas has found increasing uses and more attention has been paid to its proper cleaning, involving an increased use of disintegrators. Stove design has improved, with the result that periodical cleaning has virtually been eliminated and automatically controlled high blast temperatures, up to 1600° F., have become usual.

Electric furnaces have not been used to any extent for smelting, except for certain specialized purposes, such as aluminum reduction, but for melting metals and the manufacture of alloys, their use was increasing. In steel metallurgy, an electrode furnace with a capacity of 90 tons was built during 1929, and several induction furnaces. High-frequency induction furnaces are of increasing use in making high-grade alloy steels, and promise to make a better product than the best crucible steel.

Of outstanding interest among the new uses of metals was the attention being paid to rustless or stainless irons and steels. Few industries do not have a corrosion problem, so these new alloys have an exceptionally wide appeal. Most of the stainless steel about which so much has been heard differs from that used in cutlery in its content of nickel, the former well-known stainless steel being merely a high chrome steel. The Krupp Nirossta, however, which is made under licensing agreements by several American steel companies, contains about 8 per cent nickel and

18 per cent chromium, which gives it increased resistance to corrosion, greater toughness and adaptability to cold drawing and rolling. It cannot, however, be tempered. This type of steel received considerable advertising toward the end of the year through its adoption by the Ford company for trim on the new models of its automobiles. It was also being commercially manufactured in the form of cooking utensils. Steels of this type promised to afford a considerable and increasing outlet for both nickel and chromium, the latter being used ordinarily in the form of ferro-chrome, though one company is making chrome irons and steels direct from chrome. Fortunately, ample supplies of both nickel and chrome ores exist to take care of any reasonable demand.

Chromium plating also came to the fore, first for the polished parts of automobiles and more recently for jewelry, specialties, household utensils, and such articles, formerly made of other metals or nickel plated. Chromium plate is somewhat darker than nickel or silver but is extremely hard and is virtually untarnishable.

Cadmium, like chromium, found increasing use as a plating material where rust prevention was advisable, as in bolts and nuts used in automobile construction and other exposed iron surfaces. It is obtained as a by-product in the hydrometallurgy of zinc, and there was some doubt, early in the year, as to whether enough could be produced to supply the demand. Added production of electrolytic zinc, however, apparently met the situation without a price advance that would have limited the popularity of cadmium.

The popularity of non-corrodible metals extended to aluminum, which has been used for exterior ornamentation to a considerable extent on one of the new New York skyscrapers, the Chrysler building, this structure also calling for a large amount of stainless steel. Aluminum paint and aluminum foil have been used to a large extent in the petroleum industry, where its reflective property toward light and heat is valuable, and also its resistance to hydrogen sulphide. The lightness of the metal is an exceedingly valuable quality for many purposes, and this quality of lightness is now being combined with high tensile strength in alloys of the Duralumin type, containing about 90 per cent of aluminum. In this form, it provides a valuable structural metal for the aviation industry and for use in various moving parts where great weight is undesirable but where strength is required. Spot welding of aluminum and further knowledge of its heat treatment have widened its economical applications.

Another light metal, heretofore little more than a chemical curiosity, is beryllium. Outstanding among its qualities is its extreme elasticity. Its cost—about \$200 a pound in 1929—can be lowered to a tenth of that or less in all probability, when its uses are developed to take a considerable amount. During the year about a ton was made in Germany and a Cleveland plant was reported to have attained a productive capacity of about 50 pounds per month.

Other minor metals whose uses were expanding were tungsten, molybdenum, titanium, barium, tantalum, and selenium. Tungsten was principally used in alloys replacing tool steels, in association with carbon and cobalt, these tungsten carbide compounds are finding a rapidly increasing acceptance. Molybdenum production

from the world's principal source of supply in Colorado has increased considerably; it is used in nitriding steels, in alloy steels of low molybdenum content for a variety of purposes, and in some of the corrosion-resisting steels. Titanium is finding its most important use in the form of oxide as a white-paint pigment. Domestic production of metallic barium of 99.95 per cent grade began last year, it is used in the terminals of spark plugs and as a deoxidizer in the manufacture of radio tubes. Tantalum now has a few accepted uses in laboratories and in the electrical industry, and selenium is of increasing importance in the vulcanizing of rubber. Sulphur, selenium, strontium and lithium, in metallic form, have recently been made available and are awaiting the discovery of commercial uses. Cesium and rubidium are two other metals a supply of which has only recently been assured should an important industrial outlet be found.

Certainly the metallurgists have provided the research workers, at the end of the third decade of the century, with a wide variety of metallic elements and alloys. Great progress has been made in their applications, but the vast possibilities that still exist will be evident.

#### METAPHYSICS See PHILOSOPHY

**METEOROLOGY.** It is well known that all except a negligible fraction of the energy involved in weather phenomena is derived ultimately from the solar radiation that is intercepted by the earth. The atmosphere acts like a great heat engine, transforming radiant energy from the sun into the energy of weather processes, and the primary agency actuating all meteorological phenomena is this continual supply of solar energy. In the long run, the total amount of heat lost by the earth as a whole through outgoing terrestrial radiation must be just equal to the total heat gained through the absorption of incoming solar radiation, since no part of the earth is growing steadily warmer or colder. At any one place, however, or for short intervals of time, this is not true in general, the difference between the intensity of terrestrial radiation and that of the effective solar radiation then represents the rate of temporary accumulation or loss of heat, and is a very important meteorological factor, for upon it depends nearly every dynamical process that takes place in the atmosphere.

The amount of outgoing radiation depends upon the surface temperature, the temperature of the upper clouds and of the stratosphere, and the amount of cloudiness. From the available data concerning these factors, Simpson has calculated, on the basis of certain simplifying assumptions, the mean intensity of outgoing long-wave earth radiation in different seasons for 10-degree squares over the globe. The most striking feature of the results is the remarkable uniformity they display from season to season and from place to place, for all seasons and over practically the whole earth, the values nearly all lie between 0.26 and 0.30 calory per square centimeter per minute. The central equatorial regions, with their high temperatures, radiate only slightly more than the cold polar regions, for, because of the greater cloudiness in the tropics, the region of effective outward radiation is there transferred to the stratosphere, which is colder than it is over higher latitudes. The most intense terrestrial radiation comes from desert areas.

The effective solar radiation, or quantity of solar energy absorbed by the earth and the at-

mosphere, may be computed from the solar constant, the geographical distribution of insolation, the amount of reflection by the albedo of the earth, the atmosphere, and the clouds. For the entire year, the computed effective solar radiation falls 2 per cent short of the computed terrestrial radiation, an amount well within the possible errors of the data used. For the earth as a whole, the gain of energy from effective solar radiation exceeds the loss by terrestrial radiation from October to April, and is less from May to September, because of the varying distance of the sun. The whole of the summer hemisphere to beyond latitude 60° receives more heat than it radiates. Areas of maximum excess of incoming over outgoing radiation, to the amount of 0.15 calory or more per square centimeter per minute, are found in South America, Africa, and Australia in January, and at 30° north latitude in July.

The atmospheric and oceanic circulations are generated by the temperature inequalities brought about through the geographical distribution of incoming and outgoing radiation. The transport of heat by these circulations tends to eliminate the temperature contrasts and compensates for the local differences between gain and loss of heat by radiation. Under the simultaneous influences of the opposing factors, the earth's atmosphere, as a whole, has reached a state which is not far removed from one of dynamic equilibrium.

The simplifying assumptions used by Simpson seem to be justified by the results to which they lead. Abbot, employing different assumptions and different methods, has carried out similar computations with the independently derived data accumulated by the Smithsonian Astrophysical Observatory and has obtained results which differ very little from those of Simpson.

**DYNAMICAL METEOROLOGY.** The long-standing problem of the meteorological structure and dynamical development of barometric highs and lows has been the subject of several recent investigations of importance. In early theories, the cyclone was regarded as simply a column of warm, moist, rotating air, the warmth and moisture providing the low surface pressure, and the convective ascent of air the precipitation. These ideas are probably essentially correct in the case of tropical cyclones, but have long been known to be inadequate for those of temperate latitudes. It was found that the air movements in extratropical cyclones did not consist, to any great extent, of rotation about a centre, and the investigation of temperature conditions in the free air showed that the explanation of the low pressure could not be so simple as had been supposed.

In particular, Dines found that, at least in England, the air in a barometric depression, from a short distance above the surface to a height of about 10 kilometers, was on the average not warm but cold, and he attributed the low pressure at the surface to the presence of a column of warm air in the stratosphere above the cyclone. Similarly, the troposphere in the anticyclone was found to be warm, not cold, and the high pressure due to a cold stratosphere. Dines's ideas are substantially correct, not only as regards average conditions in a large number of depressions investigated in England by sounding balloons but also for many individual formations occurring both in England and elsewhere, but many cyclones have been observed in which the low

pressure is actually due to warm air in the lower atmosphere, while the rapidly moving anticyclones which separate successive depressions frequently consist of great outbreaks of cold polar air, and Dines's results do not represent even average conditions in some parts of the world.

It seems necessary to recognize the existence of two types of cyclones and of anticyclones—warm and cold, in each case. The warm lows and cold highs may be termed thermal formations, they are comparatively shallow and are not in dynamic equilibrium. The cold lows and warm highs, or dynamical formations, are in a steady state and reach to great altitudes. Formations sometimes have been observed apparently to change from the former type to the latter, though the mechanism by which such a development might take place is not at present clear. Investigations of the phenomena in cyclones and anticyclones, on the basis of the preceding classification, recently have been made by Haurwitz and by Rossby. Haurwitz has discussed the 24-hour changes of temperature and pressure observed at each kilometer level in a large number of balloon ascents over Europe, and so far as possible has classified the surface pressure changes according as the temperature changes causing them took place in the troposphere or the stratosphere. Through a mathematical theory of the effects of advectional movements in the free air, Rossby has devised methods for analyzing aerological observations to disentangle the various factors operating to produce the pressure changes at each level.

The Norwegian polar front theory of the cyclone gives the latter a warm centre, contrary to Dines's findings, it has been suggested, however, that the Dines depression is a late stage of the Bjerknes type which has been reached by the majority of cyclones when they got to the British Isles. C. K. M. Douglas has suggested a process of development in harmony with the German and Austrian conceptions, which explain cyclones and anticyclones largely by advectional movements that ultimately come to involve the stratosphere. Douglas points out that a very favorable condition for the deepening of a barometric depression is the occurrence of a pronounced polar current behind it. At the surface, such a current may be traveling from due north to south, but, because of the general fall of temperature from low to high latitudes, there is always a tendency for air at high levels to move from westerly toward easterly points. This tendency is especially strong at the upper boundary of the warm cyclonic sector, at a height of about nine kilometers, hence at about this level, the polar current will have a large component toward the east and will overrun the centre of the depression, bringing with it part of the low warm stratosphere belonging to the polar air.

In the lower troposphere, warm air is being slowly eliminated, with a consequent tendency for pressure to rise, but at the same time the stratosphere is becoming much warmer, with a tendency for pressure to fall, when the latter tendency predominates, the depression continues to deepen and develop, in spite of being occluded, and changes from a shallow thermal formation to an extensive dynamical cyclone that involves the stratospheric levels. Similarly, the rise in pressure in a developing anticyclone is due to a spreading over of tropical air, including cold

stratospheric air, at high levels, thus, the high pressure of the great slow-moving anticyclones of long duration, which wander into temperate latitudes from subtropical regions, is due to overlying portions of the high, cold stratosphere of the tropics. In the dynamical highs, the air is slowly descending beneath the stratosphere, probably at the rate of about one kilometer per day at the three-kilometer level, and is being warmed by compression.

Thus, the existence of developing cyclones and anticyclones in the troposphere, generated by conditions in the lower levels, apparently causes further formations to be brought in over their tops in the substratosphere, these latter are the upper high-level formations of the Austrian theories. The changes of surface pressure in developing formations are mainly due to large-scale horizontal advectional movements at high levels, but the requisite energy is probably supplied in the lower levels through the juxtaposition of warm and cold currents. The primary cause of "fronts" is to be found in the bringing together of masses of air of widely different origin by the large-scale horizontal currents involved in highs and lows, the transition zones may be anywhere from a few kilometers to hundreds of kilometers in width.

**METEOROLOGICAL PHYSICS.** In a study of the daily temperature variation near the ground, N. K. Johnson and D. Brunt have confirmed Chapman's recent conclusion that this variation is greatly influenced by long-wave radiation, and is not due mainly to eddy conductivity as previously assumed by Taylor. Stömer's investigations of the high auroral rays that are situated in the sunlit region of the atmosphere have indicated that possibly the radiation pressure of sunlight drives the upper air away from the earth tangentially, and that, when corpuscular rays from the sun strike the tail thus formed, they produce the auroras. The lowest points of the sunlit auroras lie near the line between the dark and the illuminated portions of the atmosphere, some rays consist of two illuminated parts, one in sunlight and the other in shadow, with an invisible part between. The green auroral line is much weaker in the sunlit rays than it is in the other rays.

**MISCELLANEOUS.** A West Indian hurricane that appeared in the latter part of September, 1929, exhibited unusual behavior and moved in an erratic path. It hovered almost stationary off the Florida coast for several days. Considerable damage was caused in the Bahamas and disastrous floods occurred in Georgia and the Carolinas, as a result of this storm. The unusual path was probably due to erratic upper winds.

**METEOROLOGY.** Harry C. Frankenhof, of the U. S. Weather Bureau, died July 29.

Kahler, *Einführung in die atmosphärische Elektrizität* (Berlin).

**METEORS.** See **ASTRONOMY**.

**METHODIST CONNECTION (OR CHURCH) OF AMERICA, WESLEYAN.** A branch of the Methodist Episcopal Church, organized May 31, 1843,

in Utica, N. Y., the outgrowth of controversy over what was termed "liberty of testimony and freedom of discussion" and also a protest against the exercise of ecclesiastical authority. The purpose of the new organization was a church that should be anti-slavery and non-episcopal. In doctrine, the church is in accord with the Methodist bodies generally. In 1919 the branch comprised 25 annual conferences, including a mission conference in India and Africa. Its general conference meets quadrennially, the last convocation being in June, 1927, at which time the use of tobacco in any form, its growth, sale, or manufacture was made a test of full membership. In 1929 there were 602 churches, 769 ministers, and 21,980 members, the Sunday schools numbered 582, with 6218 teachers and officers, 35,578 pupils, and 7214 persons enrolled in the home department and on the cradle roll. Among the colleges maintained by the church are Central College, Central, S. C., Houghton College, Houghton N. Y., Marion College, Marion, Ind., and Miltonvale College, Miltonvale, Kans. *The Wesleyan Methodist*, published weekly in Syracuse, N. Y., is the official organ of the church. A large printing plant is maintained in Syracuse and all the literature of the church is printed there. Headquarters are at 330 East Onondaga Street, Syracuse, N. Y.

**METHODIST EPISCOPAL CHURCH.** Methodism in its widest significance and intention was a "revival of Christian earnestness, simplicity, and power." John Wesley (1703-91) had no intention of establishing a new church, his effort was to revive pure and undefiled religion. He taught the doctrines of the Church of England and "faithfully urged the people to attend its ordinances to be present at its public assemblies, and to be interested in its prosperity." Had the authorities of the Church of England accepted some of Wesley's plans, in place of driving him away from them, the future of Methodism might have been quite different. Richard Boardman and Joseph Pilmoor, two of Wesley's workers, came to America in 1769 and were followed in 1771 by Francis Asbury who was destined to be the great leader of the infant church. At the first conference held in Philadelphia in 1773, there were present 10 preachers who reported 1170 members. The Methodist Episcopal Church was organized at a "Christmas conference" held in Baltimore in 1784.

The governing body is the general conference, composed of an equal number of ministerial and lay delegates who meet once in four years and make all the rules and regulations. The last quadrennial session of the general conference convened in Kansas City, Mo., in May, 1928. The general conference commissions in 1929 were Courses of study, interdenominational relations, social service activities, world peace, central conference, worship and music, ministers' reserve pension plan, evangelism, revision of ritual, judicial procedure, sequentennial of organization of the Methodist Episcopal Church, adequate support and equitable apportionment, federation in Korea, federation in Mexico, Near East relief, revision of the hymnal and psalter; church union, relations with other than Methodist churches, relations with other Methodist churches, Federal Council of Churches and like bodies, Lausanne and Stockholm conferences and like groups. An annual conference, presided over by the bishop of each area, meets once a year at

which all pastoral changes are considered and reports of the local churches are gathered and compiled. There is also a local quarterly conference that administers all matters pertaining to the work of the local church. In 1929 there were in the United States and affiliated countries in Europe 153 annual conferences and missions, 28,929 churches; 19,339 ordained ministers, 14,141 lay preachers, 5,255,506 church members, 33,889 Sunday schools, 405,805 Sunday-school officers and teachers, 4,561,099 Sunday-school pupils, and 583,107 Epworth League members. Church property was valued at \$438,427,134 and parsonages, at \$65,040,004.

The administration of the missionary, educational, and philanthropic work of the Methodist Episcopal Church is committed to six general benevolence boards. Foreign missions, home missions and church extension, education; hospitals, homes, and deaconess work, pensions and relief; and temperance, prohibition, and public morals. These boards cooperate in the world service movement, their budgets being fixed and their work correlated in the interest of cooperation, economy, and efficiency by the world service commission. On May 31, 1929, this commission reported total receipts of \$7,961,898. The board of foreign missions administers the missions of the church in Mexico, South America, Europe, Africa, southern and eastern Asia, the Philippines, and the islands of many seas. It received during 1929 a total of \$2,579,265. The board of home missions and church extension looks after weak churches in new and growing communities in the United States, where church buildings are needed and ministers have to be supported, and cares for the religious work among many foreign groups. During 1929 a total of \$2,763,265 was expended on this work. There are also two women's missionary societies, the foreign and the home, which reported receipts in 1929 amounting to \$5,057,760.

The educational system of the church, administered by the board of education, included, in 1929, 46 colleges and universities, 25 secondary or preparatory schools, 62 professional and graduate schools; and 20 institutions for colored people, 13 of which were colleges. The enrollment in these schools (not including professional and graduate) was 68,738, the faculty numbered 4000, property was valued at \$82,210,182, and the endowment amounted to approximately \$74,000,000. The board of hospitals, homes, and deaconess work administered, in 1929, 77 hospitals, 45 homes for the aged, 43 homes for children, 45 deaconesses' homes, and 27 homes for young business men and women. The value of this property was estimated at \$67,458,651. The board of pensions and relief reported in 1928 a gross income of \$3,545,114 and estimated capital resources of \$21,446,503; \$3,119,896 was paid during the year as annuity to a total of 8513 claimants. The board of temperance, prohibition, and public morals, which is supported through the world service commission, is representative to the general conference, its purpose is "to make more effective the efforts of the church to create a Christian public sentiment which will relate the experiences of the Gospel of Christ to the economic, political, industrial, and social relations of life and which will crystallize opposition to all public violations of the moral law and to all attempts to undermine and destroy civil and religious liberties."

The official publications of the church are the *California Christian Advocate* (San Francisco), the *Central Christian Advocate* (Kansas City, Mo.), the *Christian Advocate* (New York), the *Epworth Herald* (Cincinnati), the *Southeastern Christian Advocate* (Atlanta), the *Northwestern Christian Advocate* (Chicago), the *Pacific Christian Advocate* (Portland, Ore.); the *Pittsburgh Christian Advocate* (Pittsburgh), the *Southwestern Christian Advocate* (New Orleans); the *Western Christian Advocate* (Cincinnati), and *Der Christliche Apologete* (Cincinnati). In 1929 the secretary of the general conference was the Rev John M Arters, 700 Hammond Street, Bangor, Me

520, for Sunday schools, more than \$300,000; and for salaries of pastors, 10 bishops, and general officers, \$1,532,526. The denominational periodicals are the *Christian Index*, *Western Index*, *Index Herald*, and *Colored Methodist*. The last quadrennial general conference was held in Kansas City, Mo. in May 1926. Headquarters are in Jackson, Tenn.

**METHODIST EPISCOPAL CHURCH, SOUTH** A separate branch of the Methodist Episcopal Church formed in 1845 over the question of slavery. Statistics for 1929 showed that there were 55 conferences and missions, of which 42 were in the United States and 13 in foreign countries; 8310 traveling preachers and 4769

GENERAL STATISTICS OF METHODISM, 1929

[The following table is from the Methodist Publishing House of London, N. B.—These statistics are the latest procurable. The members in Junior Classes are not reckoned.]

DENOMINATION	Min- isters	Lay Preach- ers	Church Members and Probationers	Sunday School Officers and Teachers	Sunday School Scholars	Churches, Etc

\* Seating accommodation, 2,486,803

\* These figures include the Solomon Islands with three native ministers, 198 lay preachers, 5519 members, three Sunday schools 253 scholars, 98 churches

\* Methodism also is represented in several European countries by Conferences and Missions affiliated to the Methodist Episcopal Church of America, and their membership is included in the figures given above. The latest returns available are Austria, 714 members, Bulgaria, 698, Denmark, 3768, Finland, 1809, France, 904, Germany (North) 17,254, Germany (South), 25,898, Hungary, 468, Italy 3536, Jugoslavia, 775, Norway, 7258, Russia (and Baltic Mission), 3326, Sweden, 15,593, Switzerland, 11,220

**METHODIST EPISCOPAL CHURCH, COLORADO** This denomination was organized in Jackson, Tenn., in 1870 and was composed of the colored membership of the Methodist Episcopal Church, South. In 1929 it reported 4300 churches with 474,526 members, 3621 traveling preachers and 2140 local preachers, 3122 Sunday schools, with an enrollment of 281,560 pupils, and 1812 Epworth Leagues, with a membership of 44,210. In cooperation with the Methodist Episcopal Church, South, the denomination maintained "Bethlehem Houses" (social service centres) in Birmingham, Ala., Chattanooga, Tenn., Augusta, Ga., and Nashville, Tenn. It also sponsored 14 schools and a hospital in Memphis, Tenn., and maintained missions in Trinidad and the British West Indies. The amount raised during the year for educational purposes was \$312,-

local preachers, 2,840,517 members, 17,249 churches which had a valuation of more than \$180,000,000, 6653 parsonages with a valuation of \$29,171,000; 15,705 Sunday schools, 1,939,740 Sunday-school pupils, 9181 Epworth Leagues, and 256,713 Epworth League members. The contributions for all purposes for 1929 amounted to \$40,611,961. The denomination sponsored 248 educational institutions, including 32 universities and colleges, 21 academies, and 46 mission schools. The important periodicals of the denomination are the *Methodist Quarterly Review* and the *Christian Advocate*. The executive body is the College of Bishops, which in 1929 had 13 members who hold office for life. Headquarters of the church are in Nashville, Tenn. A general conference was arranged to be held in Dallas, Tex., in May, 1930.

**METHODISTS.** **WESLEYAN METHODIST CHURCH.** The principal branch of the Methodist denomination in Great Britain and Ireland, founded at the University of Oxford in 1739 by John and Charles Wesley and holding its first conference in London in 1744. This is the mother church of the denomination and is composed of five divisions: Great Britain, Ireland, Foreign Missions, French Conference, and South African Conference. The Wesleyans are governed by the conference, by the synods, and by quarterly meetings of the ministers and lay officers of each circuit, the latter being subordinate to the conference which has the supreme legislative and judicial power. Statistics for all the divisions in 1929 were: Ministers, 39,008; lay preachers, 37,338; church members, 1,089,116; Sunday schools, 11,875; Sunday-school pupils, 1,043,522; churches, 19,511. In Great Britain alone, the churches numbered 8,629; members, 517,730; ministers, 2,557; lay preachers, 18,992; Sunday schools, 7,328; Sunday-school pupils, 800,292. The church maintains a publishing house at 25-35 City Road, London, E. C. 1. See **METHODIST CONNECTION (OR CHURCH) OF AMERICA, WESLEYAN**.

**PRIMITIVE METHODIST CHURCH.** Commonly known as the "Camp Meeting Methodist," organized in Staffordshire in 1810. Next to the Wesleyan, this is the most numerous and most democratic of the denominations which have arisen out of the Methodist movement. In 1929 it had 4,515 churches, 223,915 members, 10,922 ministers, 13,110 lay preachers, 39,433 Sunday schools, and 378,581 Sunday-school pupils. A publishing house is maintained at Holborn Hall, Clerkenwell Road, London, E. C. 1. The church was organized in the United States in 1844 by Hugh Bourne, one of the founders of the movement in England. In 1929 it reported 99 churches, 11,905 members, 87 ministers, 81 lay preachers, 88 Sunday schools, and 14,781 Sunday-school pupils.

**UNITED METHODIST CHURCH.** Formed in England in 1907 by the union of three denominations of Methodists which had hitherto been separate from and independent of each other: The Methodist New Connection, the Bible Christians, and the United Methodist Free Church. In 1929 there were 2,209 churches, 115,323 members, 703 ministers, 4,691 lay preachers, 2,067 Sunday schools, and 231,420 Sunday-school pupils. The church maintains a publishing house at 12 Farringdon Avenue, London, E. C. 4.

**WESLEYAN REFORM UNION.** One of the smaller divisions of the Methodist movement, which separated in 1850 from the Wesleyans and organized as a separate body in 1859. Its adherents are mostly in the Midland counties of England. In 1929 there were 227 chapels, 11,104 members, 32 ministers, 496 lay preachers, 230 Sunday schools, and 25,555 Sunday-school pupils.

**INDEPENDENT METHODIST CHURCHES.** Founded in 1796 in England and united with other societies in 1806. The title was changed twice, but in 1898 the old name was resumed. In 1929 there were 165 churches, 10,973 members, 395 ministers, 163 Sunday schools, and 24,249 Sunday-school pupils.

**AUSTRALASIAN METHODIST CHURCH.** Methodism in Australia dates from 1812, the first conference was held in 1855. In 1929 there were 5,307 churches, 173,105 members, 10,588 ministers, 8,223 lay preachers, 3,425 Sunday schools, and 207,088

Sunday school pupils. Publishing houses are maintained in Sidney, Melbourne, Adelaide, Brisbane and Perth.

Other branches of the denomination include the New Zealand Methodist Church and the Japan Methodist Church, for statistics of which see **METHODIST EPISCOPAL CHURCH**. Also see **CANADA, THE UNITED CHURCH OF**.

In Great Britain, a scheme for the reunion of the Wesleyan, the Primitive, and the United Methodist churches, after having been approved by all three conferences, was submitted to Parliament. In May, 1929, Parliament gave its unanimous consent to the passage of an Enabling Bill which provided that the three churches might unite as "The Methodist Church" on such terms as they should mutually approve, the final vote on union to be taken at the conference of 1931, a majority of 75 per cent being requisite both in the representative and the pastoral sessions.

**METROPOLITAN MUSEUM OF ART.** See **ARCHAEOLOGY, ART EXHIBITIONS, ART MUSEUMS**.

**MEUX, ADMIRAL OF THE FLEET, SIR HEDWORTH.** British naval officer, died Sept. 20, 1929, at Danebury, near Stockbridge, Hampshire. He was born July 5, 1856, and entered the navy in 1870, being promoted to the rank of captain in 1889. He served with distinction in the Egyptian War of 1882, and in 1894-97 was private secretary to the First Lord of Admiralty. During the South African War (1899-1902) he was in command of a naval brigade in Ladysmith and was credited with an important part in securing that town from the Boers. He was in command of the Royal Yacht (1901-03), second in command of the Channel Fleet (1903-04), and in command of the Cruiser Division of the Mediterranean Fleet (1904-06). He was commander-in-chief of the China Station (1908-10) and at Portsmouth (1912-16). He was in command at Portsmouth during the early years of the World War, in 1915 was made Admiral of the Fleet, and in 1921 was retired. He was a Unionist member of Parliament from Portsmouth (1916-18), where he served as successfully as in the navy. Sir Hedworth was born Hedworth Lambton, but in 1911 changed his name to Meux, which was the condition under which he inherited the fortune of the wealthy Lady Meux. He was knighted in 1906 and was a grand officer of the Legion of Honor.

**MEXICAN BEAN BEETLE.** See **ENTOMOLOGY, ECONOMIC**.

**MEXICAN FRUIT FLY.** See **ENTOMOLOGY, ECONOMIC**.

**MEXICAN LABOR.** See **IMMIGRATION**.

**MEXICO.** A federal republic lying between the United States and Central America. Capital Mexico City.

**AREA AND POPULATION.** The area of the republic, which is divided into 28 states, one Federal district, and three territories is 767,198 square miles. The population, according to the census of 1921, was 14,234,799, of whom 6,074,213 were males and 7,287,586 females, estimated in 1928, 15,048,448. In December, 1928, the Indian population was estimated at 4,179,472, of whom 1,791,000 still conversed their native tongue. Americans residing in Mexico in 1929 totaled 14,607. The prevailing religion is Roman Catholic, but according to the new constitution of 1917, the Church is separated from the State, and there is toleration of all other religions. No ecclesiastical

body can acquire landed property. Mexico City, the capital of the Republic, had a population of 615,367, of whom 23,668 were foreigners, at the census of 1921. Other large cities are Guadalajara, 143,376, Monterey, 88,458; San Luis Potosi, 57,353 and Merida, 79,225.

The reported immigration in 1927 was 67,970 and the emigration 56,534, but there is a considerable movement across the northern boundary which is not fully reported.

**EDUCATION** Education is free, compulsory, and secular. In 1928 there were 1,311,000 students in state and Federal schools and in the previous year the number enrolled in private schools was 17,928. Students in the three universities—the National University of Mexico, the National University of the Southeast, and the University of Guadalajara—totalled 9379 on July 31, 1928. In addition there were 70,901 schools maintained by ranches, mills, mines, and other concerns as provided by the constitution, also 65 normal schools, 20 law schools, 31 medical schools, 12 engineering schools, and 107 technical schools, with 78,403 students and 7247 teachers.

**AGRICULTURE** Mexico has great agricultural possibilities, the fertile soil of the tropical regions, the mountain valleys, and the great central plateau being only partially exploited, and for the most part by antiquated farming methods. In 1928 about 6 per cent of the total area, or 30,023,000 acres, were under cultivation, 120,444,000 acres were devoted to pasture, and 43,993,000 acres to forests. Production of the principal crops in 1928 was as follows: Wheat, 11,492,000 bushels, corn, 83,917,000 bushels, tomatoes, 72,000 metric tons, coffee, 75,080,000 pounds; cotton, 133,103,000 pounds, sugar, 392,000,000 pounds, chick-peas, 2,363,000 bushels. Production of other leading crops for which the 1928 figures were not available, was as follows in 1927: Barley, 4,487,000 bushels; rice, 3,615,000 bushels, beans, 1,153,000 bushels, tobacco, 19,912,000 pounds, cacao, 3,521,000 pounds, henequen, 133,000 metric tons, alfalfa, 1,703,000 metric tons. Other crops are winter vegetables, bananas, garbanzos, vanilla beans, chicle, and rubber.

In 1929 the agricultural production was still insufficient for local needs, due to revolutionary disturbances and inadequate transportation facilities which resulted in a tendency on the part of the rural population to produce only enough for its own needs. In 1928 imports of agricultural products and equipment amounted in value to 34,310,848 pesos, the largest item being 15,464,680 pesos for laid (one peso was equivalent to \$0.4810 in 1928). The government was actively encouraging the expansion of agricultural production. In 1929, 5,700,000 acres were under irrigation in Mexico, three large projects which would add 260,000 acres to the total were nearing completion, and the National Irrigation Commission had selected sites for eight other large projects. Stock raising is an important industry. In 1928 there were 5,585,000 cattle, 2,903,000 swine, 2,698,000 sheep, 5,424,000 goats, 1,036,000 horses, 686,000 mules, and 850 asses in the communes reporting (about 96 per cent of the total). Up to Jan. 1, 1928, public and confiscated lands totaling about 10,680,000 acres had been distributed among 500,000 families in accordance with the agrarian laws.

**MINING AND PETROLEUM** Mineral production declined in 1928, the value of the total output be-

ing \$207,547,000 (431,401,000 pesos), as compared with \$233,552,000 (494,814,000 pesos) in 1927. Of the 1928 total, petroleum was valued at \$49,046,000, gold, \$14,012,000, silver, \$63,089,000, lead, 32,216,000; zinc, \$22,674,000; copper, \$20,581,000. The output of minerals and petroleum in 1928 with comparative figures for 1927, is shown in the accompanying table.

MINERAL PRODUCTION IN MEXICO

Product	1927	1928
Gold . . . . . 1000 troy oz	725	702
Silver . . . . . do	104,576	108,477
Copper * . . . . . metric tons	58,734	65,103
Lead * . . . . . do	243,346	284,727
Zinc * . . . . . do	136,478	162,023
Antimony * . . . . . do	1,924	3,342
Arsenic (white) . . . . . do	9,018	8,670
Graphite . . . . . do	5,837	4,972
Mercury * . . . . . do	81	85
Coal . . . . . 1000 metric tons	1,031	1,025
Petroleum . . . . . 1000 barrels	64,121	50,150

\* Metallic content of ore extracted

Petroleum production declined in 1928 for the seventh consecutive year, being only one-fourth as large as in the peak year of 1921. A total of 148 wells with an initial daily producing capacity of 110,438 barrels were brought in, as compared with 204 wells producing 383,702 barrels in 1927. Advanced government estimates placed the 1929 production at between 44,000,000 and 45,000,000 barrels. The National Chamber of Mining, in recommending a revision of the laws, presented figures to the Ministry of Finance, Commerce, and Labor during 1929 which placed the total operating costs of the industry for 1928 at 244,461,628 pesos, as compared with a fiscal valuation of the mineral production for the year amounting to 231,272,927 pesos. In 1929 metal production increased over 1928 as follows: copper, 32 per cent, zinc, 7, lead, 5, silver 0.15. Gold and mercury production declined 12 and 5 per cent respectively.

**MANUFACTURING** While manufacturing is relatively unimportant, the production of textiles (mostly cotton), shoes, iron and steel, tobacco products, pharmaceuticals, beer, flour, paper, cement, pottery, and various other products has developed to some extent. A depression in the textile industry, which is the most important in the country, continued from 1925 to 1929.

Capital investments by foreigners in the chief Mexican industries was given in 1929 as follows: Mexican, 23.78 per cent, Canadian, 20.72 per cent, American (United States), 17.34 per cent; English, 6.71 per cent, French, 5.67 per cent. Total American investments in Mexico were estimated at \$1,325,000,000, compared with \$800,000,000 in 1912.

**COMMERCE** Mexican exports decreased to \$285,000,000 in 1928, or 4 per cent less than the 1927 figure of \$296,173,000, while the imports increased to \$172,166,000, 5 per cent more than in 1927 (\$163,495,000). Decreased shipments of minerals, and particularly of petroleum, accounted for the export decrease. Chief exports in 1928 included crude petroleum, fuel oil, and gasoline, lead, copper, henequen, coffee, raw cotton, tomatoes, zinc, and other agricultural and mineral products. Leading imports were machinery, iron and steel, automobiles, lard, mineral oils, wood for building purposes, wheat, corn, chemicals, and gold and silver bullion and specie. While exports to the United States totaled \$124,500,000, or 10 per cent less than in 1927, imports

from that country increased by 6 per cent to \$115,700,000. Imports into Mexico were supplied principally by the United States, 68.2 per cent, Germany, 8.6 per cent, United Kingdom, 7.6 per cent, and France, 4.6 per cent. Exports were consigned as follows: United States, 69.7 per cent, United Kingdom, 8.1 per cent, Germany, 6.3 per cent, France, 3.2 per cent. In 1929 trade with the United States continued the trend of the previous year, exports to that country declining slightly to \$117,706,722, due entirely to a decrease of some \$5,000,000 in petroleum shipments, while imports from the United States increased to \$133,960,912 (1929 figures are preliminary).

**FINANCE** The budget for 1929 estimated expenditures at 288,473,000 pesos (\$143,754,000), receipts at 34,000,000 pesos for the service of the debt, and receipts at 288,428,600 pesos. At the end of the year, the cash surplus of the Government was 19,000,000 pesos, or about \$9,500,000, as compared with a surplus a year earlier of less than 3,000,000 pesos. Preliminary figures for 1928 placed actual revenue collections at 300,507,000 pesos (\$149,803,000), or more than the estimates, while expenditures were also believed to have exceeded the budget figure of 291,118,000 pesos (\$145,122,000). The final figures were not available. The budget for 1930 submitted to Congress by the Minister of Finance called for expenditures of 293,773,787 pesos (about \$146,903,475). The appropriations were increased by the budget committee, however, to a total of 293,092,489 pesos (about \$146,546,242). The estimated income for the year was 293,125,651 pesos, which left an estimated surplus of 33,162 pesos. On Aug. 31, 1928, the internal funded and floating debt, exclusive of claims of foreigners arising from revolutionary disturbances totaled 773,113,000 pesos (\$385,397,000). On Jan. 1, 1928, the total funded debt, which had been in default since 1914, stood at 1,091,485,429 pesos, including 263,435,903 pesos owed by the National Railways and guaranteed by the government. An allowance of 26,000,000 pesos was made for debt payments in the 1930 budget.

**COMMUNICATIONS** In 1929 there were 12,359 miles of main railway line in Mexico, operated by 39 different companies. The principal system was the National Railways of Mexico, with 7460 miles of line. In 1927-1928 the National Railways handled 22,696,014 passengers and 16,772,357 metric tons of freight, the operating revenues totaling \$81,369,361, the operating expenses, \$79,056,915, and the net revenues, \$2,312,446. In 1929 a new line between Mexico City and Laredo, Texas, was approaching completion. Of the 66,000 miles of highway in Mexico in 1929, only about 30,000 miles were usable the year round and only about one-third of the total was suitable for motor traffic. The National Highway Commission established in 1925 is carrying out the construction of a nation-wide system of primary thoroughfares, in connection with which 310 miles of new highway were scheduled for completion in 1929. The programme called for the construction of 15,000 miles, 950 miles of which had been completed by 1929.

Air lines operating in the country were considerably extended in 1929. Lines between Mexico City and Brownsville, Texas, between Vera Cruz and Guatemala City, Guatemala, and between Los Angeles, Mexico City, and Guatemala City, were inaugurated during the year. A new air-mail

service between Mexico City and New York reduced the traveling time between those two points to 50 hours.

In 1927 the government and privately owned telegraph and telephone systems had 85,371 and 304,016 miles of wire, respectively. The state telegraph system in 1929 had 23,396 miles of line.

**GOVERNMENT** Under the constitution of 1917, executive power is vested in the President, elected by direct popular vote for four years and ineligible for reelection, legislative power in the Congress consisting of the House of Representatives elected for two years by universal suffrage, and the Senate, comprising two members from each State, elected in the same manner. Provisional President in 1929, Emilio Portes Gil, elected by the Senate and Chamber on Sept. 25, 1928, in place of President-elect Obregon, who was assassinated. For the presidential election in 1929, see below.

#### HISTORY

Three events marked the further evolution of the government in Mexico in 1929—the crushing of a serious revolution in April, the signing on June 21 of an agreement between President Portes Gil and Archbishop Ruiz, acting Papal delegate, which healed the open breach between the State and the Roman Catholic Church, and the election of Pascual Ortiz Rubio as President of the Republic on November 18.

**THE REVOLUTION** Gen. Jesus Maria Aguirre, military commander of the State of Vera Cruz, on March 3 proclaimed a military revolution which received the support of Gen. Fausto Topete of the State of Sonora, Gen. Francisco Manzo, military commander of Sonora, and Gen. Gonzalo Escobar, military commander of the State of Coahuila. The revolutionists made a bid for the support of the Church by a promise of noninterference in religious affairs but made it plain that their chief aim was the overthrow of the Portes Gil administration, which had the powerful support of former President Plutarco Elias Calles, and to prevent the election of Pascual Ortiz Rubio, who, with the support of Calles, was a candidate for President. The insurrection made considerable headway in northern Mexico and General Calles was appointed Secretary of War to direct the government's campaign. The United States government gave moral and material support to the Mexican government by continuing in force the embargo on the export of arms and munitions to parties in Mexico other than the government and by adding civil airplanes to the embargo list. Personally taking the field early in April, General Calles defeated the rebels after a remarkable series of strategic maneuvers and announced to President Portes Gil on April 28 that the revolt was ended. Gen. Jesus Aguirre, Gen. Simon Aguirre, and a number of officers of their staffs were captured and executed. Other leading rebels escaped to the United States. A number of Americans in Naco, Ariz., and El Paso, Tex., were wounded, one fatally, from stray bullets or bombs dropped by rebel planes during the course of fighting on the Mexican side of the border, and American airplanes and troops were ordered to these points.

**RELIGIOUS SETTLEMENT** The Roman Catholic Church gave no support to the rebel cause, but during the government's campaign against the insurgents, the "Christeros," or rebellious Cath-

olics in the States of Jalisco and Guanajuato, who had been resisting the government for two years, increased their activities and a large force of Federal troops was sent against them. During March more than 1700 priests throughout the country were forced to register their addresses with the government. The religious controversy developed a particularly bitter tone following the execution of José Leon Toral on February 9 for the assassination of General Obregon the preceding July. On February 10, an unsuccessful attempt was made to assassinate President Portes Gil. The President asserted that investigations which followed the dynamiting of his special train had convinced the government that his assassination undoubtedly was planned by "elements who undoubtedly obeyed exalted fanatical Catholics."

On May 1, the government made the first move toward a reconciliation when President Portes Gil announced that "the Catholic clergy, when they wish, may renew the exercise of their rites with only one obligation, that they respect the laws of the land as the ministers of other denominations are doing." The statement was received as "an evidence of good will" by Catholic spokesmen and negotiations were inaugurated which resulted in the agreement of June 21. In brief, the Mexican government agreed to allow the Catholic hierarchy to designate those priests who were to register in compliance with Mexican laws, thus giving the bishop control over the clergy, and religious instruction was made permissible within the churches. The government also reserved to the Catholic prelates the right to apply for modification of the constitution at any time in the future. In return, the Church agreed to participate in "the great task of national reconstruction" and to comply with the provisions of the Mexican Constitution until such time as it was revised. Announcement of the rapprochement was followed by the release of all women held in the penal colony of Tres Marias for violation of religious laws and by the cessation of activities by the religious rebels in several states.

**PRESIDENTIAL ELECTION.** The chief opponents in the Presidential election were Pascual Ortiz Rubio of the National Revolutionary party and José Vasconcelos of the Anti-Reelectionist party. The latter, a prominent educator and philosopher, attacked the administration candidate on the ground that he stood for a continuation of existing relations with the United States in which Vasconcelos declared Mexico "had less liberty than an imperial colony." He favored the elimination of alleged corruption in the government, greater religious liberty for the Catholic Church, the reduction of the army to a minimum, and complete freedom of organization among workmen. Rubio pledged himself to continue the government's agrarian policy, and favored indemnification for lands expropriated in connection with this policy, the protection of foreign capital, and the enforcement of the law with regard to the Catholic Church. The campaign was marked by a number of minor disturbances and on election day 19 deaths occurred as a result of political brawls. Ortiz Rubio was elected by an overwhelming majority (1,825,761 to 110,279 votes) on the face of returns. The fairness of the election as an index to popular opinion was questionable, however Vasconcelos issued a statement declaring that in no part of the republic had genuine elections been held.

"Everywhere voting has been prevented except by public employees," he said. "It is the most glaring imposition of a candidate in Mexican history."

The Mexican election law provides that the first nine citizens to appear at a voting booth shall constitute themselves an election board for that precinct. According to the Vasconcelos Opposition, the Rubio political machine, apparently backed by the government, rushed the election booths as soon as they were opened and in many cases established control, turning away many Opposition voters. On the other hand, gains in the practice of constitutional government were evidenced by the fact that the election was for the first time conducted as an appeal to the people from public platforms. Newspapers were outspoken in their presentation of the issues, President Portes Gil maintained an impartial attitude, and the Opposition candidate exhibited an aggressive and independent attitude throughout the campaign.

After the election Vasconcelos made his way to the United States, where he issued a call for a revolution. No revolution followed, but on December 22 the government announced that, in a raid on the Vasconcelos headquarters in Tampico, a plot for an uprising was uncovered and fifty persons arrested. Other Vasconcelos adherents were arrested at Guadalajara and Nogales, charged with plotting revolution. About the same time a conspiracy to assassinate former President Calles was discovered by government authorities and thirty persons were arrested. Twenty others, alleged to be foreign anarchists who had planned a terrorist campaign, were rounded up and deported.

**OTHER EVENTS.** Previous to his inauguration, President-elect Ortiz Rubio made an extended visit to the United States, where his reception reflected the increased cordiality of the relations between the two countries. President Hoover broke a precedent by calling upon the visitor at the Mexican Embassy in Washington. In a radio address delivered in New York, Ortiz Rubio said he believed it "indispensable for the prosperity of both countries to strengthen more and more the ties of friendship which unite us on a basis of mutual respect."

An incident which disturbed somewhat the development of friendly relations with the United States occurred in December, when the District Attorney John Valls of Laredo, Texas, threatened to arrest General Calles, who was scheduled to pass through Laredo on his return to Mexico from a visit to Europe and the United States. Valls charged Calles with complicity in an alleged political murder on the Texas side of the Rio Grande several years previous. General Calles passed through Laredo accompanied by a United States military guard to prevent the threatened violation of his diplomatic immunity. On December 17, the Mexican Ministry of Foreign Affairs closed the Mexican Consulate at Laredo, rescinded the permission granted the Laredo Chamber of Commerce to issue tourists cards into Mexico, and announced that no goods purchased in Webb County would be allowed entry into Mexico. At the same time the Mexican Consul General in San Antonio declared that the consulate would be reopened only after the resignation of Mr. Valls, who was charged with displaying enmity toward Mexico on former occasions.

Despite the demands of Laredo merchants, whose business was badly curtailed, Governor Moody of Texas refused to remove Valls, appealing instead to Secretary of State Stimson to attempt to secure the reopening of the Consulate. The Secretary of State, after pointing out to the Governor that the source of the difficulty lay in the latter's failure "to ameliorate the conduct of the legal officers of the (Webb) County," finally consented to intervene with the Mexican Foreign Office. Two Americans seized for ransom were killed by Mexican bandits on February 22. On February 28, the military governor of Guanajuato reported that ten members of the bandit group had been killed in a battle with Federal troops.

A two-year extension of the General and Special Claims Commissions engaged in adjudicating the claims of American and Mexican citizens against the Mexican and United States governments, respectively, was authorized by a convention signed in Mexico City in August and September. The General Claims Commission then had on file claims of 2781 American citizens aggregating \$513,694,257 and claims of 836 Mexican citizens totaling \$245,158,395. The Special Claims Commission appointed to dispose of claims of American citizens for damages and losses arising from revolutions in Mexico between 1910 and 1920 had on file 3148 claims involving \$420,435,256.

The temperance movement gained considerable headway in Mexico during the year under the active encouragement of President Portes Gil. In May, the President announced the formation of a committee to discuss with the national and state governments the gradual introduction of temperance measures. The governors of most of the states pledged their cooperation.

On December 15, a new and radical law code, abolishing the jury system and the death sentence, went into effect. See UNITED STATES, under *History*, and PETROLEUM. Consult Frank Tannenbaum, *The Mexican Agrarian Revolution* (New York, 1929).

**MEYER, HANS** A German explorer and editor, died July 6, 1929, in Leipzig. He was born Mar. 22, 1858, in Hildburghausen and studied science and political economy at the universities of Leipzig, Berlin, and Strassburg. In 1884 he entered the Bibliographische Institut in Leipzig, founded by his grandfather, and on the death of his father in 1885 became one of the directors of that publishing house, holding the office until 1914. From 1915 to 1928, he was professor of colonial geography in the University of Leipzig. He was also a world traveler and explorer, beginning his travels as early as 1882. During 1887-89 he made three expeditions into East Africa to explore the Kilimanjaro. In 1889 he reached the top of Kilbo, the higher peak of this mountain, where he found a crater. The results of a study of this mountain he published in *Der Kilimandscharo* (1900). His other writings include *Die Strassburger Goldschmiedezunft von ihrem Entstehen bis 1681* (1881), *Fine Weltreise* (1884), *Zum Schneedom des Kilimandscharo* (1888), *Ostafrikanische Gletscherfahrten* (1890), *Die Insel Teneriffe* (1896), *Die Eisenbahnen im tropische Afrika* (1902), *In den Hochanden von Ecuador* (1907), *Das Deutsche Kolonialreich* (1909-10), *Die Barundis* (1916), *Das portugiesische Kolonialreich* (1918).

**MIAMI UNIVERSITY.** A coeducational institution in Oxford, Ohio, founded in 1809. The enrollment for the autumn of 1929 was 2044, dis-

tributed as follows. College of liberal arts, 722; school of education (four-year course), 695, (two-year course), 198, business administration, 405; fine arts, 24. The faculty numbered 150, of whom 13 were new appointees. The income from the State of Ohio for maintenance, from gifts, fees, and income on investments for 1929-30 was \$1,104,880. There were 105,000 bound volumes in the library. The school of fine arts was opened in the autumn of 1929 with a dean and faculty of 13 members. The curriculum as arranged covered only the freshman year, but courses for the other three years were to be added as needed, leading to degrees in architecture, music, and art. The most important gift of the year was that of \$65,000 from the Daughters of the American Revolution and known as the Caroline Scott Harrison Memorial Gift. This was used in remodeling as a women's dormitory the building formerly occupied by Oxford College for Women, which was merged with the university in 1928. The Ohio Legislature appropriated funds for the erection of a new gymnasium and a new chemistry building costing approximately \$600,000 and for the purchase of Lewis Place, under lease since 1909, as the home of the president. The university received as a gift the homestead built in 1829 by the first president of the institution, Robert Hamilton Bishop, to be used as a faculty centre. President, Alfred H. Upham, Ph.D.

**MICHETTI, mè-kèt'tà,** FRANCESCO PAOLO An Italian genre painter, died Mar. 5, 1929, in Francavilla Al Mare. He was born in 1851 at Tocco da Casauria in the Abruzzi, and studied under Morelli, an Italian historical painter, at the Naples Academy. A member of the modern realistic school of Italian painters, he chose subjects from peasant life in southern Italy, painting them with dramatic insight and versatility of style, and in rich, dazzling colors. His works include *Corpus Domini* (1877), *Palm Sunday* (1879), *The Shepherdess of the Abruzzi* (Modern Gallery, Rome), *Peasant Girl* (Pennsylvania Academy), and *The Vow* (1883, Modern Gallery Rome).

**MICHIGAN.** POPULATION. According to the Fourteenth Census, the population of the State on Jan. 1, 1920, was 3,668,412. The estimated population on July 1, 1928, was 4,591,000. The capital is Lansing.

**AGRICULTURE.** The following table gives the acreage, production, and value of the principal crops in 1928 and 1929.

Crop	Year	Acreage	Prod. Bu.	Value
Hay	1928	3,029,000	5,085,000 *	\$54,207,000
	1929	2,870,000	4,327,000 *	50,013,000
Corn	1929	1,344,000	32,928,000	29,806,000
	1928	1,461,000	48,944,000	41,113,000
Oats	1929	1,372,000	40,886,000	19,625,000
	1928	1,633,000	58,461,000	25,138,000
Wheat	1929	904,000	16,810,000	18,994,000
	1928	887,000	14,205,000	18,164,000
Dry beans	1929	694,000	5,691,000	21,057,000
	1928	538,000	5,918,000	26,385,000
Potatoes	1929	263,000	18,410,000	23,012,000
	1928	306,000	35,402,000	14,321,000
Sugar beets	1929	50,000	287,000 *	
	1928	71,000	452,000 *	3,268,000
Barley	1929	243,000	5,589,000	3,856,000
	1928	270,000	6,100,000	5,670,000
Rye	1929	166,000	2,241,000	1,972,000
	1928	182,000	2,366,000	2,200,000

\* Tons

**MINERAL PRODUCTION.** The mining of iron ore, the foremost of the mineral industries of Michigan, again fell off somewhat in 1928, in contrast

to increasing production in the neighboring State of Minnesota. The iron mines of Michigan produced in 1928, 14,241,102 long tons of ore; they had yielded in 1927, 14,534,831 tons. The value of ore mined was 1928, \$37,039,044, 1927, \$37,135,364. Though the iron industry of the State was small, yield of short tons, valued at \$2,631,000, in 1928 and in 1927, 756,763 tons, in value, \$3,262,000, coking and the smelting of iron were active. There were produced in 1928, 2,399,650 short tons of coke, in value, \$14,461,466, in 1927, 1,920,394 tons or \$12,227,241. Blast furnaces of the State shipped 797,776 long tons of pig iron, in value, \$15,157,535, in 1928; in 1927, 620,532 tons and \$12,527,993. Copper mining was slightly more productive in 1928. The mine production of copper was 1928, 178,442,704 pounds, in value, \$25,697,749; 1927, 177,537,775 pounds and \$23,257,449. There were shipped from mills 14,044,230 barrels of cement in 1928 and in 1927, 13,708,259, the values of shipments were, for 1928, \$19,628,495 and for 1927, \$20,858,202. The salt production increased to 2,405,240 short tons for 1928, from 2,271,460 for 1927, its value, to \$8,249,437 for 1928, from \$7,551,552 for 1927. Clay products attained \$6,772,283 for 1927 and \$7,362,007 for 1926, stone production, \$6,560,946 for 1927, \$6,715,249 for 1926. The value of all mineral products totaled for 1927, \$124,029,572, for 1926, \$130,860,609.

**TRANSPORTATION** The total number of miles of railroad line under operation on Jan. 1, 1929, was 8208.46. There were built, in 1929, 21.93 miles of first and 6.01 of second track.

**MANUFACTURES** According to the biennial Census of Manufactures published by the U. S. Department of Commerce in 1929, there were in the State, in 1927, 5800 manufacturing establishments. These employed 488,856 wage earners, whose wages for 1927 totaled \$760,602,319. Materials and supplies used in manufacture cost \$2,346,678,396. The manufactured products attained the combined value of \$1,244,941,132.

**EDUCATION** The school-aged population for 1928 was placed at 1,274,478. There were enrolled in the public schools of the State 848,741 pupils, and in the parochial and private schools, 136,445 pupils. The enrollment in elementary schools was 707,205, in high schools, 141,536. Expenditures of the year for education totaled \$87,151,126. Salaries of teachers averaged \$202 a month for men and \$153 a month for women.

The Michigan law as to the certification of public school teachers was modified so as to remove the power of certification from the county superintendents and vest it specifically in the department of public instruction. An appropriation of \$2,000,000 from the general funds of the State was made for distribution among the poorer school districts. This step was characterized by a commentator in the *Journal* of the National Education Association as carrying the State forward a long way in the acceptance of responsibility in the equalization of educational opportunity.

**CHARITIES AND CORRECTIONS** Within the State Welfare Department in 1929 were the State Welfare Commission, which had parole power over the inmates of a number of institutions and duty of inspection of jails, maternity hospitals, and children's boarding homes, and control over probation officers and county agents, the State Prison Commission, in charge of the prison, the State Hospital Commission, in charge of hos-

pitals, and two other institutional commissions. There were, in September, 1929, 20,159 inmates distributed as listed among the following State institutions for the care or custody of individuals: Kalamazoo State Hospital, 2574; Pontiac State Hospital, 1889; Traverse City State Hospital, 2079; Newberry State Hospital, 1138; Ionia State Hospital, 604; Farm Colony for Epileptics, 776; Michigan Home and Training School, 2784; State Prison, Jackson, 4113; Michigan Reformatory, Ionia, 1593; Branch Prison, Marquette, 882; Boys' Vocational School, 665; Girls' Training School, 308; State Public School, 304; School for the Deaf, 371; School for the Blind, 102; Employment Institute for the Blind, 57.

**LEGISLATION** The regular biennial session of the Fifty-fifth State Legislature convened on January 2 and adjourned on May 8. The effort was made to alter two features of the State's penal law that had drawn much criticism. One of these features, the life imprisonment of fourth offenders convicted of a minor infraction of the Prohibition law, was abolished by an act limiting life sentences upon fourth offenders to cases where the fourth offense would of itself carry a normal penalty of five years. The other feature, the absence of the death penalty from the penal laws, which had been criticized as responsible for frequency of homicides, led to the passage of the Wood-Lennon bill, providing death by the electric chair for murder in the first degree, but Governor Green vetoed the measure. A bill for the rehabilitation of the State institutions was enacted, authorizing the expenditure of some \$28,000,000 for building purposes. The Lower House having defeated a proposal to issue \$20,000,000 of State bonds for the institutional programme, an increase in the direct tax was voted, to defray the cost. There was created, also, a State tax of one cent on every ten cigarettes sold in the State. Likewise a sale tax was placed on malt, despite the common impression that this substance was purchased extensively for the manufacture of beverages forbidden by the State Prohibition law. The Prohibition law was itself amended, and in some respects rendered more stringent, chiefly by the classification of liquor violations. A commission was created to inquire into the tax system of Michigan, with a view to the enlightenment of the next subsequent Legislature, and a crime commission was brought into being. To correct an error in the school code of 1927 that had inadvertently repealed the enactment of that year for a teachers'-retirement-pension fund, provision for this fund was reenacted. The terms of a new dairy law applied the milk standards of Detroit to the entire State. Two years of college credits were made requisite to the study of the law. By an amendment of the corporation tax, the intangible property, located in Michigan, of foreign corporations was rendered taxable. Airplane gasoline was subjected to the 3-cent gasoline tax.

**POLITICAL AND OTHER EVENTS** The repeal of the life sentence for fourth offenders as applying to small infractions of the Prohibition law was followed by the issue of pardons to some of those previously sent to prison under this act. The number of fourth offenders sentenced to life for Prohibition infractions up to the time of the amendment of the penal law on this point was stated to have been 15. A movement was started in the spring to bring about a referendum on the act of 1929 placing a tax on cigarettes. A petition for the referendum obtained some 120,000 signa-

tutes, and Attorney-General Brucker in an opinion rendered July 16 ruled that, subject to the checking of the petitioners' names, a referendum should be held in November of 1930, and that the tax should not previously be effective. By a decision of the State Supreme Court rendered March 20, the Michigan Bell Telephone Company was prevented from the diversion of part of its profits to the parent corporation, the American Telephone and Telegraph Company, under a contract held not to indicate that the Michigan company received any compensating consideration. The telephone rates, a subject of conflict, were not directly affected.

The need of reforesting the State's waste lands was agitated by the *Detroit News*, which proposed a plan of general action toward replanting. A benevolent fund, the Children's Fund of Michigan, was created by Senator James Couzens, with a gift of \$10,000,000. The terms of the trust required that the money be employed to promote the welfare and particularly the health of children of the State and that it be all expended within 25 years. What was declared likely to be the last great lumber drive in the State took place on the Manistique River and Driggs River late in July, about 2,500,000 board feet of pine, hemlock, and hardwoods being run.

The city of Detroit in an election held April 1 rejected a proposal to create a great municipal subway by the expenditure of \$91,000,000, of which \$54,000,000 would have been furnished by an immediate issue of bonds. The Ambassador Bridge, characterized as the greatest suspension span in existence, was completed and was formally open on November 11. It bridges the Detroit River, connecting the city with the Canadian shore. Preliminary work was undertaken on a proposed third bridge over the river, to be known as the Grosse Ile and Amherstburg Bridge. By the gift of Mr. and Mrs. Charles T. Fisher of \$750,000 to the Sisters of St. Vincent de Paul, a hospital was provided, which was to be built to replace that destroyed by fire in November, 1928. A new Woman's Hospital building was dedicated on June 1. Ground was broken in October for a new Naval Reserve Armory.

**OFFICERS** Governor, Fred W. Green, Lieutenant-Governor, Luren D. Dickinson, Secretary of State, John S. Haggerty, Treasurer, Frank D. McKay, Auditor, Oramel B. Fuller, Attorney-General, Wilbur M. Brucker, Superintendent of Public Instruction, Webster H. Pearce.

**JUDICIARY** Supreme Court Chief Justice, Howard Wiest, Associate Justices, Louis H. Ford, Nelson Sharpe, William W. Potter, John S. McDonald, George M. Clark, Henry M. Butzel, Walter H. North.

**MICHIGAN**, UNIVERSITY of A State institution for the higher education of men and women in Ann Arbor, founded in 1817. In 1928-29 the enrollment was 13,769, of whom approximately 34 per cent were women, 65 per cent were inhabitants of the State of Michigan, and the remaining 35 per cent, with the exception of 351 foreign students, were from all parts of the United States. Of the total enrollment, in the summer sessions, 5717 were in the college of letters, science, and arts, 1570 in the college of engineering, 392 in the college of architecture, 979 in the medical school, 107 in the school of business administration, 253 in the nurses' training school; 723 in the law school, 130 in the college of pharmacy, 359 in the school

of dentistry; 1002 in the school of education; 32 in the school of forestry and conservation; and 2290 in the graduate school. The registration in the 1929 summer session was 3485. The teaching staff was composed of 819 members. The university libraries contained 718,425 volumes. For current expenses, the State appropriated \$4,925,000, while approximately \$4,000,000 was derived from other sources. During 1928-29 the new Intramural Sports Building and the Michigan League, a club house for women students, were opened, and the construction of an elementary model school was begun. The gift of the Legal Research Building, to include the law library, and of a new dormitory known as the John P. Cook Building, both to form part of the new law quadrangle, was announced. Alexander (Giant) Ruthven, Ph.D., succeeded Clarence Cook Little as president in 1929.

**MIDDLEBURY COLLEGE** A coeducational, nonsectarian college in Middlebury, Vt., founded in 1800. For the autumn term of 1929, 616 students were registered as undergraduates and 19 as graduates, of these, 350 were men and 285, women. The enrollment in the special summer schools of French, Spanish, and English, conducted by the college, amounted to 593. There were 61 members on the faculty, including administrative officers and those on leave of absence. The productive funds of the college in 1928-29 amounted to \$3,411,553, and the income for the year was \$330,741. The library contained 60,000 volumes. Gifts to the college amounted to \$103,930. President, Paul D. Moody, D.D.

**MIDDLE CONGO** SEE FRENCH EQUATORIAL AFRICA

**MIHALOVICH**, EDMUND VON An Hungarian composer, died in Budapest, in August, 1929. He was born in Perkasanez, Sept. 13, 1842. He began his musical education under Mosonyi in Pest, then went to Hauptmann in Leipzig and finished under Bulow in Munich. Almost his entire life was spent in Pest, where for many years he was director of the Landes-Schauspielakademie. In 1887 he was chosen to succeed Liszt as president of the Landesmusikakademie, which post he held till 1919, when he was pensioned. He wrote the operas *Hagbarth und Sigune* (Dresden, 1882), *Toldi* (Pest, 1893), *Flana* (Pest, 1908), and *Wieland der Schmied* (after Wagner's sketch, not produced); four ballads for orchestra *Das Gespenstschiff*, *Ilero und Isander*, *La Ronde du Sabbat*, and *Die Nix*, four symphonies, and a piano concerto.

**MILITARY PROGRESS** Any discussion of military progress among the nations of the world during the year 1929 must include something on the subject of the Kellogg Pact, the Covenant of the League, the Pacific Treaty, the Locarno Treaty and the optional clause of the Permanent Court of International Justice. The disarmament parley called for January, 1930 was bound to consider all these instruments in all their phases and bearings upon national security, and disarmament must include consideration of land forces and land reserves. Only time and the results of the parley will disclose to what extent the nations of the world will limit their armament, or how they will disarm.

The French idea seemed to be that disarmament should be carried out through the League of Nations, while Great Britain apparently was pinning her faith to the Kellogg Pact. Great Britain assumed that this Pact was the *raison*

*d'être* for the success of the conference and as a refutation of the French thesis. It was apparent that, unless disarmament would begin now, a tendency toward expansion in arms would develop and once more nations would be taught to trust only to military preparation for their security.

In an address by Prof. Harry Elmer Barnes of Smith College at the Rand School Forum, New York City, he stated that there were more potential causes of war in Europe than there were in 1914. If a situation like that in 1914 arose, there would be no important new force to hold Europe from war that did not exist in 1914, for diplomacy would find a loop hole in the Kellogg Pact. The League of Nations would not dare to interfere and progress in disarmament since the War, he said, had been "little but rhetoric."

With that view, the reviewer is inclined to agree, as one must who seriously contemplates the potential causes of war. Among those listed by Professor Barnes were Italian ambitions in Dalmatia and Albania, Albania and Italo-Franco friction in Africa, the Polish corridor, resentment and desire for revenge in Hungary and Bulgaria and the unsettled problem of the Dardanelles and Bosphorus. Many of these were discussed in the 1928 YEAR BOOK. The cancellation of all war debts and reparations was advocated as a basis of economic recovery, although, as far as moral questions are concerned, American financial generosity in debt settlement has been unparalleled in history.

The Franco-German negotiations for solution of the Saar problem did not achieve anything. There could be no doubt in the minds of the Germans as to what French demands are, if what Carlisle MacDonald cabled to the New York Times was correct, viz. 1.—The unconditional purchase by Germany of the mines of the Saar which were given to France by the Treaty of Versailles. 2.—Continuation of the present highly advantageous relationship between Saar provinces and France, both as to delivery of coal for the French steel industry and as to the present favorable tariff arrangements between the district and France. A new director for the Saar mines effective Jan. 1, 1930, does not seem to indicate an early return of the mines to Germany. Either Germany must meet the French demands in full or else France must maintain her present privileged position until 1935, the time limit fixed by the Treaty.

As to the relations, the whole difficulty . . . possibility of war elsewhere according to Philip Kerr in *Foreign Affairs*, October, 1929 Great Britain could not ignore the possibility of being involved in war in the north Atlantic and the Mediterranean arising out of the discords of Europe and the Near East. The United States does not ignore the possibility of being involved in war in the Pacific arising out of the discords of Asia.

The World War proved that all earlier codifications of maritime law, e.g., the Declaration of Paris (1856) or the Declaration of London (1909), break down under the stress of world war, and that under modern conditions of the *guerre totale*, it is impossible to distinguish between contraband and non-contraband, or between public and private property at sea. Everything except ostrich feathers is used for war purposes. The whole idea of codifying neutral and belligerent rights is incompatible with the Kellogg-

Briand Pact, and in some measures with the Covenant of the League of Nations and the Locarno Treaties. It is quite illogical, as well as a confession of lack of faith, to draw up rules for warfare if the use of war itself is to be forbidden and renounced.

There is only one solution and that is that England and the United States should use all their efforts to prevent the settlement of international disputes by war, i.e., to make the Briand-Kellogg Pact effective. The alternatives are inexorable. Either war is prevented, or every war is liable to develop into an Anglo-American War.

If war is to be ended, nations not only must cease to use their armaments as the instruments of national policy; they also must agree to use them solely as the instruments for preventing successful resort to violence. They must be used either for military or for police purposes. *It is not possible to keep naval and land armaments in separate compartments.* Large armaments anywhere threaten war.

It will be almost impossible to prevent the military hegemony of France and her allies in Europe from developing into a new balance of power ending in another world war, unless adequate international securities for the prevention of war can be created. How is that to be done?

Are the Polish corridor, the Anschluss, the outlet for surplus populations, economic opportunity for all nations, the relations between East and West, between Russia and her neighbors, the giving of security against international wrong and aggression and other problems to be settled by patient consideration of them in all their aspects and a willingness to do what reason and justice eventually prescribe, or are they to be settled by war?

As to France and Italy, an . . . . . between them is essential to the . . . . . The patriotic hysteria prevailing in Italy is not without its dangers. The failure of Mussolini to find an outlet for Italian emotions in Sicily, in Abyssinia, in Albania, along with pressure on Italian finance which was increasing in spite of the efforts of his government to reduce the strain, was making for a perilous atmosphere gathering around the abandonment of a policy of rejecting the status quo for something that promises more grand adventure. Napoleon III showed us what such things cost. So did the Kaiser. (Henry di Jouvean, *Foreign Affairs*.)

Under date of October 8, Voroshilov, Soviet Minister of Defense declared that military discipline was necessary not only for the Red Army but the Soviet plants as well. He pointed out that the coming fight in which the fate not only of Soviet Russia, but of World revolution is finally decided will be mass war, and that Soviet armed power ought to be strengthened by militarily organized plants and factories. While stating that the Red Army, so far as aviation, artillery, and deadly poisons were concerned was already strong enough to defeat "all our supposed enemies," the fact must be considered that these enemies are supported by superior industries. He emphasized that the utmost must be done to improve their army's present equipment, quality and quantity. He expressed the opinion that the next war would be decided by the workers in the plants and by the professors in laboratories and students in technical universities.

China was engaged in warlike activities most of the year, her break with Soviet Russia on account

of the Chinese Eastern Railway came as "a bolt from the blues." It was almost inevitable that the two countries should have been brought to the brink of war—with serious hostilities and armies engaged in serious conflict. The parley pending between the Chinese and Russian delegates was not expected to solve finally the vexed question. As to the warfare going on by rebels or dissatisfied province or army commanders against the Nationalist government conclusions may not yet be definitely stated.

**ARMIES OF THE WORLD** The authorized peace strength of the armies of leading nations were as follows

United States	119,112
Great Britain (exclusive of India)	212,044
France	626,488
Italy	249,429
Japan	306,400
Russia	562,000
Germany	100,635

The active and reserve totals were

United States	426,153 or	32 to 1000 of population
British Empire	974,993 or	25 do
France	5,676,945 or	5 19 do
Italy	3,342,236 or	7 54 do
Japan	2,248,000 or	2 03 do
Russia	6,083,000 or	4 16 do
Germany	100,500 or	18 do

**GREAT BRITAIN** In the War Office exercises in September army training was carried on with night operations of an infantry-battalion group having as their object the testing of the idea that a small force under cover of darkness may sometimes succeed where in daylight a larger force has failed. In the division maneuvers, the question arose as to the best use of divisional cavalry, cooperating with infantry, as compared with the tanks allotted to cavalry acting independently. More maneuvers will have to be made to determine the question. Also, affecting light tanks, when it is a race for time, whether it is best to send horsemen on light tanks forward to make good important ground on ahead. It seems that light tanks in suitable country are likely to forestall cavalry and should be sent in front of them when such a mission has to be carried out.

In the House of Lords on November 14, the Government was warned that the British Army had fallen below the point of safety when her increased responsibilities in controlled territories, mandated territories, and frontiers were taken into account. Lord Middleton declared the army had fallen below its strength of 1895 when it had 148,000 in England and 73,000 in India, since there were in 1929, 140,000 in England and 60,000 in India. Lord Allenby said "British armed forces have been a great universal police force and we must keep them at such strength that we can, when required, safeguard and uphold the mandates with which Britain has been entrusted." A matter of policy seeming to emphasize this danger of lessening safeguards.

The Indian Central Committee, cooperating with the Parliamentary Committee, had before it the very serious future condition of the Indian Army. According to the policy laid down by the Government of India Act of 1919, the Indian Army must be brought under control of the Indian Parliament. The throwing open of the ranks of commissioned officers was a part of the move

in that direction. British officers cannot serve as mere mercenaries under the pay of the future government of India and the Indian Army must be Indianized if it is to be handed over to Indian Control. The functions of the Indian Army have been—one of defense from external dangers and one of keeping internal peace. A solution appears to be that these two functions be given to different groups (1) the central Indian Army, which should remain partly under British control as at present and (2) the provincial armies, to preserve internal peace, under the control of the provincial governments, which should be recruited, manned, and paid for by the provisional governments.

The evacuation of Weisbaden by the British troops beginning September 26, by the departure of the band of a Dorsetshire infantry regiment and a small detachment from its barracks in the famous resort of Bad Schwalbach, playing "John Brown's Body," lends an interesting note in Rhineland rule. For eleven years the British Army has contributed varying numbers of troops of all arms to the Allied Armies of Occupation in Rhineland territory. The Watch on the Rhine could be inscribed in the annals of such units as a phase in British Military history and will in the course of time become a tradition of which all ranks may be justly proud.

The Director of Mechanization of the British Forces, Maj-Gen S C Peck, stated their expectation on mechanization overcoming the dominant power of the defensive and restoring decisive maneuver in battle as follows: "We are in a purely experimental stage, feeling our way, but, personally, I feel that mechanization has come to stay. It is the pivot around which future armies must organize." The British Tank Corps had enjoyed a continuous existence since its creation as a new combat branch during the World War and had given continuous study to the organization, equipment, training, and tactical employment of mechanized units.

As has been noted Tank Corps units are not normally included in corps or division but are considered part of G H Q reserve and at present include 4 tank battalions and 11 armored-car companies.

The real problem of mechanization was to work fighting machines into the tactical thought and practice of the army.

Extensive tests were made with wheeled and half-track tractors, trailers, armored caterpillar tractors and self-propelled mounts. All mobile anti-aircraft artillery had become motorized, the guns being mounted on trailers which are towed by 6-wheeled tractors. Anti-aircraft equipment included machine guns and anti-aircraft guns mounted on special cross-country carriers. The carriers provide armored protection for engine driver and for members of gun crews except when operating their weapons. The 37 howitzer batteries, for close support of cavalry experimentally were provided with caterpillar trailers.

The "dragons" were apparently in good standing, because they do the work and fit into the mechanized force. They weigh about 9 tons, have a speed of 16 miles per hour, and capacity for 11 men and 128 rounds of field ammunition and a 3.3-inch gun in tow, engine is air cooled.

In the infantry, the 1929 experiments involved the partial mobilization of two infantry brigades. The infantry battalions of these were not motorized. The tractor is comparatively slow, but in-

conspicuous, light, simple, and cheap, provides partial armored protection for driver and gunner and carried either a 303 machine gun and 3500 rounds of ammunition or a 3-inch mortar with range of 2000 yards. The 0.8-inch anti-tank gun on its mount is towed by the tractor, the 0.5-inch anti-tank gun can be mounted on a tractor. All of these weapons were intended for close support of infantry.

For close reconnaissance the British considered the horse soldier indispensable and irreplaceable. Two cavalry regiments, however, had their horses replaced by armored cars. All of the horse cavalry regiments were supplied with light 6-wheeled trucks for their first-line transport. It was all experimental, however, and no conclusions definite or determined were reached.

Remarkable progress was made in the development and use of bridging equipment including pontoons, for mechanized forces. Pontoons are light, collapsible, and can be conveniently nested. Roadway made of duck boards can be placed in position quickly.

Experiments with smoke-producing devices were not satisfactory. An armored vehicle with a weapon that can fire smoke shells either when in motion or stationary was considered more useful than a smoke-producing machine (*Field Artillery Journal*, November and December, 1929).

The exercise involving the armored cars of the mounted regiment was the first of its nature since the machine took the place of the horse in the regiment. The time from the assumed frontier to the river crossings, compared with that which horsemen would have taken, was significant. The experience gained showed generally that the principles which govern mounted troops employed on such missions apply equally to armored cars, which range more widely and do the work more rapidly. Difficulties arose over control. They can be solved by keeping pace with scientific progress in radio telephony.

It appears that while the substitution of a battalion of light tanks for a battalion of infantry was ideal in a brigade upon a special mission, it is not a sound policy to embody permanently in an infantry brigade so mobile a unit as a battalion of tanks. The embodiment of small mortars for a close support was worth considering. The question of the best methods of carrying infantry machine guns and gunners and that of machine-gun platoons in companies instead of machine-gun companies in battalions must be studied further.

FRANCE. The World War completely changed the old-time methods of erecting defensive fortifications and such famous forts as Wailhem, defending Antwerp, Louvain at Liège, Vaux and Boncourt at Verdun were being replaced by subterranean trenches, covered over and as far as possible made invisible to airplanes. Disappearing guns lifted by mechanical apparatus can be made to disappear under ground when the enemy has found the range or planes are dropping bombs. Machine-gun defense was receiving special attention.

No work of any account was being done along the northern frontier separating Belgium and France. The feeling was deeply engrained in the French military mind that should Germany ever attack again it would not be through Belgium. The strengthening of the fortifications along the Rhine and north of Lorraine started in 1927 was

expected to be finished before November of 1930.

The Chamber of Deputies on Dec. 28, 1929, appropriated 2,000,000,000 francs (\$116,000,000) to fortify the positions and to increase the navy. More than one-third of the appropriation was to be available in 1930. The programme of defense for which funds were voted as above was in continuation of the plans laid previously. The land defenses were made necessary in part by new frontiers given by the Treaty of Versailles. Just what was planned of course was not made public. The evacuation of the Rhineland makes execution of the plans urgent.

Actual evacuation of Coblenz began Oct. 15, 1929, with the departure of 151st Infantry Regiment for its new post at Metz. The shifting of troops in the third Rhineland zone during September and October was due to economical reasons rather than otherwise, because under the Young Reparation Plan the expense of maintaining Allied troops in the Rhineland after Sept. 1, 1929, must be borne by the government concerned instead of by Germany. The most strategic posts were maintained and it may be assumed that all French troops in the third zone would remain there until final ratification of the Young Plan by Germany.

Twelve hours after the French tricolor had been hauled down, Nov. 30, 1929, the flag of the German Republic was hoisted at midnight over the famed fortress of Ehrenbreitstein which crowns the heights of the Rhine opposite Coblenz, signaling the end of foreign military control of the Second Zone of the Rhineland. What a memory to the Americans who served with the Army of Occupation! Here was a worthwhile ceremony, for thousands of happy Germans celebrated the reunion with the Reich of the 2,000,000 German citizens who had been under the supervision of Allied troops since the American doughboys marched into the city eleven years before.

The hauling down of the French flag marked the complete evacuation of the Second Zone as a similar ceremony took place at Aix-la-Chapelle (Aachen), when the Belgian troops retired over the frontier to their own territory. It is interesting to note that during the Belgian occupation 4000 rooms were sequestered, 23 persons were killed and 334 officials and civil-service employees were expelled from Aachen, all costing about \$7,400,000 for an average contingent of 4000 soldiers during the last year and 9000 at the beginning. And what of the future? General Poincaré, commanding Belgian troops said: "The Germans are executing works here which can only be explained by military reasons. According to Von Seeckt's theory, motorized German shock troops leaving Aix-la-Chapelle at 8 p.m. could be in Brussels at 5 a.m. the next day without having met Belgian troops."

The Third Zone, centering at the Maastricht bridgehead was the only one left under allied control at the end of the year.

According to the Treaty of Versailles, Article 43, the Allies were to occupy the Rhineland for 16 years, when, provided Germany had fulfilled her obligations under the treaty, they were to withdraw, it being stipulated that the bridgehead of Cologne and nearby territory should be evacuated after five years, the bridgehead of Coblenz in ten years, and the remainder of the Rhineland in fifteen years, provided the guaranties against aggression by Germany were

considered sufficient and she was observing the conditions concerning reparations.

France's demand for the inclusion of "sanctions" or military guarantees in the protocol of The Hague conferences would be vigorously opposed by the German Foreign Minister probably because the United States has accepted Germany's good faith as the sole guaranty of payment. It was believed that a guaranty must be given conforming to Article 430 of the Treaty of Versailles, which provides a right of reoccupation of the Rhineland in case of default by the Reich.

The new law reducing compulsory military service in France to one year will provide adequate defensive forces and bring great economic and social benefits. An important feature of the new law was the possibility of convoking, without mobilization, every one eligible for military service in the first three classes of reserves. Each eligible man will resume his place in the ranks among his former comrades at any day. This convocation will require less than three days. If mobilization is ordered thereafter, it will be accomplished much quicker than it was in 1914. There is a legal obligation to forward to the League of Nations news of intention to convoke men eligible for military service. With the one year's military service, France had begun cutting down the number of soldiers under the colors. There were to be 400,000 men in the new French Army, as against 740,000. Due to science and organization, it was believed it would be as formidable as the larger army with two years' service requirement. It will cost more, however, as there will be 106,000 professional soldiers, officers, and non-commissioned officers, and 35,000 civilians.

Modern subterranean fortifications, machine guns, motorized artillery, mass automobile transportation, the army of the air, and other sources of science and invention were counted on to counteract the lessened man power.

The "blines," as conscripts are called, were to be put through intensive training during their twelve months, learning the principles of war. Domestic polling, not duty, and the like would be taken care of by an enlarged force of 15,000 gendarmes. In the colonies, native troops would be used, but officered by officers from France.

For 1930, it was estimated the actual cost would be \$242,000,000, about  $\frac{1}{20}$  more than in 1929. France was to spend 2,500,000,000 francs, about \$100,000,000, during five years on defensive fortifications of her post-war frontiers, north, east, and the Alps. It was to be especially noted that this was the first time in her history that France was devoting nearly as much time and money to strengthen the Alps as the line of the Rhine—a reversal in form when one thinks of Italy as an ally and Germany her traditional enemy.

The war budget of France for 1930 was to amount to 4,305,992 francs or about \$170,000,000—an increase of \$9,000,000 over the expenditures of 1929. There was another appropriation of roughly \$72,000,000 for maintenance of troops in Algeria, Tunisia, Syria, and China, bringing the total for 1930 to \$242,000,000.

AUSTRALIA The new Labor Prime Minister, J. H. Scullin, announced Oct 31, 1929, that compulsory military training in Australia had been suspended and that the whole matter would be reviewed with military officials with a view to adopting "a more satisfactory and more efficient system in place of compulsory training. Military

training is now given between the ages of 17 and 21 and consists of a couple of hours weekly drill with an annual camp of 7 days during the later stages of training.

ITALY. Notwithstanding disarmament discussion in many countries, Italy apparently intended to look out for national defense. The War office and Ministry of National Education agreed that students at all universities throughout the kingdom should receive special instruction and training in duties as army officers. During the university year weekly courses were to be undertaken by the officers of the staff college in military tactics, and similar courses were to be given for the officers of the regular army. These lectures form part of the curriculum which all students, without exception, were to be compelled to attend. Added to this, they would have drilling at stated periods, and also pass part of their holidays in camp. When their course, which was supposed to coincide with their taking a degree was finished, they would follow a seven months' practical course in the army and receive a commission in the officers' army reserve corps. They were to be liable to be called up under certain conditions, to continue their practical study of war tactics. The project was put in force at the opening of the university year in November.

RUSSIA Press dispatches from Moscow November 6 stated that 30 war tanks built in Soviet factories with money raised from a fund known as "Our Answer to Chamberlain" were presented to the Red Army, as part of the twelfth anniversary ceremonies of the 1917 revolution. They were of various sizes and said to combine the best principles of European and American tanks and bear individual names such as Railway Worker, Painter, Miner, Textile Worker, Sailor, and Soldier.

Russian women, who had long been admitted to special units in the Red Army were to have advanced instruction in the art of war. The Revolutionary War Council, according to press information of November 11, decided to admit women between the ages of 18 and 23 to military academies for instruction in rifle and artillery fire, aviation, photography, communications, and medical service.

MEXICO The Secretary of War, Joaquin Amaro, made public on October 23 the 1930 War Department budget amounting to about \$41,000,000 and providing for an army of 60,000 men—a reduction of \$31,000,000 over the 1929 budget or nearly 45 per cent.

IRELAND The whole of the Army Air Corps was based at Baldonnel Aerodrome about ten miles out of Dublin. There were four very large hangars constructed by the British government in 1917. The Air Corps consisted of headquarters and one squadron having two training and one service flights. Officers must know the make of every machine and be prepared to act as pilot, observer, workshop, or stores officer. The machines bear the Free State colors, emerald, white, and orange, on the wings and tail. Colonel Fitzmaurice, the first to fly the Atlantic from east to west was the officer commanding.

The Army Medical Service was organized as a division of two companies. The service was commanded by a colonel, with 53 officers, 33 nurses, and other ranks. The Military Police Corps had its headquarters in Dublin with a depot company, one company at Dublin, Cork, Athlone, and Curragh, the first two having two platoons each,

the other two one platoon each. The Army Signal Corps was organized in a headquarters company at Dublin, three signal companies for the Dublin, Limerick, Cork, and Athlone districts.

In the matter of uniform, one is struck with the great uniformity present, for there is practically one uniform. Six patterns of cloth cover the whole range of army dress. Three for officers, one for the tunic, one for the breeches of dismounted officers and for trousers, and the third a light buff khaki cord for the breeches of mounted officers. The color of the two former is a dull green, slightly tinged with brown. The three cloths for the men are uniform in shade, very much darker and greener. In equipment, the whole army, except commissioned officers, carries the 303 Mark VII short Lee-Enfield rifle with 17-inch bayonet.

For training, there is a special training establishment at Curragh called the Army School of Instruction. Every battalion goes to camp for one month during the year. Musketry training entails the firing of 285 rounds per man for infantry and 150 for other services. All officers take a six weeks' course at Curragh. The machine-gun course of six weeks for junior officers embodies training in riding and horse mastery. For the non-commissioned officers, the school at Curragh also is used, an unusual feature being the giving of religious instruction.

Officers' pay is as follows: Lieutenant-General, £1000 per year, Major General, £800 a year, Colonel, 28s, 30s, and 32s a day, the increase being after two and five years' service, Major, 24s, 26s, and 28s per day, Commandant, 20s, 22s, and 24s a day, Captain, 14s, 16s, and 18s a day, Lieutenant, 10s, 12s, and 14s a day, Second Lieutenant, 8s, 9s, and 10s per day. Officers' messes are maintained very much after the model of the British Army, with a defense force regulation for the "cultural and social well being of the members, the messing of members and visitors, the cultivation of esprit de corps, and the maintenance of the national and social position of the officers of the forces." Commanding officers were directed to dine in mess once a week and to see that all non-dining members attend that evening.

**FINLAND.** An unusual feature in the military aspect of Finland is the fact that operations are in many ways facilitated in winter owing to snow and ice, as in other seasons of the year the Finnish Army has to adopt a special form of warfare suited to the geographical features of the country, which consist largely of forest areas divided by a vast number of lakes and waterways. Field operations such as are carried out in most European countries are thus more or less impracticable in Finland, and a special form of guerrilla tactics has become the leading feature in Finnish military training. With the coming of winter every man in the Finnish Army takes to skis, the whole military machine becomes more mobile, and swift offensive action is the aim of all military commanders.

It was not until after the War of Independence of 1918, when the Finns defeated the Bolsheviks, that special ski battalions were formed. The artillery moves on skis, the guns being carried on sleighs drawn by horses, or having special heavy skis fitted to the wheels of the carriages. Machine guns are mounted on small sledges, drawn, as is the light transport, in small Lapland sledges by men with ropes over their shoulders. Ammunition is carried partly on the soldier, partly in

regimental reserves or hand-drawn sledges, and partly in large reserves carried on sleighs or motor tractors operating on the roads. The small Lapland sledges form the connecting links between the troops in action and the columns, and their mobility enables them to maintain a supply system over a considerable distance. Cavalry operates as a mounted force.

As an example of a ski march done by the Tampere Regiment the distance skied was 186 miles, covering 17 miles in the last day's march without any straggling. A normal day's march on roads with horse and sleigh transport is about 25 miles, while a maximum forced march without transport is about 62 miles.

**UNITED STATES.** Today, national defense cannot be left to haphazard methods, but must be planned consistently and carried out likewise. The President's message to Congress was most interesting as far as its figures are concerned, showing the United States to be foremost in the matter of current military expense exceeding "those of the most highly militarized nations of the world." The question naturally arose—Was it up to the United States to make the first offer of a real slash in military expenses? It remained to be seen whether in the forthcoming disarmament parley this would be the case. France may take this expression of President Hoover as being the very reason for her not reducing her military strength. From a total expenditure for national defense purposes in 1914 of \$267,000,000, it naturally rose with the Great War, but receded again to \$612,000,000 in 1924, when again it began to rise, until during the current fiscal year the expenditures will reach to over \$730,000,000, excluding all civilian services of these departments. President Hoover authorized will carry it to still larger figures in future years, yet the total of our expenditures is in excess of those of the most highly militarized nations of the world (President's message).

"In 1914 the officers and men in our Regular Army and Navy were about 164,000, in 1924 there were about 256,000 and in 1929 about 260,000. Our citizens army, however, including the National Guard and other forms of reserves, increased these totals to about 299,000 in 1914, about 672,000 in 1928, and 728,000 in 1929. Under the Kellogg Pact, we have undertaken never to use war as an instrument of national policy. We have therefore undertaken by covenant to use these equipments solely for defensive purposes. The improvement in the National Guard has definitely strengthened our national security by rendering it far more effective than ever heretofore."

The actual strength of the active Army of the United States on June 30, 1929, was 137,539, according to the report of the Adjutant-General of the Army. The table on page 515 shows the total strength by classes of personnel.

In addition to all of the foregoing, there were 734 army nurses (561 regular and 173 reserve), 29 contract surgeons, 850 cadets at the United States Military Academy, making altogether 139,142 in the military service on that date.

Of the Commissioned officers, warrant officers, and enlisted men on active duty June 30, 1929, 98,943 were serving in the continental United States, 14,228 in Hawaii; 8734 in the Canal Zone, 228 in Alaska; 1196 in Porto Rico, 12,337 in Philippine Islands (including scouts), 1012 in China, 6 in Europe, and 1735 either en route

Grand total . . . . .	137,520

from one country to another, on leave of absence, or serving as military attachés in various foreign countries.

The strength of the Officers Reserve Corps at the end of the fiscal year June 30, 1929, was 112,757 including 10,831 officers who held commissions in both the National Guard and Reserve Corps. This was a net decrease of 2067 during the year. A total of 19,608 received training during the year for periods of 14 days and 940 for longer periods, a total of 20,548.

For the first time the annual report of the Assistant Secretary of War revealed the fact that it would cost from \$250,000,000 to \$4,000,000,000 to build up a safe reserve of raw materials not produced in quantity in this country and necessary to conduct a modern war, and it gives a clear idea of the task of the department in attempting to create a reserve of materials for use in a national emergency. Major-General Fries, retired chief of Chemical Warfare Service, states there were some 25 strategic raw materials that the United States lacks that are absolutely essential in war, and without which military success will be impossible. Rubber, for motor transport, the vitally necessary gas mask, and large quantities required by the air service, with uses in all branches of the military machine is one of the twenty-five Coconut shell charcoal, the best absorbent for war gases and the principal constituent of the gas mask canister is another. Tin, manganese, sisal, and shellac are some others. To insure a proper supply of these commodities, the sea lanes must be kept open, adequate substitutes found or a reserve of materials sufficient to last for a war of at least two years' duration. This is a task difficult in the United States where people are inclined to minimize the possibilities of any or another war.

The annual report of the Secretary of War praises peace-time activities. As to the mechanization of the armed forces, he states "When we increase the soldier's mobility, we should not accomplish it at the expense of his protection or his striking power."

A section of the report dealt with the work of rescue and assistance performed by the Army during the year, which included large expenditures from army stores for tornado victims and sufferers from disasters in many parts of the world. Supplies valued at \$953,766 were furnished to the Porto Rican hurricane victims.

With reference to the National Guard "The present condition is most gratifying. It is continually becoming a more valuable and dependable potential component of the Army of the United

States. The strength of the National Guard on June 30, 1929, was 12,347 officers, 188 warrant officers, and 164,453 enlisted men, an aggregate of 176,988. There was a net increase of 25 headquarters and 34 units. The cavalry has been reorganized into larger units. The total authorized strength on June 30, 1929, was 187,950.

"The Reserve Officers Training Corps now has a total of 112,424 students, enrolled in 321 units located at 226 educational institutions. Of these units, 221 were senior units, with an enrollment of 71,903, and 100 were junior units, with an enrollment of 40,521. This important element of our national defense continues to supply the life blood for the organized reserves, furnishing as it does approximately 5000 young officers each year. The Citizens Military Training Camps have been accepted by the country as a desirable contribution of good citizenship. . . . We were assured of never again being forced into war, the camps still would be a profitable investment, for they awaken in those who attend them a readiness to serve the country in peace or war."

The New York *Herald Tribune* on December 2 editorially recalled the complexity of the army problem, referring to the suggested possibility of a reduction without impairing the national defense by Mr. Hoover, who pointed to the great absolute size of our military and naval expenditures.

"The real problem of the Army can be solved by neither the President nor the General Staff alone. The Army finds itself charged with 'the national defense.' It is a mission of complete vagueness, under which it may be called upon to do any one of half a dozen quite different things at any time between to-morrow and eternity. In theory it is supposed to be equally prepared for a punitive expedition in unsettled territory or a major war in highly developed country. It can, to take an example, dispense with neither its mules nor its tractors. It must keep up its weapons for use to-morrow, at the same time that it must avoid loading up with a vast equipment which may be obsolete long before any actual service is required of it. And it must retain the infantryman while developing the Air Corps, because there is no possible way short of actual fighting in which to determine which one will prove the more valuable in war. . . . Everywhere throughout the Army, there reigns a want of men, a want of means, a feeling that existing units and services have been paid down so far that they are of little use."

According to the opinion quoted, the Army has never abandoned the "six-field army plan" of organization for the national defense on a theoretical war-time force of some 2,000,000 men. The plan above survives because Congress has not changed it, but Congress has cut the strength of the regular establishment in two and the appropriations for reserve work never have been forthcoming on the scale anticipated. In the end Congress has to say what the plan will be and will have to do its share in making the revision.

The conclusion of Major-General Gilchrist, Chief of the Chemical Warfare Service that "flesh and blood cannot advance against machine guns in the proportion in which they are now included in modern armies without the protection afforded by armor, smoke, or great masses of artillery" is in consonance with the later experience of the World War. As against artillery and armor, smoke is very economical and is about the only possible protection, other than the

speed of the mechanized force itself, against semi-automatic weapons. Accentuation of smoke training has been one of the major aims of the Chemical Warfare Service during the year. Specifications for the construction of atomizing apparatus for airplanes have been prepared and instructions for their use have been written. A number of these apparatuses have been constructed and successfully employed for the production of smoke screens in a great number of demonstrations and field tests.

"The Infantry Board has also carried out a test of the smoke-screen apparatus for tanks, finding that the mechanical elements and their functioning were in general mechanically satisfactory and that the blanketing smoke laid down would greatly assist the advance of attacking riflemen." To combat enemy smoke and chemicals, the War Department has approved the creation of a field laboratory chemical company for each field army. To assist the training of a chemical regiment there is included a platoon in the experimental mechanized forces at Fort Meade, Maryland. It has 42-inch chemical mortars mounted on hand carts, the entire platoon and arms being carried in trucks. The trucks can keep up with the mechanized force while on the march and the hand carts keep up with the infantry in the attack.

Improvements have been made in gas masks, a new type being produced with a universal-sized face-piece, screw-type eye-piece assembly, sun-proof hose tube without stockinette, hose-tube clamp and pressed metal diaphragm assembly. During the year the production of 24,667 gas masks was undertaken for the Army and 30,000 for the Navy.

According to the Chief of the Air Service there were to be arranged long cross-country flights of tactical units, especially bombardment, pursuit, and attack planes, to points as far away as Panama with a view to a concentration of the air force in 1931 for a maneuver in conjunction with ground troops in defense of the Canal.

During the year the following developments resulted, that of a satisfactory temperature indicator for radial engines had progressed sufficiently to warrant construction of a number of these units. Fuel-system development consisted largely in improving existing equipment and investigating new pumps submitted by the manufacturers. Ignition development centered largely upon obtaining a satisfactory method of shielding the ignition system and spark plugs to prevent radio interference. The use of aircraft radio receivers of greater sensitivity has demanded greater care in shielding the ignition system.

The Assistant Secretary of War for Aviation stated rather emphatically the shortness of army airplanes and equipment. The Army Air Corps had only 1273 planes on hand and 231 in process of manufacture on June 30, 1929. Of the planes listed many were laid up for repairs and a big percentage of the original number were training planes suitable only for primary flying of students or "refreshing" of reserve officers.

At Mitchell Field, so serious had the shortage become that the seven Consolidated PT training planes ordinarily reserved for reserve officers, were being used by regular army flyers to maintain their flying schedules. While the reserves were suffering with the Regular Army, the National Guard was well taken care of. At Miller Field, L. I., there were five Curtiss Falcons,

a Douglas observation plane, two Consolidated PT's with Wright Whirlwind motors and an ordinary Consolidated training plane for New York's National Guard flyers, 17 pilots qualified to fly nine planes. Seven service type planes (Falcon, with liberty motors) and one Consolidated PT training plane were to be turned over to the newly formed New Jersey National Guard Squadron at Newark with a flying personnel of probably less than 20.

A new system of classifying reserves according to their flying efficiency was put into effect; such as a monthly report showing the physical, flying, and professional status of every active reserve officer. Of the 5954 reserves in the Air Corps, only about 1500 were qualified for flying service and, of these, some 600 were qualified for immediate service. When it is considered that approximately 4000 group-1 reserves are required, it is apparent that the Air Corps was far below strength necessary to make it effective from a national defense standpoint. In the National Guard units were 80 per cent of their authorized strength in pilots and observers and 70 per cent of which have grouped classification. The squadron had 50 per cent of their authorized observers, some not rated, however. On June 30, 1929, there were 1143 officers and 10,890 enlisted men in the Air Corps.

A new tank for the storing of helium gas was completed at Scott Field, Belleville, Ill., having a capacity of 300,000 cubic feet, another tank at the same field has a capacity of 500,000 cubic feet.

To allow for increments in the Air force, 11 of the 38 regiments of infantry had only two battalions. Field artillery battalions had been reduced to two battalions and cavalry squadrons to two groups, three of the five annual increments having been made.

The combat arms had suffered to effect this, and they were just as essential to national defense as the air forces. According to general military opinion, it was all wrong.

Contracts were awarded on October 24 for 66 new airplanes, extra motor and parts, to cost \$1,643,383, being part of the five-year building programme of the Army Air Corps. Thirty-six will be of the observation type, and 30 for observation training of army pilots. The observation planes will be used for tactical missions and both will provide prompter training and tactical work.

In regard to motorization, General Summerall, Chief of Staff, stated in his annual report: "We must recognize that we are living in a machine age and, in the interest of national defense, the Army must act accordingly. In the commercial world, the machine has largely replaced man power, so in the Army, we must to the fullest practicable degree, use machines in place of man power in order that our man power can occupy and 'hold' without terrific losses incident to modern fire power. The Army must be a constantly functioning research laboratory. Every effort should be made to set aside sufficient funds to permit the development of mechanization at a pace commensurate with the progress of modern science."

The movement to speed up the Army through motorization and mechanization advanced another step when the Secretary of War approved the purchase of a new type of light armored vehicle in which experts saw much promise. It was de-

The material collected in 1920 from the crater of Vesuvius has, upon recent investigation, yielded a new hydrous chloride of potassium and copper. The name of *mitscherlichite* has been given to this mineral in honor of E. Mitscherlich, who, as early as 1840, prepared an artificial salt of this composition.

*Larnite*, a new rock-forming orthosilicate of calcium, has been noted among other rare species in the contact zone between chalk and dolerite near Laine, County Antrim, Ireland. This mineral occurs in grayish crystalline masses with unique optical properties. The name *tanteuwentite* has been given to a new titanotantalate of yttrium from the Pilbara Goldfield in the north-west division of West Australia, because it is essentially an *eucosite* in which *tantalum* replaces columbium. The mineral is found in indistinct crystals and crystalline masses of a brownish-black color and resinous lustre. *Thucholite* is a new carbon mineral containing thorium and uranium. Jet black, noncrystalline nodular masses of this mineral were found on Parry Sound, Ontario, Canada. Some of the salt stock of North Germany has yielded a new oxychloride

of complex composition named *zirklerite* in honor of Dr. Zirkler, General Director of the Ascherleben Potash Works.

The mines of the New Jersey Zinc Company at Franklin, New Jersey, have produced during the year two new mineral species. A very basic hydrous sulphate of magnesium, manganese, and zinc, occurring in white tabular, monoclinic crystals, was named *mooreite* in honor of the late Dr. Gideon Moore, a chemist and local investigator of Franklin minerals. Also from Franklin comes another new species, *loseyite*, named in honor of the late Samuel R. Losey, a local mineral collector. *Loseyite* is a basic carbonate of manganese and zinc which is found occurring in bluish-white lath shaped, monoclinic crystals.

A platinum compound which is claimed as a new mineral occurs very sparsely in steel-gray metallic fragments and irregular grains in the Rustenburg District of the Transvaal. This mineral occurrence, which is a sulpharsenide of the rare metal platinum, and is said to be distinct from sperrylite, the only known native compound of platinum, is designated by the name *cooperville*

## MINERAL PRODUCTS OF THE UNITED STATES, 1927 AND 1928 \*

Product		1927		1928	
METALLIC		Quantity	Value	Quantity	Value
Aluminum	pounds		\$ 39,266,000		\$ 47,899,000
Antimonial lead <sup>b</sup>	short tons (2000 pounds)	24,347	3,277,043	33,058	3,978,318
Antimony <sup>c</sup>	do	2,736	875,800	1,432	707,000
Bauxite	long tons (2240 pounds)	320,940	1,988,780	375,426	2,273,898
Cadmium	pounds	1,074,554	645,000	1,875,806	1,144,297
Chromite	long tons	201	5,063	660	14,807
Copper, sales value	pounds	1,684,040,983	220,609,000	1,825,900,891	262,940,000
Feather alloys	long tons	646,749	55,163,574	794,695	66,578,009
Gold <sup>d</sup>	troy ounces	2,197,125	45,418,600	2,194,295	45,360,100
Iron					
Ore <sup>e</sup>	long tons	61,232,473	151,125,820	63,432,826	153,788,657

Total value of nonmetallic products (approximate)			\$4,303,600,000		\$4,109,000,000
SUMMARY					
Total value of metallic products			\$1,217,700,000		\$1,282,000,000
Total value of nonmetallic products (exclusive of mineral fuels)			1,243,353,000		1,216,000,000
Total value of mineral fuels			3,060,047,000		2,893,000,000
Total value of "unspecified" (metallic and nonmetallic products partly estimated) <sup>7</sup>			8,200,000		9,000,000
Grand total approximate value of mineral products			\$5,529,500,000		\$5,400,000,000

\* In this general statement, certain of the figures represent shipments rather than quantity mined, and some of the figures for 1928 are estimates. The reader is referred to articles on the various mineral products for information in greater detail than it seems practicable to give here.

<sup>1</sup> From both domestic and foreign ores.

<sup>2</sup> Figures represent antimony content of antimonial lead. Value excluded from metallic total as the value of the antimony is included in the antimonial lead value. Value for antimony other than that in antimonial lead is included in metallic total. Bureau of Mines not at liberty to publish figures.

<sup>3</sup> Product from domestic ores only.

<sup>4</sup> Value, \$20 67184625533 an ounce.

<sup>5</sup> Value not included in total value.

<sup>6</sup> Including ore used for fluxing.

<sup>7</sup> Figures not available.

<sup>8</sup> Figures showing values not available.

<sup>9</sup> Figures for 1928 not yet available.

<sup>10</sup> Value included in total value of metallic products, Bureau of Mines not at liberty to publish figures.

<sup>11</sup> Figures obtained through cooperation with Bureau of the Census. Figures for 1928 not yet available, estimate of value included in total value of nonmetallic products.

<sup>12</sup> Includes brown coal and lignite and anthracite mined elsewhere than in Pennsylvania.

<sup>13</sup> Figures represent tripoli only. Value of diatomite is included in total value of nonmetallic products, Bureau of Mines not at liberty to publish figures.

<sup>14</sup> No value included in total value of nonmetallic products.

<sup>15</sup> Canvass discontinued after 1915. Value of iron ore sold for paint included under last item ("Unspecified").

<sup>16</sup> Sublimed blue lead, sublimed white lead, leaded zinc oxide, and zinc oxide.

<sup>17</sup> K<sub>2</sub>O equivalent.

<sup>18</sup> Figures obtained through cooperation with Bureau of the Census.

<sup>19</sup> Figures represent talc only. Value of soapstone is included in total value of nonmetallic products, Bureau of Mines not at liberty to publish figures.

<sup>20</sup> Includes for 1928 the value of bluish cadmium sulphide and other cadmium compounds (\$228,013), chate columbite (\$23,322), flint lining for tube mills and pebbles for grinding (\$89,421), gem feldspar (\$12,000), iron ore sold for magnets, iron ore sold for paint (\$83,190), lithium minerals (\$94,750) natural magnesium salts (\$1,020,044), calcareous marl (\$200,704), greensand marl (\$207,000), micaceous minerals, molybdenum (\$1,924,600), selenium, silica sand and sandstone (finely ground) sodium salts (carbonate bicarbonate, sulphate, and iron) from natural sources (\$1,738,241), tellurium (\$1960), zircon, and an estimate of the value of miscellaneous mineral products, statistics for which are not collected annually by the Bureau of Mines.

**MINERAL PRODUCTION OF THE UNITED STATES.** The total value of mineral products in the United States in 1929 was estimated at approximately \$5,900,000,000, as announced by Scott Turner, Director of the U S Bureau of Mines, Department of Commerce. This was an increase of nearly 10 per cent over the total value of mineral products in 1928 and was due to increases in the total value of metals and the mineral fuels produced. The total value of nonmetallic mineral products in 1929 decreased slightly, as compared with 1928. The increase in the value of metallic products was due chiefly to the increase in quantity and unit value of copper and iron produced. Lead and zinc also increased, but gold and silver decreased. The value of each of the mineral fuels produced showed increases, especially petroleum and natural gas. The total quantity of petroleum produced changed little, but there was a slight increase in the unit value. On the other hand, the total quantity of coal produced increased appreciably, but the total value increased relatively less, because unit values were lower.

The following figures give the estimated value of metallic mineral products and nonmetallic mineral products other than fuels and of mineral fuels produced in the United States in 1929.

**ESTIMATED VALUE OF MINERAL PRODUCTS OF THE UNITED STATES, 1929**

Metallic	\$1,540,000,000
Nonmetallic (other than fuels)	1,200,000,000
Mineral fuels	3,160,000,000
Total	\$5,900,000,000

These estimates were subject to revision and replacement by precise figures for 1929, as soon as the Bureau of Mines could complete its systematic canvass of mineral industries. In this canvass, the Bureau sent to every mining, quarrying, and well-operating company an inquiry soliciting a report on the output of each mineral commodity by each producing establishment.

According to the Summary of Mineral Resources of the United States in 1928, published by the U S Bureau of Mines, the combined output of all mineral production was valued in 1928 at \$5,400,000,000, or 2 per cent less than the corresponding value for 1927 and 13 per cent less than for 1926. The mineral fuels as a group showed a decrease of about 5.5 per cent in total value, attributable chiefly to the decrease in petroleum and in bituminous coal, although anthracite shared in the decline, there being less anthracite and bituminous coal mined in 1928 than in the preceding year. On the other hand, natural gas and its coproducts increased. The total value of metallic products of mines of the United States in 1928 was about 5 per cent greater than that in 1927, copper, iron, and aluminum accounting for the gain, the last named showing a large increase in production, and in total value amounting to 22 per cent, notwithstanding a decline in price.

The total refined copper output of the United States established a new all-time record, and the smelter output made a new peace-time record. There was a decreased value and quantity of lead production, while the total quantity of zinc produced was greater than in 1927 but with a lower aggregate value. The production of steel reached a new peak in 1928, but the output of pig iron

and iron ore, though larger in 1927, was considerably below the record years. Gold production remained virtually unchanged while the production of silver in the United States decreased sharply but was accompanied by a higher average price in 1928 than in 1927.

The total value of nonmetallic mineral production (not including fuels) showed a decrease in 1928 as a result of the general decline in prices. Among structural materials, stone and sand and gravel production decreased moderately in quantity and value, lime production showed a decrease more in value than in quantity, cement production increased in quantity but decreased in value, and gypsum production decreased about 5 per cent in quantity and 24 per cent in value. Clay and feldspar showed moderate increases in quantity but diminished in value. Phosphate rock and potash, the chief fertilizer ingredients, increased markedly in quantity and value of production, as did also salt, while sulphur shipments were a trifle greater in quantity and slightly less in volume than in the previous year. Graphite showed a large increase in value.

The statistical summary (pages 518 and 519), prepared by Martha B. Clark of the U S Bureau of Mines, indicates the mineral production of the United States in 1927 and 1928. The more important minerals, both for the United States and other countries, are discussed under their own heads—such as COAL, COPPER, GOLD, IRON AND STEEL, LEAD, ZINC, etc.

**MINIMUM WAGE.** In 1928 the U S Bureau of Labor Statistics issued an interesting report detailing the origins and present status of minimum-wage legislation in a number of the leading industrial countries of the world. Its survey showed that the basis of the origin of minimum-wage legislation was a public uprising against the "sweating" system, particularly of women and children. As abolition sweating, it became evident, it was necessary to determine a living wage, and it was the discovery of this living wage which was the cornerstone of existing minimum-wage systems throughout the world. The ability of the trade to bear wage increases is only a secondary consideration in most countries. In Great Britain and in Russia, the principle is used for the purpose of increasing the efficiency of the workers.

The Bureau's survey found that the laws were administered by wage boards in Victoria, Great Britain, Germany, Austria, Czechoslovakia, Norway, Hungary, most of the provinces of Canada, most of the States in the United States, Argentina, Mexico, and South Africa. The method of industrial arbitration, particularly where strong labor unions exist and are in a position to begin the fixing of living wages, has been resorted to in New South Wales, New Zealand, Italy, and Rumania. The direct fixation of wages appears to have been the rule adopted in the American States of Arizona, South Dakota, and Utah, in the Canadian Province of Alberta, in Uruguay, and in the Argentine State of Tucuman, as well as in the state trusts of Russia.

A variety of methods has been developed to insure enforcement of minimum-wage decrees. France, in the case of home workers, and Norway, in the case of commercial employees, have resorted to civil suits for the enforcement of wage decisions with, however, slight results. A chief source of reliance appears to be in the regular state inspection forces. These agencies are em-

powered to impose fines for violations. The Survey reports that enforcement has been particularly good in the countries of the British Empire, in the United States, and in some of the continental European nations. The particular case of Massachusetts, where reliance is had entirely on the strength of public opinion, has been referred to often in the YEAR BOOK. The survey reported the entire success of the Massachusetts scheme.

The following were found to be some of the general results of minimum-wage control: The abolition of sweating among home workers, particularly in Australia, New Zealand, and England, similarly good results have been obtained in the home-work trades of Norway and Argentina. The relief of women workers in shops and stores in the United States and in the Canadian provinces has been marked. Another outstanding effect of minimum-wage legislation has been the general increase in wages. From Canadian provinces, Australasian States, New Zealand, and certain States of the United States, reports were general that the fixing of a minimum in no way tends to standardize the wage for the particular industry covered. In Australasia and New Zealand, increases and stabilization of wages for women workers appeared to be slow, even in the face of industrial depression and falling prices. The effect of minimum wages on slow workers is of course an important question. Are slow workers handicapped because of the inability of employers to pay them below a fixed minimum? Of course, the system of licenses permits the payment of sub-minimums to handicapped workers, but these apparent handicaps are not always of a discernible nature. The survey found that in the United States and in Canada no great hardships were recorded as a result of the establishment of minimums. On the other hand, in Great Britain and in Australasia, where the economic situation is not nearly as favorable, the abolition of some home-work trades and their replacement by factories resulted. This was due to the fact that home-work trades had competed with factories on the basis of a lower wage scale, also, in France, Austria, and Germany, it was felt that there was an increase in unemployment because of minimum wage legislation, particularly in the effect on home-work industries. It was reported by Massachusetts, Pacific States, and by employers in Victoria, Australia, and in Great Britain that the fair employers were grateful for the elimination of competition by sweating. The fact is, the British employers favored an international convention for minimum-wage legislation in order to eliminate competition from nations that were still tolerating the sweating of employees. Similarly, British and American experience does not indicate a harmful effect on industry because of the fixation of minimum wages. In fact, the prosperity of the women-employing industries of Massachusetts has grown since the introduction of a standard minimum. In New Zealand and Australasia, the application of the laws has been brought to its logical conclusion, i.e., the States used their machinery to suppress all industries where living wages cannot be paid.

In summary, it is worth pointing out that the minimum wage legislation has coped with three different industrial situations. (1) Home-work trades and women's trades, particularly as covered by the legislation of the United States, Canada, Great Britain, and most of the countries

on the European continent. Here, the minimum wage was introduced not against strikes, but against sweating. (2) The introduction of minimums in the insufficiently organized trades and in agriculture, particularly in Great Britain (by the Act of 1918). (3) The introduction of minimums to cover the highly organized trades of New Zealand, the Australian States, Russia, and Italy. The purpose of the establishment of these minimums was to eliminate industrial strife. By the creation of arbitration courts, machinery has been perfected for fixing wages very much as legislative assemblies enacted laws to meet general situations. In other words, the arbitration courts do not wait for specific disputes before stepping in to do their work.

The survey seeks to answer the question as to whether or not the legal fixation of wages will ever take the place of the so-called laws of supply and demand. It reports that the experiences of 30 years of wage fixing do not yet permit a complete answer. In Victoria (Australia), wages are fixed everywhere by wage boards. In the other States of Australasia and in Great Britain, a trend toward the same goal is apparent. The same is true of Canada, South Africa, and Mexico, and Italy and Russia are reaching the same place, though of course by different methods. On the other hand, in other countries the advance toward legal wage-fixing is still uncertain. The survey's closing generalization is: "If it seems to be particularly in line with the British tradition of continuous legal progress, of endeavoring for harmony between the various branches of national life. Australia, perhaps more purely British than Great Britain itself, has shown the way. Great Britain follows Australia, and Canada follows Great Britain. In the other countries, there are more cross goals, more diversity, less continuous development."

CANADA. The Minimum Wage Board of British Columbia reported that since its organization it had issued orders for the creation of minimum wages in the following nine industries: mercantile trades, laundries, public-house keeping, office occupations, personal service, fishing, telephone and telegraph operating, manufacturing, and the fruit and vegetable industry. In 1927 the number of employees affected was 17,507, of whom 90 per cent were over 18 years of age. The average weekly wage for those 18 and over and experienced workers was \$17.06, and for those under 18 and inexperienced, it was \$10.40. The Board's report denied that the minimum wage tended to become the standard rate. It will be recalled that the experiences of the California Board cited in the 1928 YEAR BOOK coincided with this belief. The board found in British Columbia that, after nine years' experience, only 3056 workers out of a total of 17,507 were reporting as having received the actual minimum set up. On the other hand, 3703 were paid below the minimum, leaving a total of 10,748 women and girls, or 61.30 per cent, as being in receipt of wages in excess of the legal minimum. The basis for the establishment of minimum wages is always an interesting phenomenon. Thus, the minimum-wage board of the Province of Ontario fixed a weekly wage of \$12.50 for women employed in the industries of the city of Toronto. On the basis of an annual wage of \$653, the following are the budgetary distributions: \$364 per year for board and lodging; \$127 per year for

clothing; \$162 for sundries which include laundry, doctor, dentist, car fare, amusements, church, etc. Thus, the weekly budget is as follows: board and lodging, \$7, clothing, \$2 44, sundries, \$3.06; making a total minimum weekly wage of \$12.50

**MINING AND METALLURGICAL ENGINEERS**, AMERICAN INSTITUTE OF An organization founded in 1871 and incorporated under the laws of New York State in 1905 "to promote the arts and sciences connected with the economic production of the useful minerals and metals and the welfare of those employed in these industries." It is made up of 27 local sections and has 43 affiliated societies in colleges throughout the country. There are six classes of membership. Members, men who have been practicing engineers for at least six years; junior members, the younger engineers, associates, men interested in or connected with mining, geology, metallurgy, or chemistry, but not practicing engineers, junior associates, those who were elected when students in engineering schools, membership being retained for not more than six years, student associates, students in engineering schools; and honorary members, those elected by unanimous vote of the board of directors. On Dec. 5, 1929, there were 8978 members, distributed as follows: Honorary, 16, members, 6596; junior members, 36, associates, 1042, junior associates, 1038, student associates, 112, Rocky Mountain members, 138. The income for 1928 was \$190,573.

In addition to the monthly meetings of the local sections, the annual meeting, a four-day convention, is held on the third Tuesday in February in New York City, and regional meetings are held in various important mining or metallurgical centres in the United States or abroad. At the 1929 convention, the following officers were elected: President, Frederick W. Bradley, vice presidents, W. H. Bassett, Henry Krumb, F. Julius Fohs, George D. Barron, Henry A. Buchler, Edgar Rickard, secretary, H. Foster Bain, treasurer, Karl Eilers. The Institute publishes *Transactions*, an annual containing the best papers of the year on mining and metallurgical subjects, *Mining and Metallurgy*, a monthly bulletin; the *Year Book*, which constitutes a "Who's Who" in the profession, *Technical Publications*, a series of individual technical pamphlets, and special volumes from time to time. In connection with three other societies, the Institute maintains the engineering societies' library and an employment bureau. Headquarters are at the Engineering Societies Building, 29 West 39th Street, New York City.

**MINNESOTA. POPULATION** According to the Fourteenth Census, the population of the State on Jan. 1, 1920, was 2,387,125. The estimated population on July 1, 1928, was 2,722,000. The capital is St. Paul.

**AGRICULTURE** The accompanying table gives the acreage, production, and value of the principal crops in 1928 and 1929.

**MINERAL PRODUCTION** The State supplied about 60 per cent of the iron ore produced in the United States in 1928. Its production of iron ore was 38,129,018 long tons, as against 35,563,177 in 1927; in value, \$94,258,899 for 1928 and for 1927, \$87,935,099. Though not a coal-producing State, Minnesota produced considerable coke, 622,696 short tons, valued at \$5,616,506 in 1928, as against 632,628 tons or \$6,212,501 in 1927. The

PRINCIPAL CROPS IN 1928 AND 1929

Crop	Year	Acreage	Prod. Bu.	Value
Corn	1929	4,253,000	148,885,000	\$86,756,000
	1928	4,089,000	139,026,000	\$6,196,000
Hay	1929	4,326,000	5,487,000 *	\$2,118,000
	1928	4,154,000	6,440,000 *	55,303,000
Oats	1929	4,212,000	153,738,000	56,888,000
	1928	4,089,000	153,338,000	58,668,000
Wheat	1929	1,377,000	19,944,000	21,005,000
	1928	1,532,000	22,964,000	21,990,000
Barley	1929	2,300,000	59,400,000	28,512,000
	1928	2,000,000	60,000,000	30,000,000
Potatoes	1929	812,000	25,896,000	25,896,000
	1928	354,000	38,940,000	11,682,000
Flaxseed	1929	523,000	4,707,000	13,509,000
	1928	726,000	5,808,000	11,908,000
Rye	1929	395,000	6,930,000	5,683,000
	1928	421,000	6,315,000	5,368,000

\* Tons

blast furnaces shipped 341,203 long tons of pig iron in 1928, 287,813 in 1927. The production of low-content manganiferous ore increased, being 940,875 long tons, in value, \$2,192,051 for 1927 and 1,025,014 and \$2,471,582 for 1928. Stone was quarried to the quantity of 802,340 short tons in 1927 and 628,800 in 1926, the value of the product was \$4,259,766 for 1927 and \$3,740,392 for 1926. The value of all mineral products of the State was, for 1927, \$102,972,753, for 1926, \$118,361,306.

**FINANCE.** State expenditures in the year ended June 30, 1928, as reported by the U. S. Department of Commerce, were for maintenance and operation of governmental departments, \$34,064, 115 (of which \$9,906,434 was for local education), for interest on debt, including the reimbursement of some \$1,651,372 of interest on county road debt, \$4,103,386, for permanent improvements, \$1,914,533, total, \$51,982,034 (of which \$16,197,082 was for highways, \$4,910,862 being for maintenance and \$1,286,400 for construction). Revenues were \$50,565,551. Of these, property and special taxes formed 21 7 per cent, departmental earnings and remuneration for officers' services, 9 1; sale of licenses, 50 4 (including gasoline taxation of \$5,327,079). The State's funded debt of June 30, 1928, was \$56,683,359 outstanding, and but \$8,008,569 net of sinking funds. The totals included rural credit bonds but not county road bonds that the State had undertaken to reimburse. On a property valuation of \$2,350,556, there were levied in the year State taxes of \$15,188,343.

**TRANSPORTATION** The total number of miles of railroad line under operation on Jan. 1, 1929, was 8822 31. There was no reported construction of new line in 1929.

**MANUFACTURES** According to the biennial Census of Manufactures published by the Department of Commerce in 1929 and relating to the operations of 1927, there were in the State in 1927 3886 manufacturing establishments. These employed 98,833 wage earners, whose wages totaled \$123,619,231. Materials and supplies used in manufacture cost \$726,390,744. The manufactured products combined were valued at \$1,066,727,215.

**EDUCATION** The year witnessed a campaign for the passage in the Legislature of a bill to establish a State retirement fund for teachers. The supporters of the bill were reported as finding encouragement for the expectation that a measure of like tenor might pass in 1931. There were enrolled in the public schools of the State, in the academic year 1928-29, 553,336 pupils. Of these, 459,030 were in elementary and rural schools and 94,306, in high-school grades. Kx

penditure for public-school education in 1922 totaled \$53,152,384. The salaries of teachers, except those in the three chief cities, averaged \$176.12 for men and \$115.16 for women, by the month. In Minneapolis, they averaged \$245 for men and \$188.82 for women. In Duluth, they were a shade lower, and in St. Paul somewhat lower than in Duluth.

**CHARITIES AND CORRECTIONS.** Wide powers of central control are vested in the State Board of Control, with regard to State institutions for the care and custody of individuals. It has charge of 18 institutions for the divers classes of defectives, invalids, and delinquents, supervises certain of the county institutions, operates prison industries, appoints county child-welfare boards, exercises legal guardianship over committed children, and establishes the paternity of illegitimate children. The State institutions in 1929 were: Asylums and mental hospitals at Anoka, Hastings, Willmar, Fergus Falls, and Rochester; St. Peter Hospital, Asylum for the Dangerous Insane, and School for Feeble-minded, Faribault; Home School for Girls, Sank Center, Colony for Epileptics, Child Welfare, State Training School for Boys, Red Wing; State Reformatory, St. Cloud; Reformatory for Women, Shakopee; State Prison, Stillwater; Hospital for Inebriates and School for the Blind, Faribault; School for the Deaf, Faribault; State Public School for Dependent Children, Owatonna; Sanatorium for Consumptives, A-Gwah-Ching; Hospital for Crippled Children, St. Paul.

**LEGISLATION** The State Legislature met in regular session, adjourning April 25. One of its chief concerns was to correct the troubles of counties suffering from financial depression. Among these were Beltrami, Lake of the Woods, and Koochiching, within whose bounds the obligations incurred for extensive drainage ditching approached maturity. An act was accordingly passed to create the Red Lake Game Preserve, for which the counties in question were to deed the State 1,250,000 acres, in return, the State was to issue its certificates of indebtedness for \$2,500,000 as a maximum, to redeem the drainage obligations. The act provided for the maintenance of the preserve thus formed as a refuge for wild life and, at the same time, as a public hunting ground. The law of 1927 for the promotion of tree planting on the private lands of low farming value was amended by setting still lower the small annual tax required of owners during the growing period of trees and prior to the final tax at cutting. A measure in the counties' interest, to require the State to pay counties containing State forestry lands five cents an acre on such lands was passed, but Governor Christianson vetoed it.

On behalf of the Iron Range region, where taxation had caused much difficulty, the moderation of direct taxation under the per-capita-tax law was adopted. The per-capita rate was lowered to \$80 for the succeeding two years, after 1929, \$75 for 1932 and \$70 for 1933. To support further highway construction, the State was authorized to refund certain bond issues of nearing maturity and to divert to highway construction the sinking funds accumulated for their redemption, thus releasing \$3,500,000 in the current year and greater amounts in the three years to follow. The gasoline tax was increased to three cents a gallon, but much proposed taxation along novel lines was defeated. The Legislature abol-

ished the two boards of visitors and merged the department of agriculture with that of dairies and foods. An effort to subject the regents of the State University to the central authority was defeated. The law on the sale and transportation of liquor was rendered more stringent. Closing hour at the polls was advanced to 8 P. M., from 9 P. M. Counties received the option to pay old-age pensions instead of maintaining the old in poor houses. A cooperative pension plan for State employees was adopted, under which these were to contribute 3½ per cent of salary and retire at 65 years on half pay, if 20 years in service. Provision was made for the conversion of the scene of the Battle of Birch Coulee into a State park.

**POLITICAL AND OTHER EVENTS** The conflict of interest over the development of the Rainy Lake watershed continued during the year. This area, partly in Minnesota and partly in Ontario, as it contained numerous lakes and possessed much unspoiled wilderness scenery, was the object of an effort to have it made by international treaty into a park. Because of the presence of water-power possibilities, it was at the same time the subject of investigation by the international joint commission which considered plans for changing the lake levels and developing power sites. The movement for internationalization of the State gained headway through the announcement on behalf of the Weyerhaeuser lumber interests, on June 18, of a plan for creating by self-reproduction a forest on areas comprising 172,420 acres in the northern part of the State. Petition to create an auxiliary forest was filed in the name of the Northwest Paper Company, one of the Weyerhaeuser interests, in order to benefit by the remission of taxation provided by an act of the Legislature of 1929. The hasty use of firearms by a Federal prohibition agent at International Falls caused the death in June of an inoffensive citizen, Henry Virkkula, and occasioned the sending of a local petition to President Hoover for relief from similar excesses of authority.

At Minneapolis occurred on November 1 a financial failure described as the greatest on record in the Northwest, when the W. B. Foshay Company and allied companies went into receivership with liabilities reported as approximating \$20,000,000. The holdings of the embarrassed companies included the Foshay Tower, a 32-story building at Minneapolis that had been opened in August. The First National Bank of St. Paul absorbed the Merchants' National Bank in January and in March joined with the First National Bank of Minneapolis to form a company for the acquisition of a chain of banks in the Ninth Federal Reserve District. The St. Paul institution, which had successfully contested the State ad valorem bank tax, negotiated a compromise with the State, whereby it would pay this tax if made a depository of public moneys. Condemnation proceedings to provide the site for a \$2,700,000 Federal Building at Third and Sibley Streets, St. Paul, were begun on June 14. St. Paul made provision for a city-planning commission, representing both city and county, to consider improvements to be made under a \$15,719,000 programme of municipal public works.

**OFFICIALS** Governor, Theodore Christianson, Lieutenant-Governor, Charles E. Adams, Secretary of State, Mike Holm; State Treasurer, Julius A. Schmah; Auditor, Ray P. Chase; Attorney-General, Henry N. Benson; Commissioner of Education, James M. McConnell.

**JUDICIARY** Supreme Court. Chief Justice, Samuel B. Wilson; Associate Justices, Homer B. Dibell, Andrew Holt, Clifford L. Hilton, Royal A. Stone.

**MINNESOTA.** UNIVERSITY OF A coeducational State institution for higher learning in Minneapolis, Minn., founded in 1851. The 1929 autumn registration was 11,357, while the summer session enrollment for the same year was 5887. The university staff on a full-time basis, including professors, associate professors, assistant professors, and instructors, numbered 687. The income for the year ending June 30, 1929, amounted to \$10,248,873, distributed as follows: State appropriations for maintenance, buildings, and special purposes, \$4,717,695; Federal aid, \$330,776; permanent university fund, \$217,882; income from student fees, \$1,112,154; income from service enterprises, revolving funds, and intercollegiate athletics, \$2,206,883; income from trust funds, \$660,005, received from students, alumni, and friends for construction of auditorium, \$489,899, sales and miscellaneous income, \$507,719. The permanent university fund was increased by \$278,598, also, a gift of \$40,000 was received from William H. Eustis. There were more than 525,000 volumes in the library. The Cyrus Northrup Auditorium, erected at a cost of \$1,375,000, was dedicated on Nov. 15, 1929; additions to the Minnesota Hospital and Home for Crippled Children, which was erected in 1928, made the completed total cost \$1,254,317, a law school building, costing \$256,090, and a plant industry building, costing \$220,472, also were completed during the year. President, Lotus Delta Coffman, Ph.D., LL.D.

**MINORITIES.** See LEAGUE OF NATIONS.

**MISSISSIPPI.** POPULATION According to the Fourteenth Census, the population of the State on Jan. 1, 1920, was 1,790,618. Owing to a decrease between 1910 and 1920, no later estimates have been made. Capital, Jackson.

**AGRICULTURE** The following table gives the acreage, production, and value of the principal crops in 1928 and 1929.

Crop	Year	Acreage	Prod.	Value
Cotton	1929	4,071,000	1,915,000 *	\$164,690,000
	1928	4,029,000	1,475,000 *	136,438,000
Corn	1929	1,765,000	35,900,000	92,829,000
	1928	1,765,000	24,710,000	25,204,000
Hay	1929	478,000	592,000 *	9,041,000
	1928	493,000	616,000 *	9,223,000
Sweet potatoes	1929	59,000	7,670,000	6,136,000
	1928	55,000	6,050,000	5,445,000
Potatoes	1929	14,000	1,222,000	1,894,000
	1928	15,000	1,329,000	1,695,000

\* Bales    \* Tons

**MINERAL PRODUCTION** While the mineral industries of the State remained entirely secondary, they made a relatively large increase in 1927 over 1926. The total mineral production of Mississippi was \$2,553,633 for 1927, for 1926, \$1,882,986. The difference was due chiefly to increase in the output of sand and gravel, of which 3,122,401 short tons were produced in 1927, as against 1,952,781 in 1926. The respective values of the products were 1927, \$1,372,089; 1926, \$871,038. The value of the clay products of the State attained, for 1927, \$1,146,472, for 1926, \$1,006,661.

**TRANSPORTATION** The total number of miles of railroad line under operation on Jan. 1, 1929, was 4266.33. There was no reported construction of new line in 1929.

**MANUFACTURES.** According to the Federal Biennial Census of Manufactures published by the U. S. Department of Commerce in 1929, and dealing with 1927, there were in the State, in 1927, 1333 manufacturing establishments. These employed 50,569 wage earners, whose wages for the year totaled \$40,734,359. Materials and supplies used in production cost \$103,559,493. Manufactured products attained the combined value of \$196,640,742.

**EDUCATION** The State committed itself in 1929 to a policy of county-wide equalization of the burden of taxation for public schools. The district school taxes were generally eliminated and school taxes were made assessable throughout each county as a unit. A programme of high-school consolidation was likewise adopted, to the end that only those high schools having student bodies sufficiently large to admit of their giving college preparation and vocational courses should be maintained.

**CHARITIES AND CORRECTIONS** The State had in 1929 no single central body for control of its institutions. These were under separate boards of trustees. The State institutions were Beauvoir Soldiers' Home, Gulfport, State Insane Hospital, Jackson, East Mississippi Insane Hospital, Meridian, State Charity Hospital, Jackson, South Mississippi Charity Hospital, Laurel, Vicksburg Charity Hospital, Vicksburg, State Charity Hospital, Natchez, Mattie Hersee Hospital, Meridian, Colony for Feeble-minded, Ellisville, Deaf and Dumb Institute, Jackson, Blind Institute, Jackson.

**LEGISLATION** A special session of the State Legislature, called by Governor Bilbo, convened on June 24. It was summoned exclusively for the purpose of passing highway legislation. It was desired to create a programme for the construction of a system of hard-surfaced highways and to qualify the State to obtain from the Federal Government a share of the latter's yearly distribution of highway aid to States. The legislators failed to support the proposal of the Governor that the highway commission be made appointive and eventually adjourned on September 4, having accomplished nothing.

**POLITICAL AND OTHER EVENTS** Because of the failure of the previous Legislature to end the division of authority between State and county as to road improvement, the continuation of Federal road aid to the State was imperiled. The special session convened in June was to have corrected this difficulty, but its failure to agree with Governor Bilbo left the prospect of further Federal aid uncertain. The State Superintendent of Banks announced in April that the State law for the guaranty of deposits had proved inadequate to its purpose and required repeal. His published statement was to the effect that the fund for guaranty of deposits was short by some \$2,285,980 of the amount required to cover claims. The resignation of Rnah H. Knox, impeached Attorney-General, was tendered on August 19.

**OFFICERS.** Governor, Theodore G. Bilbo, Lieutenant-Governor, Bidwell Adam, Secretary of State, Walker Wood, Attorney-General, George T. Mitchell; Treasurer, Webb Walley, Auditor, C. C. White, Superintendent of Education, W. F. Bond.

**JUDICIARY** Supreme Court: Chief Justice, Sydney Smith, Associate Justices, W. D. Anderson, James G. McGowan, George H. Ethridge, W. H. Cook, V. A. Griffith.

**MISSISSIPPI, UNIVERSITY OF** A coeducational, State institution of higher learning in University, Miss., chartered in 1844 and opened in 1848. The university consists of a college of liberal arts and schools of law, engineering, medicine, pharmacy, education, and commerce and business administration. The total enrollment for the autumn of 1929 was 1216, the registration for the 1929 summer session was 312. The faculty numbered 66, exclusive of fellows and student assistants. There were approximately 40,000 volumes in the library. The productive funds amounted to \$210,000 from State appropriation, \$98,000 from student fees, and \$52,000 from other sources. A special appropriation of \$1,600,000 was made by the 1928 Legislature for the construction of new buildings and other permanent improvements. Among the buildings completed or approaching completion by the end of 1929 were those for the law and graduate schools, a model high school, a gymnasium, a field house, a hospital, and seven dormitories. Chancellor, Alfred Hume, D.Sc.

#### MISSISSIPPI FLOODS. See FLOODS

**MISSOURI. POPULATION** According to the Fourteenth Census, the population of the State on Jan. 1, 1920, was 3,404,065. The estimated population on July 1, 1928, was 3,523,000. The capital is Jefferson City.

**AGRICULTURE** The following table gives the acreage, production, and value of the principal crops in 1928 and 1929.

Crop	Year	Acreage	Prod Bu.	Value
Corn	1929	5,384,000	126,524,000	\$108,811,000
	1928	6,260,000	181,540,000	132,524,000
	1929	4,056,000	5,368,000 *	55,324,000
Hay	1928	3,714,000	4,724,000 *	49,430,000
	1929	1,730,000	17,900,000	19,548,000
	1928	1,511,000	19,194,000	28,189,000
Oats	1929	1,586,000	34,770,000	15,872,000
	1928	1,706,000	47,768,000	20,063,000
Cotton	1929	843,000	215,000 *	17,952,000
	1928	834,000	147,000 *	13,230,000
	1929	53,000	1,980,000	3,360,000
Potatoes	1928	85,000	10,285,000	6,171,000
	1929	12,000	1,320,000	1,584,000
	1928	11,000	1,155,000	1,213,000

**MINERAL PRODUCTION** Lead production, in which the State ranked first in the Union in 1927, proceeded in Missouri in 1928 at a rate little changed. The quantity of lead mined was, for 1928, 195,393 short tons, for 1927, 198,760 tons. Its value was 1928, \$22,605,588, 1927, \$25,043,760. The factory shipments of cement attained for 1928 the quantity of 7,943,367 barrels, as against 6,929,229 for 1927. In value they were \$12,307,018 for 1928 and \$11,117,047 for 1927. Coal production increased in 1928, attaining for that year 3,732,421 short tons. The production of 1927 was 3,064,313 short tons. In value, the product of 1928 attained \$9,637,000, that of 1927, \$8,698,000. The clay products of the State, almost entirely consisting of brick and tile, attained for 1927 the value of \$16,392,171, as against \$17,018,931 for 1926. Chief of the other metals beside lead was zinc, of which was produced in 1928 the quantity of 12,974 short tons, and in 1927 of 18,737 tons, in value, \$1,582,828 for 1928 and \$2,289,336 for 1927. The silver production (\$103,451 for 1928) and that of copper were secondary in importance. Stone production was, as to quantity, 3,064,600 short tons for 1927, 3,093,000 for 1926, as to value, \$5,170,859 for 1927, \$6,-

012,013 for 1926. The production of lime was estimated for 1928 to be 301,000 short tons, in value, \$2,263,000, for 1927 it was 287,776 tons, in value, \$2,189,420. The aggregate value of the mineral product of the State was, for 1927, \$75,800,415, for 1926, \$80,003,537.

**FINANCE** State expenditures for the year ending Dec. 31, 1927, as reported by the U. S. Department of Commerce, were for departmental maintenance and operation, \$24,247,504 (of which \$6,202,776 was aid to local education), for interest on debt, \$3,218,105, for permanent improvements, \$14,320,321, total, \$41,785,930 (of which \$15,075,761 was for highways, \$1,006,148 being for maintenance and \$14,069,613 for construction).

Revenues amounted to \$45,013,708. Of this, property and special taxes furnished 34.4 per cent, departmental earnings and compensation to the State for officers' services, 16.0 per cent, sale of licenses and taxation of gasoline, 41.2 per cent. The valuation of property assessed to aid valorem taxation was \$4,909,112,303, State taxation thereon, \$6,381,846. The net funded State debt was \$68,840,469.

**TRANSPORTATION** The total number of miles of railroad line under operation on Jan. 1, 1929, was 7954.31. There were built, in 1929, 51.13 miles of first, and 0.03 mile of second, track.

**MANUFACTURES** According to the biennial Federal Census of Manufactures published by the U. S. Department of Commerce in 1929 and relating to the operations of 1927, there were in the State, in 1927, 5422 establishments. These employed 1,111,111 wage earners, whose wages for the year totaled \$230,017,241. Materials and supplies used in manufacture cost \$1,004,709,373. Manufactured products attained the combined value of \$1,665,173,463.

**EDUCATION** A State survey commission earned on a survey of the educational system of the State, on which it was to render a report in 1930.

**CHARITIES AND CORRECTIONS** The institutions of the State include four State hospitals, the Missouri Colony for the Feeble-minded and Epileptic, Missouri State Sanatorium, Confederate Home, State Soldiers' Home, State Penitentiary, Reformatory, Industrial Home for Girls, and Industrial Home for Negro Girls.

**LEGISLATION** The fifty-fifth General Assembly of the State sat in regular biennial session for 150 days, adjourning on May 29. The rapid transit programme of St. Louis engaged much of its attention. A measure proposing a constitutional amendment was passed, whereby cities and towns of more than 5000 inhabitants might have authority to issue their bonds for terms up to 50 years, in order to acquire or to construct various public utilities.

The amendment was to be submitted for popular ratification at the election of 1930. Its chief purpose was to aid the plans of St. Louis. There was enacted a measure enabling St. Louis to buy, build, or own rapid-transit facilities, and authorizing assessment of the cost of such action against property benefiting, or at will, the meeting of such cost by bond issue. It was also enacted, in another bill, that so-called terminable permits for operating street railways in St. Louis might be issued. These permits were opposed by a strong St. Louis element as amounting to perpetual franchises and, in accordance with the opposition, Governor Caulfield vetoed the measure. By

enactment, the rate of interest on small loans was restricted to the maximum of 24 per cent. In the criminal field, the possession and the use of machine guns were made special offenses. Despite the defeat of a specific police-pension plan by the voters of St. Louis in the election of the previous November, the Legislature enacted a police-pension system. This was on different lines from those of the defeated plan and established the police pensions upon what were described as actuarial principles. An interim commission was created to survey the condition of the State's eleemosynary, educational and penal institutions.

Quite a number of changes in the State's system of criminal justice, backed by the Association for Criminal Justice in Missouri, which had worked out a plan of revision, failed of passage. A bill to name a projected artificial lake, in the Osage River, Lake Benton, after the historic Missourian, Thomas H. Benton, was passed but was vetoed by the Governor as likely by its praise of Benton to wound admirers of other distinguished sons of the State.

**POLITICAL AND OTHER EVENTS** The State Supreme Court in a decision of June 13 sustained the constitutionality of the inheritance tax act of 1927 permitting the State to collect up to 80 per cent of the Federal assessment on decedents' estates. By Federal Court order, fire, lightning, hail, and wind insurance companies were directed to refund to policyholders sums collected on premiums, in excess of rates set by the State in 1922, when a 10 per cent rate cut was made. Somewhat less than \$14,000,000 in premiums was estimated as having been paid the companies in excess of the State's rate. The Missouri Society for Social Welfare conducted through an agent a survey of the State reformatory at Boonville, a report of unsatisfactory conditions, indicating the inadequacy of the institution either as a training school or as a reformatory, was published.

A new board of managers for the Missouri State eleemosynary institutions, consisting of six members, three of them members of the old board, was appointed in April. Opposition in southeastern Missouri to the proposals of the Chief of Army Engineers for a setback levee from Birds Point to New Madrid, as a part of the general plan of Mississippi River flood control, led in June to the postponement of award of the necessary contracts. Construction went ahead during the summer on an \$8,000,000 Federal project for improvement of the channel of the Missouri River at Robinson Bend, near Boonville, to provide a 6-foot channel and stone-faced river banks as a preventive to erosion. Success in the growing of Burley tobacco in the Ozark region along the line of the Missouri Pacific in the previous two years was apparently confirmed by the marketing of Missouri tobacco at Lexington, Kentucky, for favorable prices.

In Kansas City the construction of a bus terminal, having two levels, and of an adjacent hotel, an office building, and a public garage, the whole to cost \$3,200,000, was started at Ninth, Tenth, McGee, and Oak streets. A move of the Kansas City Public Service Company to increase traction fares to 10 cents was opposed by the city in the courts. The Mississippi River Fuel Company began in December to supply to consumers in St. Louis natural gas conveyed from Louisiana by a 431-mile pipe line.

**OFFICERS.** Governor, Henry S. Caulfield; Lieutenant-Governor, Edwin H. Winter; Secretary of State, Charles U. Becker; Auditor, L. D. Thompson; Treasurer, Larry Brunk; Attorney-General, Stratton Shartel; Superintendent of Public Schools, Charles A. Lee.

**JUDICIARY.** Supreme Court Chief Justice, John Turner White; Associate Justices, David E. Blair, Robert F. Walker, Frank E. Atwood, William S. Ragland, Ernest S. Gantt, William F. Frank.

**MISSOURI, UNIVERSITY OF.** A State institution of higher education in Columbia and Rolla, Mo., founded in 1830. The enrollment for the first semester of 1929-30 was 4568, of whom 3174 were men and 1394, women. This enrollment was distributed as follows: Agriculture, 368; arts and science, 1780; business and public administration, 194; education, 427; engineering, 435; mines, 518, fine arts, 128; graduate, 316, journalism, 303, law, 147, medicine, 73, short course in agriculture, 32. The total enrollment for the summer session was 2479, of whom 1044 were men and 1435 women. The total annual enrollment of all classes of students, including those in correspondence and extension courses, was more than 8500. There were 400 faculty members. The endowment of the university was approximately \$2,500,000 and the total income from all sources a little more than \$3,500,000. The libraries contained approximately 326,000 volumes. President, Stratton Duluth Brooks, LL.D.

**MITTSCHERLICHTE.** See MINERALOGY.

**MITTEN, THOMAS EUGENE.** American street-railway executive, was drowned near Milford, Pa., Oct. 1, 1929. He was born in Brighton, England, Mar. 31, 1864, and came with his parents to America in 1877, living until he was 19 on a farm in Newton Co., Ind. His first connection with the railway was as telephone operator and joint agent for the Chicago & Eastern Illinois Railroad and the Big Four, at Wyndham, Ind. He held only minor positions on various railroads until 1890, when he became general superintendent of the Denver, Lakewood & Golden Railroad. From 1895 to 1900, he was superintendent and general manager of the Milwaukee Electric Railway, in 1901-04, general superintendent, and in 1904-05, general manager of the International Railway Company. In 1905 he became vice president, and later, president, of the Chicago City Railway Company, and also vice president and managing director of the International Railway Company. In 1911 he was chairman of the executive committee of the Philadelphia Rapid Transit Company, president from 1914 to 1923, and after 1923, chairman of the board. Mr. Mitten was also president of the Mitten Men & Management Bank & Trust Company.

**MOLASSES.** See CHEMISTRY, INDUSTRIAL.

**MOLECULES.** See PHYSICS.

**MONACO, mōn-à-kō.** A principality on the Mediterranean coast, surrounded on the land sides by the French Department of Alpes Maritimes Area, eight square miles. population, according to the census of 1928, 24,927. It is chiefly known for its gambling resort, Monte Carlo (population in 1928, 11,055). Other towns are Monaco (2085) and La Condamine (11,787). Under the constitution of Jan. 7, 1911, the Government consists of the Prince assisted by a Council of State and a National Council elected

by universal suffrage. The ruler in 1929 was Prince Louis II, born July 12, 1870, who succeeded his father, Prince Albert, June 26, 1922.

**HISTORY** There was a continuance in 1929 of the internal difficulties which broke out in this tiny state in 1928, largely as a result of the declining revenues of the Casino, the famous gambling resort at Monte Carlo, and the decrease in the number of tourists attracted to the principality. The failure of Prince Louis to authorize the elections scheduled to be held in March caused the resignation of a commission appointed in 1928 to seek a way out of the difficulty. The Prince refused to receive a delegation sent to urge him to call for new elections as soon as possible. A crowd of some 500 indignant citizens then forced its way to the Palace, demanding to be received by the Prince, but was finally dispersed by the police, who made a number of arrests. The Prince then announced that elections would be held in June and promised that a new constitution would be promulgated. At the end of the year, more amicable relations existed between the Prince and his people but the latter were still waiting for some of his promised reforms to be carried out.

**MOND CONFERENCES.** See **TRADE UNIONS**.  
**MONEY.** The table on page 528 from the annual report of the director of the United States Mint shows the distribution of the stock of money in the United States on June 30, 1929, June 30, 1928, Oct. 31, 1920, June 30, 1914, and Jan. 1, 1879.

**MONEY RATES** See **FINANCIAL REVIEW**

**MONGOLIA** A vast and indefinite tract of territory lying to the west of Manchuria and divided into two political divisions, Inner Mongolia, which is administratively a part of China, and Outer Mongolia, a soviet republic in close relations with Soviet Russia. In 1928 the Nationalist Government of China made provinces of the former special administrative districts of Jehol, Suiyuan, and Chahar into which Inner Mongolia had been divided. Chengteh, Kweisui, and Kalgan are the respective provincial capitals. Uрга is the capital and chief town of Outer Mongolia. The total area is about 1,875,000

square miles, although some authorities place it as low as 1,367,000 square miles. Population, variously estimated at 750,000 to 2,000,000. Mongolia is inhabited by nomadic Mongol and Kalmyk tribes, but latterly the Chinese have emigrated in considerable numbers. The chief occupation is stock raising and the principal exports are furs, skins, hides, horns, and wool. The soil is naturally fertile but needs irrigation to be productive. Gold, iron, copper, silver, and tin are found, but are not worked extensively. Since 1917 there has been a motor-car freight service across the Gobi Desert. The trip takes three days and is only feasible in the summer. See **CHINA**.

**MONOPLANES.** See **AERONAUTICS**

**MONROE, (GENERAL SIR CHARLES (CARMICHAEL))** A British soldier, died in London, Dec. 7, 1929. He was born June 15, 1860, and entered the British Army in 1879. From captain in 1889, he was promoted through the grades to general in 1917. In 1879-80 he served on the northwestern frontier of India, and in 1899-1900 he was in South Africa. At the opening of the World War, he was put in command of the 2d Division at Aldershot, and in 1915 was given command of the 3d Army. Sent to Gallipoli in the last months of 1915 to study the strength of

the Allies in the Dardanelles, he returned a report in favor of evacuation of Gallipoli. As commander-in-chief of the Mediterranean Expeditionary Forces, he led this withdrawal in greater secrecy and with more success than the British Government had hoped. From 1916 to 1920, he was commander-in-chief in India, and from 1923 to 1928, he was governor and commander-in-chief in Gibraltar. He was knighted by the British Government in 1915. He also received decorations from France and Japan.

**MONTAGU OF BEAULIEU, SECOND BARON, JOHN WALTER EDWARD DOUGLAS J. SCOTT-MONTAGU** English engineer and scientist, died Mar. 30, 1929, in London. He was born June 10, 1866, and was educated at Eton and at New College, Oxford. He entered the shops of the London & South-Western Railway at Nine Elms, where he made himself a competent mechanic and locomotive driver. Lord Montagu was an expert in motor construction and was a pioneer in promoting the British motor industry in its early years. Later, he was an enthusiastic advocate of aviation and believed in the future of the sea plane. The magazine, *Car*, which he founded and edited for a long time, reflected his interest in travel and transport problems. He also wrote magazine and newspaper articles about his experiences as a traveler, for he traveled widely in America, Japan, China, India, Egypt, and South Africa.

Baron Montagu was a member of the Road Board from 1909 to 1919. At the beginning of the World War, he joined the 7th Battalion Hants Regiment and went to India. In 1915 he was appointed adviser on mechanical transport services to the Government of India, winning government recognition for his services when he was created a companion of the Order of the Star of India (1916) and Knight Commander of the Indian Empire (1919). He was a Conservative member of Parliament, New Forest Division Hants (1892-1905), when he succeeded his father in the House of Lords.

**MONTANA.** **POPULATION** According to the Fourteenth Census, the population of the State on Jan. 1, 1920, was 548,889. The capital is Helena.

**AGRICULTURE** The following table gives the acreage, production, and value of the principal crop in 1928 and 1929.

Crop	Year	Average	Prod Bu	Value
Wheat	1929	4,166,000	40,098,000	\$38,181,000
	1928	4,275,000	77,998,000	65,036,000
Hay	1929	2,082,000	2,527,000	30,762,000
	1928	1,900,000	3,103,000	27,126,000
Oats	1929	554,000	4,418,000	4,803,000
	1928	554,000	20,221,000	8,281,000
Corn	1929	301,000	4,212,000	3,024,000
	1928	274,000	5,206,000	4,269,000
Flaxseed	1929	293,000	938,000	2,626,000
	1928	183,000	1,556,000	2,988,000
Barley	1929	251,000	4,016,000	2,731,000
	1928	209,000	6,374,000	3,569,000
Potatoes	1929	33,000	1,980,000	3,366,000
	1928	37,000	4,255,000	2,846,000
Dry beans	1929	50,000	525,000	1,890,000
	1928	40,000	580,000	2,233,000
Rye	1929	111,000	1,221,000	879,000
	1928	154,000	2,156,000	1,488,000

\* Tons.

**MINERAL PRODUCTION** Copper, by far the most important mineral product of the State, in which it ranks third as a producer in the United States, yielded more heavily in 1928 as to quantity and much more as to value, than in 1927.

LOCATION, OWNERSHIP, AND PER CAPITA CIRCULATION OF UNITED STATES MONEY, JUNE 30, 1929  
[From the Report of the Director of the Mint]

\* The amount of money held in trust against gold and silver certificates and Treasury notes of 1890 should be deducted from this total before combining it with total money outside of the Treasury to arrive at the stock of money in the United States.

This total includes \$15,723,715 of notes in process of redemption, \$168,415,343 of gold deposited for redemption of Federal reserve notes, \$13,157,972 deposited for redemption of national bank notes, \$19,500 deposited for retirement of additional circulation (Act of Mar. 30, 1908), and \$7,459,992 deposited as a reserve against postal savings deposits.

Includes money held by the Cuban agency of the Federal Reserve Bank of Atlanta.

Population of continental United States (estimated) June 30, 1929, 119,788,000; June 30, 1928, 118,364,000; Oct. 31, 1920, 107,491,000; June 30, 1914, 99,027,000; Jan. 1, 1879, 38,211,000.

United States paper currency in circulation in foreign countries and the amount held by the Cuban agency of the Federal Reserve Bank of Atlanta.

Revised.

Does not include gold bullion or foreign coin other than that held by the Treasury. Federal reserve banks, and Federal reserve agents Gold held by Federal reserve banks under earmarks for foreign account is excluded and gold held abroad for Federal reserve banks is included.

These amounts are not included in the total since the money held in trust against gold and silver certificates and Treasury notes of 1890 is included under gold coin and bullion and standard silver dollars respectively.

Notes—Gold certificates are secured dollar for dollar by gold held in the Treasury for their redemption. United States notes are secured by a gold reserve of \$158,039,088 held in the Treasury. This reserve fund may also be used for law held in the Treasury for the redemption of United States notes also secured dollar for dollar by standard silver dollars held in the Treasury. Federal reserve notes are obligations of the United States and a first lien on all the assets of the Federal Reserve Bank.

of gold or silver and much discounted or purchased paper as is eligible under the terms of the Federal Reserve Act. Federal reserve banks must maintain a gold reserve of at least 40 per cent, including the gold redemption fund which must be deposited with the United States Treasurer against Federal reserve bank notes. National bank notes are secured by United States lawful money has been deposited with the Treasurer of the United States for their retirement. A 5 per cent fund is also maintained in lawful money with the Treasurer of the United States for the redemption of national bank notes secured by Government bonds.

The total mine production of copper in Montana was 248,262,027 pounds for 1928, as against 223,492,639 pounds for 1927. Its average value for 1928, 14 4 cents a pound, was well above the 13 1 cents of 1927. The value of the product of 1928 was thus not far from \$36,000,000, as against \$29,277,536 for 1927. Of other leading metals, the quantities produced were as follows: gold, 58,196 fine ounces in 1928 and 53,541 in 1927, silver, 1928, 10,853,276 and in 1927, 11,200,077, lead, in 1928, 33,759,644 pounds and in 1927, 35,898,315, zinc, in 1928, 165,660,198 pounds and in 1927, 160,461,803. The aggregate value of the year's product of gold, silver, copper, lead, and zinc was, for 1928, \$55,365,240, for 1927, \$49,265,945.

The State's coal production for the year 1928 was 3,324,195 short tons, in value, \$7,550,000, that of 1927 had been 3,143,638 tons, in value, \$7,403,000. The output of petroleum declined, for 1928, to 3,935,000 barrels, in value (estimated), \$6,400,000, from 5,058,000 barrels, value, \$7,090,000 for 1927. Arsenious oxide, lime, and natural gas were produced to the value of less than \$1,000,000 each in 1927. The aggregate value of the mineral product of the State was, for 1927, \$68,264,687, for 1926, \$79,706,330.

The value of gold, silver, copper, lead, and zinc produced from Montana mines in 1929, according to estimates, was about \$75,019,500, showing a sharp increase over 1928. The improvement in the market for copper was reflected in increased output from the Butte district. The value of the gold output decreased from that of 1928 to about \$1,054,200 for 1929. There was a decided decrease in gold from copper ores. Gold from the Spring Hill mine near Helena was nearly double that of 1928. The mine output of silver increased to about 12,650,000 ounces for 1929, and the value to about \$6,755,000.

The copper output increased to about 298,600,000 pounds for 1929, and its value to about \$53,450,000. The increase of about 20 per cent in the output, making the largest year's production value since 1918, was due chiefly to the advanced price of copper. The Anaconda Copper Mining Company, as in the past, produced most of the copper from its mines at Butte. The production of lead increased to about 30,500,000 pounds, valued at \$2,508,200 for 1929. The increase of about 17 per cent was due chiefly to the unusually large output from the Block P Mine, owned by the St. Joseph Lead Co. The output of zinc recovered from ore mined in Montana increased to about 169,660,000 pounds for 1929, and the value, to about \$11,282,000.

**FINANCE** State expenditures of the year ending June 30, 1928, as reported by the U. S. Department of Commerce were for departmental maintenance and operation, \$6,531,522 (of which \$1,542,914 was for local education), for interest on debt, \$406,275, for permanent improvements, \$3,573,361, total, \$10,511,161 (of which \$4,708,074 was for highways, \$785,812 being for maintenance and \$3,292,262 for construction). Revenues were \$11,235,840. Of this, property and special taxes furnished 25 1 per cent, departmental earnings and compensation to the State for officers' services, 6 0, sale of licenses and taxation of gasoline, 29 7. The valuation of property for ad valorem taxation was \$432,544,107, taxation thereon by the State, \$1,935,632. The funded State debt was gross, \$6,651,008, net, \$4,066,984.

**TRANSPORTATION.** The total number of miles of railroad line under operation on Jan. 1, 1929, was 5232 22. There were built, in 1929, 2 72 miles of additional second track.

**MANUFACTURES.** According to the biennial Federal Census of Manufactures published by the Department of Commerce in 1929 and dealing with operations of 1927, there were in the State, in 1927, 565 ' ' ' ' establishments. These employed 14,242 wage earners, whose wages for the year totaled \$20,915,203. Materials and supplies used in production cost \$151,971,508. Manufactures combined were valued at \$203,503,250.

**EDUCATION.** The school-aged population for the year 1928-29 was placed at 154,751. There were enrolled in the public schools 119,384 pupils, of whom 96,383 were in elementary and 22,901, in high schools. Expenditures for public-school education totaled \$14,592,186. Salaries of teachers averaged \$1700 for large high schools, \$1500 for medium-sized high schools, \$1350 for small high schools, and about \$1100 for grade teachers.

The Montana standard of high-school graduation and of one year of additional professional and academic training was set up as the minimum requirement for the rural public school teachers of the State. It was required that the additional year be taken in an accredited normal school, college, or university.

**CHARITIES AND CORRECTIONS.** The State Board of Examiners exercised in 1929 direct supervision over the State charitable and correctional institutions. This board was composed of the Governor, Secretary of State, and Attorney-General, serving ex officio. These officers likewise constituted a State Board of Prison Commissioners, a Board of Commissioners for the Insane, and a Parole Board. A separate Board of Pardons, which did not include the Governor, recommended pardons to him. The State Board of Education shared in the control of the orphan, deaf, blind, and reform schools. An appointive advisory board, the Board of Charities and Reform, reported separately each year on the condition of the institutions. The State institutions of care and custody, with the numbers of the respective inmates as of Nov. 30, 1929, were: Montana State Hospital, 1524; School for the Deaf and Blind, 397; Industrial School for Boys, 167; State Prison, 649; Vocational School for Girls, 69; Orphans' Home, 223; Soldiers' Home, 80.

**LEGISLATION.** The regular biennial session of the State Legislature convened in January and adjourned March 13. A measure was enacted to promote the effort of the farmers' union and other agricultural organizations to establish a system for the regulated storage of wheat on farms, in such fashion as to render wheat thus stored available as security for loans from Federal Intermediate Credit banks. The measure was similar to one adopted at the same time in North Dakota. An act to permit Sunday dancing in cities of over 25,000 population was passed but was vetoed by Governor Lusk. The license fees upon motor vehicles were made to vary according to the weight of the cars, instead of then horse power, the former standard. Appropriations made for the ensuing two-year period totaled \$6,132,300, which did not include earnings of institutions and government agencies, estimated at \$906,540. A law was placed on carbon black and a measure was passed to regulate dairy products.

**POLITICAL AND OTHER EVENTS.** Two railroad systems, the Great Northern and the Northern

Pacific, engaged in competition for the opportunity to extend into the eastern and east-central part of the State. The Northern Pacific having built in 1928 62 miles of line from Glendive to Brockway sought to extend from Woodrow northward toward Bloomfield. The Great Northern countered with an application to the Interstate Commerce Commission early in August for permission to build from Richey westward for 195 miles to Jordan, thus opening a line leading toward Lewiston. The Northern Pacific filed a protest to this application without delay, and in turn applied on October 9 to extend its own proposed line all the way to Lewiston, at a probable cost of \$6,000,000 or more. The State Board of Education arranged in April to take over the use of a junior high-school building at Havre for the seat of the North Montana Agricultural School.

Estimates which were made of the wild-animal life of the State, published by the U. S. Forest Service, set the total of the larger wild creatures at 200,000 head, of these, 75,613 were estimated to be game animals, 90,801, fur-bearing creatures; and 26,146, predatory. Deer were listed at 50,220, elk, at 11,639; moose, 1257, mountain sheep, 2212, mountain goats, 4082, black bears, 5713, grizzlies, 490, beavers, 18,150, martens, 8252, mink, 8721. Efforts were made during the summer to round up as nearly as possible all the wild horses at liberty in the State, with the purpose of using some and destroying the rest, for the preservation of range feed. Many of the wild horses, however, took refuge in almost inaccessible parts such as the Missouri Breaks.

OFFICERS Governor, J. E. Erickson, Lieutenant-Governor, Frank A. Hazelbaker, Secretary of State, W. E. Harmon, Treasurer, F. E. Williams; Superintendent of Public Instruction, Elizabeth Leland.

JUDICIARY Supreme Court, Chief Justice, Lew L. Callaway, Associate Justices, John A. Matthews, Albert J. Galen, S. C. Foid, Albert H. Angstman.

**MONTANA**, STATE UNIVERSITY OF A State institution for the higher education of men and women in Missoula, Mont., founded in 1895. The enrollment for the autumn of 1929 was 1433, of whom 770 were men and 664, women. These were distributed as follows: Arts and sciences, 978, business administration, 61, forestry, 80, journalism, 115; law, 61, music, 27, pharmacy, 48, music specials, 42, and unclassified, 12. In the 1929 summer session, 450 students were registered of whom 121 were men and 329 women. The faculty had 98 members. The productive funds and income for the year amounted to \$468,362. There were about 150,000 volumes in the library, including government documents. President, Charles H. Clapp, Ph.D.

**MONTENEGRO**, mōn'tā-nā'g'ro An integral part of the State of Yugoslavia. Before the World War, it was a Balkan kingdom, bounded by Serbia on the east, Albania on the south, Dalmatia on the west, and Herzegovina on the west and north, with an area of 5603 square miles and a population of 436,789 on Jan. 1, 1917. After Dec. 1, 1918, its status was indeterminate until 1921, when it became an integral part of Yugoslavia. In 1929 Montenegro was abolished as an official subdivision of Yugoslavia and the territory was incorporated in one of the nine new banats established by order of the dictatorship. The area in 1921 was placed at only 3733 square miles, and the popula-

tion according to the census of that year, 199,857. Capital, Cetinje, with a population of 5500. See JUGOSLAVIA.

**MONTGOMERY**, THOMAS LYNCH, American librarian and historian, died Oct. 1, 1929, in Philadelphia, Pa. He was born Mar. 4, 1862, in Germantown, Philadelphia, and was graduated in 1884 from the University of Pennsylvania. In 1886 he became actuary and librarian of the Wagner Free Institute of Science, remaining there until he was appointed State librarian of Pennsylvania in 1903. In 1921 he resigned this position to fill a similar one for the Historical Society of Pennsylvania, where he was at the time of his death. Mr. Montgomery edited series five to seven of the *Pennsylvania Archives*. He established the first branch of the Philadelphia Free Library in 1892, and was trustee of the library and chairman of the library committee after 1894.

**MONTGOMERY Y AGRAMONTE**, GEN CHARLES HORACE See AGRAMONTE.

**MONTREAL**, GOVERNMENT OF See MUNICIPAL GOVERNMENT.

**MONTSERRAT**, mōn'tsē-lāt' One of the presidencies of the Leeward Islands. See LEeward ISLANDS.

**MOON**, (FREDERICK) FRANKLIN An American forester and educator, died Sept. 3, 1929, in Syracuse, N. Y. He was born in Easton, Pa., July 3, 1880, and was graduated from Amherst College in 1901. In 1902-04 he studied at Harvard University, and in 1909 was graduated from the Yale University Forest School with the degree of master of forestry. In the summer of 1908, he made a forest survey in Connecticut, and in 1909, a survey in Kentucky for the United States Forest Service. He was forester for the New York Forest, Fish, and Game Commission, in charge of the Highlands of Hudson Forest Reservation (1909-10). He became associated with the New York State College of Forestry in Syracuse in 1912, as professor of forest engineering, and after 1920 was dean and professor of silviculture there. Mr. Moon went as a delegate to the World Forestry Congress in Rome in 1926 and remained abroad for a year studying systems of forestry education in 11 European countries. He wrote numerous public reports on forestry subjects and was joint author of *Elements of Forestry* and *The Book of Forestry*.

**MOON**. See ASTRONOMY.

**MOORE**, JOHN TROTWOOD Tennessee State librarian, historian, and novelist, died in Nashville, Tenn., May 10, 1929. He was born in Marion, Ala., Aug. 26, 1858, and was graduated from Howard College in 1878. After moving to Tennessee in 1885, he began his literary work. In 1905-06 he edited *Trotwood's Monthly*, and from 1906 to 1911, with Robert Love Taylor, *The Taylor-Trotwood Magazine*. In 1919 he became director of the departments of libraries, archives, and history in the Tennessee State Library. Mr. Moore was a student of Southern history, especially of Andrew Jackson, and was a novelist and poet. His works include *Songs and Stories from Tennessee* (1897); *Ole Massa* (1897); *The Old Cotton Gin* (1910); *Red Eagle and White* (historical novel, 1924); *Tennessee—The Volunteer State* (with A. P. Foster, 1924); *Ballads of the Unafraid* (1927).

**MOOREITE**. See MINERALOGY.

**MORAVIANS**. A religious denomination comprising, in the United States, three branches. The Moravian Church (Unitas Fratrum), the

Evangelical Union of Bohemian and Moravian Brethren in North America; and the Independent Bohemian and Moravian Brethren Churches. It was formed in Bohemia in 1467 under the leadership of John Huss and Jerome of Prague, and opposed the efforts of Austria and the Roman Catholic authorities to suppress it. At the beginning of the Reformation, it had more than 400 churches. In 1741 Moravians settling at Bethlehem, Pennsylvania, founded the first Moravian Church in the United States. The doctrine is evangelical, without a creed peculiar to itself, and in its polity the denomination follows a modification of the episcopacy, having a ministry of three orders: bishops, presbyters, and deacons.

THE UNITAS FRATRUM, the largest branch, is organized in two coordinate provinces: the Northern, with a provincial synod meeting every fifth year (a meeting of the Northern Province was to be held in 1930), and the Southern, of which the provincial synod meets every third year. The church maintains the following four educational institutions: Linden Hall, Lititz, Pa., Moravian College and Theological Seminary, and Moravian Seminary and College for Women, Bethlehem, Pa., and Salem Academy and College for Women, Winston-Salem, N. C. Missionary workers are maintained in southern California and Alaska, and in Nicaragua, the West Indies, Jamaica, Labrador, Surinam, South America, the Himalayas, and Unyamwezi, Central Africa. The official periodical *The Moravian*, is published weekly in Bethlehem, Pa. On Jan. 1, 1929, there were 135 churches, 162 ministers, 27,454 communicant members, although the actual membership was estimated at 38,000, and 125 Sunday schools, with 22,000 pupils.

THE EVANGELICAL UNION OF BOHEMIAN AND MORAVIAN BRETHREN IN NORTH AMERICA, of which the first congregation was organized in 1864 in Wesley, Tex., is under the direction of a synod which meets each year on July 6, the day of the death of John Huss. In 1926 (the latest year for which figures were available) this denomination reported 34 churches in North America, with 5241 members and 24 Sunday schools, with an enrollment of 1708. Total expenditures were \$12,023 and value of church property, \$76,700.

THE INDEPENDENT BOHEMIAN AND MORAVIAN BRETHREN CHURCHES were founded in 1858 in College Township, Iowa. In 1926 there were three churches with one minister and 356 members and three Sunday schools with 381 scholars.

**MORMONS.** See LATTFERDAY SAINTS, CHURCH OF JESUS CHRIST OF.

**MOROCCO.** The largest of the Barbary States, occupying the northwestern corner of the continent of Africa, bounded on the west by the Atlantic Ocean, on the north by the Mediterranean Sea, on the east by Algeria, and on the south by the Sahara Desert and the Spanish colony of Rio de Oro. From an administrative and political point of view, Morocco is divided into three zones. First and most important, the French protectorate, including approximately 85 per cent of both area and population, with Fez as the political capital and Casablanca as the leading port and commercial centre. Second, the Spanish protectorate, a narrow strip of land extending for about 300 miles from the Atlantic Ocean along the Mediterranean with Ceuta, Melilla and Tetuan as the principal localities,

and third, the international Tangier zone ruled in accordance with the terms of the Paris convention of Dec. 18, 1923, between France, Great Britain, and Spain. The latest estimate of the total area places it at 218,525 square miles, of which the area claimed by Spain for her zone in the north was 8000 square miles for her southern zone, 9500 square miles, and for Ifni on the west coast, 800 square miles. In 1929 the area effectively held by the French was estimated at 200,000 square miles.

A census of the French zone taken in March, 1926, placed the population at 4,016,882 native Moslems, 107,552 native Jews, and 104,712 foreigners, making a total of 4,229,146. That of the Spanish zone was estimated at nearly 1,000,000, and that of the Tangier zone at about 80,000. The largest towns in the French zone with their populations according to the census of 1926 are Marrakech, 149,263, Casablanca, 106,608, and Fez, 18,172. In the Spanish zone, the largest town is Tetuan, with a population of 24,000. The population of Tangier is approximately 60,000. The chief languages are French, Spanish, Moorish, Arabic, and Berber dialects. In 1926 there were in the French zone 199 schools, in the secondary schools there were 188 teachers and 2822 pupils, in the high schools, 26 teachers and 417 pupils; in the primary schools, 645 teachers and 23,327 pupils, in the professional schools, 79 teachers and 1029 pupils. There are Moslem schools at Rabat and Fez and a research institute for the study of the Arabic and Berber languages at Rabat.

**PRODUCTION.** The most important industry is agriculture. The principal crops are cereals, especially wheat and barley, beans and chick-peas, canary seed, cummin and coriander, linseed, olives, grapes and other fruits, and especially almonds. In the fall of 1929 swarms of locusts overran many of the valley oases of French Morocco, causing damage estimated at several millions of francs. Stock raising is an increasing industry. In 1926 there were in the French Zone, 1,932,840 cattle, 9,248,462 sheep, 3,037,731 goats, 58,911 pigs, 190,251 horses, 562,835 asses, and 117,917 camels. Although no coal is found in Morocco, the rich mineral resources include phosphates, the output of which in 1928 was 1,337,100 tons, iron ore, gold, silver, tin, copper, and petroleum. The phosphate mines are exploited by the Government and under its monopoly.

**COMMERCE.** In 1927 exports of the French Zone were valued at 871,390,141 francs and imports, at 1,798,597,755 francs.

**FINANCE.** The estimated revenue for the French Zone in 1929 was 687,768,968 francs and the estimated expenditures the same amount. The budget for the Spanish Zone for 1928 balanced at 55,913,441 pesetas. In the Tangier Zone, the 1929 budget provided for expenditures of 23,969,533 francs and revenues of 23,971,500.

**COMMUNICATIONS.** In 1927, 1713 vessels of 2,421,088 tons engaged in foreign trade entered the ports of the French Zone and 1615 vessels of 1,557,188 tons the port of Tangier. There are approximately 1100 miles of railway in Morocco.

**GOVERNMENT.** The Tangier Zone is permanently neutralized and is governed by an international control organization. The French Zone constitutes a protectorate, under a French and native administration. The highest local authority is the French Resident General. The

with only some 30 per cent of possible votes being cast. By inadvertence, San Diego had been carried on the standard list of manager cities, apparently because since 1915 it had had an operating manager in charge of various kinds of public works.

Votes against the adoption of the manager plan were recorded at Portland, Me., and Cleveland, Ohio, the vote at Cleveland being the third unsuccessful attack on the plan within two years. Majorities in favor of retaining the manager plan at the three elections were, in round numbers, 6400 in November, 1927 (with some twice the number of total ballots cast), 3200 in 1928, and 3000 in 1929. At each of these elections, abandonment of proportional representation in the election of councilmen also was voted down. During the year, Hamilton, Ohio, voted to retain, and Ashtabula, Ohio, to give up, proportional representation, votes being about 8600 for continuation to 3200 against at Hamilton and 1900 for to 2600 against at Ashtabula. According to *Public Management*, January, 1930 (Chicago), Ashtabula was the first American city to adopt and the first to give up proportional representation, nine other cities having voted to retain the plan. Ashtabula adopted the plan 14 years previous—long enough ago to permit the citizens to forget the political conditions before its adoption, the journal named suggests.

Two cities abandoned the plan. Wheeling, W. Va., substituting an elected manager-mayor, and Dearborn, Mich., which was operating under the council-manager plan, combining with Fordson, the combined city having the mayor-council plan. Indianapolis, which was to have come under the manager plan in 1930, was prevented from so doing by a court decision which was interpreted as compelling Michigan City, Ind., to abandon the plan. The court held that the act under which Indianapolis was to have a city manager was unconstitutional because it was physically impossible for the city clerk to verify signatures to the election petition within the time required, the court assuming that personal verification was required instead of having the work done by deputies, as is allowed in other States. It was held that because this verification was physically impossible in Indianapolis, the council-manager enabling act could not be utilized in any other municipality of the State.

The Hartford Metropolitan District was created by the State Legislature of Connecticut and Greater Atlanta by the Legislature of Georgia. The Hartford District includes Hartford, Worcester, Bloomfield, Newington, and Weatherfield, all of which accepted the act by popular vote, while New Hartford voted against coming into the district. The government of the district is vested in a commission of 20 members, in two forms, all appointed by the Governor of Connecticut. In the first form, there is one member for each of the five municipalities. After two years' service, these members will be replaced by elected representatives, one from each municipality. In the other form, there are 15 members, five each appointed for two, four, and six years. At the expiration of these terms, successors will be elected for six-year terms, the election being at large. The work of the district is vested in two bureaus. One of these will be the Bureau of Water Supply with the executive head of the Hartford Water Department as its manager and chief engineer. The other, the Bureau of Public

Works, will be directed by the city engineer of Hartford, who will have charge of trunk highways, sewerage, and drainage.

Greater Atlanta, effective Jan. 1, 1930, is chiefly an organization for working out a plan for future action, except that it was intended to get immediate recognition in the Federal Census. It embraces the city of Atlanta, the adjacent towns of Decatur, Avondale Estates, East Point, College Park, and Hapeville, together with 15 unincorporated districts. In Atlanta, each of the five incorporated towns are called boroughs. The mayor to each of these municipalities will continue as borough mayor with the mayor of Atlanta as *ex-officio* mayor of Greater Atlanta. There will be 15 councilmen from the unorganized districts, making up a council of 21 in all. This council is empowered to make a study of "such governmental, sanitary, water, and police problems as it sees fit and by a resolution to recommend to the governing bodies of the various boroughs such legislative and other action as may be deemed beneficial."

The borough system of government for Montreal and vicinity was under consideration during the year in the hope of forming Greater Montreal. There is already in existence the Montreal Metropolitan Commission. A proposed charter for the Metropolitan District of Pittsburgh, Pa., to include 122 cities, boroughs and towns, was defeated on referendum vote June 25 because, although the total vote was 87,800 for, to 41,000 against, the charter and although 84 of the 122 municipalities cast a majority vote for the charter, only 49 of the municipalities gave the necessary 2 to 1 vote. The total vote of 129,000 was only about one-third of the vote cast in the same district at the presidential election in 1928. The vote was taken in accordance with a constitutional amendment adopted by the State in 1928.

The charter, as originally framed by a commission, was materially changed by the Legislature before being submitted to popular vote. The charter was designed to create Greater Pittsburgh, including all Allegheny County and still leave municipal autonomy in the 122 minor local-government areas. Attempts to resubmit the charter to popular vote before the taking of the Federal Census of 1930, in order that Greater Pittsburgh might attain high rank among the larger cities of the country, were unsuccessful, a court holding that the Legislature had not authorized resubmission. Since the Legislature does not meet in 1930, it was impossible to secure a legislative amendment before the 1930 census.

**GREAT BRITAIN.** Sweeping changes in both local government and local taxation in Great Britain were provided in an act of Parliament passed just before the Baldwin, or Conservative, government went out of power. There were separate acts for England and Wales and for Scotland. Hundreds of minor governing bodies were abolished by the act, including those pertaining to parishes in England and to districts in Scotland. In general, powers of county councils were considerably increased, particularly as regards highways outside of large municipalities. For the relief of manufacturing industries and of railways, local taxation was cut to 25 per cent and for the relief of agriculture, local taxes were reduced from the former 25 per cent to zero. The revenue thus lost by the local governing bodies is to be made up from the national Treasury, and various specific

grants-in-aid are to be replaced by lump-sum grants. In Scotland, the taxation relief is somewhat different.

**BIBLIOGRAPHY** Important books published during the year included Forbes, *Government Purchasing* (New York), Maxwell, *Contemporary Municipal Government in Germany* (Baltimore), Merriam, *Chicago, a More Intimate View of Urban Politics* (New York), Thompson, *Urbanization, Its Effect on Government and Society* (New York), Walker, *Municipal Ordinance Making* (Columbus, Ohio) Whyte, *Local Government (Scotland) Act* (Edinburgh).

See also CITY PLANNING, GARRAGE AND REFUSE DISPOSAL, MUNICIPAL OWNERSHIP, ROADS AND PAVEMENTS, SEWERAGE, WATERWORKS.

**MUNICIPAL LEAGUE**, NATIONAL. See NATIONAL MUNICIPAL LEAGUE.

**MUNICIPAL OWNERSHIP** Waterworks continue to be far in the lead as regards municipal ownership of public utilities in the United States, with electric light and power plants second. Gas works and street railways show only a few examples of public ownership and little change from year to year except for construction of rapid transit system extensions in New York, Philadelphia, and Cincinnati, all for private operation. The few sewer systems owned and operated by private companies barely hold their own. The largest of these is in Atlantic City, N. J. In December, San Francisco sold the \$41,000,000 of bonds voted in 1928 for the purchase of the works of the Spring Valley Water Company. Mar. 3, 1930, was set for taking possession by the city. Condemnation proceedings in behalf of the cities of Paterson, Passaic, and Clifton, N. J., were prosecuted during 1929 to fix the price for transfer to those cities of the works of the Passaic Consolidated Water Company. When these and the Spring Valley works change to municipal ownership, there will remain only a half-dozen cities in the United States with population of 100,000 or more which do not own their waterworks. The voters of Davenport, Iowa, cast 2800 against, to 2500 for, the purchase of the works of the Davenport Water Company in 1929. Some smaller cities bought privately owned works during the year. Apparently, there were no changes from municipal to private ownership.

Ownership of electric light and power plants has changed fundamentally in recent years. Consolidation of both physical plant and ownership has been rapid. This has greatly reduced the number of plants but neither the number of communities nor the population supplied. Preliminary announcements of U. S. Census statistics gathered as of the year 1927 (summarized in *The American City* for September, 1929) show that the total number of plants decreased from 6385 in 1922 (date of the previous census) to 5335 in 1927. For the same period, municipal establishments fell from 2581 to 2198 and private operating companies, from 3774 to 2137. The municipal loss in five years was thus 383, or 15 per cent, and private loss, 1637, or 43 per cent.

An exhaustive preliminary report entitled "The Changing Character and Extent of Municipal Ownership in the Electric Light and Power Industry" was published in 1929 by The Institute for Research in Land Economics and Public Utilities (Chicago). It is confined to municipally owned plants, which are exhibited in various ways for each year and for groups of years from 1882, the beginning of the industry, until 1927. The

report gives the number of municipal plants at the close of 1927 as 2320, instead of the 2198 in the preliminary census figures already mentioned. The peak of municipal ownership, according to the report, was in 1923, with 3066 "installments," as it terms a municipally owned plant, but at one time or another, there have been 3814 such plants. Of the latter, 827, or 22 per cent, had once been privately owned and the remainder were publicly owned at their inception. Of 2320 municipally owned plants at the close of 1927, 1802 started as such and 518 as privately owned plants. Of 1484 changes from municipal to private ownership in the period under consideration, 1185, or 81 per cent, began as municipal and 309, or 21 per cent, as private plants, the 309 having changed from private to public then back to private ownership. Most of the 3814 plants now or previously municipal are in small places, 1099, or 29 per cent, in places of 500 or less, 2058, or 54 per cent, in places of less than 1000, 3125, or 84.5 per cent, in places of 2500 or less, and only 44, or 1.15 per cent, in cities of 20,000 and over.

**CANADA** Figures collected by the Dominion Bureau of Statistics as a part of its 1927 Census of Industry (published late in 1929) showed that for all Canada there were 629 stations generating electric power of which 432 were privately, and 197 publicly, owned, giving percentages of 69 and 31. The total number of organizations engaged in supplying electric power was considerably in excess of the number of stations, because many organizations buy current for distribution. Of 1012 organizations, 473, or 47 per cent, were private and 539, or 53 per cent, were public. Ontario had 314 of the 539 public organizations.

**LONDON TRANSIT** What would be in substance a single coordinated system of the many competing passenger transit agencies in London and vicinity, under public ownership but with private operation, was foreshadowed in the House of Commons near the close of the year by Herbert Morrison, Minister of Transport, under authority of Prime Minister MacDonald. Such action was considered necessary both to lessen traffic congestion and to facilitate transport, while it was believed that the economies effected by bringing under single ownership and control "the complicated network of separate interests, private and municipal, including omnibuses, tramway and local railway service, would be such as to make unnecessary any liability on public funds or credit." Consult *Municipal Journal* (London), Dec. 6, 1929.

**MURDER**, See CRIME.

**MURRAY**, THE HON. GEORGE HENRY Canadian statesman, died Jan. 6, 1929, in Montreal, Can. He was born June 7, 1861, in Grand Narrows, Nova Scotia, where he began his education, finishing at Boston University. He was appointed to the Legislative Council of Nova Scotia (1889), and a member of the Government of Nova Scotia without portfolio (1891). He formed a new administration in his province (1896), in which he was both Provincial Secretary and Premier. He resigned in 1923, after serving a remarkably long Premiership.

**MURRAY**, THE MOST REV. JOHN GARDNER, Presiding bishop of the Protestant Episcopal Church in the United States, died of an apoplectic stroke while conducting a meeting of the House of Bishops in Atlantic City, N. J., Oct. 3, 1929.

He was born in Loueoning, Md., on Aug. 31, 1857, and he was educated at Wvoming Seminary in Kingston, Pa., and Drew Theological Seminary. On leaving Drew Seminary in 1881, he was forced to enter business to aid in the support of his family. Beginning as a bookkeeper in the Osage Coal and Mining Company of Selma, Ala., he became vice president before he retired in 1892. He was ordained a deacon of the Protestant Episcopal Church in 1893 and a priest the following year. In 1893-96 he was in charge of missionary work in southern Alabama, and after that became rector of the Church of the Advent in Birmingham. He went to Baltimore as rector of the Church of St. Michael and All Angels in 1903. In 1909 he was consecrated bishop coadjutor of Maryland, and in 1911 he became bishop of Maryland. He was elected presiding bishop of the Protestant Episcopal Church for the period 1920-31. Bishop Murray was an able administrator, and as the presiding bishop, directed the missionary work of his church both in the United States and abroad. Attention to missions and an absorbing interest in the human needs of his people were distinctive features of Bishop Murray's work.

**MUSCLE SHOALS.** See AGRICULTURAL LEGISLATION, FERTILIZERS, and UNITED STATES.

**MUSEUMS, SCIENTIFIC.** See ANTHROPOLOGY.

**MUSIC.** GENERAL NEWS. Having perfected a vast organization during the celebration of the Beethoven and Schubert centennials of the two preceding years, the Columbia Phonograph Company of New York conceived a plan of making this organization a permanent body to act as a jury in determining an annual award of \$5000 for the outstanding contribution in the field of music during any year, beginning with the year 1929. This body was officially incorporated as "The Columbia Yearly Award for the Advancement of Music and the International Parliament of Music." For the purpose of the award, the "field of music" is defined as comprising all compositions in the various forms, as well as original and scholarly contributions to musicology.

On October 6, the birthday of the late Oscar G. Sonneck, the Beethoven Association of New York presented to the Library of Congress a check for \$10,000 as a Sonneck Memorial Fund. The income is to be devoted to the advancement of musicology in the United States by offering annual prizes and stipends for original research work.

In his will the late Charles H. Ditson set aside \$800,000 to be evenly divided among the music departments of eight institutions of learning: Columbia, Harvard, Yale, Princeton, the Chicago Musical College, the College of Music of Cincinnati, the New England Conservatory, and the Ann Arbor School of Music.

The famous Wanamaker Collection of Stringed Instruments, which after the death of its collector (1928) was acquired by Dr. Thaddeus Rich, was sold by the latter for \$850,000 to Rudolph Wurlitzer, who thus became the owner of the world's largest collection, representing a total value of \$3,000,000.

Impressed by the fact that some recently published works on American folklore contain a number of hitherto unknown folksongs, Lorraine Foster, a singer and direct descendant of the composer, organized in New York, on November 29, the Stephen Foster Society for the

purpose of collecting and publishing unknown American folksongs that may still survive in any part of the United States.

In Gotha occurred in March, the world-premiere of an unfinished opera by Mozart, *Lo sposo deluso*, which dates from the year 1783 and was abandoned by the composer because of its silly libretto. Ludwig Kuschier completed the score by using the music of another unfinished opera, *L'oca del Casor*, written in the same year. The result hardly justified the pains taken by the arranger and certainly did not add an iota to Mozart's fame.

Among the papers left by an orchestral player, who died in Prague in 1916, there was found the complete score of the original version of Dvořák's opera, *King and Charcoal Burner*, dated 1871. When this was rejected as too difficult, the composer reset the entire libretto to new music, in which form it was produced in Prague in 1874. In Leipzig Gunter Raphael discovered an unknown concerto for 'cello and orchestra in A minor by Dvořák, which had its first performance at a Gewandhaus concert in October, under the direction of Hermann Scheichen, with Hans Munch-Holland as soloist.

In Berlin the original manuscript of the first version of Schubert's *Erkoning*, which had been in the possession of Clara Schumann, was sold at auction for \$6000.

In Vienna Fritz Lange, the biographer of Johann Strauss, discovered among the composers' papers in the possession of his widow parts of the orchestral score of a hitherto entirely unknown operetta, *Romulus*, written about 1866.

On an extended tour of the principal cities of Germany in the spring, the famous Concertgebouw Orchestra of Amsterdam, under Willem Mengelberg, aroused everywhere demonstrations of frantic enthusiasm, which later on were duplicated at a series of concerts given in Paris.

To its already existing three important opera houses, Berlin added a fourth one, Die Volkoper des Westens, under the directorship of Karl Stolzberg. It was formally opened on August 18 with Lortzing's *Die beiden Schützen*.

The death of Siegfried Ochs (90), in February, stirred the numerous admirers of the great conductor to quick action, resulting in the re-establishment of the famous Berlin Philharmonic Chorus, with Otto Klemperer as conductor. Ochs had founded this chorus in 1882 and conducted its concerts till 1921, when post-war conditions brought about the dissolution of this world-famous organization.

Through the annual subvention of 480,000 marks, guaranteed by the Berlin municipality for ten years, the Philharmonic Orchestra, of which Wilhelm Furtwängler is the principal conductor, became a state institution.

Prague and several other Czech cities devoted the latter part of April and the entire month of May to an elaborate celebration of the twenty-fifth anniversary of the death of Dvořák (May 1, 1904) by performances of almost all his orchestral and chamber music, as well as his operas.

In striking contrast to this enthusiasm the centenary of the birth of Anton Rubinstein passed practically unnoticed. A few of his personal pupils, both in Europe and the United States, resurrected the faded piano concerto in D minor, but no record can be found of the revival of any of the larger works, the symphonies, operas or

outones What the great artist had feared, and what embittered the last years of his life, has literally come true Today the world remembers only the superb pianist, the composer was forgotten even before the first decade after his death

The third festival of the Deutsche Händel Gesellschaft, held at Halle, in June, showed considerably lessened interest in works of merely historical importance, although the committee had hoped to attract a large number of visitors by including works by some of the master's contemporaries, Telemann, Keiser, Steffani and Hasse

On the other hand, the enormous success of the seventh festival of the Deutsche Brahms Gesellschaft, held at Jena, also in June, testified to the ever-growing appreciation of this master in wider circles

Under the auspices of the Internationale Bruckner Gesellschaft, founded the preceding year in Leipzig, the first great Bruckner Festival, conducted by Hugo Balzer and Knöll Krips, was held at Karlsruhe, early in November The major works produced were three symphonies (Nos. 1, 3, and 8) and the Mass in F minor

The seventh International Festival of the International Society for Contemporary Music was held at Geneva, in September The programmes presented new works by 21 composers of 15 nationalities

Owing to further extensive alterations and innovations in the Festspielhaus, the annual Bayreuth Festival was omitted

In May Toscanini, with the complete personnel and accessories of La Scala, gave a series of gala performances in Vienna and Berlin, rousing the audiences of both cities to the point of frenzy After the final performance in Berlin (June 20) he startled the world with the unexpected announcement of his resignation, not only as director and principal conductor of La Scala, with which institution he had been connected for more than thirty years, but also of his permanent retirement from all operatic conducting, as he desired in the future to devote his entire time to the concert platform A few days later a second announcement followed, that he had accepted the invitation of Siegfried Wagner to conduct *Tannhäuser* and *Tristan und Isolde* during the Bayreuth Festival of 1930 This is the first time that the much-coveted honor of directing at Bayreuth has been extended to a foreign conductor

In connection with the centenary of the premiere of Rossini's *William Tell* (Grand Opera, Aug. 3, 1929) the entire company of the Teatro alla Scala, under Tullio Serafin, was invited to Paris to give a series of model performances of several of Rossini's operas Although these productions were almost flawless in all respects and the audiences were lavish in their demonstration of approval, only one work of the series drew full houses, Rossini's only masterpiece, *Il Barbiere di Siviglia*

At the Théâtre des Champs Élysées, Maria Kuznetsov-Massenet gave a short season of Russian opera with her own private company, assisted by the Stinram Orchestra under Emil Cooper The critics were emphatic in their praise of the musical excellence and the scenic splendor of the performances. The repertory included Rimsky-Korsakov's *Snegurochka*, *Tsar Saltan*, and *Tale of Kitezh*, Borodin's *Prince Igor*, Mussorgsky's *Boris Godunov* and Tchaikovsky's *Eugen Onegin*

In London Sir Thomas Beecham conducted a six-day festival of the compositions of Frederick Delius (October 12-November 1), presenting all the major works At the conclusion the invalid composer was visibly moved by the sincere homage of the vast audience

After a long and valiant struggle of seven years the British National Opera Company was obliged to disband in the spring But immediately its place was taken by the Covent Garden Opera Syndicate, under the direction of Colonel Eustace Blois, with John Balmorli as principal conductor

The house in Zelazowa Wola, where Chopin was born, was acquired by the city of Warsaw for preservation as a national memorial

ARTISTS It may not be amiss to begin the year's survey of the activities of prominent artists by recording the career of that prodigy of the violin, Yehudi Menuhin, whose extraordinary success in the United States furnished the sensation of the year 1927 After a few more appearances in that country, in January, he made his first visit to Berlin, then revisited Paris, where he had been heard two years before, and also visited London for the first time Everywhere he roused his audiences to frenzied enthusiasm and won the unanimous and unqualified admiration of the critics, who pronounced his interpretation of the colossal concertos of Beethoven and Brahms as the equal of that of the greatest masters of the violin New York was still spellbound by the marvellous art of this boy, when his teacher, Louis Persinger, introduced a second young genius of the violin, twelve-year-old Ruggero Ricci, accounts of whose brilliant playing on the Pacific coast had preceded him The lad did not disappoint expectations for he created a real sensation at his New York début, on October 20, when he played Mendelssohn's Concerto in E minor with the Manhattan Symphony Orchestra For a child of twelve to surmount merely the technical difficulties would be an astonishing achievement, to present this work with such maturity of conception is nothing less than a manifestation of genius that defies explanation Young Ricci's triumph is all the more significant in that it followed so closely upon that of his remarkable fellow-student, when comparison was unavoidable

On October 11, a new Spanish pianist, José Iturbi, made his American debut in Philadelphia, in the Beethoven's G major Concerto with the Philadelphia Symphony Orchestra His success was instantaneous and nothing less than sensational A few weeks later, he received a similar ovation at his first New York appearance with the Philharmonic-Symphony Society (December 5) and at his recitals capacity audiences greeted him with demonstrations usually reserved only for prime favorites. The critics exhausted their superlatives in praising his stupendous technical execution, the variety of his tonal effects, his musical interpretation, the universality of his taste and his marvellous sense of style, as exemplified by his rendition of classical, romantic, and modernistic compositions with equal authority Such praise is, indeed, no exaggeration However, what differentiates one great artist from another, sets him apart as a distinct individuality, is personality, that subtle, indefinable force which emanates unconsciously from the soul of the executant and casts its magic spell over the listener, a force akin to electric-

ity, in that it can neither be described nor explained, but which proves its real existence through results produced; a spiritual force that irresistibly stirs the deepest emotions. This personality Nature has bestowed upon Mr. Iturbi.

Another memorable event was the American debut of a new Russian 'cellist, Gregor Piatigorsky, who was first heard in Philadelphia, on November 8, in the Dvořák's Concerto in B minor with the Philadelphia Symphony Orchestra. A few weeks later, on December 26, he repeated the same work in New York with the Philharmonic-Symphony Society. On both occasions he evoked tumultuous demonstrations and critical opinion proclaimed him the greatest 'cellist heard here since the advent of Casals in 1901. What has just been said about Iturbi is applicable with equal force to the art and personality of Piatigorsky. An artist new to New York, although favorably known by the reputation which he had won in Chicago, was Alfred Wallenstein, the new solo 'cellist of the Philharmonic-Symphony Society, who made a deep impression at his first appearance as soloist with that organization on October 24, when he played in masterly fashion, together with the concertmaster, Scipione Gundi, Brahms's great double Concerto for violin and 'cello. Worthy of mention also is the debut of another 'cellist, Antonio Sala, who was introduced to New York on March 4 and proved himself a fine artist.

A piano recital given by Hans Barth in New York, on April 9, attracted a good-sized audience, curious to witness the demonstration of a quarter-tone piano. In reality, the instrument was nothing else than a combination of two pianos, each fully equipped with its own keyboard and set of pedals. He later tuned a quarter-tone apart. . . . was bewildering, so that no opinion could be formed as to the merits of either the instrument or the music—the latter being written, as a matter of course, in quarter tones—in as much as it was impossible to establish a basis of comparison with any music of the past, or even with the most extravagant productions of the modernists.

There was no dearth of concerts by established favorites—pianists, violinists, organists, harpists and vocalists. The mere enumeration of their names would read almost like a catalogue. In recent years the recital for two pianos seems to have won increasing favor, for, besides well-known artists in this field, there were heard the new teams formed by June Wells and Gizi Stantos, Lewis Sears and W. L. Grossman, and Elizabeth and Frances Copeland.

A hearty welcome was extended to two distinguished Russian composers, Alexander Gretchaninov and Alexander Glazunov, on their first visit to this country, where they appeared as conductors of their own works. The former made his American debut at a special concert in New York, on March 24, the latter with the Detroit Symphony Orchestra on November 21. After conducting also in Chicago and Cleveland, Glazunov appeared at a special concert in New York (December 3). Although he did not reveal extraordinary powers as a conductor, his importance as a composer, widely recognized long before his coming, aroused his audiences to great enthusiasm. During his stay many of the larger orchestras gave performances of his works, and at several of these concerts the composer was present as the guest of honor.

**CHAMBER MUSIC.** The fourth annual Washington Chamber Music Festival was held in the concert hall of the Library of Congress from October 7-9. The assisting artists were the Barrière Ensemble, the Gordon String Quartet, the Roth String Quartet, a chamber orchestra selected from members of the Philadelphia Symphony Orchestra, under Leopold Stokowski, the pianists Harold Bauer and Arthur Loesser and the organist Lynnwood Farnam. Although the biennial \$1000 prize was formally withdrawn after the last award—to a worthless work—in 1926, Miss Coolidge had offered the prize once more for this festival. Out of 135 scores submitted by composers of 33 nationalities the judges selected a sextet for wind instruments, entitled *Disvertissement grotesque*, by Joseph Huttel of Czechoslovakia. A second prize of \$500 had been offered for a composition for two pianos, but was not awarded, because no score was deemed sufficiently meritorious. Another novelty produced was Hindemith's Second Concerto for organ and chamber orchestra. If the *Disvertissement* was truly grotesque and execrating, the concerto was in spite of its dull third novelty, a sextet for wind instruments, by Werner Janssen, was most appropriately entitled *Oberquers of a Saxophone*. It was genuine jazz, repellent in its vulgarity. These and several more modernistic works were scarcely suited to put the audience into a receptive mood for such a masterpiece as Brahms's *String Sextet*, or even Buckner's *Piano Quintet*. A remarkable feature of the festival was the splendid execution of Bach's last work, *Die Kunst der Fuge*, a collection of 19 masterly, but rather long, fugues, the performance of which required exactly one hour and forty minutes. Whether any listener derived real æsthetic enjoyment from this purely intellectual, technical exhibition, without appeal to the emotions, is highly questionable. The work was not presented in its original setting for organ, but in the very effective orchestral arrangement of Wolfgang Graesser.

In Valley Forge, Pa., Ben Stad gave, in May, a concert of early music performed on the old instruments for which it was originally written. He attracted so much attention, that he organized the Society of Ancient Instruments, which made its initial appearance in four festival concerts on November 15 and 16, and the success led to a movement to establish an annual festival similar to Arnold Dolmetsch's famous Haslemere Festival. The artists were Ben Stad, viola d'amore, J. Brode, quinton, J. Smit, viola da gamba, C. Klug, viola da basso, Flora Stad, clavichord.

The twenty-fifth season of the famous Florenz Quartet established a record for packed houses, as it had been announced that after the conclusion of the tour the world-famous organization would be disbanded. The last concert took place in New York, March 17. Originally established in 1902 as a private quartet maintained by a wealthy patron of art, Edward de Coppel, the members, by constant practice, attained such perfection of ensemble, that on their first tour of Europe, in 1904, they created a sensation. The following year, they began their regular American tours and were recognized immediately as the equals of the famous Kneisel Quartet. The flawless perfection of their ensemble was maintained throughout their career by literally adhering to the original policy to devote the entire time to rehearsing or to concert tours with the quartet as a whole. As a matter of fact, no member ever

taught or ever appeared as a soloist. The original members were Adolfo Betti, Alfred Pochon, Ugo Ara, and Ivan d'Archambeau. Until the time of dissolution only three changes were made in the personnel, all affecting the viola desk. In 1917 Ara was succeeded by Léon Bailly, the latter in 1924 by Félicien d'Archambeau, and he, in 1926, by Nicolas Moldovan.

The passing of this famous organization gives rise to some inevitable reflection. In 1917 an equally famous group of artists, the Kneisel Quartet, was disbanded, and their rare art was irrevocably lost, except as it lingers in the memory of those who had the good fortune of actually hearing it. With the passage of time such memories are bound to become dimmed. Certainly he must be rash who would dare compare a present, actual performance with the memory of a performance of the same work heard twenty or thirty years before. Thanks to the perfection attained by the present method of recording and reproducing, actual performances by the Flonzaleys are preserved for all posterity of two of Beethoven's *String Quartets*, op. 18, no. 2 and op. 135, of Brahms's *Piano Quintet*, op. 34, of Schumann's *String Quartet*, op. 41, no. 1 and the same composer's *Piano Quintet*, op. 44. All these works are recorded in their entirety.

Immediately after the dissolution of the Flonzaleys two of its members formed the Stradivarius Quartet for the avowed purpose of continuing the tradition of the Flonzaleys. The personnel consists of Wolfe Wolfenson, Alfred Pochon, Nicolas Moldovan, and Gerald Warburg. The name was chosen because of the fact that every member plays a Stradivarius instrument. They began their activities on May 10, with a series of twenty-eight concerts at Mills College in California.

Another new organization, that gave its initial concert on November 15, is the Cincinnati String Quartet, formed by players of the Cincinnati Symphony Orchestra, Isaac Berger, Mikhail Stolarevsky, Vladimir Bekalevnikov, and Desné Daneyowski.

Two important changes were made in the personnel of the Curtis String Quartet of Philadelphia. Carl Fleisch and Emanuel Zetlin, first and second violins, respectively, were replaced by Lea Luboshutz and Edwin Bachmann. Leon Bailly and Felix Salmon continue as violist and cellist.

One of the sensations of the year was provided by the Aguilar Lute Quartet of Madrid, which made its debut in New York on November 9. The members were three brothers, Ezequiel, Paco, Pepe, and their sister Elisa. Their masterly renditions of classical and modern compositions revealed undreamt possibilities of the lute as a concert instrument.

**CHORAL SOCIETIES** On January 3, the Prague Teachers' Chorus, a body of 60 trained male voices, under the direction of Metod Dolezal, made its American debut in Boston and scored a most emphatic success, which was repeated a few days later in New York (January 7). The flawless technical execution respecting intonation, attack, release, and fine nuances caused no surprise, was, in fact, expected, and thus taken as a matter of course. The real interest centered in the compositions themselves, the majority of which possessed the characteristic flavor of the national folk-music. Thus, while the works themselves were real novelties, they were representative of a type of music not only familiar to, but even

very popular with, American audiences through the works of Dvořák and Smetana.

Before embarking for their first European tour, the Dayton Westminster Chori, under J. F. Williamson, visited several of the Eastern cities and won high praise for their fine rendition of a cappella works of the older masters. In England, France, Germany, and Austria, their concerts evoked genuine enthusiasm.

After two years of intensive training and rehearsing, the Smallman Association of Chicago, composed of 32 trained voices, under John Smallman, gave their first public concert in Chicago, scoring a pronounced success, and at once undertook a transcontinental tour. Their first New York concert, on November 7, was nothing less than a triumph.

On April 23, the A Cappella Choir of the Denver College of Music, a body of 32 trained voices under John C. Wilcox, made their debut as a concert organization in their home town and won immediate favor.

A noteworthy concert was given on December 4 by the Braluns Chorus of Philadelphia, under N. Lindsay Norden, when Beethoven's *Missa Solemnis* was produced in a manner that caused local critics to write in superlatives. Because of its extraordinary demands upon the singers, both soloists and chorus, this mass is heard rather infrequently, consequently, any performance, even in New York, is a musical event. On this particular occasion Philadelphia heard not only an eloquent artistic interpretation, but also the first performance in that city of the great work in its entirety. Thus the distinction of having given the local première of one of the world's greatest masterpieces belongs to the city's youngest choral society, for at that time the Brahms Chorus was just beginning its third season.

On April 18 the Columbia University Chorus, under the direction of W. H. Hall, gave the American première of Handel's oratorio, *Solomon*, which was first produced in London in 1748. The work proved to possess merely historical interest.

**FESTIVALS** The twenty-ninth biennial Cincinnati May Festival was held under the direction of Frederick Stock, from May 7-10. The new conductor, who succeeded Frank Van der Stucken, was no stranger to this festival, since he has taken part in many festivals of earlier years, first as viola player in the Chicago Symphony Orchestra, then as associate and later as guest-conductor. The chief works performed were Mendelssohn's *St. Paul*, Wolf-Ferrari's *La Vita Nuova*, Pierné's *Les Enfants de Ruthém*, and Honegger's *Le Roi David*. The climax of the festival was the afternoon concert of May 9, when Dr. Stock presented a Wagner cycle of excerpts from the Ring dramas, with assistance of Florence Austral, Finstine Schumann-Heink, Dorothy Maucki, Tudor Davies, Paul Allhouse and Frederick Patton.

The works produced at the twenty-third Bethlehem-Bach Festival (May, 10, 11), under Dr. Frederick Wolle, were the *Passion According to St. Matthew* and the *Mass* in B minor.

The ninth Harrisburg Festival (May 11-13), directed by Ward Stevens, offered as principal works a repetition of Mozart's *Mass* in C minor, which at the preceding festival had its American première, and Pierné's *Children's Crusade*.

The fifth Westchester Festival at White Plains (May 9-11), under Albert Stoessel, presented as

the chief attractions splendid concert performances of Saint-Saëns's *Samson and Dalilah* and the entire first act of Wagner's *Lohengrin*.

The thirty-sixth Ann Arbor May Festival (May 22-25), under Earl V. Moore, with the assistance of the Chicago Symphony Orchestra, produced a novelty, Norman Lockwood's orchestral suite, *Odysseus*. Josef Hofmann, as soloist, observed the centenary of the birth of Anton Rubinstein, his former teacher, by a brilliant performance of the D minor concerto. The choral offerings included Brahms's *Ein Deutsches Requiem* and Wolf-Ferrari's *La Jda Nuova*.

The twenty-first North Shore Festival at Evanston (May 27-June 1), under Peter Luthin, brought forward as the principal offering Bach's *Missa in B minor*. Josef Hofmann repeated the Rubinstein concerto, assisted by the Chicago Symphony Orchestra directed by Frederick Stock.

The seventieth Worcester Festival (October 2-5), under the direction of Albert Stoessel, offered a decided innovation in presenting the Maimon Dancers at the second concert. It is the first time that the art of dancing was ever represented at any of the festivals, but the demonstrations of a capacity house left no doubt as to the favorable reception of the innovation. Two novelties were produced, Josten's *Ode for St Cecilia's Day*, for soprano, baritone, chorus, and orchestra, and Hanson's *Lament for Beowulf*, for chorus and orchestra. The principal feature of the last concert consisted of Puccini's *Crusade*.

**ORCHESTRAS.** Owing to the delayed arrival, because of the illness of Toscanini, the concerts of the New York Philharmonic-Symphony Society during January and February were conducted by Hans Lange, the associate conductor, and Reiner, Gabriłowitch, Molinari, and Krauss as guests. Toscanini then led the concerts from February 21 to April 1. He also was at the helm of the opening of the fall season, from October 3 to November 24, when Mengelberg conducted to the end of the year. At the concerts of January 19 and 20, Arthur Honegger appeared as guest-conductor, conducting his *Rugby* and a *Concertino* for piano and orchestra, the latter work being interpreted by the composer's wife, Andree Vauraboug. The concert for the pension fund, on April 1, was made a gala occasion in honor of the solo cellist, Leo Schulz, who retired after thirty consecutive years of distinguished service. On that evening, he appeared as soloist, playing the Schumann concerto for cello, and as composer and conductor, directing his *American Overture*. After the conclusion of the summer season at the Stadium, the other solo cellist, Cornelius Van Vliet, also retired. The two positions were then consolidated and Alfred Wallenstein, until then solo cellist of the Chicago Symphony Orchestra, succeeded Schulz and Van Vliet.

Two important changes took place in the Philadelphia Symphony Orchestra. Dr. Arthur Rodzinski, the assistant conductor, and Mischa Mischakow, the concert-master, resigned and were succeeded by Alexander Smallens and George Bernick, respectively. Ossip Gabriłowitch and Clemens Krauss appeared as guest-conductors. Early in the year, when illness necessitated the cancellation of Sir Thomas Beecham's visit, the concerts that were to have been directed by him were divided between the assistant conductor, Dr. Rodzinski, Eugene Goossens, and Alexander Smallens. At the concert of October 11, Stokowski introduced for the first time the perfected

Thereminphone as an orchestral instrument. The programme of November 29 marked a radical departure from the accustomed order of symphony programmes, in as much as an entire opera, lasting almost four hours, was given in concert form. The occasion marked the American premiere of the original version of Mussorgsky's *Boris Godunov*. Opinions may differ as to the necessity or propriety of the radical changes made by Rimsky-Korsakov, whose version is the only one known to the operatic public, but even a single hearing suffices to establish the vast superiority of Rimsky-Korsakov's instrumentation over Mussorgsky's. At any rate, the concert aroused sufficient interest to warrant repetition the following day and on December 2.

In less than a year, the stipulated \$1,500,000 was raised by popular subscription to supplement the original gift of \$1,000,000, made the year before to the Cleveland Symphony Orchestra by Mr. and Mrs. John L. Severance for the orchestra's own concert hall and a permanent endowment fund. The experiment of the preceding year of performing Bloch's symphony, *Israel*, in New York as a pantomime was so successful, that Mr. Sokolov arranged a similar pantomime programme for Strauss's *Heldenleben*, which he performed in New York on April 26, 27, and 28, followed by two repetitions of *Israel*.

The frequent appearances as a concert pianist of Gabriłowitch, the regular conductor of the Detroit Symphony Orchestra, were responsible for the unusually large number of guest-conductors during the year. The audiences had ample opportunity to admire the art of Mengelberg, Stokowski, Arbos, Enescu, Hertz, and Schneevogt. The concert of November 21 was memorable for the fact that it introduced for the first time to an American audience the distinguished Russian composer, Alexander Glazunov, who conducted his *North Symphony* in C minor and his *Second Piano Concerto*, played by Elena Gavrilova.

During January and February, the Minneapolis Symphony Orchestra, under its regular conductor, Henri Verbrugghen, made a successful tour of Southern cities and also gave two concerts in Havana.

The year marked the twentieth consecutive season of Frederick Stock as regular conductor of the Chicago Symphony Orchestra. Alfred Wallenstein, the solo cellist, resigned to accept a similar position with the New York Philharmonic-Symphony Society, and was succeeded by Ennio Bolongini of Buenos Aires.

The announcement that after 15 years of distinguished service, Alfred Hertz would resign as conductor of the San Francisco Symphony Orchestra produced, quite aside from the unpleasant surprise, the result of drawing capacity audiences to every concert of his final season. Whether the unexpected and unsolicited subvention of \$15,000 by the municipality toward meeting the expenses of the orchestra had relation with the conductor's contemplated resignation was not known. The fact remains, that this is the very first instance in the United States of any musical organization having been subsidized out of the

At the conclusion of the spring season George Schneevogt retired as conductor of the Los Angeles Philharmonic Orchestra. His successor, Dr. Arthur Rodzinski, formerly assistant conductor of the Philadelphia Symphony Orchestra,

began his first season on October 24, creating a deep impression.

The Woman's Symphony Orchestra of Chicago opened its fourth season on October 9 under a new conductor, Ebba Sundström, who succeeds Ethel Legniska. Miss Sundström had been concert-master from the beginning of the organization, and assistant conductor during the preceding season.

The twelfth season of the summer concerts at the Stadium in New York (July 6-August 29), by the Philharmonic-Symphony Orchestra under Willem Van Hoogstraten and Albert Coates, was noteworthy for the unusual variety of the programmes. Besides the regular orchestral concerts, there were given two performances of Beethoven's *Ninth Symphony*, under Van Hoogstraten (July 17, 18), and two of Verdi's *Requiem*, under Coates (July 31, August 1). In both works the choral portions were sung by the Choral Symphony Society. Three nights (August 6, 7, 8) were given over to the Denishawn Dancers, when the orchestra was directed by Anna Fuleihan. The night of August 12 brought a concert performance of *Carmen* and *Pagliacci* by the American Opera Company, under the direction of Eugene Omandy. On August 20 and 21 another dancer, Anna Duncan, was presented, while David Mendoza directed the orchestra.

Of the new orchestras that began their career during the year, the most important is the Manhattan Symphony Orchestra of New York, under Henry Wallick. The organization of 100 players gave its initial concert on June 9, the first of a series of summer concerts. The regular winter series was inaugurated on October 20, when that young prodigy of the violin, Ruggiero Ricci, made his sensational New York debut. Since the nucleus of the orchestra is composed of former members of the disbanded New York Symphony Society, a high level of technical finish was evident even at the opening concerts. Milwaukee, which for serious symphonic concerts had been dependent upon the visits of the Chicago Symphony Orchestra, at last established its own Milwaukee Philharmonic Orchestra of 70 performers, under Frank L. Waller. The first concert was given on September 3. The members of the former Eastman Theatre Orchestra were organized as the Rochester Civic Orchestra, under Guy F. Harrison, and began their first season with a series of 34 concerts.

**NOVELTIES.** The following is a list of the principal novelties heard during the year. Boston Symphony Orchestra, under Konsevitzky, *A Honegger, Rugby* and *Concetto* for piano and orchestra (January 11), W. Josten, *Jungle*, symphonic poem (November 15), L. Grunberg, *The Enchanted Isle*, symphonic poem (November 23). New York Philharmonic-Symphony Society, under Toscanini, I. Pizzetti, *Concerto dell'Estate* (February 24), V. Tommasini, *Prelude, Fanfare and Fugue* (March 21), A. Coates, *The Elopement of the Spinster Aunt*, orchestral scherzo after Dickens (August 4, conducted by the composer), M. Ravel, *Bolero*, and H. Wetzler, *The Basque Venus* (November 14). Philadelphia Symphony Orchestra, under Gabilowitch, A. Chausson, *Concerto* for piano and orchestra, in F minor (January 18), under Goossens, Loid Berners, *Suite from The Triumph of Neptune* (March 1), under Stokowski, A. Tansman, *Ouverture symphonique* and J. Eiehlheim, *Japanese Nocturne* (April 12), S. Prokofiev, *Symphony No. 2* (October 11), A. Schoenberg, *Vari-*

*ations* (October 18); under Stock, A. Krein, *Ode to Lenin* (October 25), S. Fridman-Gramatté, *Concerto* for piano and orchestra, *Danse Marocaine, El'que and Caprice* for violin and orchestra (November 1); J. Eiehlheim, *Jana*, Chicago Symphony Orchestra, under Stock, F. Stock, *Concerto* for cello and orchestra, played by Alfred Wallenstein (January 25); A. Casella, *Concerto* for violin and orchestra, played by Josef Szigeti (February 1), B. Ginram, *Marionette*, orchestral scherzo, and *Apina stolen by the Dwarfs of the Mountain* (February 8), N. Lockwood, *Odysseus*, orchestral suite (March 22); A. Tansman, *Symphony in A minor* (December 27). Detroit Symphony Orchestra, under Enesco, G. Enesco, *Second Orchestral Suite* (February 21), under Gabilowitch, C. McKinley, *Masquerade* (November 7), R. Henot, *Mountain Legend* and J. Wagenaar, *Divestimento* (November 28). Minneapolis Symphony Orchestra, under Verbrugghen, E. Stingham, *Symphony in Bb minor* (November 15), A. Fawell, *The Gods of the Mountain*, suite (December 13). Cleveland Symphony Orchestra, under Sokoloff, J. Rivier, *Overture to Don Quixote* (November 14), J. Schilling, *Airphonc Suite* (November 29).

**OPERA.** At the Metropolitan Opera House in New York 197 performances were given from a repertory of 48 operas by 28 composers. According to nationality these were divided as follows: Italian, 23 works by 12 composers totaled 104 performances; German, 14 works by six composers totaled 54 performances; French, nine works by eight composers totaled 34 performances. One Russian opera was given twice (in French) and one American work had three performances. Wagner, represented by nine works, stood first with 32 performances. Next came Verdi, represented by six works with 31 performances, then Puccini, with six works and a total of 29 performances.

Only two novelties were produced. The first was Ernst Krenek's *Johnny spielt auf* (January 19), under Bodanzky, with Easton, Fleischer, Laubenthal, Bohnen, and Schorr in the principal rôles. Nobody took this jazz opera seriously. However, curiosity to hear a work that three years ago had been the operatic sensation throughout Germany was sufficiently strong to fill the auditorium for seven performances. There were some people who derived genuine amusement from this exhibition of silly buffoonery, but the real lovers of art were disgusted, and the majority of critics considered the production of such frivolous satire on music as unworthy of an institution devoted to musical art. The second novelty was Ildebrando Pizzetti's *Fra Gherardo* (March 21), under Serafin, with Mueller, Clausen, Johnson, and Pinza in the chief rôles. In spite of a really powerful dramatic action and gorgeous scenic effects, the opera failed because of the composer's inability to write adequate, characteristic music.

Of far more interest than either novelty was the revival of Mozart's *Don Giovanni* (November 29), under Serafin, with Corona, Rethberg, Fleischer, Gigh, Pinza, and Ludikar. The last time that this opera had been heard at the Metropolitan was on Apr. 3, 1908, when the singers were Eames, Farrar, Forman, Bonei, Scotti, and Muhlmann, and the conductor, Mahler. A comparison of the two casts will probably reassure those who are open-minded and endowed with a

fairly good memory that the art of singing cannot have fallen upon quite such evil days as we hear often asserted. The revival of *Don Giovanni* was in all respects a model performance. Another revival was that of Verdi's early opera, *Luisa Miller* (December 21), under Serafini, with Ponselle, de Luca, and Lauri-Volpi. The tumultuous applause throughout the performance was not evoked by Verdi's music. It was quite evident that the enthusiasm was due to the reappearance, after a serious illness, of one of the prime operatic favorites.

Only three new singers were introduced during the year. They were capable artists, but none showed outstanding quality. Tauciedi l'aseio made his debut as The Duke, in *La Gioconda* (November 1), Santa Biondo as Nedda, in *Pagliacci* (November 23) and Edward Hansome as Manrico, in *Traviata* (December 14).

A wonderfully eloquent performance of *Tristan and Isolde*, on April 13, was made the occasion of a tremendous ovation to the conductor, Artur Bodanzky, who, after 14 years of distinguished service, was bidding farewell to his Metropolitan audiences. His successor, Josef Rosenstock of Wiesbaden, made his debut on October 30 with *Die Meistersinger*, but failed to measure up to the standard set by his predecessor. After only four more appearances, he tendered his resignation on November 16. Thunderous applause greeted Bodanzky, when, on November 30, he resumed his former post with a brilliant performance of *Der Rosenkavalier*. In the short interim, Karl Riedel, one of the assistant conductors, acquitted himself creditably, when suddenly called upon to conduct *Lohengrin* and *Die Walkure*.

The Chicago Civic Opera Company gave in its home town 86 performances of 33 works by 17 composers. According to nationality these were distributed as follows: Italian, 16 works by eight composers totaled 41 performances; French, 10 works by six composers totaled 23 performances; German, seven works by three composers totaled 22 performances; Verdi, represented by seven works, achieved 21 performances; Wagner came second with 12 performances of four works, in spite of the fact that the much belated restoration of his works to the repertory was begun only during the last six weeks of the year. It is also significant that every Wagner performance drew a capacity house. The management wisely engaged the finest artists available. First of all, there was Egon Pollak, who had proved his superlative skill as a Wagner conductor as far back as 1915-17, and who was greeted with boundless enthusiasm upon his reappearance in *Tristan and Isolde*, on November 9. In the same performance, Theodor Strack made his American debut as Tristan, with emphatic success, while the unsurpassable Frieda Leider sang *Isolde* Maria Olawska (Biancane), Richard Bonelli (Kurwenal), and Alexander Kipnis (Marke) completed an ideal cast. Three other newcomers made a fine impression at their debut. Emil Schipper as Telramund (*Lohengrin*, January 12), Italic Stiles as Elsa (*Lohengrin*, December 19) and Giovanni Inghilleri as Rigoletto (*Rigoletto*, December 28). Henry G. Weber resigned as conductor and Frank St. Leger returned as conductor after an absence of two seasons. A new conductor, Emil Cooper, made his debut with *Roméo et Juliette* (November 7) and proved himself a master of the baton. After the conclusion of the Chicago season, the company gave 63 perform-

ances on tour, including a two weeks' stay in Boston.

The performance of *Roméo et Juliette*, on January 26, was the last given in the company's old home, the Auditorium. The same opera had been chosen for the inauguration of the theatre in 1889. The magnificent new home, situated on Wacker Drive, was inaugurated with great pomp and ceremony on November 4 with a brilliant performance of *Aida*, under the direction of Giorgio Polacco. The cast was as follows: Rosa Raisa (*Aida*), Charles Marshall (*Rhadames*), Cyrena Van Gordon (*Amneris*), Cesare Formichi (*Amonasro*), Virgilio Lazari (*Ramfis*), Chase Baromeo (*Il Rè*), Giuseppe Cavadore (*Messenger*), Iilda Burke (*High Priestess*).

A company calling itself the German Grand Opera Company made a tour of the principal cities from New York as far west as Chicago, giving Wagner's *Ring des Nibelungen* without cuts. Advance notices, promising exact duplication of the Bayreuth festival performances, had raised high expectations which were not fulfilled. The tour opened in New York (January 14-22), where two complete cycles were given. Even after the first two performances the company found itself in financial difficulties and had it not been for the timely aid of several enthusiastic lovers of Wagner, the undertaking would have collapsed right then. However, sufficient funds were guaranteed to make possible the carrying out of the original plans. The most serious shortcomings were antiquated scenic decorations and an orchestra numerically insufficient and inadequately rehearsed. Even two such superb conductors as Walter Rahl and Ernst Knoch could not remedy this latter fault in New York. Favorable and enthusiastic reports from cities visited later on indicated that constant repetition must have wrought an improvement in this respect. Among the singers there stood forth as towers of strength Johanna Gadski, Ottilie Metzger-Lattermann, Carl Join, Carl Braun, and Marcel Salzinger. A special performance of *Tristan and Isolde* (January 14) was noteworthy for the reappearance in New York on the operatic stage of Johanna Gadski, who had not been heard here in opera since she left the Metropolitan Opera House in 1917. The occasion resulted in an overwhelming ovation to the great artist, whose voice had lost none of its pure quality and very little of its former power and brilliancy. She sang also *Brunnhilde in Die Walkure*, and on January 22 was heard for the first time in America as Brunnhilde in *Götterdämmerung*.

The Philadelphia Civic Opera Company, with Alexander Smallens as conductor, launched its most ambitious undertaking, so far, with the presentation of the complete *Ring des Nibelungen*. *Rheingold* was given on November 21 and *Die Walkure* followed on December 12, both being rapturously received by public and critics. In the latter work, Florence Austral, as guest, sang Brunnhilde and created nothing less than a sensation. *Siegfried* and *Götterdämmerung* were scheduled for performance in Philadelphia early in 1930.

The Philadelphia Grand Opera Company became affiliated with the Curtis Institute of Music. Mrs. Joseph Leider remains president and William C. Hammer, general manager, while Miss Mary Curtis Bok became chairman of the board of directors. Emil Mlynarski succeeded Artur Rodzinsky as conductor. The chief event of the

year was the American première of Eugene Goossens' *Judith* (December 26).

The American Opera Company, under the general direction of Vladimir Rosing, began its third touring season of September 20, with a three weeks' engagement in Chicago. On October 9, an American opera, *Yolanda of Cyprus*, by Clarence Loomis, conducted by Isaac Van Grove, had its world-première and achieved considerable local success.

The Cincinnati Zoo Opera (June 16-August 28) repeated the excellent performances of *Die Meistersinger*, which had been the sensation of the preceding summer, and furnished a similar sensation this year with an equally fine production of *Parafal* (August 6), under Isaac Van Grove, with Forest Lamont, Marta Wittkowska, Henri Scott, Frederick Patton and Robert Ringling. There were two repetitions.

At Ravinia Park, Chicago, the usual summer season of opera (June 22-September 2) offered nothing but familiar works from the standard repertory. The innovation of the Sunday symphony concerts of the preceding year had met with such favor, that in 1929 additional symphony concerts were given on Monday evenings and Thursday afternoons by the Chicago Symphony Orchestra under Eric Delamarter.

At Smith College, Northampton, Mass., Werner Josten, with artists recruited from the faculty and students of the college, chose for the annual revival of older operas Monteverdi's *Orfeo* and Handel's *Apollo e Dafne* (May 11).

**BIBLIOGRAPHY.** Following the usual classification the notable books of the year may be summarized as follows. **REFERENCES.** W. Altman, *Handbuch für Streichquartettspieler* (3 vols., Berlin). K. Bayer, *Musikliteratur: Ein Handbuch für Bibliothekare* (Berlin). W. W. Cobbett, *Cyclopedic Survey of Chamber Music* (vol. 1, A-H, London). *Diccionario de la Musica Ilustrado* (vol. 1, A-G, Barcelona). **MUSIN**, mürän', OVINE A famous Belgian violinist, died in New York, Nov. 24, 1929. He was born at Nandrin, near Liège, Sept. 22, 1854. After four years' study at the Liège Conservatory under Heynberg, he won the first prize, while Ysaÿe (Massart's pupil) carried off the second. He then continued to study with Léonard in Paris, and began his career as soloist in Spa, in 1870. Three years later, upon the recommendation of Léonard, he filled a series of engagements which had been offered to Léonard and Wieniawski, but which neither was able to accept then. From 1874 to 1882, he made triumphal tours of Europe and in 1883 visited the United States for the first time. In 1892 and 1897, he made tours of the entire world. On his return, he was made professor of violin at the Liège Conservatory, succeeding César Thomson. At the same time, he made an arrangement to spend half the year in New York. In 1905 he resigned his position in Liège and settled permanently in New York, where he established his own school. He was the recipient of numerous orders and decorations. His compositions for the violin are brilliant and effective, but of slight musical value. His technical studies are of more importance, especially his chief work, *The Belgian School of the Violin* (1916), a combination of his own and Léonard's methods. He also published *My Musical Memories* (1920).

**MUSSOLINI**, BENITO See ITALY, under History.

**MUTATION** See ZOOLOGY.

**MUTHESIUS**, KARI A German educator and Goethe scholar, died Feb. 22, 1929, at the age of 70. From 1906 to 1925, he was director of a seminary in Weimar. He published in connection with his pedagogical work *Stellung der Heimatkunde in Lehrplan* (1890), *Schulaufsicht und Lehrerbildung* (1902), *Universität und Volksschullehrerbildung* (1904), *Die Lehrerbildung im Strom der Zeit* (1906), *Schule und soziale Erziehung* (1911), *Der Einheits des deutschen Lehrerstandes* (1917), *Die Zukunft der Volksschullehrerbildung* (1919). He was an authority on Goethe, and contributed to studies of him *Goethe ein Kinderfreund* (1903), *Goethe und Pestalozzi* (1908), *Goethe und Karl Alexander* (1910), *Goethe und seine Mutter* (1923), *Goethe und das Handwerk* (1927).

**NATIONAL ACADEMY OF DESIGN**. An institution in New York City, established in 1825 and incorporated in 1828 for the purpose of "the cultivation and extension of the arts of de-

sign." The academy holds two exhibitions of contemporary art each year, to which an artist of any country may submit his work. The works which are accepted by the jury of selection are exhibited without charge to the artists, members of the academy may exhibit one work without approval by the jury. The total number of associate members in 1929 was 152, the number of academicians was 142, including 111 painters, 24 sculptors, 5 architects, and 2 engravers. The following academicians were elected in 1929: Edward Dufner, Howard Giles, Charles Hopkinson, Jerome Meyers, Violet Oakley, Henry Parton, Rudolph Evans, Harriet Frishmuth, and Frederick Law Olmstead. The associate members elected were Arthur Covey, Will Foster, Mary Gray, F. Tenney Johnson, George J. Nelson, Dorothy Oechman, Paul Jennewein, Arthur Lee, J. Monroe Hewlett, and Allen Lewis. The curriculum of the free art school was enlarged in 1929 by a grant of \$20,000 from the Carnegie Corporation. This grant made possible the addition of several cultural studies, so that students would be well equipped for mural painting, as well as other branches of the fine arts. On Nov. 26, 1929, the academy's gold medal for "distinguished services to the fine arts," awarded for the first time went to Elihu Root in recognition of his efforts to beautify the nation's capital. The officers in 1929 were: President, Cass Gilbert, first vice president, H. W. Watrous, second vice president, Robert Atken, corresponding secretary, Charles C. Curran, assistant corresponding secretary, Albert P. Lucas, recording secretary, Holbert Nichols, and treasurer, Charles Piellwitz. The council members were: Charles S. Chapman, Ernest L. Ipsen, Carl Rungius, Chauncey F. Ryder, Eugene Savage, and James Earle Fraser. Headquarters are at Amsterdam Avenue and 109th Street, New York City. See ART EXHIBITIONS.

**NATIONAL ACADEMY OF SCIENCES**. A body of American scientists incorporated by Act of Congress, approved by President Lincoln in 1863, for the purpose of investigating, examining, experimenting, and reporting upon any subject of science or art when called upon by any department of the government. The actual expense of such investigations, examinations, experiments, and reports are met from appropriations made for the purpose, without compensation for any services to the Government. Membership in the academy is limited to 300 active members and 50 foreign associates. New members are elected on nominations from the 10 sections: Mathematics, astronomy, physics, engineering, chemistry, geology and paleontology, botany, zoology and anatomy, physiology and pathology, anthropology, and psychology. The following new members were elected in 1929: Roger Adams, Irving Widmer Bailey, Albert Francis Blakeslee, James Bryant Conant, Joel Henry Hildebrand, William Hovgaard, Albert Wallace Hull, Frank Leventhal, Paul Willard Merrill, David Hilt Tennent, George Hoyt Whipple, and Clark Wissler. The foreign associates elected were: Frederick Orpen Bower of Yorks, England, C. de la Vallée-Poussin of Louvain, Belgium, Willem de Sitter of Leiden, the Netherlands, and Richard Hertwig and Arnold Sommerfeld of Munich, Germany.

The academy holds two meetings each year. The annual meeting is held in Washington, beginning the fourth Monday in April, and the autumn meeting is held at a place and on dates

decided upon by the council of the academy. The 1929 autumn meeting was held Nov. 18-20 in Princeton, N. J. These meetings are devoted to the transaction of business and the presentation of scientific papers by academicians or persons introduced by them. Among the papers read at the annual meeting were "An Experimental Method for Determining the Activity of Convalescent Polomyelitis Serum," by Simon Flexner and Cornelius P. Rhoads, "The Relief of Experimental Pneumonia," by Yandell Henderson, G. L. Binbaum, P. N. Coryllos, H. W. Haggard, and E. M. Radloff, "Measurements of 100 Members of the Academy and What They Show," by Ales Hrdlicka, "The Reality of the Great Star Streams," by Jan Schlitt, "Scattered Light," by R. W. Wood, and "Reconciliation of Binocular and Monocular Color Fusion," by Christine Ladd-Franklin. The papers read at the autumn meeting included "A Classification of Stellar Systems," by Harlow Shapley, "Radiation of the Planet Earth," by Charles G. Abbott, "Ancient Migration Routes to Central Asia," by Henry Fairfield Osborn, "Report on Ether Drift Experiments of 1929 and Consideration of Other Experimental Evidence Indicating a Motion of the Solar System," by D. C. Miller, "Spontaneous and Induced Streptococcus Disease," by Theobald Smith, "On Some Race Differences in the Structure of Human Spinal Nerves," by H. H. Donaldson, "Relation between Stature of Childhood and Adult Stature," by Franz Boas, "Maps of the Pleistocene Glaciation," by Chester A. Reeds and E. Antevy, and "On New Measurements on the Intensity of Cosmic Rays as a Function of Depth beneath the Surface of the Atmosphere," by R. A. Millikan and G. H. Cameron.

The academy has trust funds from which grants are made for the furtherance of research investigations, other trust funds are used to provide for gold medals in recognition of outstanding scientific work. At the 1929 annual meeting, the Agassiz Medal for Oceanography was awarded to Dr. J. Stanley Gardiner of the zoological laboratory of Cambridge University, England, in recognition of his contributions to that field of science, the James Craig Watson Medal and a honorarium of \$100 were awarded to J. H. van de Sitter, director of the *sterrenwacht* and professor of theoretical astronomy at the University of Leiden, the Netherlands, in recognition of his researches in astronomy. The academy publishes a series, *Memoirs*, consisting of monographs by academicians and others, reports of investigations conducted for the Government, and *Biographical Memoirs* of the deceased members. *Proceedings*, issued monthly, is devoted to condensed reports of the most recent scientific discoveries. The officers in 1929 were T. H. Morgan, president, Frederick E. Wright, vice president, R. A. Millikan, foreign secretary, David White, home secretary, Joseph S. Ames, treasurer. The headquarters are at B and 21st Streets, Washington.

**NATIONAL BANKS.** See BANKS AND BANKING.

**NATIONAL CIVIC FEDERATION.** The This movement was organized in 1900 to seek the solution of some of the great problems related to social and industrial progress. It provides especially for the discussion of questions of national import, aids in the crystallization of enlightened public opinion, and promotes legislation when desirable. The 38 members of the

executive committee represent the public, employers, and wage earners. The various committees and departments are organized to conduct the activities of the federation.

The department of industrial relations, with William D. Baldwin as chairman, has for its general purpose the seeking of a *modus vivendi* between employers and wage earners to the end that such friction and misunderstanding as exist between them may be reduced to a minimum. While not organized solely to deal with problems of capital and labor, the federation has sought, since its inception, to bring together employers and wage earners for the discussion of questions responsible for bitterness between the two forces that logically should be working together.

The department on active citizenship, John Hays Hammond, chairman, aims to interest citizens in participating actively in their political party organizations. They are urged not only to enroll and vote at primaries and elections but to aid in the selection of reputable and efficient candidates.

The commission on industrial inquiry, as organized, consists of four committees. Plan and scope, study of anti-trust legislation, study of injunctions in industrial disputes, and study of forms of employee organization and of employment contracts. The purpose of the committee on plan and scope, Matthew Woll, chairman, is to study economic factors and policies upon which wide differences of opinion exist and to see if an impartial presentation of facts will disclose basic principles acceptable to the three groups representing American industrial life—capital, labor, and the public. The committee on study of anti-trust legislation, Wheeler P. Bloodgood, chairman, analyzes court decisions, proposals for legislation, results of foreign experience, and the recommendations of various groups such as trade associations, agricultural organizations, etc. As a result of replies received to a questionnaire sent during 1929 to 25,000 individuals and organizations, the committee has recommended the amendment of the anti-trust laws (Sherman Act, Clayton Act, Federal Trade Commission Act, etc.).

The committee on study of injunctions in industrial disputes, under the chairmanship of Hon. James W. Gerard, analyzed Federal and State court decisions in injunction cases where, on the one hand, labor claims to have been wronged and, on the other hand, employers claim that only by the use of an injunction can their just rights be protected. The committee on study of forms of employee organization and of employment contracts, Sam A. Lewisohn, chairman, completed an impartial study in which it analyzed existing types of formal arrangements between employees and employers and attempted, in so far as possible, to determine the effectiveness of results obtained through these forms and methods.

The object of the industrial welfare department, Charles L. Edgar chairman, is to secure improvements in working and living conditions of wage earners voluntarily by employers. During 1929 it made an exhaustive report upon the extent of old-age dependency, advocating a proposal for retirement annuities designed to provide economic security for the wage-working population against destitution in old age. The department on subversive activities carried on its programme of opposition to recognition of the

Soviet Government and upheld the policy of the Wilson, Harding, Coolidge, and Hoover administrations against such recognition.

The most active of the committees of the woman's department, Maude Wetmore, chairman, was the committee on education. During 1929 it continued its study of the intimate relation of chemistry to human lives, made a survey of illiteracy among adults, considered a recodification of the naturalization laws, and indorsed restrictive legislation. In cooperation with 12 women's organizations, it also joined in the movement for a closer affiliation of the women of the country with the War Department through the appointment by the Secretary of War of nine women civilian aides, one aide for each of the nine corps areas. The objects of the movement are to provide a medium through which to create a better understanding and wider sympathy with the Army, and to broaden the knowledge of the women of the country of the purpose and aims of the National Defense Act and to encourage their active cooperation in support of the provisions of that act.

The executive council of the federation for 1929 included the following: Elhu Root, honorary president, Matthew Woll, acting president, Samuel McRoberts, treasurer, W. N. Doak, secretary, Ralph M. Easley, chairman executive council, Maude Wetmore, chairman of the woman's department, Charles L. Edgur, chairman industrial welfare department, John Hays Hammond, chairman department on active citizenship, William D. Baldwin, chairman department on industrial relations, Marcus M. Marks, chairman industrial round-table department, Gertrude Beeks Easley, secretary executive council, Mrs. Coffin Van Rensselaer, executive secretary woman's department, and Peter J. Brady, secretary department on active citizenship. Headquarters are in the Metropolitan Tower, 1 Madison Avenue, New York City.

**NATIONAL DEFENSE.** See MILITARY PROGRESS, NAVAL PROGRESS.

**NATIONAL EDUCATIONAL ASSOCIATION OF THE UNITED STATES.** An organization of persons actively engaged in educational work and others interested in education, organized Aug. 26, 1857, at Philadelphia under the name of the National Teachers' Association and on June 30, 1907, incorporated by Congress under its present name. In July, 1920, at the annual meeting, the association was reorganized and provision was made for a representative assembly composed of delegates from State and local educational associations. The other governing bodies are a board of directors, an executive committee of five, a board of trustees, departmental organizations, standing and special committees, and a staff at headquarters which is held responsible for carrying out the decisions of the governing bodies. In 1929 there were 17 departments, each having its own officers, as follows: Adult education, business education, class-room teachers, deans of women, elementary school principals, kindergarten-primary education, lip reading, rural education, school health and physical education, science instruction, secondary-school principals, social studies, superintendence, supervisors and directors of instruction, teachers colleges, visual instruction, and vocational education. There were also more than 15 standing and special committees actively at work on the various problems confronting the profession.

The chief objective of the association is to secure from the American public a broader recognition of education and, through a legislative programme, to provide for increased educational opportunities for American children. The association advocates a department of education with a secretary in the President's cabinet, a competent, well-trained teacher in every public-school position in the United States, increased facilities for teacher training, continued investigation of educational problems as the basis for revised educational standards and methods, active assistance to State and local affiliated associations in securing needed legislation and in promoting the interests of such associations, and such an interpretation of education as will awaken the people to a broader realization of its importance. In 1929 the association, through a national commission in which were included many prominent laymen, launched a nationwide, all-inclusive movement for the wiser use of leisure.

The association holds two conventions annually. The summer meeting serves as a clearing house for educational ideas and reviews the year in education. At this time, to the general session, meetings of the representative assembly, the departments of the association, and a number of allied organizations are held. In 1929 this meeting was held June 28 to July 4 in Atlanta, Ga., with an estimated total attendance of more than 10,000. Among the addresses delivered at this convention were "Education for a New America," by William John Cooper, U. S. Commissioner of Education, "America's Part in Bringing about World Peace," by Josephus Daniels, former Secretary of the Navy, "The Need of Improved Integration of Certain Basic Ideals and Practices in American Life and Education," by John W. Withers, dean of the School of Education, New York University, "School Administration and Conflicting American Ideals," by William F. Russell, dean of Teachers College, Columbia University, "Public Cooperation in School Policies," by William J. Bogan, Superintendent of Schools, Chicago, and "Teacher Training for a New World," by W. P. Morgan, president of Western Illinois State Teachers College. The 1930 summer convention was scheduled to be held the first week in July in Columbus, Ohio. The department of superintendence holds a winter convention the last week in February of each year. The 1929 meeting was in Cleveland, Ohio, that for 1930 was to be held in Atlantic City, N. J. The 1930 year book of the department, prepared for presentation at the Atlantic City meeting, was to be on "Supervision." The themes for the 1931 and 1932 year books were scheduled to be "Articulation of the Units of American Education" and "Character Education."

The *Journal of the National Education Association*, the organization's monthly publication, established in 1921, supports the policies and programmes of the association, aims to reflect the activities of professional organizations, and gives special consideration to new movements in education of national and international interest. The association publishes an annual volume, *Proceedings*, and numerous reports on its activities. Research bulletins containing statistical information on educational subjects are issued regularly. The finances of the association are embodied in two funds, the current and the perma-

ment, the latter amounting to \$490,270 on May 31, 1929, the receipts for the year ending on that date having been \$491,118. The enrollment on Jan. 1, 1929, was 193,145. The growth of the association had been such that during 1930 the attractive colonial headquarters building was to be enlarged by the construction of an adjoining building on M Street, thus more than doubling the present facilities. Officers elected for 1929-30 were President, Miss E. Ruth Pytle, Lincoln, Nebr., secretary, J. W. Crabtree, Washington, and treasurer, Henry Lester Smith, Bloomington, Ind. The headquarters of the association are at 1201 Sixteenth Street, Northwest, Washington.

**NATIONAL GUARD.** See MILITARY PROGRESS.

**NATIONAL KINDERGARTEN ASSOCIATION.** An organization founded in New York City in 1909 with the object of helping to secure the advantages of kindergarten education for all of the nation's children. The association is supported entirely by private subscriptions, which amount annually to approximately \$45,000. These funds are used for the purpose of promoting a knowledge of, and an interest in, the value of the kindergarten as an integral part of the public-school system. Field secretaries are employed in the different States for the purpose of keeping this matter before the public and assisting parents in having classes organized for their children. By 1929 the association had been instrumental in securing the establishment of 1373 kindergartens, it had the unique record of securing kindergarten training for one child for each dollar that it had ever received. During 1928 and 1929, through the generosity of its members, it was able to set aside a fund from which to aid in the purchase of equipment for 33 classes which otherwise could not have been opened. Where no adequate provision has been made in the school laws for the maintenance of kindergartens, the association has worked to stimulate an effort to secure the enactment of improved laws and has been instrumental in obtaining their passage in 15 States through co-operation with such State organizations as the Congress of Parents and Teachers, Federation of Women's Clubs, Woman's Christian Temperance Union, Federation of Labor, and Chambers of Commerce. Since 1912 the association has co-operated with the National Kindergarten and Elementary College at Evanston, Ill.

In 1917, in cooperation with the U. S. Bureau of Education, the association undertook the publication of weekly articles on Home Education, which were edited by experts on pedagogy and psychology and were issued free of charge to the press. In 1929 these articles were distributed to approximately 2000 periodicals in the United States and 46 foreign countries, thus reaching a combined circulation of many millions. Leaflets on the subject of kindergarten extension and training also were published and distributed extensively free of charge. The officers in 1929 were: President, Maj. Bradley Martin, honorary president, Philander P. Claxton, first vice president, Miss Henry Phipps; second vice president, Mrs. Charles Cary Rumsey, secretary, Mrs. Roger C. Aldrich, executive secretary, Miss Bessie Locke; treasurer, Julian M. Gerard. Headquarters are at 8 West 40th Street, New York City.

**NATIONAL MUNICIPAL LEAGUE.** An organization which acts as a central clearing house for current information on improvements

in State and local government throughout the United States; founded in 1894 and incorporated in 1923. Its aim is to promote efficient and democratic government in city, county, State, and nation. Under its direction, committees of experts are constantly at work on sound principles of governmental administration. These committees submit reports which are printed by the league and made available for distribution. The active committees in 1929 were as follows: Committee on government of metropolitan areas; national committee on measurement standards; joint committee on municipal reporting; committee on park and playground administration; committee on teaching municipal government; committee on model election system; committee on organized citizens' participation in city government; committee on organized citizens' support of city-manager government; committee on county manager plan.

The committee on government of metropolitan areas, which is headed by Frank H. Somer, dean of the New York University Law School, secured a grant of \$10,000 from the Russell Sage Foundation to finance a nation-wide survey of metropolitan government and to publish the resultant report early in 1930. The national committee on measurement standards, of which Col. H. M. Warte is chairman, was organized to meet the need of definite standards for appraising the results of municipal administration. This committee is composed of representatives of the National Municipal League, Governmental Research Association, and International City Managers' Association. The joint committee on municipal reporting, of which Col. C. O. Sherrill, city manager of Cincinnati, was chairman, reported the activities of municipal government to the citizens and was composed of representatives of the National Municipal League, the International City Managers' Association, and the American Municipal Association. The committee on park and playground administration, headed by Prof. Jay B. Nash of New York University, prepared recommended standards of administration for park and playground work in city governments. The committee on teaching municipal government, of which Dr. H. W. Dodds was chairman, was at work upon a programme of recommended standards for teaching municipal government in colleges and universities.

The committee on model election system, headed by Prof. Charles E. Merriam of the University of Chicago as chairman and Prof. Joseph P. Harris of the University of Wisconsin as secretary, was engaged in a report which was to be a companion to the league's report on a model registration system and which should be equally effective in improving the methods of selecting public officials. Professor Harris had made a nation-wide field study of election methods and had prepared recommended standards of administration and a recommended model law to set up the proper election system. The committee on organized citizens' participation in city government, with Carl H. Pforzheimer as chairman, was engaged in a study of the various types of citizen groups and what they may accomplish through greater correlation of effort. The committee on organized citizens' support of city manager government, headed by Henry Bentley, chairman of the Cincinnati City Charter Committee, was to summarize the best methods for

organizing and conducting a city-manager campaign and for organizing a permanent charter committee to acquaint voters with progress accomplished and to defend the plan against organized attacks. The committee on county-manager plan, of which Prof. John A. Fairlie of the University of Illinois was chairman, was preparing a companion pamphlet to the one on a model city charter, containing arguments in favor of the county-manager plan and a suggested model law to make it effective.

The thirty-fifth annual meeting of the league was held in Chicago Nov. 12 to 14, 1929, under the general title of the National Conference on Improving Government. The Governmental Research Association, the National Association of Civic Secretaries, and the Proportional Representation League cooperated in this conference. Convention topics included: "Regional Consolidation", "The County Manager Plan", "Aviation and Municipal Progress"; "Equalizing the Tax", "Mechanical Helps to Governmental Efficiency", "Traffic Regulation", and "The Administration of Criminal Justice." Among the speakers on the programme of the annual meeting were Frank O. Lowden, former Governor of Illinois, Robert M. Hutchins, president of the University of Chicago, Russell Wilson, councilman-elect of Cincinnati, William B. Stout, president of the Stout Air Lines, Prof. Charles E. Merriam of the University of Chicago, Prof. Thomas H. Reed of the University of Michigan, Prof. Paul W. Wager of the University of North Carolina, Prof. John A. Fairlie of the University of Illinois, Charles M. McDowell, president of the Union League Club of Chicago, Harold S. Battenheim, editor of *The American City*, W. P. Lovett, Detroit Citizens' League, Miss Julia Lathrop, former director of the United States Children's Bureau, J. L. Jacobs, adviser to commissioners of Cook County, Rush C. Butler, president of the Illinois Association for Criminal Justice, Miss Jane Addams, head resident of Hull House, Chicago, William J. Hogan, superintendent of Chicago Public Schools, Richard S. Childs, president of the National Municipal League, Luther Gulick, president of the Governmental Research Association, Leo Tiefenthaler, president of the National Association of Civic Secretaries, Harry H. Freeman, director of the Buffalo Municipal Research Bureau, Clarence E. Ridley, secretary of the International Civic Research Association, Geoffrey T. Bailey, J. Edgar Hoover, George O. Fairweather, chairman of Cook County Joint Commission on Land Valuation, Miller McClintock of Harvard University, and Meredith N. Stiles, of the National Committee on Calendar Simplification.

The officers of the league for 1929-30 were: President, Richard S. Childs, vice presidents, Glenn Frank, president of the University of Wisconsin, Carter Glass, U. S. Senator from Virginia, Charles Evans Hughes of New York, W. D. Lighthall of Montreal, Meyer Lissner of Los Angeles, A. Lawrence Lowell, president of Harvard University, C. E. Merriam of the University of Chicago, W. B. Munro of Harvard University, Frank L. Polk of New York, Miss Belle Sherwin of Washington and A. Leo Weil of Pittsburgh, treasurer, Carl H. Pfotzheimer, secretary, Russell Forbes, honorary secretary, Clinton Rogers Woodruff, editor of *The National Municipal Review*, H. W. Dodds; and public rela-

tions secretary, Howard P. Jones. Headquarters are at 261 Broadway, New York City.

**NATIONAL RESEARCH COUNCIL.** A cooperative organization of American scientists interested in pure and applied science, including engineering and industry. It was established in 1916 by the National Academy of Sciences, at the request of President Wilson, for the purpose of coordinating the research facilities of the country for work on war problems involving scientific knowledge. By executive order, it was reorganized in 1918 as a permanent body, its essential purpose being to promote scientific research and the application and dissemination of scientific knowledge for the benefit of the national strength and well-being. The council maintains close cooperation with governmental scientific bureaus and has the formal recognition and cooperation of 75 national scientific and technical societies, its membership being composed in large part of appointed representatives of these societies.

The activities of the council are conducted by 11 divisions, each of which has a chairman and from 20 to 25 members. These divisions fall into two groups. One group comprises seven divisions of science and technology, representing physics, mathematics, and astronomy, engineering and industrial research, chemistry and chemical technology, geology and geography, the medical sciences, biology and agriculture, and anthropology and psychology. The other group of four divisions of general relationships government relations, foreign relations, States relations, and educational relations. The council also maintains a special research information service.

Among the important undertakings of the council during 1929 were the maintenance of about 120 research fellowships in physics, chemistry, and mathematics and in the biological and medical sciences, work on the preparation and publication of international critical tables of numerical data in physics, chemistry, and technology, of which six of the seven volumes planned had been issued, the continuation in cooperation with the American Petroleum Institute of the work of the central petroleum committee in conducting a series of about 40 fundamental investigations on the physics, chemistry, and geology of petroleum, physics of the earth, research problems on minor planets, highway research, industrial lighting, heat transmission, structural welding, electrical insulation, problems of coastal subsidence and elevation, sedimentation, the measurement of geological time, seismological studies, bibliography of economic geology, medical problems of animal parasitology, especially ascariasis in children, problems of industrial medicine, infectious abortion and undulant fever, scientific problems of sex, drug addiction, medico-legal problems, problems in tropical agriculture and biology, the atmosphere and man, animal nutrition, effects of radiation on organisms, State archaeological surveys, fellowships in child development, and child development abstracts, and physiological and psychological problems of deafness.

The financial support of the council is derived, first, from a gift of \$5,000,000 from the Carnegie Corporation of New York to the National Academy of Sciences, part of which sum has been devoted to the erection of a building in Washington, D. C., to house the academy and the council, the remainder being used for the purposes of the council; and second, from other

gifts from various sources mostly made for the specific support of particular work. These sources include the Rockefeller Foundation, General Education Board, International Education Board, Laura Spelman Rockefeller Memorial, Commonwealth Fund, and numerous individuals and industrial concerns. The council maintains two regular series of publications, bulletins, of which 74 had been issued up to the end of 1929, and the reprint and circular series, of which 91 had appeared. It issues, in addition, miscellaneous publications and an annual report.

The general administrative officers of the council for 1929 were: Chairman, George K. Burgess, first vice chairman, Thomas H. Morgan, second vice chairman, John C. Merriam, third vice chairman, Simon Flexner, treasurer, J. S. Ames; and permanent secretary, Vernon Kellogg. George E. Hale was the honorary chairman. The headquarters of the council are on B Street, between 21st and 22nd Streets, Washington, D. C.

**NATIONAL SAFETY COUNCIL.** An international, non-profit, cooperative association of more than 5300 members, companies, and individuals, located in the United States and in foreign countries. It was formed as a result of a meeting of the Association of Iron and Steel Electrical Engineers in Milwaukee in 1912 and functions for the prevention of accidents in factories, schools, homes, streets, the air, as well as for the health, sanitation and general safety of the public at large. In 1929 there were 60 affiliated local councils throughout the United States, and intensive safety work was carried on in hundreds of local plants, embracing approximately 150 different lines of industry and reaching more than 10,000,000 workers. In addition, safety campaigns were carried on in the schools under the auspices of the education division of the council, which receives financial support from the National Bureau of Casualty and Surety Underwriters and maintains a trained staff devoting its entire time to teaching accident prevention fundamentals.

The council maintains a large publication service, including four monthly publications: *The National Safety News*, for industry; *Public Safety*, for public officials, police chiefs, etc.; *Safety Education* for schools; and *The Safe Worker*, which is distributed each month to 200,000 workers. The council also issues safe-practice and health-practice pamphlets for industry and carries on extensive work, through the 28 sections represented in the industrial division, for the exchange of new ideas, new plans, and new practices among members. During 1929 more than 725,000 copies of the annual safety calendar were distributed, and each month 40 different two-colored and multi-colored posters were designed, printed and distributed, the poster circulation for the year being around 2,225,000 copies. The annual income of the organization in 1929 amounted to approximately \$800,000. In addition to paid memberships the council received financial contributions from the Rockefeller Foundation. Companies who are members of the industrial division pay dues in proportion to their size.

The eighteenth annual safety congress was held in Chicago in October, 1929, with an attendance of approximately 7000 delegates. The officers elected for 1930 were: President, C. E. Pettibone, Boston, managing director, W. H. Cameron, Chicago, treasurer, J. I. Banash,

Chicago; vice president for public relations, Charles E. Hill, New York City; for local councils, George Opp, Detroit, for public safety, Prof. Miller McClintock, Cambridge, Mass., for health, Prof. C. E. A. Winslow, New Haven, Conn., for membership, G. T. Helmuth, Chicago, for engineering, Earl F. Blank, Pittsburgh, for finance, C. W. Berquist, Chicago, for education, Albert W. Whitney, New York City, for industrial safety, Charles L. Close, New York City. Executive offices are at 108 East Ohio Street, Chicago.

**NATURAL GAS.** See GAS, NATURAL, METALLURGY.

**NAVAL PROGRESS.** The principal development in the various navies of the world during the year 1929 are given in the following notes which are arranged alphabetically. Among the notes upon the navies of the world are tables giving the names and tonnages of vessels completed during the year and the names, tonnages, and conditions of vessels under construction on Dec. 31, 1929.

**ARGENTINA.** The programme of construction approved in 1926 (See YEAR BOOK, 1927, p. 552, 1928, p. 486) was well advanced. Of the three cruisers, the *Veinticinco de Mayo* was launched Aug. 11, 1929, at Leghorn, and a sister ship, the *Almirante Brown*, building at Genoa, was put in the water a few weeks later. Two of the 6 destroyers were purchased from Spain and 3 were building in England. These are the *Mendoza*, *Tucuman*, and *La Rioja* and were completed during 1929. The designed speed was 36 knots, but the *Mendoza* was reported to have made nearly 40. Of the 6 submarines, 3 were building at the Tori works, Tarento. The two marine surveying vessels, *San Juan* and *San Luis*, were completed in England in 1929.

**AUSTRALIA.** The Australian naval budget for the year 1928-29 was £1,347,000. The aircraft carrier *Albatross* (see YEAR BOOK, 1928, p. 486) was completed in 1929. No other war vessels of importance were under construction or projected. The government dockyard on Cockatoo Island, Sydney, was sold to private industry and all government work was to be carried on at the Government Dockyard and Engineering Works on Walsh Island in the Hunter River about two miles from Newcastle, New South Wales. A floating drydock in three sections was completed in 1929. This, or any of its sections, may be towed to other harbors if desirable. It was expected that it would have considerable use for commercial as well as naval vessels. In order to give greater experience to Australian officers, some of the Australian cruisers were serving in the British fleet and were replaced in Australia by British cruisers.

**AUSTRIA.** Since Austria lost her seacoast and navy in the World War, her naval force has consisted of river patrol boats on the Danube. In 1929 there were 4 of these—3 of 128 tons and 1 of 60 tons.

**BRAZIL.** The submarine *Humayta*, 1300/1884 tons (See YEAR BOOK, 1928, p. 486), built at Spezia, Italy, was completed in April, 1929, and joined the Brazilian fleet.

**CANADA.** The naval budget for 1928-29 was £545,000. The two new destroyers ordered in England were building at the Thornycroft Works, Southampton. They were to have a displacement of 1320 tons, a speed of 35 knots, and probably would resemble quite closely the *Amazon* of the British Navy.

**CHILE** During the past three or four years, a serious effort was made to reorganize and improve the Chilean Navy. The naval ports of Talcahuano and Valparaíso were strongly fortified and more extensively equipped for repair of vessels and use by the fleet. The coast is divided into five naval districts—Arica, Valparaíso, Talcahuano, Puerto Montt, and Magellanes. Of the 6 cruisers that were to be built under the terms of the programme of 1926, none had yet been ordered. But the 6 destroyers building in England—the *Serrano*, *Orella*, *Riquelme*, *Hyatt*, *Aldea*, and *Videla*—were completed in 1928-29. They were fully described in the YEAR BOOK for 1928, p. 486. Three submarines—the *Almirante Simpson*, *Capitan O'Brien*, and *Capitan Thompson*—were completed or completing in England. These boats are similar to the later British boats of the O type and were reported to have a displacement of 1540 tons on the surface and 2020 tons when submerged, the surface speed was 16 knots and the armament consists of one 4-inch gun and 8 torpedo tubes. The battleship *Almirante Latorre* was to be modernized in the British naval dockyard at Devonport. New turbine engines were to be installed, the fuel supply was to be changed from part coal and part oil to oil only, and the boilers were to be altered to conform to this. Armor and other protection against aircraft and torpedoes were to be fitted, additional anti-aircraft guns were to be mounted, and a new system of battery control installed. The *Latorre* was built in England but sold at the outbreak of the World War to the British Admiralty. Under the name of *Canada*, she served throughout the War and was then resold to Chile.

**CHINA** The Nationalist government was endeavoring to get control of the various Chinese war vessels of former days and consolidate them into an organized navy. These vessels, under the empire, although admitting the imperial authority, were more or less free lances and looked for immediate support and direction to local authorities in the North or in the South. This condition was accentuated by the revolutionary ferment that had pervaded Chinese politics since the deposition of the emperor. The first action of the Nationalists after attaining nearly supreme power was the formation of a navy department. A secretary of the navy and an assistant secretary were appointed and the British Admiralty was requested to send a naval mission to China to give advice as to numbers and types of vessels needed and as to general naval organization. The Government was reported to have approved a programme for new construction to cost 100 million taels (1 tael = 55 cents in 1929). The vessels to be built were 3 armored cruisers, 4 destroyers, and 2 submarines. It was presumed that such old vessels as were worth repair would be put in condition for active service.

**DENMARK** The military and naval situation in Denmark sways back and forth with the changes in Danish politics. The Conservative government at the end of 1928 presented a very considerable programme of new construction consisting of four 4500-ton armored coast-defense vessels, 12 torpedo boats of 300 tons, 12 submarines of 300 tons, 2 mine layers of 500 tons, and 6 mine sweepers. The socialist majority in 1929 canceled the programme and presented a bill which, if passed, would practically disarm the country as regards both army and navy. See DENMARK under *History*.

**FINLAND** The building programme of the Finnish Navy (See YEAR BOOK for 1927, p. 552) was

being carried out. Two armored coast-defense vessels of 4000 tons and two submarines of 300 tons had been laid down in the national arsenal at Abo, and one submarine of about 100 tons was commenced at Helsinki. The coast defense vessels were to have Diesel-electric engines.

**FRANCE** The budget for 1929-30 was 2683 millions of francs (1 franc = 3 92 cents). The vessels of the programme for the year were: 1 cruiser of 10,000 tons, 6 destroyer leaders of about 2700 tons, 6 submarines of 1550 tons (on the surface), 1 submarine mine layer of 780 tons (surface), 1 cruiser mine layer of about 5300 tons, 2 small cruisers of 2000 tons for colonial service, 1 net layer. It was possible that the cruiser would not be laid down; and if laid down it may be of a type which would borrow some features suggested by the German battle cruiser *Admiral Scheer*.

The enlisted personnel of the navy was set at 53,300, or a reduction of 4200 due to the transfer of men to the Air Ministry. The officers performing naval aviation duty do not lose their naval status. The new vessels completed therefore necessitated an increase of officers applicable to the numbers given in the YEAR BOOK for 1927, p. 522. The reorganization of the French colonial service brought about the specific designation of the following ports which were to be the colonial naval bases: Saigon in Indo-China, Dakar in West Africa, Port de France in Martinique, and Diego Suarez in Madagascar. Work on the buildings of the new naval academy at Brest was proceeding steadily after many delays. The corner stone of the main building was laid in 1929.

The vessels completed in 1929 were the light cruiser, *Suffren* (10,000 tons), the fuel ship *Mekong* (15,150 tons at full load), the destroyer leaders, *Valmy*, *l'ordon* (2780 tons), and the *l'uepard* (2690 tons), the destroyers, *Typhoon* and *Tornado*, of 1460 tons, and the *Fortuno*, *Adroit*, *Basque*, *Alcyon*, and *Bordelaise* of 1405 tons, the submarines, *Redoutable*, *l'engueur*, *Pascal*, and *Pasteur* of 1550/2000 tons, the submarines, *Danar*, *Kuydice*, *Ariane* (604/778 tons), and the submarines *Doris* and *Thetis* (590/764 tons).

(GERMANY The budget for 1929 was 200,544,000 marks (1 mark = 23 82 cents). The following was the principal allotments of funds: second installment for armored ship A (*Admiral Scheer*), 13,260,000 marks, completion of the cruiser *Köln* of 6000 tons, 10,812,000, cruiser *Leipzig* (6000

tons), 8,020,000; for modernization of the old battleship *Hanover*, 1,060,000, guns of the cruiser *Karlsruhe*, 620,000; for the building of large destroyers, 5,620,000; for a tender (type not stated), first installment, 1,000,000, for a new oil-fuel ship, 3,000,000; maintenance and repair of vessels 22,133,240; for maintenance and repair of the target ships, *Zähringen* and *Baden*, 445,570, torpedo boats, 4,135,570. The budget for 1930, as voted by the Reichstag, amounted to 180,000,000 marks. The commission of the budget made large reductions in the projected budget submitted by the Government. The project for enlarging and developing the dockyard at Wilhelmshaven was refused, as were those for a torpedo factory at Eckernförde, and for a torpedo school at Munkwitz, while the allotment for the *Admiral Scheer* was reduced by 800,000 marks.

The personnel of the German Navy in 1929 consisted of 691 line officers, 170 engineer officers, 98 medical officers, 228 warrant officers, 3794 petty officers, and 9933 enlisted men. The cruisers *Königsberg* and *Karlsruhe* of 6000 tons, and 4 torpedo boats of 800 tons were completed in 1929. Similar cruisers, the *Köln* and *Leipzig* were under construction, the former was approaching completion, the latter was launched on October 18, 1929.

By the terms of the peace treaty, Germany was permitted to have 8 cruisers, 6 in commission and 2 in reserve. These vessels are limited to a displacement of 6000 tons. The only other war vessel of importance which was building for the German Navy was armored ship A, sometimes referred to as the *Ersatz Preussen*. The German press stated that she would be named the *Admiral Scheer* when launched. This ship was of such a new and peculiar type as to attract widespread interest and to cause much speculation as to her designed rôle in naval war. The German building programme included four ships of the A class, but it was by no means certain that they would be duplicates of the first one. It was quite possible that the others would be delayed until the *Admiral Scheer* was in service and able to demonstrate the soundness of the design in its various parts and details.

The length of the *Scheer* is 503 feet, beam, 60 feet, standard displacement, 10,000 tons, normal displacement, 11,420 tons, full-load displacement, 13,480 tons. The approximate weights are reported as follows: of the hull, 3640 tons, of armor, 2600 tons, of auxiliary machinery, 475 tons, of equipment and stores, 125 tons, of armament and ammunition, 1670 tons, of propulsive machinery, 1130 tons, of fuel and reserve feed water, 3480 tons. The armament consists of six 11-inch guns, eight 5.9-inch guns, four 3.46-inch anti-aircraft guns and six torpedo tubes. The 11-inch guns are in 3-gun turret—one forward, one aft. The 5.9-inch and anti-aircraft guns are mounted behind shields on the upper deck. The torpedo tubes are on triple mounts, one each side on the quarter-deck and that is about 7 feet below the level of the upper deck which extends from the stem to the after side of the after turret. The propelling machinery consists of two sets of Diesel (M. A. N.) engines geared directly to the propeller shafts. The total designed horse power is 50,000 and the anticipated maximum speed is about 26 knots. The radius of action is said to be 10,000 miles at 20 knots. The armor consists of a waterline belt that extends from abaft the rudder post nearly to the stem, two barbette towers,

each surmounted by a closed turret, a conning tower and communication tube, an armor deck at the level of the top of the belt; a lightly armored upper deck, an inclined armor or protective deck behind the belt abreast the barbettes and communication tubes; vertical, fore-and-aft, anti-torpedo bulkheads extending nearly the full length of the ship, outboard of these are similar bulkheads of thin plating. The belt is 5 inches thick amidships, 3 inches forward and aft, the barrette towers are 4 inches, turrets, 7 inches in front, 2 inches on sides, 2 to 3 inches on top, conning tower and tube, 5 inches; the armor deck, 3 inches around barrette and tube bases, 1 1/2 inches between barbettes, and 1 inch elsewhere, protective deck, 4 inches, fore-and-aft bulkhead, 2 7/8 inches.

**GREAT BRITAIN** The naval budget for 1929-30 amounted to £55,865,000, a reduction of £1,435,000 from the figures of 1928-29. It provided for a personnel of 99,800—a reduction of 2000. The allotment for work on the Singapore naval base was £10,000 greater than in 1928-29. The fleet air arm allotment was increased by £200,000, only two vessels of the navy were equipped with catapults on Apr. 1, 1929, but catapults of several designs were being investigated and tested. The programme of new construction for the year 1929-30 comprised 1 cruiser of 10,000 tons, 2 cruisers of 8400 tons, 1 destroyer leader, 8 destroyers, 6 submarines, 1 net layer and 1 vessel, 6 sloops. The vessels completed in 1929 were cruisers, *Devonshire* and *Sussex* of 10,000 tons, submarines, *Odin*, *Olympus*, *Orpheus*, *Ossiris*, *Oswald*, and *Otus* of 1346/1750 tons, submarine depot ship, *Medway*; sloops *Brigadoon* and *Sandwich*, and the river gunboats *Gannet*, *Petrel*, and *Scamew* of 262 to 310 tons.

Two very serious accidents took place during the year. The submarine *H-47* was sunk in collision with the submarine *L-12*. All except three of the personnel of the *H-47* were drowned. A hang-fire and too early opening of the breech of one of her 8-inch guns caused an explosion in a turret of the cruiser *Devonshire* in which 13 men were killed and 12 wounded.

**GREECE** The naval budget for 1929-30 was slightly in excess of 437,000,000 drachmas (1 drachma = 13 cents). The reorganization of the Turkish Navy, the repair and modernization of the battle cruiser *Sultan Selim* (ex-*Goeben*), the building of submarines, and the adoption of a new Turkish building programme that included submarines, destroyers, subchasers, and mine layers caused the Greek Government to consider the question of a building programme for Greece. It was reported that the Government had decided to complete and modernize the battleship *Salamis*, which had been lying unfinished in a German shipyard since 1914, but these reports also were denied. Four submarines of 780/960 tons were completed in France during 1929. During the year two destroyer leaders of 1450 tons were ordered at the Odero Works, Genoa, Italy. These vessels are of modified *Dardo* type (Italian Navy) and the contract speed was 40 knots—39 5 knots for a 4-hour run. The line officers of the navy were 3 rear-admirals, 15 captains, 26 com-

manders, 32 lieutenant-commanders, 70 lieutenants, and 50 sublieutenants and ensigns. The number of enlisted men depends upon the demands of the vessels in commission. The British naval mission in Greece had renewed the contract for three years. In further development of its naval force, the navy department had ordered 6 torpedo planes in England. These were of the Hawker-Horsley type with Rolls-Royce engines of 700 h.p. and an endurance of 8 hours at 170 km per hour.

**INDIA** A new sloop was ordered for the Indian Marine. It was to be built by the building for the British Navy and have a displacement of about 950 (standard) tons.

**ITALY** The naval budget for 1929-30 amounted to 1,232,433,530 lire (1 lira = 5.263 cents). Of this sum, 1,070,012,000 lire was for purely naval purposes, the remainder was for coast defense, financial operations, etc. The building programme for 1928-29 was 2 light cruisers of 10,000 tons, 2 cruisers of 5300 tons, 4 destroyers, and 5 submarines. The programme for 1929-30 had not been published up to the end of the year. The battleship *Dante Alighieri*, 19,500 tons, had been condemned.

and was to be sold. It was much inferior to the four battleships that were retained. The difficulties connected with the organization and operation of the Air Force system had made themselves manifest and a new decree was designed to effect a closer union of the aviation force assigned to the navy and the naval forces.

**JAPAN** The naval budget for 1930-31 amounted to 269,120,000 yen (1 yen = 49.8 cents) and was almost exactly 15 per cent of the total Japanese budget. The principal items were, fitting out, maintenance and operation of the fleet, pay of personnel, etc., 147,000,000, new construction, 88,000,000, new naval works, improvement of ports, etc., 8,600,000, renewal of naval war material, 8,000,000, scientific research, 1,300,000, affairs in

<i>Futami</i>	400	Building

China, 1,020,000. A programme of construction for the replacement of vessels that are reaching the limit of age was presented to Parliament by the Navy Department. It was to be completed in six to eight years at an estimated cost of 400,000,000 yen and included 4 cruisers of 10,000 tons, 15 first-class destroyers, and as many torpedo boats, submarines, gunboats, fuel-oil ships, and anti-submarine vessels as may need replacement. The cruisers to be replaced were of less than half the tonnage of the new ones and all the other vessels to be replaced were smaller and less important than were their proposed successors. The four battle cruisers of the *Haruna* class were undergoing modernization, elevation of guns, and additional protection against torpedoes and aircraft. Anti-torpedo "bulges" had been fitted, the total displacement thus was increased by nearly 3000 tons and the speed decreased from 27.5 to 26 knots.

The work on the *Haruna* was finally completed in 1929. Similar work on the sister ship *Kongo* was commenced in Yokosuka dockyard about the end of December, 1928. The old battleship *Asahi*, launched in 1890 and condemned about ten years later was stripped and rebuilt as a submarine salvage vessel and workshop. As rebuilt, she had four cylindrical boilers and a speed of 12 knots. Work was completed in the autumn of 1928, but the trials in the early part of 1929 were reported as unsatisfactory—presumably as regards the salvage equipment.

All of the *HA* class of submarines—ten in number—had been condemned for sale. They were of 280 to 480 tons and were launched in the years between 1909 and 1920. The 1700-ton destroyer *Shirakumo* was completed in 1928, the sister boats *Fubuki*, *Shirayuki*, *Hatsuyuki*, *Shinonome*, *Utsugumo*, *Isonami*, *Myuki*, *Uranami*, *Murakumo*, and one unnamed (in reports) were completed in 1929. Thirteen of the 1700-ton class are under construction or about to be laid down. The 10,000-ton cruiser *Nachi* was completed in November, 1928, her sister ships *Myoko*, *Itaguro*, and *Ashigara* have been reported as completed in 1929. The submarines thought to be completed are so marked in the accompanying table—some were known to be in service.

**YUGOSLAVIA** The naval budget for 1929-30 showed an increase of 13,000,000 dinars (1 dinar = 177 cents). A sum of 100,000,000 was placed at the disposal of the ministry of defense and part of this may be applied to naval affairs. The only vessels under construction during 1929 were the submarines *Smok* (*Redoubtable*) and *Ostvoink* (*Avenger*). The design was very similar to that of the *Diane* class of the French Navy, the surface displacement being 630 and the submerged displacement about 800 tons.

**NETHERLANDS** The naval budget for 1930 amounted to 40,544,790 florins (1 florin = 40.2 cents). Of this, 33,600,000 florins was devoted to purely naval purposes, 500,000 florins for the lighthouse service, and 2,000,000 florins for pensions. Of the 16,800,000 florins for material, the sum of 7,300,000 florins was allotted to new construction—naval and aeronautical; 5,600,000 florins to repair and maintenance of ships and shore establishments, 3,400,000 florins to equipment, and 600,000 florins to miscellaneous purposes. The budget provided payment of the final annual installment for the construction of the submarines *O.12*, *O.13*, and *O.14* and the first installment for the construction of the submarines *O.15*, *K.14*, *K.15*, and *K.16*. The *O* boats were de-

signed for the home fleet and the *K* boats for service in the Dutch East Indies. The first four destroyers of the *De Ruyter* class (1820 tons) were completed in 1928 or before. Of the four later boats, the *Van Galen* and the *Witte de Wit* were completed in 1929 while the *Bankert* and *Van Nes* were still under construction. A fast motor boat of 62 tons with a speed of 38 knots was received from Thornycroft in 1929. The enlisted force in home waters was 3475, in the East Indies, 2384.

**NEW ZEALAND** The budget for the New Zealand Navy for 1928-29 was £711,000 (£ = \$4.8665). The naval force was called the New Zealand Division of the Royal Navy. The ships and complements were furnished by the Royal Navy, but the maintenance charges are paid by New Zealand.

**NORWAY** According to some Norwegian naval criticism the navy was in a very ineffective state—it should either be wholly abolished or strengthened sufficiently to make it a real defensive force. The naval budget for 1928-29 amounted to 12,114,424 crowns (1 crown = 28.8 cents). This was a reduction of 340,000 crowns from the previous budget. The allotment for new construction and repair of vessels, aircraft, etc., was 8,816,000 crowns. The vessels under construction were the submarines *B.5* and *B.6* of 413/545 tons and a coast-guard cruiser of 1275 tons. The submarines were to be completed in 1929-30 and the coast-guard boat in 1930-31. The allotment of 951,500 for maintenance of vessels in commission supports in service the following: 3 submarines for 12 months of the year, 1 coast-defense armoured for 6 months, 1 cruiser and 3 torpedo boats for 3 months, 4 mine layers for 2 weeks during the summer. More attention was being paid to naval aviation. The army aviation fields at Kristiansund and Beigen were transferred to the navy. Therefore, the navy had but one field—that at Horten. In the future it was expected to have a fourth field which would be located in the north.

**PARAGUAY** The Government ordered in Italy the two river gunboats *Comodoro Meza* and *Capitan Cabral*. These vessels are 230 feet long, 35 feet broad, with a draft of 5.4 feet, and a displacement of five to six hundred tons. They were to carry four 4.7-inch guns, three 3-inch guns, and two machine guns of large calibre.

**POLAND** The naval budget for the fiscal year 1929-30 amounted to 33,064,000 zlotys (1 zloty = 11.22 cents). 16,100,000 is allotted to new construction, 6,400,000 for the maintenance of ships and ports; 620,000 for equipment, 643,000 for naval schools, and 229,000 for cruises abroad. The budget provided for 310 officers, 700 petty officers, and 2280 men. The chief of the Naval Department had under his orders the command of the fleet and of the coast about Gdynia, the Pinsk gunboats, the magazines of ammunition and torpedoes at Gdynia, the naval workshops at Gdynia and Pinsk, the naval academy at Thorn, and the schools of petty officers at Schwetz and Pinsk. Mainly through the initiative of General Zanucki a navy league of 70,000 members and 200 branches had been established. It was presided over by some of the most distinguished citizens of Poland and exercised much influence in directing the national naval policy. The destroyers *Burza* and *Wicher* of 1500 tons, building in France, were completed in 1929, and the submarines *Rys*, *Wilk*, and *Zbik*, of 980/1230 tons, also under construction in France, were completed or approaching completion at the end of 1929. These destroyers and submarines are

fully described in the YEAR BOOK for 1927, p. 556.

**PORTUGAL** The Government desired to acquire three cruisers of 7850 tons, type of the Spanish cruiser *Almirante Cervera*, but it was unlikely that Parliament would supply the money.

**RUMANIA** There were building in Italy, for the Rumanian Navy, the submarine *Delfin*, 650/900 tons, the submarine depot ship *Constanta*, 2300 tons, and the destroyer leaders *Regele Ferdinand I* and *Regina Maria*. None of the foregoing was completed. The *Regele Ferdinand I* was launched at Naples in December, 1928, and the *Maria* during 1929. These boats were of 1800 tons, the length is 334.5 feet, beam, 31.5 feet, draft, 11.5 feet, horse power, 75,000; speed, 35 knots, armament, five 4.7-inch guns, one 3-inch gun, two 2-inch anti-aircraft guns, six 21-inch torpedo tubes; 50 mines.

**RUSSIA** The condition of the navy was not improving to any great extent. The establishment of the naval academy and of special trade and general schools for the men. The great lacks were seagoing knowledge, proper ranks and promotion, and suitable organization and discipline. These seemed difficult of attainment without sacrifice of Communist ideals. See remarks on the Russian Navy in several preceding YEAR BOOKS.

**SOUTH AFRICA** The budget for 1928-29 was £98,000. There was no real naval defensive force. The expenditure was chiefly on the coast guard.

**SPAIN** The amount of the naval budget for the year 1929-30 was 167,044,904 pesetas (1 peseta = about 14 cents). For the salivention of merchant steamship lines, the sum of 59,062,925 pesetas was allotted, for maintenance at navy yards and government establishments, 9,914,165 pesetas was provided for the payment and expenses of the personnel and 1,564,988 for materials. For the payment of officers in the active service and reserve, 22,687,125 pesetas were allotted, for the enlisted men, 20,065,213, for naval aviation personnel, 2,710,453, for the marine infantry, 4,639,631, for fuel, 11,800,000, for munitions, 10,260,492 for aircraft and aviation supplies and expenses 3,000,000, for scientific establishments and centres of instruction, 4,476,376, miscellaneous, 16,256,388.

The vessels under construction were the cruisers *Balcarres* and *Canaries*, of 10,000 tons, laid down in 1928, the cruiser *Miguel de Cervantes*, 7850 tons, which was to be completed in 1931, the destroyer leaders *Almirante Juan Ferrandiz*, *José Luis Duce*, and *Lepanto*, of 1650 tons, were under construction during 1929 and all should have been completed by the end of December, two others of the same class were laid down during the year, the submarines *C-3* and *C-4*, 915/1290 tons, were completed during 1929 and the *C-5* and *C-6* were to be ready for service in 1930. According to the Minister of Marine, the next vessels to be taken in hand were 8 destroyers of about 1300 tons which were to be laid down without delay and 12 submarines that were to be commenced after experiments with the *C* class had settled some features of the design.

**SWEDEN** The total amount of the naval budget for 1928-29 was 40 million crowns (1 crown = 26 cents). Of this, about 9 millions were allotted to new construction. The vessels under construction for the navy at the end of the year were the airplane carrier and mine layer *Gotland* (laid down in 1929) of 5500 tons, 40,000 h p, 29 knots speed, six 5-inch guns, seven 3-inch anti-aircraft guns, six torpedo tubes, eight airplanes, two airplane catapults, and two cranes for air-

plane handling; the submarine *Ulfen* (laid down in 1928) of 700/850 tons, speeds 15/8, one 3-inch gun, four torpedo tubes, radius of action 10,000 miles; the destroyers *Class Horn* and *Class Uggla* (laid down in 1928) of 974 tons, 293 feet in length, 29.25 feet beam, 10.5 feet draft, three 4.7-inch guns, two 1-pounder anti-aircraft guns, six 21-inch torpedo tubes, 24,000 h p, 35 knots speed, 150 tons oil fuel, 125 officers and men, they are practically the same as the *Ekrensköld* recently completed. Of that part of the building programme to be completed in 1927-32, all but two submarines of a class smaller than the *Ulfen* have been laid down.

**TURKEY** The amount of the naval budget for 1929-30 was 6,475,082 Turkish pounds (1 pound = about 52 cents in 1929). The current building programme, approved in 1928, provided for the construction of 6 destroyers, 6 combat submarines, 6 mine-laying submarines, and 6 submarine chasers. Of these, there were ordered in Italy in 1929 the following: at the works of Ansaldo, Genoa, 2 destroyers of 1610 tons, 38 knots speed, four 4.7-inch guns, six 21-inch torpedo tubes, at the Cantieri Triestino, Monfalcone, 1 submarine of 630/800 tons, 15/9 knots speed, one 3-inch gun, four 21-inch torpedo tubes, at the same works, 1 submarine mine layer of about 950/1200 tons, 12/7 knots speed, one 4-inch gun, twelve (?) 21-inch torpedo tubes, 48 torpedoes, at the Cantieri Swan, Venice, 3 anti-submarine motor boats of 32 tons, 34 knots, 2 torpedoes, one 3-inch gun. The battle cruiser *Tavuz Sultan Selim* (ex-German *Goeben*) was very thoroughly repaired and refitted at the new Turkish navy yard at Ismid. This fact and the recent orders of destroyers and submarines in Italy led the Government of Greece to take steps to strengthen its fleet (see foregoing note on the Navy of Greece).

**UNITED STATES** The naval appropriation bill for 1929-30 as it passed Congress carried a total of \$360,236,697. An allotment of about \$47,000,000 was made for the increase of the Navy, this included \$28,550,000 for construction and machinery, to which was to be added \$2,000,000 by transfer from Treasury funds of the naval supply account, of this appropriation, \$200,000 was made immediately available for expenditure on the second five cruisers of 10,000 tons, that were to be laid down, the remainder of the allotment included the sum of \$18,000,000 for armor, armament, and ammunition for vessels heretofore authorized, said sum to remain available until expended. The appropriation for enlisted personnel provided for an average of \$4,500 during the year. The naval act also provided for an enlisted force of 18,000 marines.

The estimates for 1930-31 were submitted to Congress and amounted to \$383,092,526. This sum included the budget estimates of \$380,392,526, \$2,000,000 to be transferred from the naval supply fund, and \$700,000 to be reappropriated from unexpended balances.

On Feb. 13, 1929, an act of Congress providing for the construction of 15 light cruisers was signed. It directed that five cruisers be commenced in each of the fiscal years ending June 30, 1929, 1930, and 1931. The cost of each cruiser was not to exceed \$17,000,000, the limiting cost of a 10,000-ton cruiser. The act also provides for an aircraft carrier that is to be commenced before June 30, 1930. A contract for the construction of one cruiser (*CL-3*) has been executed with the Bethlehem Shipbuilding Corporation (Fore River

Yard), and one (OL-35) with the New York Shipbuilding Company (Camden, N J, Yard). One was allotted to each of the navy yards at New York, Puget Sound, and Philadelphia. If the conference for the limitation of armaments did not extend the "naval holiday for battleship building" beyond 1931, replacement of the older battleships was to begin in that year. In order to be prepared for such an eventuality, the Navy Department had prepared designs for a new battleship of 35,000 tons to replace the *Utah*, *Florida*, and *Wyoming*.

Of the 10,000 ton cruisers under construction in 1929, the *Salt Lake City* was launched on January 23, and completed in December. The *Pennacola* was launched on April 25, the *Chester*, on July 3, the *Houston*, on September 7, and the *Northampton*, on September 5. Eighteen cruisers and fifty-three destroyers were condemned and were to be withdrawn from service as soon as practicable. The cruisers include the armored cruisers *Frederick*, *Huntington*, *Huron*, *Pittsburgh*, and *Pueblo* of 13,080 tons, the armored cruisers *Seattle*, *Missoula*, and *Charlotte* of 14,500 tons; the armored cruisers *St Louis* and *Charleston* of 9700 tons, the light cruisers *York*, *Salcm*, and *Birmingham* of 3750 tons, the cruisers *Challanooga*, *Cleveland*, *Denver*, *Galveston*, and *Des Moines* of 3200 tons.

Much attention was given to submarine safety, rescue, and salvage. A board appointed by the Secretary of the Navy to study submarine safety and salvage appliances made a full report of its findings early in 1929. Much important information was obtained and many devices and fittings were being given careful test. One of the most noteworthy of the devices recently produced is the so-called "submarine lung" devised by Lieutenant Morsmen which permits escape of the personnel of a sunken submarine at a depth of 200 feet without aid from the surface.

The Naval Reserve Officers Training Corps in 1929 was in the fourth year of its existence and the enrollment for 1929-30 was 1080. There were 31 divisions of the aviation branch of the Naval Reserve and these divisions were organized and drilled. At the beginning of the fiscal year 1929-30, there were 110 officers in the Merchant Marine Naval Reserve and 61 ships were authorized to fly the Naval Reserve flag.

The United States Navy continues to lead all navies in aviation. The success of his department led to the reappointment of Rear-Admiral Moffett as Chief of the Bureau of Aeronautics. The fiscal year 1928-29 was the third of the 5-year aircraft programme approved by Congress. The appropriation for this year was \$32,189,000 which included \$16,500,000 for the purchase of new airplanes and equipment and 370 planes were acquired for the Regular Navy and 40 for the Naval Reserve. On July 1, 1929, the total number of officers and men on duty in connection with naval aviation activities were: pilots, 693 (officers, 520), student pilots, 191 (officers, 116), observers, 11 (all officers), student observers, 0; flight orders, 743 (officers, 41), non-flyers (approximate figures), 10,847 (officers, 155), total 12,485 (officers, 843). The number of fatalities during the year was 31, flying hours per fatality, 6558. The flying hours per separate fatal accident have increased from 7226 in 1927-28 to 11,288 in 1928-29. Much surveying work was done by naval aviators in Cuba, the Gulf of Panama, Alaska, and elsewhere, 18 flying boats were ordered for the Alaska survey.

The airship *ZRS-4* was under construction by the Goodyear-Zeppelin Corporation and completion was expected in April, 1931, or soon after that date. Work on *ZRS-5* might not start until 21 months after date of contract (Oct. 6, 1928) and until the department gives its approval. Full description of these airships was given in the *YEAR BOOK* for 1928, p. 6. Recent discoveries indicated that there was no likelihood of any shortage of helium and that its cost and the expense of using it are steadily going down. Progress in the development of heavy-oil engines for airships was slow but the results were promising. Aviation charts were being steadily improved by the U. S. Naval Hydrographic Office. Pilot charts of the upper air over the Atlantic Ocean, of particular value to aviators, had been published monthly since December, 1927, similar charts of the air over the North Pacific Ocean had been published monthly since January, 1929. All of the larger ships of the Navy—battleships, cruisers, and some auxiliaries—were carrying airplanes and were fitted with catapults. In no other navy except that of Japan had much progress been made in installing airplanes and catapults on cruising ships. This was due to the lack of knowledge and interest of the navy ministries in naval needs and naval strategy. Japan had closely followed American naval air policy.

**NEAR EAST RELIEF.** The Near East Relief, organized in 1915 and chartered by special Act of Congress in 1919, on June 30, 1929, terminated 14 years of public campaigning for funds for emergency relief, on the ground that the era of drives for war relief and post-war reconstruction had reached a logical end. During this period operation receipts amounted to \$91,173,073 and expenditures to \$89,748,013. Through the administration of these funds, it was estimated that the lives of 1,500,000 persons were saved, 132,552 of whom were orphan children. Approximately 12,500,000 persons were fed during famine periods, and more than 6,000,000 received medical aid. At the chief centres of distress, 30 hospitals were established, and in the orphanages and schools the children were registered, fed, clothed, and given a practical education. Nurses' training schools, the first schools of their kind for women, were established in Greece and Armenia, the first schools for deaf mutes were established, 263 teachers were prepared for government schools in the Caucasus, and more than 30 trades were taught. In this work, the organization had the constant cooperation

of the officials of each government, without which the results obtained would have been impossible. The centres of administration in 1929 were: Athens, controlling Greece and her islands, Constantinople, Bulgaria, and Egypt, Lennakan (formerly Alexandropol), directing the work in Russian Armenia and Georgia, and Beirut, supervising the areas of Syria, Palestine, and Mesopotamia.

The governments in several areas of operation had requested a continuation of certain departments of the work with government cooperation, chiefly in agriculture, medical aid, and social welfare. There were also more than 20,000 children inadequately provided for. The Near East Relief, therefore, created a subcommittee, called the conservation committee, to take under advisement the projects suggested by the requests of the overseas governments and to see that all children who were still in orphanages or out-placed under subsidy and supervision were securely rooted into the social structure of the countries in which they lived. This committee was to operate from headquarters in New York City, under the chairmanship of Cleveland E. Dodge. The officers of the Near East Relief in 1929 were: Chairman, James L. Barton, vice chairman, John H. Finley, treasurer, Cleveland E. Dodge, general counsel, Frank L. Polk, members of executive council, Barclay Acheson, Laird W. Archer, William E. Doughty, H. C. Jaquith, and E. C. Miller. Headquarters are at 151 Fifth Avenue, New York City.

**NEBRASKA** Population According to the fourteenth census, the population of the State on Jan. 1, 1920 was 1,296,372. The estimated population on July 1, 1928, was 1,408,000. The capital is Lincoln.

**AGRICULTURE** The following table gives the acreage, production, and value of the principal crops in 1928 and 1929.

Crop	Year	Acreage	Prod Bu	Value
Corn	1929	9,144,000	237,744,000	\$164,043,000
	1928	8,937,000	212,701,000	151,018,000
	1929	3,548,000	56,555,000	55,902,000
Wheat	1928	3,672,000	69,919,000	65,498,000
	1929	4,580,000	6,234,000	57,131,000
	1928	4,451,000	5,877,000	52,202,000
Oats	1929	2,486,000	86,304,000	32,796,000
	1928	2,792,000	78,936,000	29,996,000
	1929	92,000	8,924,000	9,816,000

Bailey	1929	647,000	18,892,000	9,446,000
	1928	410,000	14,018,000	7,149,000
	1929	246,000	3,694,000	2,807,000
Rye	1928	249,000	3,486,000	2,684,000

\* Tons

**MINERAL PRODUCTION** The total value of the mineral products of the State for 1927 was \$3,541,792, for 1926, \$3,322,460. Supplying the domestic demand for sand and gravel constituted the most important single mineral industry. The value of sand and gravel produced in 1927 was \$1,370,605, in 1926, \$1,124,764. Clay products of 1927 attained the value of \$819,494, falling below the \$1,112,923 of 1927. There was a minor production of pumice, in which mineral the State ranked as the second among producers in the Union in 1927.

**TRANSPORTATION** The total number of miles of railroad line under operation on Jan. 1, 1929, was 6147.30. There was no reported construction of new line in 1929.

**MANUFACTURES.** According to the biennial Federal Census of Manufactures published by the Department of Commerce in 1929 and relating to the operations of 1927, there were in the State, in 1927, 1277 manufacturing establishments. These employed 20,111 wage earners, whose wages for the year totaled \$34,296,241. Materials and supplies used in manufacture cost \$326,917,490. Manufactured products attained the combined value of \$420,296,190.

**EDUCATION** A system of study in rural sociology was developed as part of the course for the training of teachers in normal-training high schools. The State further enlarged its scheme of the tendencies of education by extending the course of school instruction in the unfavorable effects of alcohol and narcotics on the physique of the growing child. For the academic year 1928-29, the school-age population of the State was estimated at 416,644. There were enrolled in the public schools during the year 325,204 pupils. Of these, 258,656 were in elementary, and 66,548 in high-school, grades. Expenditures for public-school education in the academic year totaled \$27,363,923. The salaries of teachers, by the year averaged in cities and villages, for men \$1464 and for women \$1239, in rural districts, for men \$770 and for women \$763.

**CHARITIES AND CORRECTIONS** The Department of Public Welfare possessed extensive powers with regard to the dependent classes, particularly as to child care. It did not have charge of the State institutions of care and custody, which were under the authority of the separate Board of Control. These institutions were Nebraska Institution for the Feeble-minded, Beatrice, Girls' Training School, Geneva, Nebraska Soldiers' and Sailors' Home, Burkett, Hastings State Hospital, Ingleside, State Industrial School, Kearney, Hospital for Tuberculous, Kearney, Lincoln State Hospital, Lincoln, Orthopedic Hospital, Lincoln, State Penitentiary, Lincoln, Nebraska Industrial Home, Milford, Soldiers' and Sailors' Home, Milford, Nebraska School for the Blind, Nebraska City, Norfolk State Hospital, Nebraska School for the Deaf, Omaha, State Reformatory for Women, York, Nebraska Home for Dependent Children, Lincoln, State Reformatory for Men, Lincoln.

**LEGISLATION** The State Legislature held a regular biennial session, convening in January. Its most widely noted action was to terminate the unsuccessful bank-guarantee system that had operated for many years in the State. An act was passed repealing the bank-guarantee-fund law and consequently terminating the power of the Bank Commission to conduct banks previously declared insolvent but not thrown into receivership. In order to succeed depositors in defunct banks the Legislature approved a constitutional amendment to allow of the appropriation of \$8,000,000 for depositors' reimbursement. The amendment was to be submitted to popular vote at the election of 1930. By statute, insolvency was defined, with regard to State banks, as occurring when the actual cash value of assets did not suffice to meet liabilities, or when a bank was unable to meet the demands of creditors in the ordinary and usual manner, or when it failed to make good its reserve as required by law, or when stockholders failed to make good capital impairment, after due notice. The gasoline tax was increased to 4 cents a gallon, from 2 cents, and

was assigned in the proportion of 2 cents to the building and maintenance of State roads and 2 cents to improvement of county roads. A measure repealing the prohibition against the couring of rabbits was passed, but was vetoed by Governor Weaver on humanitarian grounds. An effort to ratify the Federal Child Labor Amendment failed.

**POLITICAL AND OTHER EVENTS.** A decision of Judge Lincoln Frost in one of the inferior State courts, rendered at the end of April, dealt a severe blow to the operation of the State law for the guaranty of bank deposits. This decision granted the application of 500 or more State banks for release from the obligation to pay further special assessments into the State bank-guaranty fund. There were at the time some 60,000 former depositors holding claims against defunct banks. The court held that according to the evidence before it two-thirds of the banks that were solvent could not well keep up their payments on guaranty assessments. The decision was favorable to the hopes of depositors of failed banks for indemnification through a future State grant, rather than through the guaranty fund. In the course of the summer the Banking Commissioner reopened 15 banks in the period of three months by inducing depositors to scale their claims down to the levels of the solid assets of the respective institutions. In the same period, 21 banks were closed. The difficulties of the banks' situation were reported as due to their having invested heavily in real estate and in second mortgages on lands.

The State law of 1929 imposing an ad valorem tax on money, bank deposits, and intangible property generally was upheld by the State Supreme Court in November. This court, on March 28, held that workmen's-compensation insurance companies in filing appeals could not be restricted to the district court of the county in which the injured worker lived.

The charge was made by a former State engineer, George B. Johnson, that more than \$1,000,000 had been wastefully or improperly spent for tile and other building materials in the construction of the State capitol. At North Platte, on July 13, rioters attacked the Negro dwellers, killed a policeman and terrorized about 200 Negroes into flight from the town. With funds supplied by Mrs. Sarah Joslyn, the construction of a \$4,000,000 building at Omaha to serve the city as an art centre was started. The grain elevator of the Trans-Mississippi Grain Company at Omaha, with 400,000 bushels of grain, was burned in August.

**OFFICERS.** Governor, Arthur J. Weaver, Lieutenant-Governor, George A. Williams, Secretary of State, Frank Marsh, Treasurer, W. M. Stephens, Auditor, L. B. Johnson, Attorney-General, C. A. Norensen, Superintendent of Public Instruction, C. W. Taylor.

**JUDICIARY.** Supreme Court Chief Justice, Charles A. Goss, Associate Justices, William B. Rose, James R. Dean, W. H. Thompson, George A. Eberly, Edward E. Good, George A. Day.

**NEBRASKA, UNIVERSITY OF.** A State institution of higher education in Lincoln, Neb., founded in 1869. The enrollment for the autumn of 1929 was 6535, of whom 3654 were men and 2081 women. The enrollment was distributed as follows: Agriculture, 604, arts and sciences, 1880; business administration, 736; dentistry, 111; engineering, 722; graduate, 398; law, 153,

medicine, 324; nursing, 104, pharmacy, 90; teachers, 1481. Included in the arts and sciences and teachers' colleges were 514 students of the school of fine arts and 184 of the school of journalism. There were 2814 students enrolled in the summer session of 1929, of whom 931 were men and 1683, women. The faculty numbered 374. The total income for the year was \$4,209,977. The library contained 235,605 volumes. Chancellor, Edgar A. Burnett, D.Sc.

**NEBULÆ.** See **ASTRONOMY**.

**NECROLOGY.** The following list contains the names of notable persons who died in 1929. Articles will be found in this volume, in their alphabetical order, on those whose names are given below without other text.

Abercorn, Mary, Duchess of Edinburgh, died May 10, 1929, London, at the age of 81. The fourth daughter of the first Earl Howe, she married in 1869 the Marquis of Hamilton, eldest son of the first Duke of Abercorn. Lord Hamilton was early attached to the household of the Prince of Wales.

Aberdare of Duffryn, second Baron. See Bruce, Henry Campbell.

Adamson, Colonel Agar, Canadian army officer, died in England, Nov. 21, 1929, at the age of 65. He was educated at Trinity College School, Port Hope, Ontario, and at Corpus Christi College, Cambridge University, served with the Stathcona Horse in South Africa, and at the outbreak of the World War was an officer in the Princess Patricia's Canadian Light Infantry. In 1915 he was made a Companion of the Distinguished Service Order, and in 1916 became commander of the "Princess Pats." He was promoted to a staff position in corps headquarters in 1918.

Adamson, William Charles.  
Adelsward, Baron Theodor. A Swedish statesman, died Sept. 28, 1929. He was born Oct. 13, 1860. From 1910 to 1914, he was Minister of Finance. He was for many years head of the Interparliamentary Union.

Agramonte, Charles Horace Montgomery.  
Aiken, William Appleton, American manufacturer, died Nov. 7, 1929, in Norwich, Conn. He was born in Manchester, Vt., Apr. 18, 1853, and was educated in public and private schools in Massachusetts. Appointed to the U. S. Military Academy, he failed to finish the course because of ill health, and went into business. He was acting assistant paymaster of the U. S. Navy in 1861-65 and quartermaster-general of Connecticut in 1862-65. After the Civil War, he was president of the Norwich Nickel and Brass Company.

Alkins, Sir James (Albert Manning)

Allen, Edwin West

Allen, Hamilton Ford, American educator, died in Durham, N. H., Aug. 14, 1929. He was born in Lafayette, Ind., July 7, 1867, and was graduated from Williams College. He studied also at the universities of Berlin and Leipzig, the American School of Classical Studies at Athens, the University of Chicago, and the McCormick Theological Seminary at Chicago. He was professor of Greek at Washington and Jefferson College, 1902-05, at Princeton, 1905-07, professor of Latin and Greek at the University of Illinois, 1907-09, professor of Greek at Washington and Jefferson, 1909-22, and professor of modern languages at the University of New Hampshire after 1922. He conducted the University Travel League at Leuven, Gelin, France, in the summers of 1926-28.

Allen, The Rev. Sturgis Protestant Episcopal clergyman, died in Liberia, Africa, in April, 1929. He was born in Hyde Park, N. Y., June 26, 1850, and was graduated from the College of the City of New York and the General Theological Seminary, being ordained in 1882. In 1881 he was curate at Kansas City, Mo., and from 1881 to 1883, at Newburgh, N. Y. He was with the Holy Cross Mission Church in New York, 1884-89, and served as a member in the Episcopal Order of the Holy Cross, 1889-1907. In 1923 he went as a missionary to Liberia, where he taught in the mission schools.

Almeida, Antonio José de, Portuguese statesman, died Oct. 31, 1929, in Lisbon, at the age of 64. He was appointed Minister of Marine in the provincial government of Portugal in 1910 and was Premier from 1913 to 1917. In 1919 he became president of Portugal and served in that capacity until August, 1923. He played a leading part in the overthrow of the monarchy in 1910.

Alston, The Rt. Hon. Sir Beulby Francis, British Ambassador to Brazil, died in London, June 29, 1929.

He was born Oct. 8, 1868. After a private education in England and on the Continent, Seibly entered the Foreign Office as a clerk in 1890. His first appointment in South America was to the position of acting secretary and chargé d'affaires at Buenos Aires, 1896-97. After service in Japan and China he was returned to South America in 1923 as Minister to the Argentine Republic and to Paraguay, and in 1925 he was made Ambassador to Brazil. Sir Seibly was knighted in 1920 and in 1925 was elevated to the Privy Council.

Alva, Frederico Garcia y, American editor, died Nov. 7, 1929, in Los Angeles, Calif., at the age of 56. He began his journalistic work as a young man in Mexico City, later becoming editor of the *Los Angeles Mexican Herald*. At the time of his death he was publisher and editor of *Mesero*, a Los Angeles Spanish language periodical.

Alamaina, Lizardo Peruvian jurist, died March 10, 1929, at Lima, Peru. He was formerly president of the Supreme Court.

AMARAL, MARSHAL Antonio Ferreira do Brazilian physician, died Feb. 18, 1929, in Etyva, Brazil. He was formerly at the head of the Army Central Hospital, where he found the first school for nurses in Brazil, director of the Medical Corps, and representative of the Brazilian Red Cross at both the First and Second Pan-American Red Cross Congresses. He retired in 1924.

Andover, Marie Henri

Andrassy, Count Julius

Andrews, William Symes An Anglo American electrical engineer, died in N. Y. July 1, 1929. He was born in N. Y. Sept. 10, 1847, moving to America in 1875. In 1879, he entered Thomas A. Edison's laboratory at Menlo Park, N. J., and became Edison's assistant just after the incandescent lamp was invented, so that much of Andrews' early work had to do with that invention. He held executive positions with various electrical companies and, at the time of his death, was consulting engineer to the General Electric Company.

Appel, Daniel Frederick An American insurance executive, died Nov. 21, 1929, in Boston, Mass. He was born in Cumberland, Md., June 24, 1857, and was educated in the public schools. He was in the fire-insurance business from 1875 to 1885, when he became associated with the New England Mutual Life Insurance Company, where he served successively as superintendent, secretary, vice president, and, after 1924, president. Mr. Appel was a member of the executive committee of the Association of Life Insurance Presidents and a director of the Old Colony Trust Company.

Appleton, Daniel American publisher, died March 15, 1929. He was born in New York City, Feb. 24, 1852, the son of Daniel Appleton, founder of D. Appleton & Co. Appleton entered Appleton's in 1871, becoming a member of the firm in 1879 and, later, vice president. He retired in 1913. He was a member of the 7th N. Y. in which he served as colon from 1916, when he was retired with the rank of brevet major general.

Armstrong, Benjamin J. American silk manufacturer, died Oct. 20, 1929, in New London, Conn. He was born Dec. 10, 1843, and entered upon his business career as a bookkeeper in the Williams Silk Company of New York. In 1867 he formed with James P. Blainard the firm of Brainerd & Armstrong, which was merged in 1922 with the Nonocuck Silk Company under the title of the Littleton Silk Company. Mr. Armstrong became president in 1904 of the National Bank of Commerce in New London, and for 35 years was president of the Board of Water Commissioners. He was an incorporator and first president of the New London Memorial Hospital and in 1926 he established a trust fund of \$100,000 for charitable and educational needs in New London.

Arisaola, Enrique J. Colombian statesman, died March 28, 1929. At the time of his death, he was Minister of the Interior.

Attherley Jones, Llewellyn Archer English judge and former member of Parliament, died June 15, 1929. He was born in 1850 and was educated at Brasenose College, Oxford. Called to the bar in 1875, he became a benchet of the Inner Temple and joined the North-eastern Circuit, where he represented the miners in many industrial cases. From 1885 to 1914, he was a Liberal member of Parliament for Northwest Durham. After 1905 he was recorder of Newcastle and after 1919, judge of the Mayor's Court of London. He was Commissioner of Central Criminal Court. In addition to articles on social and political subjects, he published *Manual* (1882), *The Miners' Handbook* (1887), *Commerce in War, a Treatise on International Law*, *The Law of Offences and Young Persons*, *Looking Back* (1925), *The Fall of Lord Paddockles*, and other novels published anonymously.

Auer, Karl von Welsbach

Ault, James Percy An American magnetician and commander of the nonmagnetic ship, *Carnegie*, lost his

life at Apia, Samoa, when his ship burned following a gasoline explosion, Nov. 29, 1929. He was born Oct. 18, 1881, in Olathe, Kan., and was graduated from Baker University in 1904, where he acted as magnetic observer for the U. S. Coast and Geodetic Survey. After being graduated, he became associated with the department of terrestrial magnetism of the Carnegie Institution of Washington. Captain Ault commanded the *Carnegie* on cruises in Arctic and Subantarctic regions (1914-17) the purpose of which was to make magnetic observations. In 1919 he was made chief of the ocean work section of the Carnegie Institution. On September 3, the *Carnegie* left San Francisco to continue the three-year cruise begun in 1928, and had reached Apia when the explosion occurred.

Aultman, Brig Gen Dwight Edward

Austin, Chellis A.

Austin, Leonard S. An American mining engineer, died in Los Angeles, Calif., Oct. 29, 1929. He was born in Stratford, Conn., Feb. 26, 1846, and was graduated in 1868 from the Sheffield Scientific School of Yale, later doing post graduate work at Yale, Columbia, and the Colorado State school of Mines. He was engaged in mechanical engineering work until 1877, when he became a chemist for the Exploration Company on the eastern coast of Patagonia, South America. During 1880-86 he was chemist and foreman of the Germania Lead Works and until 1902 superintendent of various smelting works in the United States. He was professor of metallurgy and ore dressing in the Michigan College of Mines from 1903 to 1909, when he began to practice privately. Among other works, he wrote *Metallurgy of the Common Metals* (1906, 5th ed., 1920) and *The Fire Assay* (1907).

Avery, Baron See Lubbock, John Kirkbeck

Avery, Elizabeth An American educator, died at Flushing, L. I., N. Y., Aug. 11, 1929. Miss Avery was born in Petrolia, Pa., and was educated at Forestville Academy, Forestville, N. Y., and Cornell University. After teaching in the University of Wisconsin and the University of London University and New York University, she taught in the high schools of Flushing, Rochester, and Gouverneur, N. Y. In 1923 she became head of the spoken English department at Smith College. Miss Avery was a writer and lecturer on phonetics and speech.

Ayres, Steven Beckwith American real estate operator, and former Congressman, died in New York, June 1, 1929. Born in Fort Dodge, Iowa, Oct. 27, 1861, he attended Syracuse University. He entered the real estate business in New York in 1887, retiring after the World War. Although he had not been active in politics, Mr. Ayres, a Democrat, was elected to the House of Representatives from the eighteenth New York district, serving 1911-13. Besides numerous historical articles, he wrote *Genealogy of the Ayres Family* (1901), *Bridge* (1909), *Building an American Merchant Marine* (1912), and *Our U. S. Postal Service* (1913).

Baden, Prince of See Mar, Prince of Baden

Baez, Ramon Former president of the Dominican Republic, died Mar. 3, 1929. Having served in the Dominican Congress, he was elected provisional President on Aug. 27, 1914, and held office for two months. At the time of his death, Dr. Baez was a director of the Padre Billini Ceballos Hospital. He was a knight of the French Legion of Honor.

Bailey, Joseph Weldon

Balfour, Sir Graham English educator, died Oct. 26, 1929, in Oxford. He was born Dec. 2, 1858, and was educated at Balliol College and at Worcester College, Oxford. He was a barrister at law in the Inner Temple. From 1885 to 1905, he traveled widely, spending three years in Samoa, where he met his cousin, Robert Louis Stevenson, whose official biography he published in 1901. Sir Graham was assistant secretary to the Delegacy of Oxford Local Examinations (1899-1902), director of technical institution, Staffordshire County Council (1902-03), and director of education in Staffordshire (1903-08). He was a member of the Education of Directors and Secretaries of Education (1908), a member of the Committee on the Position of Science in Education (1916-17), a member of the Reconstruction Committee on Adult Education (1917-19), director of education in the Lines of Communication, France (1918-19), and a member of the conciliatory committee of the Board of Education (after 1926). He was knighted in 1917. He wrote also *Educational Systems of Great Britain and Ireland* (1898).

Balfour, Sir Robert A British shipowner, died in London, Nov. 4, 1929. He was born in Pilmuir, Fife shire, Scotland, in 1844 and was educated at Madras College, St. Andrews University, later becoming a member of the shipping firm of Messrs. William & Co. From 1906 to 1922, he was a Liberal member of Parliament from the Patrick Division of Glasgow. In 1911 he was created a baronet.

Ball, James Moore American ophthalmologist and educator, died in St. Louis, Mo., March 1, 1929. Born

In West Union, Iowa, Sept. 4, 1863, he was graduated from the medical school of the State University of Iowa in 1884, continuing his studies in New York and Europe. He was professor of diseases of the eye at the National University, Washington, D. C., and served as assistant at the military hospital. He edited *American Ophthalmology* at one time and wrote a textbook, *Hall's Modern Ophthalmology* (1904), and *Andreas Vesalius, the Reformer of Anatomy* (1910).

Ballou, Sidney (Miller) American lawyer, died Oct. 29, 1939, in New York City. He was born in Providence, R. I., Feb. 24, 1870, and was graduated from Harvard Law School in 1895. He came to Hawaii in 1893. Admitted to the bar in 1895, he went that year to Hawaii, where he attained success in the practice of law. He was one of the Justices of the Supreme Court there in 1901, 1902, 1903, 1904, 1905, 1906, 1907, 1908, 1909, 1910, 1911, 1912, 1913, 1914, 1915, 1916, 1917, 1918, 1919, 1920, 1921, 1922, 1923, 1924, 1925, 1926, 1927, 1928, 1929, 1930, 1931, 1932, 1933, 1934, 1935, 1936, 1937, 1938, 1939, 1940, 1941, 1942, 1943, 1944, 1945, 1946, 1947, 1948, 1949, 1950, 1951, 1952, 1953, 1954, 1955, 1956, 1957, 1958, 1959, 1960, 1961, 1962, 1963, 1964, 1965, 1966, 1967, 1968, 1969, 1970, 1971, 1972, 1973, 1974, 1975, 1976, 1977, 1978, 1979, 1980, 1981, 1982, 1983, 1984, 1985, 1986, 1987, 1988, 1989, 1990, 1991, 1992, 1993, 1994, 1995, 1996, 1997, 1998, 1999, 2000, 2001, 2002, 2003, 2004, 2005, 2006, 2007, 2008, 2009, 2010, 2011, 2012, 2013, 2014, 2015, 2016, 2017, 2018, 2019, 2020, 2021, 2022, 2023, 2024, 2025, 2026, 2027, 2028, 2029, 2030, 2031, 2032, 2033, 2034, 2035, 2036, 2037, 2038, 2039, 2040, 2041, 2042, 2043, 2044, 2045, 2046, 2047, 2048, 2049, 2050, 2051, 2052, 2053, 2054, 2055, 2056, 2057, 2058, 2059, 2060, 2061, 2062, 2063, 2064, 2065, 2066, 2067, 2068, 2069, 2070, 2071, 2072, 2073, 2074, 2075, 2076, 2077, 2078, 2079, 2080, 2081, 2082, 2083, 2084, 2085, 2086, 2087, 2088, 2089, 2090, 2091, 2092, 2093, 2094, 2095, 2096, 2097, 2098, 2099, 2100, 2101, 2102, 2103, 2104, 2105, 2106, 2107, 2108, 2109, 2110, 2111, 2112, 2113, 2114, 2115, 2116, 2117, 2118, 2119, 2120, 2121, 2122, 2123, 2124, 2125, 2126, 2127, 2128, 2129, 2130, 2131, 2132, 2133, 2134, 2135, 2136, 2137, 2138, 2139, 2140, 2141, 2142, 2143, 2144, 2145, 2146, 2147, 2148, 2149, 2150, 2151, 2152, 2153, 2154, 2155, 2156, 2157, 2158, 2159, 2160, 2161, 2162, 2163, 2164, 2165, 2166, 2167, 2168, 2169, 2170, 2171, 2172, 2173, 2174, 2175, 2176, 2177, 2178, 2179, 2180, 2181, 2182, 2183, 2184, 2185, 2186, 2187, 2188, 2189, 2190, 2191, 2192, 2193, 2194, 2195, 2196, 2197, 2198, 2199, 2200, 2201, 2202, 2203, 2204, 2205, 2206, 2207, 2208, 2209, 2210, 2211, 2212, 2213, 2214, 2215, 2216, 2217, 2218, 2219, 2220, 2221, 2222, 2223, 2224, 2225, 2226, 2227, 2228, 2229, 2230, 2231, 2232, 2233, 2234, 2235, 2236, 2237, 2238, 2239, 2240, 2241, 2242, 2243, 2244, 2245, 2246, 2247, 2248, 2249, 2250, 2251, 2252, 2253, 2254, 2255, 2256, 2257, 2258, 2259, 2260, 2261, 2262, 2263, 2264, 2265, 2266, 2267, 2268, 2269, 2270, 2271, 2272, 2273, 2274, 2275, 2276, 2277, 2278, 2279, 2280, 2281, 2282, 2283, 2284, 2285, 2286, 2287, 2288, 2289, 2290, 2291, 2292, 2293, 2294, 2295, 2296, 2297, 2298, 2299, 2300, 2301, 2302, 2303, 2304, 2305, 2306, 2307, 2308, 2309, 2310, 2311, 2312, 2313, 2314, 2315, 2316, 2317, 2318, 2319, 2320, 2321, 2322, 2323, 2324, 2325, 2326, 2327, 2328, 2329, 2330, 2331, 2332, 2333, 2334, 2335, 2336, 2337, 2338, 2339, 2340, 2341, 2342, 2343, 2344, 2345, 2346, 2347, 2348, 2349, 2350, 2351, 2352, 2353, 2354, 2355, 2356, 2357, 2358, 2359, 2360, 2361, 2362, 2363, 2364, 2365, 2366, 2367, 2368, 2369, 2370, 2371, 2372, 2373, 2374, 2375, 2376, 2377, 2378, 2379, 2380, 2381, 2382, 2383, 2384, 2385, 2386, 2387, 2388, 2389, 2390, 2391, 2392, 2393, 2394, 2395, 2396, 2397, 2398, 2399, 2400, 2401, 2402, 2403, 2404, 2405, 2406, 2407, 2408, 2409, 2410, 2411, 2412, 2413, 2414, 2415, 2416, 2417, 2418, 2419, 2420, 2421, 2422, 2423, 2424, 2425, 2426, 2427, 2428, 2429, 2430, 2431, 2432, 2433, 2434, 2435, 2436, 2437, 2438, 2439, 2440, 2441, 2442, 2443, 2444, 2445, 2446, 2447, 2448, 2449, 2450, 2451, 2452, 2453, 2454, 2455, 2456, 2457, 2458, 2459, 2460, 2461, 2462, 2463, 2464, 2465, 2466, 2467, 2468, 2469, 2470, 2471, 2472, 2473, 2474, 2475, 2476, 2477, 2478, 2479, 2480, 2481, 2482, 2483, 2484, 2485, 2486, 2487, 2488, 2489, 2490, 2491, 2492, 2493, 2494, 2495, 2496, 2497, 2498, 2499, 2500, 2501, 2502, 2503, 2504, 2505, 2506, 2507, 2508, 2509, 2510, 2511, 2512, 2513, 2514, 2515, 2516, 2517, 2518, 2519, 2520, 2521, 2522, 2523, 2524, 2525, 2526, 2527, 2528, 2529, 2530, 2531, 2532, 2533, 2534, 2535, 2536, 2537, 2538, 2539, 254

Bannard, Otto Tremont

Barclay, The Rt Hon Sir Colville English diplomat, died June 3, 1929, in London. He was born Sept 17, 1869, the youngest son of Sir Colville Barclay. He entered the British Diplomatic Service as an attaché in 1894 and was steadily promoted, becoming Counselor of Embassy at Washington in 1913, and Minister Plenipotentiary there in 1918. He was sent to Sweden in 1920, to Belgium in 1921, and to the Netherlands in 1924. In the latter year he was appointed Ambassador to Portugal. Sir Colville was knighted in 1923 and sworn of the Privy Council in 1928.

Baring, John See Revelstoke, Second Baron of

Barnston, Sir HARRY English member of Parliament, died in Furndon, Cheshire, Feb. 22, 1929. Born Dec. 12, 1870, he attended Christ Church, Oxford, and was called to the bar of the Inner Temple. Instead of practicing, however, he engaged in farming and was a member of the active public affairs. Joining the Earl of Chester's Yeomany Cavalry, he was commissioned captain and served in the South African War, 1899-1902. He re-enlisted in 1914 and fought in the World War. Having been elected a Conservative member of Parliament from the Eddisbury Division in 1918, he was elected a member of the House of Lords in 1924. He was a keen sportsman and a party whelp, during 1921-24, and from November, 1924, until his retirement in January, 1928.

Barringer, Daniel Moreau. An American mining engineer and geologist, died Nov. 30, 1929, in Haverford, Pa. He was born in Raleigh, N. C., May 25, 1860, and received his education at Harvard University. He took special courses in geology at Harvard University in 1889, and in chemistry and mineralogy at the University of Virginia in 1890. He began the practice of law with his brother in 1892, but in 1898 left to become a geologist. He was elected to the Geological Society in 1900 and was president and director of several mining companies. In 1905 he discovered that the origin of the Meteor Crater in Arizona was the impact of a meteoric mass. He wrote *The Law of Mines and Mining in the United States* (1907) and *The Law and Minerals of Commercial Value* (1907).

Barton, Esther (Mrs Frank D Nelson) An American actress, known on the stage as Esther Barton, died in West Haven, Conn., Sept. 30, 1929, at the age of 70. She appeared in dramatic and vaudeville productions and had connections with the McCaul, Holman, Katherine Lewis, and Lucia Nola opera companies. After 1916 she was manager of the "Nelson Duo," a vaudeville act.

Bassett, William Austin American engineer, died May 16, 1929, in Cambridge, Mass. He was born in Boston, Mass., Sept. 29, 1876, and was graduated from Harvard with a degree in civil engineering. During 1901-04 he was with the engineering corps in the Pennsylvania Railroad, from 1905 to 1907 in the Pennsylvania Telephone Department, and from 1907 to 1908 he became a member of the faculty of Carnegie Institute of Technology in Pittsburgh, where he remained until 1910. He was assistant editor of the *Engineering Record*, 1911-12, after which he was consulting engineer of the New York Bureau of Municipal Research. Mr. Bassett was a contributor to the technical press on municipal and state problems relating to engineering. He wrote *Problems of Road Administration* (1917).

Bates, Katharine Lee

Bauer, Colonel Max

**Bax-Irons**, Sir Henry (George Outram) English diplomatist, died in London, Apr 16, 1929. Born Nov 15, 1859, he was educated at Eton and Oxford. In

1883 he joined the diplomatic service as private secretary to Sir William White, and later was sent to many capitals as chargé d'affaires. He was Minister to Bulgaria in 1910-15, and acquired a wide knowledge of Russian, Persian, and Arabic languages.

Baxter, George W. Former Governor of the Territory of Wyoming, died Dec 18, 1893, in New York City. He was born in Hendersonville, N. C. and was graduated from the University of North Carolina. He was given a commission in the 3rd United States Cavalry, but was assigned to duty in the Territory of Dakota and took part in campaigns against the Sioux Indians. He was killed in the Battle of Little Bighorn. He was several times a member of territorial legislature, and in 1886 he was appointed Governor of Wyoming Territory, serving for one year. He was a member of the Wyoming Territorial Council, which drafted the State constitution for WYOMING in 1890.

Bazalegette, Louis French literary critic, died in Paris, Jan. 3, 1929, at the age of 55. He was the first to translate Walt Whitman's writing into French, publishing *Leaves of Grass* in 1909, and at various times translating the poet's critical essays. He also translated Carl Sandburg's *Koolhaaga Storms*. He wrote many books on French authors and a critical biography of Thoreau.

Beal, Alvin Casey

Beauheiu, Montagu of See Montagu, John Edward

**Douglas Scott**

Beer Walbrunn, A  
Bach, H. H.

Belahsky, Serge. Russian railway official, died in New York, August 3, 1919, at the age of 57. He was graduated from the classical gymnasium and the Imperial Institute of Ways and Communications in Petrograd and he was in charge of the traffic department of the Southwestern Railway of Russia from 1911 to 1918. During the World War he was general traffic manager of the Russian front, where he directed the building of 200 miles of railway under fire. In the United States, Mr. Belahsky worked for the New Haven Railroad as chairman and rodman.

New York, Charles James, an American banker, died in  
 1911. He was born in 1858, and educated there. In 1877 he went  
 to Canada, where he was connected with the Imperial Bank of  
 Canada in Toronto. On leaving there he became associated with his  
 cousin, Alexander (Graham) Bell, in the development of the  
 telephone. In 1881, however, he returned to banking, in which he  
 remained actively interested all his life. Mr. Bell was  
 elected president of the American Security & Trust  
 Corporation in 1893, an office which he held until he retired in  
 1924.

Mr. Bell, Graham Airdrie Canadian Minister of Railways and Canals, died Jan. 13 1939, in Ottawa, Ont. He was born in Perth, Ont. Aug. 1, 1874, and was educated at the Collegiate Institute there. He began his governmental work as a clerk in the Post Office Department in 1895, and in 1900, became a member of the staff transferred to the Railway Department, in which he was advanced to the position of deputy Minister of the Department of Railways and Canals in 1912, and appointed director of the Canadian National Railways in 1922. He was a member of the 43d Regiment in Ottawa from 1897 to 1899, financing the cause of major J. J. Duggan, who was in England and France on special duty for the Canadian Government.

Mr. Sir James Scottish banker and yachtman, died in K... .., Dec 17, 1929. He was director of the Bank and of the Midland Bank, and vice lieutenant and deputy lieutenant of the County of the City of Glasgow. Sir James at one time contested the America Cup with his yacht, *Thistle*.

Bennett, Robert Augustus, London editor and author, died Aug. 26, 1929. He was born in London, May 18, 1855, and educated at Oxford. From 1884 to 1891, he was on the staffs of the *Times* and the *Star*. After 1900 he was editor of *Truth*. He published with R. M. Freeman *A Diary of the Great War* by Samuel Pepys, Junr., Esquire (1916), *A Second Diary of the Great War* (1917), and *A Last Diary of the Great War* (1919).

Benjamin, The Rev. Dr. Franklin Thomas, American Methodist Protestant clergyman, died in Baltimore, Md., Apr. 6, 1929. Born in Queen Anne County, Md., Aug. 22, 1863, he was graduated from Western Maryland College in 1884, receiving the A. M. degree in 1886, and the B. D. degree from Western Maryland Theological Seminary in the same year. Ordained into the Methodist Protestant ministry in 1888 he served as pastor at Washington, 1886-88, Wilmington, 1889-90, West Baltimore, 1891, Elizabeth, N. J., 1892, Centerville, Md., 1898-1901, Baltimore, 1902-06, Denton, Md., 1906-10, and Baltimore, 1910-1912. He died in 1929. He published "The Methodist Pulpit in 1918," he edited "The Methodist Pulpit" until

his death Dr. Benson was a trustee of Western Maryland College. Kansas City University conferred on him the D. D. degree in 1914.

**Benz, Karl**  
Berger, Victor L.  
Berliner, Emil  
Berry, Rear Admiral Robert Mallory  
Bickerton, Alexander William  
Bigelow, Henry Forbes. American architect, died in Beverly Farms, Mass., Aug. 12, 1929. He was born in Clinton, Mass., May 12, 1867. After receiving his B. S. degree from the Massachusetts Institute of Technology in 1888, he practiced in Boston as a member of the firm of Bigelow & Wadsworth. Mr. Forbes designed the Shawmut National Bank, the Tremont Building, and the Hotel Tunkam in Boston.

**B. J. Charles, First Viscount of Messey**  
B. J. Charles, First Viscount of Messey, died suddenly in New York, Feb. 1, 1929. Born in Huntington, N. J., Sept. 5, 1875, he attended a business college and worked at Burlington in the carriage manufacturing business, 1893-13. A personal friend of Woodrow Wilson's, he contributed to his political career, serving as a military aide, 1913-13. After Wilson became President, he appointed Colonel Birch Minister to Portugal, Sept. 10, 1913, a position which he held for a number of years. On his return to the United States, he became active in several movements to increase the number of Spanish speaking countries and the number of Spanish speaking people in the United States while in the New Jersey National Guard. He wrote *A Giant Among Nations* (1926).

**Birkhead, The Rev. Dr. Hugh** An American Protestant Episcopal clergyman, died at his birthplace, Newport, R. I., July 9, 1929. Born Sept. 7, 1876, he was graduated from Columbia University in 1899, and from the Episcopal Theological School, Cambridge, Mass., in 1902. Ordained deacon in the latter year, he became priest in 1901. After being assistant at St. George's Church, New York, 1902-06, and rector, 1906-12, he went to Emmanuel Church, Baltimore, Md., where he remained until his death. Dr. Birkhead went to Europe in June, 1917, as special investigation for the American Red Cross remaining in England to speak, under the auspices of the Foreign Office, on the American view of the World War. On his return to the United States, he spoke throughout the country in behalf of the Red Cross and the Liberty Loan campaigns, and for the committee on public information. He received the M. A. degree from Columbia in 1906 and the D. D. degree from his theological school in 1910.

**Birge, Cyrus Albert** Canadian financier and manufacturer, died Dec. 14, 1929, in Hamilton, Ontario. He was born in Oakville, Ontario, Nov. 7, 1847, and was educated at the public schools there with one year's study at the Victoria School of Medicine. He started in business for himself as a contractor in 1870. During 1872-82 he was an accountant in the engineering department of the Great Western Railway, after which he became manager of the Canada Screw Company of Dundas. He reorganized this concern and moved it to Hamilton. In 1908 he acquired the entire capital stock of the American Screw Company of Providence, R. I., forming a new company of which he was made president. Mr. Birge was also president of the Sovereign Fire Assurance Company of Canada and of the Mercantile Trust Company.

**Birkbeck, Maj. Gen. Sir William** English army officer, died May 16, 1929, at Dinard, France. Born in Seattle, York, on Apr. 8, 1861, he entered the British Army in 1883. He was captured in 1890 and lieutenant colonel in 1900. His foreign service included appointments to Afghanistan, China, and South Africa. He received many honors in the course of his career—Knight Commander of the Bath, Commander of St. Michael and St. George, and the Order of the Rising Sun. In 1912 he was made director of remounts at British Army Horse Captivity in 1909, and lieutenant colonel during the World War and from which he was retired with pay in 1920.

**Blakesley, Thomas Holmes**  
Blach, Maurice. Leader of the Democratic Party in the New York State Assembly died Dec. 5, 1929, in New York City, at the age of 79. He was born in New York City and was educated at the College of the City of New York and the New York Law School. On leaving law school, he formed a law partnership with John A. Muller. He became a member of the New York Assembly from the 16th district of New York County in 1913, and after 1923 he was also minority leader.

**Bolon, Rev. Dr. Paul** Revolutionary leader in Haiti died in Paris, France, Dec. 19, 1929, at the age of 56. In 1914 he led a revolt against the President of Haiti and became himself provisional president, but in 1918 he resigned his insecure position. He was an opponent of American intervention in the affairs of Haiti.  
Bode, Wilhelm von,

Bolton, Benjamin Monde

Bonin, Edward Austin  
Booth, General (William) Bramwell  
Booth Tucker, Frederick St. George de Launoy  
Boucher, Maurice Victor A French writer, died in 1929. He was born in Paris, Nov. 16, 1855, and was educated at the College Sainte-Barbe. Bourdelle, Dion

Bourdelle, Emile Antoine

Bowen, Robert Hall. American college professor, died at North Dartmouth, N. H., Aug. 19, 1929. He was born at Medina, N. Y., May 24, 1892, and was educated at Colby College and Columbia University, receiving the Ph. D. degree from the latter in 1920. After 1920 he was in the zoology department of Columbia, becoming a professor in 1928.

**Bowley, Sir Anthony** Alfred A British surgeon, died Apr. 7, 1929. He was born May 10, 1855, and was educated at Durham School and at St. Bartholomew's Hospital. During 1920-23 he was president of the Royal College of Surgeons. At the time of his death he was Surgeon in Ordinary to the King of England, and consulting surgeon at St. Bartholomew's Hospital and to the Foundling Hospital. He was in South Africa in 1900 in charge of Portland Hospital, and in the World War he was advisory consulting surgeon to the British soldiers in France with the rank of major general. He was knighted in 1911, and in 1921 was created a baronet.

**Boydall, Frank E.** English astronomer, died Oct. 10, 1929, in Cambridge, England, at the age of 61. He was graduated from the Royal College of Science, London, and in 1888 became connected with the solar Physics Committee under Sir Norman Lockyer. His work consisted in the observation of stellar spectra and their reduction to determine chemical origin and variation during sunspot cycle. Later with improved instruments, he began to take part in night observations making photographs. He began the tabulation and correlation of the celestial and terrestrial spectra, publishing papers giving the results of his investigations. In 1913 the observatory was moved to the University of Cambridge, where Mr. Boydall continued his work.

**Boyd, James** An American horticulturist, died in Havertown, Pa., Dec. 2, 1929. He was born in Boston, Mass., Feb. 1, 1878. In 1901 he organized the Electric House & Rubber Company of Wilmington, Del., of which he was president until 1915, and from 1908 to 1917, he was president of James Boyd & Brother, Inc. of Philadelphia. Mr. Boyd was an enthusiastic horticulturist, being director of a number of horticultural societies and the recipient of two gold medal awards for the advancement of horticulture.

**Boydell, William** Canadian American lawyer, died in Chicago, Ill., May 30, 1929. Born in Sheffield, Ill., Apr. 6, 1864, he was graduated from Harvard in 1886, and from its law school in 1889. Immediately after his admission to the bar, Mr. Boydell commenced practice in Chicago, which he continued until his death. He became president of the Chicago Bar Association in 1926, and a director of the Central Trust Company of Illinois, the Sullivan Machinery Company, and the Liquid Carbonic Company. The League of Red Cross Societies appointed him Commissioner General to Poland in 1920, and he was decorated with the Order of Polonia Restituta. He was an overseer of Harvard, 1911-17, 1919-23, and from 1923 until his death, he was also president of the Harvard Alumni in 1922.

**Brabazon, Reginald Twelfth Earl of Meath** English diplomat and philanthropist died in London, Oct. 11, 1929. He was born on July 31, 1841, and was educated at Eton and in Germany. In 1863 he became a clerk in the Foreign Office in 1865, entered the Diplomatic Service, going to Berlin in 1870. He was married to "The Hon. Mrs. Brabazon" in 1871. He returned to England and devoted his time to philanthropic work. He was active in numerous social and civic enterprises, among them the Hospital Saturday Fund, of which he was first honorable secretary in 1895, the Dublin Homeless Movement, the Young Men's Friendly Society, and the Metropolitan Public Gardens Association. His name was popularly associated with the Empire Day Movement. Chiefly through his initiative, Queen Victoria's birth day, May 24, came to be celebrated as Empire Day. He was at one time president of the Christian Union for Social Service, and he was first president of the British Institute of Social Service and the Dublin Philanthropic Reform Association. He was elected a senator of the Parliament of Southern Ireland by the members of the Irish Privy Council. In 1920 he was created a Knight of the Grand Cross Order of the British Empire and in

1923 a Knight of the Grand Cross of the Royal Victorian Order. He was the author of a number of books on social subjects and of two volumes of reminiscences, *Memories of the Nineteenth Century* (1928) and *Memories of the Twentieth Century* (1924). In 1928 he edited *Diaries of Mary, Countess of Meath*.

Bradfield, Wesley American archaeologist died in Santa Fe, N. Mex., November 10, 1914. He was born in Waite, Me., Oct. 25, 1846, and was educated at Alma College and the University of Michigan. From 1917 to 1927, he was curator in archaeology at the New Mexico Museum and the School of American Research. He was in charge of archaeological excavations in New Mexico and Guatemala. In 1927 he became director of the San Diego Museum.

Bradtke, Oscar Edwin American agriculturist, died Mar. 25, 1929, in Xenia, Ohio. He was born Jan. 21, 1862, near Cedarville, Ohio. In 1887 he became a breeder of Aberdeen Angus cattle. He was an organizer of the International Live Stock Exposition in Chicago in 1890, and served as a director. He was a member of the White House Industrial Conference called by President Wilson in October, 1919, and a member of President Coolidge's Agricultural Conference Commission in 1924. From 1919 to 1922, he was president of the Ohio Farm Bureau Federation and during 1922-23 of the American Farm Bureau Federation.

Bradley, William Lincoln American foreign service official, died Sept. 17, 1929, in New York City. He was born in Galena, Ill., June 4, 1848, and was graduated from Yale University in 1872. He was American consul in Nice, France, 1889-93, in Tunstall, France, 1897-1903, and in Manchester, England, 1903-07, where he was consul general, 1905-06, and consul again, 1906-07. He was in Montreal, Canada, from 1907 to 1917.

Breck, Edward

Brent, The Rt. Rev. Charles Henry

Briett, Robert George Canadian physician and statesman, died Sept. 6, 1929, in Calgary, Alberta. He was born Nov. 16, 1851, in Stratford, Ont., and studied medicine at Toronto University and New York Philadelphia, and Vienna. He practiced medicine at Akron, Ontario, from 1874 to 1879, and was one of the founders of the Manitoba Medical College, becoming professor of materia medica and therapeutics there, and later emeritus professor of obstetrics and gynecology. In 1886 he established the Balfour Hospital, of which he was medical director, and in 1909 founded the Briett Hospital at Banff, of which he was senior surgeon. He entered politics as a member of the Legislative Assembly of the Northwest Territories, 1888-91, and was president of the Executive Council, 1899 to 1901. He was appointed Lieutenant-Governor of Alberta in 1915, and reappointed in 1920. He was honorary colonel of the 82d Overseas Battalion.

Breuer, Ilana

Bridgeman, Admiral Sir Francis (Charles Bridge man)

Bridgman, Howard Allen American editor and educator, died Mar. 17, 1929. He was born in Northampton, Mass., Aug. 20, 1860. He received the A. B. degree from Amherst in 1883, the B. D. degree from Yale Divinity School in 1887, and the D. D. degree from Oberlin in 1908. He was editor of *The Nation* from 1911 to 1921, and after 1925 was head master of the Bridgman School in Shirley Center, Mass.

Brodsky, Adolf

Brooks, Howard K. American business executive, died Sept. 15, 1929, in New York City, at the age of 75. In 1882 he entered the American Express Company as a clerk in the financial department of the Milwaukee office. He was later transferred to Chicago to assume charge of the money order department for the Western division, and in 1905 he was made fiscal agent of the Western financial department of the company with headquarters in Chicago. In 1913 he came to New York City as vice president of the company. Mr. Brooks was an authority on foreign exchange and the author of a book on the subject which is used as a college text. He was active in developing the sale of travelers' checks when they were first produced by the American Express Company in 1891, and in establishing and popularizing the company's travel, foreign trade departments.

Broughton, Urban Hanlon English engineer and capitalist, died in London, Jan. 30, 1929. Born in Worcester, Apr. 12, 1857, he was graduated from the University of London in 1875, and for the next three years studied with Low & Thomas, civil and mining engineers, he also studied for a time at the Institution of Civil Engineers, winning the Miller Prize in 1877. Employed on railway design and engineering work in England and Ireland, 1878-87, he was made an associate member of the institute in 1883. Moving to the United States in 1887, he engaged in various engineering and commercial projects. He was president and director of the Virginian Railway Company, vice president, director, and

general manager of one of the largest copper-distributing firms in the world, the United Metals Sales Company, president and director of the Utah Consolidated Mining Company and of the Shoshone Company, and an officer of other mining and financial corporations. Mr. Broughton also served as British juror at the World's Columbian Exposition, 1892. Retiring from active business, but retaining his directorship in several American firms, he resided in England in 1913, associating himself with the Conservative party, he represented Preston in Parliament, 1915-18, subsequently founding the Bonar Law College and donating Ashbridge Park to his party.

Brown, Charles American cancer specialist, died Sept. 27, 1929, in New York City, at the age of 66. He was graduated from the New York Homoeopathic Hospital in 1895, and began soon after to specialize in the treatment of malignant diseases. He wrote many papers on the subject and discovered a method of X-ray treatment. He gave more than \$25,000 worth of radium to be used by people unable to afford the treatments. Dr. Brown was among the first physicians of New York to use radium in the treatment of cancer and other malignant diseases, and was the founder of the Brooklyn Cancer Institute. He was radiologist for Carson Peck Memorial, Wyckoff Heights, Jamaica, and Cumberlane.

Brown, Horace Manchester American surgeon, died in Milwaukee, Wis., Jan. 18, 1929. Born in New Bedford, Mass., Oct. 12, 1857, he was graduated from the University Medical College of New York University in 1880, and continued his medical studies in London, Paris, Munich, Brussels, and Berlin. Having first practiced in Milwaukee in the years of his graduation, he arrived on his work in that city until his death. He acted as surgeon for the Chicago, Milwaukee & St. Paul Railway for 41 years. He owned the Lakeside Hospital, which he built, for 28 years, and he became surgeon at the Columbus Hospital in 1915, when his own institution closed. During the World War, he was chief of the surgical section of Advisory Board Number 2, and having aided in the organization of the Volunteer Medical Service Corps, he served as its chairman. After the war, he spent the greater part of his time in research work. Besides belonging to numerous medical associations, Dr. Brown was a director of the Physicians' Radium Association, and president of the Tri State Medical Society. He was one of the editors of the *Journal of the American Medical Association*, and wrote the English version of the *Songs of Hilite* (1901), his various translations include *De Venena of Albion*, and *Anathoma of Modius*.

Brown, William Linton American iron manufacturer, died Nov. 1, 1929, in Pasadena, Calif. He was born in St. Joseph, Mich., Aug. 23, 1842, and was educated in Garden City Academy, Chicago. In 1857 he became clerk in a board of trade commission house in Chicago. After serving in the Civil War with the Chicago Mercantile Battery Light Artillery from 1862 to 1865, he returned to Chicago as bookkeeper in a firm, which in 1883 was incorporated, with Mr. Brown as a partner, under the name of Lickens, Brown & Co. The firm was organized and became president of the Chicago Shipbuilding Company and in 1899, of the American Shipbuilding Company.

Bruce, John English philanthropist, died in London, Feb. 20, 1929. He was born Henry Campbell Bruce, son of the first Baron of Abergartney, June 19, 1851. After attending Rugby, he prepared for the diplomatic service at Berlin, but returned to the country in 1880, where he interested himself in sports and in various civic activities. On succeeding to the title in 1895, he established his residence at Duffryn, Glamorganshire. Lord Abergartney was at one time president of the University of Wales and at the time of his death was president of the National Museum of Wales. His second son, Clarence Napier Bruce, succeeded to the title.

Brunner, Sir John English political leader and capitalist, died Jan. 16, 1929, in London. He was born in 1846 and was educated at Cheltenham, the Polytechnic School of Zurich, and Cambridge. He was a member of the British Parliament from Lancashire, 1906-10, from Cheshire, 1910-18, and from Southport, 1921-24. He was chairman of the Madeley Collieries, Ltd., and Park Hall Colliery, Ltd., and director of the Shirebrook Colliery, Ltd., and of the Oxford and Ship to Continent Co., Ltd.

Brush, Charles Francis

Buchner, Edward Franklin American psychologist, died in Munich, Germany, Aug. 22, 1929. Born in Paxton, Ill., Sept. 3, 1868. In 1893 he received the Ph.D. degree from Yale University. He was successively instructor, lecturer, and professor of philosophy psychology at Yale and other universities. After 1908 was professor of education at The Johns Hopkins University, where in 1909 he was made director of the college for teachers. He was a member of the Psychological Bulletin (1900-1929) and the Journal of Educational Psychology (1910-

20), and was editor after 1917, of *The Johns Hopkins University Studies in Education*. He wrote *A Study of Kant's Psychology, with Reference to the Critical Philosophy* (1897).

Buick, David D. American automobile manufacturer, died in poverty, Mar. 6, 1929, in Detroit, Mich. In 1901 he sold a plumbing factory in order to make automobiles. He not only spent all his money but ran into debt before he produced the Buick car, which was put on the market and popularized by others. At the time of his death, Mr. Buick was a clerk in a trade school in Detroit.

Bullard, Arthur (Albert Edwards)

Bulow, Bernhard, Prince von

Burgess, William American manufacturer and pottery expert, died in Morrisville, Pa., Nov. 20, 1929. He was born Jan. 18, 1857, in Brooklyn, N. Y., and was graduated at Princeton University in 1877, studying later at the College of Physicians and Surgeons in New York. In 1877 he was assistant professor of chemistry at Princeton and in 1879-79 was assistant demonstrator in anatomy at the College of Physicians and Surgeons. He was married to William Burgess & Co., importers of pottery. He was president of the International Pottery Company, Trenton, N. J., from 1879 to 1904, organizer (1902) and president of the Hudson Porcelain Company American consul at Stoke on Trent, England, (1890-93). He was representative of the pottery industry of the United States and customs administrative matters before the Board of General Appraisers after 1884. In 1921 he was appointed by President Harding to the U. S. Tariff Commission, from which he resigned in 1925, though remaining acting adviser on customs and tariff matters. During the World War, he was department head of the War Industries Board. Just prior to his fatal illness, he was before a Senate Committee investigating lobbying and was accused of perjury by Senator Cawaway of Arkansas. He appeared before the committee in his own defense.

Burney, Admiral of the Fleet Sir Cecil British naval officer, died June 2, 1929, in Hampshire, England. He was born May 15, 1858, the son of Captain Charles Burney and was educated at the Royal Naval Academy in (report) his first experience in warfare was in Egypt, where he was lieutenant of Oryford in 1882, and in 1884 he was in the Eastern Sudan. He was also a yachtsman, entering his yacht *Yandie* in 1914 against Sir Thomas Lipton's *Namurco* for the America Cup. In 1914-15 he investigated the needs of the people of Belgium. In 1917 he for the United States entered the World War, he joined the British Navy and was put in command of the steam yacht *Warrior*, which he had given to the British Government.

Cockburn, Sir John Alexander English author and former Prime Minister of South Australia, died in London, Nov. 20, 1929. He was born in Corsbie, N. B., Canada, Aug. 27, 1870, and was educated at King's College in London. Moving to South Australia in 1875, he held numerous offices there. He was mayor of James town, a member of the House of Assembly for Burra in 1884 and for Mount Barker in 1887, Minister of Education during 1885-87, Premier and Chief Secretary in 1889-90, Chief Secretary in 1892, and Minister of Education and various international and European congresses. He was the International Commercial Congress in 1899, the Colonial Congress, Paris, 1900, the Festival of the Postal Union, Bern, in 1900, and international congresses of Workmen's Insurance, Dusseldorf (1902), Vienna (1905), Rome (1908), The Hague (1910). In 1900 he was knighted. He wrote *Australian Federation* (1901), *Birds of Empire*, *Vandication of Verulam Symbolism of Architecture*.

Cole, Maj Gen Eli Kelley American engineer, and manufacturer died in Washington, D. C., Apr. 1, 1929. Born in Baltimore, Md., Mar. 28, 1865, he was graduated from the engineering school of Lehigh University in 1888. He worked in various positions with the Lehigh Valley Railroad from that time until 1897, when he was made purchasing agent, and assistant to the president of the Bethlehem Steel Company. He returned to the Lehigh Valley Railroad in 1898, as general purchasing agent. While secretary-treasurer for the Singer Sewing Machine Company, 1901-10, he had charge of the construction of the Singer Tower, which was then one of the tallest skyscrapers in America. On leaving the Singer Company, Mr. Coleman served as president of the Saurer Motor Company, 1910, and of the International Motor Company, 1911-13. Being vice president of the International Steam Pump Company when it failed, he acted as receiver, 1914-16. When the firm was organized under the name of the Worthington Pump & Machinery Corporation, 1916, Mr. Coleman

again became vice president and handled large government contracts during the World War. He was made president in 1918. Mr. Coleman undertook the presidency and active direction of the Mount Hope Bridge Company in 1927, and was supervising the construction of the bridge at the time of his death. He was also president of the Sandusky Bay Bridge Company, the Worthington Company, Inc., and Henry E. Worthington, and a director of The Foundation Company, Worthington Simpson, Ltd., and Anderson, Meyer & Company. He belonged to the American Society of Mechanical Engineers and the American-Russian Chamber of Commerce.

Concha, José Vicente A statesman of the Republic of Colombia, died in Rome, Italy, Dec. 8, 1929. He was born Apr. 21, 1867, in Bogotá, Colombia, and was graduated in law and political science from the National University there. Later he was professor of law at the National University. During his long political career in Colombia, he held judicial, executive, legislative, and diplomatic positions. He was Attorney-General, Minister of War, Minister of Government, and Minister of Foreign Relations for Colombia. In 1902 he went as Minister to the United States and later to France. From 1914 to 1918, he was President of the Republic of Colombia, and from 1919 to the time of his death, Ambassador to the Vatican. He founded a newspaper, *El Día*, and his legal treatises are used as textbooks in Colombia.

Cone, Clarelle American pathologist and art collector, died in Lausanne, Switzerland, Sept. 20, 1929. She was born in Tennessee and studied at the Women's Medical College in Baltimore, Md., and at the University of Pennsylvania. She became a resident physician in a Philadelphia hospital, but returned to Baltimore to be professor of pathology at the Women's Medical College. She did research work in Baltimore, and also in Germany and at the Pasteur Institute in Paris. Dr. Cone was a collector of modern French paintings, a feminist leader, and a member of the Equal Suffrage League.

Conner, William James

Cooper, Henry F.

Cornell, George Bird-sall American civil and mechanical engineer, died Mar. 14, 1929, in New York City at the age of 74. He was graduated from the Columbia College School of Mines in 1877 and became successively assistant engineer on the Brooklyn Elevated Railway, assistant engineer with the New York, Chicago & St. Louis Railway, and lecturing engineer for the Rochester & Pittsburgh Railway. He was also in the bridge department of the West Shore & Buffalo Railway. Returning to the Brooklyn Elevated Railway, he became chief engineer. Under his direction, the first elevated trains to cross Brooklyn Bridge were installed during 1897-98. He was an adviser to the New York Edison Electric Company, and was a consultant for various utility corporations. In 1927 he retired.

Cott John American theatrical producer and manager, died Nov. 18, 1929, in Larchmont, N. Y., at the age of 69. At 17 he and another young man made a vaudeville tour headed at Cort and Murray comedians in the West. Mr. Cott built the first of the vaudeville circuits. Selling this circuit, he operated the Imperial Music Hall in Chicago. Later he became head of the Northwestern Theatrical Circuit, at one time controlling 150 theatres. In 1905 he came to New York and began the production of musical plays, which included *The Princess Pat*, *Pio-Flo*, *Shogun Along*, and *Chena Ron*. The Cort Theatre was opened in New York in 1912 with Laurette Taylor in *Pey O My Heart*. He was also connected as owner or operator with the Park Theatre (later the Cosmopolitan), the Frazee (later Wallack's), the Opera House, the Standard, and Daly's.

Courtieline, Georges (Georges Moinaux) French humorist and author, died in Paris, June 25, 1929. He was born in Tours, France, June 25, 1860, the son of Jules Moinaux, a humorist, and was educated at the College of Moulins. As a young man, he went to Paris, where he was for a time a waiter in a restaurant. He then entered military service, which he found irksome. A weekly newspaper, *Paris Moderne*, founded by him in 1881, existed two years. After several years in newspaper work, he began writing the humorous sketches, novels, and plays, for which he was famous. Among his works are *Les gâtées de l'escadron* (1886), *Le Train de 8 h 42* (1888), *Measures les ronds de cuir* (1893), *Boulevard* (1893), *La nuit chez soi* (1893), *La congrégation d'Alcette* (1905). He was a Communist of the Legion of Honor, and in 1927 was elected to the Académie Goncourt.

Cowan, John Francis An American surgeon and professor, died May 17, 1929, in Los Angeles, Calif. He was born in Lansing, Mich., Nov. 30, 1879, and was graduated in 1902 from Stanford University. He received the M.D. degree from Cornell in 1910. He was acting instructor in physiology at Stanford, and in 1906-09 at the medical college of Cornell University. He was an interne at the New York Hospital (1910-12)

and resident surgeon (1912-18). Returning to Stanford, he was promoted from instructor to professor of surgery. He was also a surgeon at the Lane Hospital in San Francisco. He was lieutenant-colonel of Infantry with the U. S. Naval Reserves. He wrote many articles on surgery for journals of the profession and, with Leonard A. Ely, *Bone and Joint Diseases* (1916).

Cowin, Col. William Benton American army officer, died in New Orleans, La., Oct. 4, 1929. He was born in Ohio, Jan. 27, 1874, and was appointed from Nebraska. He was a veteran of the Philippine Insurrection, and was with the American forces sent to the relief of Peking during the Boxer Rebellion, and the Pershing Expeditionary Force in Mexico in 1916. In 1917 he was lieutenant-colonel of Infantry in the National Army, and in the last year of the World War, 1918, became colonel of infantry. He was assigned to the Quartermaster Corps in 1919-20, and again in 1923. For two years before his death, he was commanding officer of the New Orleans Supply Base. Colonel Cowin was cited in orders of the War Department of the American Expeditionary Force.

Cowles, Alfred Hutchinson American engineer, died in Newarun, N. J., Aug. 13, 1929. He was born in Cleveland, Ohio, Dec. 8, 1858, and educated at Ohio State and Cornell universities. With his brother, Eugene H., he was a pioneer in electric smelting, being the first to reduce silica lime and alumina directly in the electric furnace, thus producing aluminum cheaply. In order to develop this process, Cowles and his brother, in 1885, organized the Electric Smelting & Aluminum Co., of which he was president after 1895. He was awarded the Pilott Crosson and John Scott Legacy medals by the Franklin Institute in 1886 and the gold medal of the Paris Exposition in 1889.

Creelman, George Christie Canadian agriculturist, died Apr. 18, 1929, in Beamsville, Ontario. He was born in Collingwood, Ont., May 9, 1869, and was educated at the Collingwood Collegiate Institute, the Ontario Agricultural College at Guelph, and the University of Toronto from which he was graduated in 1888. He later studied at Cornell University, the University of Wisconsin, and the Michigan Agricultural College. In 1889 he became assistant professor and in 1893 professor of biology at the Mississippi Agricultural College. From 1904 to 1920 he was president of the Ontario Agricultural College in Guelph. He was for a later part of that time also Commissioner of Agriculture in Ontario. He became agent general for Ontario in London in 1920, but returned to Canada after two years because of ill health. After serving for a short time as head of the Canadian Colonization Association and of the Soldiers' Settlement Board, he retired in 1922.

Crittenden, Frances N. American Young Women's Christian Association executive, died Sept. 15, 1929, in New York City. She was born in Clinton, Mich., in 1875. She began her work with the Y. W. C. A. in 1907, as an educational secretary in Omaha, Neb., and became general secretary of the Y. W. C. A. in Minneapolis, Minn., and then head of city secretaries for the Central States, with headquarters in Chicago. In 1922 she went to New York City to assist in organizing the Y. W. C. A. National Retirement Fund, of which she became executive secretary in 1925.

Cross, William Michael, American naval officer, died in San Diego, Calif., Apr. 4, 1929. Born in Green castle, Ind. Feb. 8, 1867, he attended DePauw University, 1882-84, and was graduated from the United States Naval Academy in 1887. He served on the *Wheeling* during the Spanish American War, 1898, and on Mar. 3, 1899, was commissioned lieutenant. Rising through the successive grades, he was made commander, Oct. 15, 1909, and the following year was appointed Governor of American Samoa and commander of the naval station there. Returning to the United States in 1913, he was assigned to the Navy Department at Washington, and later in the year was made captain of the Navy Yard, Mare Island Commanded captain July 1, 1914, he commanded the *USS Oregon*, 1915-16, and the *North Dakota*, 1916. Toward the close of the World War, Captain Cross was placed in charge of the Naval Training Station, Hampton Roads, Va., and on Dec. 20, 1918, was given command of the naval base at Cavite, P. I. He retired Feb. 8, 1923. Captain Cross was awarded the Philippine Campaign Medal, the Spanish and World War medals, and the Navy Cross.

Cross The Rev. Dr. George American Baptist clergyman and educator, died in Rochester, N. Y., Jan. 19, 1929. Born in Bowdoin, Ont., Canada, Sept. 21, 1862, he attended Woodstock College, 1883-85. Ordained into the Baptist ministry in 1888, he served as pastor in Ontario, 1887-89, Calgary, Alta., 1889-92, Carleton Place, Ont., 1894-97, and Lake Ontario, 1898-1901. He was then appointed professor of history at McMaster University and in 1909 transferred to the Newton Theological Institution, where he remained until assigned to a similar position at the Rochester Theological Seminary in 1912, teaching in that capacity

until his death Dr. Cross also lectured at the summer sessions of the University of Chicago, and in 1918 was the Nathaniel W. Taylor lecturer at Yale. He received the A.B. degree from the University of Toronto in 1888 and the B.Th. degree from McMaster University in 1891, the A.M. degree in 1895, and the D.D. degree in 1907, and the Ph.D. degree from the University of Chicago in 1900. Besides contributing to magazines and encyclopedias, Dr. Cross wrote *The Theology of Schleiermacher*, 1911; *What is Christianity?* (1918), *Creative Christianity* (1922), and *Christian Salvation* (1925).

Csencsics, Count A. Hungarian royalist, died Feb. 22, 1929, in Budapest. He was a leader in the movement to restore the throne to Archduke Otto, the pretender.

Culin, (Robert) Stewart

Curtis, Fayette N. An American railroad official, died in Boston, Mass., Feb. 15, 1929. Born in Oswego, N. Y., Dec. 16, 1841; he at first worked with the Albany & Massachusetts Railroad Co. in 1860, and later with the New York & Albany River Road Co. Appointed chief engineer of the New York, New Haven & Hartford Railroad Co., in 1886, he became vice president in 1900. He resigned in 1907 to become president of the Old Colony Railroad Company, a post which he held until his death. Mr. Curtis also served as chairman of the board of trustees of the Boston Terminal Company, and as president of the Union Freight Railroad Company.

Cutts, Ralph Hamilton

Cuzon, Richard George Penn, Earl of Howe. An English member of Parliament, died in Mayfair, Jan. 10, 1929. Born Apr. 28, 1861, he attended Christ Church, Oxford. As a Conservative, he represented the Southern Division of Buckinghamshire in Parliament, 1885-1900, being also treasurer of Her Majesty's Household 1896-1900. He served as Lord-in-Waiting to Queen Victoria, 1900-01, and to King Albert, 1901-03, and was Lord Chamberlain to Queen Alexandra from 1901 until his death in 1925. Earl Howe was a member of the Royal Commission for the St. Louis Exposition 1904. In 1914-15, he was honorary treasurer of the Allied Forces. He received numerous decorations, including the Grand Cross of the Royal Orders of the Savior, Greece, the White Eagle of Poland, the Dannebrog of Denmark, the St. Olaf of Norway, the Polar Star of Sweden, and the Charles Third of Spain, as well as the Order of the Red Eagle of Prussia, and became Grand Officer of the French Legion of Honor and of the Royal Victorian Chain, 1925. Earl Howe was succeeded by his son, Viscount Francis Richard Henry Penn Cuzon.

Cusack Smith, Sir Barry

Cust, Sir Lionel

Da Costa, Marshal Manoel de Oliveira Gomes. A Portuguese soldier and statesman, and for a short time dictator of Portugal, died Dec. 17, 1929. He was born in Lisbon, Portugal, in 1863. In 1893 he served in India as a staff officer, and in 1898 he directed successful campaigns in East Africa. He commanded the 1st and later the 2d Portuguese Divisions during the World War. He joined with General Carmona and Commandant Cabecadas in a bloodless revolution against Portugal's existing form of parliamentary government in May, 1926, and in the cabinet then formed Marshal da Costa was War Minister. There was disagreement within the triumvirate and he emerged as chief of the State. In July of 1926, General Carmona, who had been dismissed from the Foreign Ministry, caused da Costa's arrest and exile. Da Costa returned in 1927 only to be ordered again to leave the country in 1928. He went to live for a short time in Rome, after which he was allowed once more to go to Portugal.

Dagnan-Bouveret, Pascal Adolphe Jean

Dana, John Colton

Dannat, William T. (urner)

Dubi, Edwin Tyler. American dentist and college professor, died Dec. 11, 1929, in Lansdowne, Pa. He was born in N. Y., in 1857, continuing his studies and was graduated in 1881 from the College of Dental Surgery in 1865. He was professor of operative dentistry in the Pennsylvania College of Dental Surgery during 1876-78, and professor of operative dentistry and dental histology at the University of Pennsylvania from 1878 until 1919, when he became professor emeritus. In 1923 Dr. Dubi retired, after a practice of 60 years.

Davidson, Hon. Sir Charles Peers.

Davis, William Horace. American statistician, died in N. Y., Jan. 8, 1929. Born in Holyoke, Mass., Jan. 21, 1871, he attended Amherst, 1889-90, and was graduated from Harvard in 1895, and from the medical school in 1897, continuing his studies in Vienna in 1899. Before going to Europe, Dr. Davis had been the surgeon house officer at the Massachusetts General Hospital, and on his return in 1900, he practiced in Boston until 1916. Having also supervised the vital statistics of the Boston Health Department, 1908-

16, he was appointed chief statistician for vital statistics of the U. S. Census Bureau on Sept. 16, 1916, a position which he retained until his death.

Dawkins, Sir William Boyd

Deady, Charles. American physician and educator, died May 6, 1929, in New York City. He was born in New York, Aug. 27, 1850, and was educated in a high school there, later studying medicine in 1876-78. He was a visiting physician at the College Dispensary in New York and at the same time assistant surgeon in the New York Ophthalmic Hospital. In 1880 he became a lecturer in the college of the New York Ophthalmic Hospital, and he was professor of ophthalmology and secretary of the faculty for six years, dean for 21 years, and surgeon and director of the hospital. For five years he was also professor of otiology in the Homoeopathic Medical College and Hospital in New York. For 13 years, he edited the *Journal of Ophthalmology, Otolaryngology*. He was the author of numerous articles on the eye and ear.

Dean, Arthur Walsley. English agriculturist and member of Parliament, died in London, Feb. 7, 1929. Born in 1857, he attended Trent College, Derbyshire. He farmed on a large scale, exporting sheep to Argentina. Entering politics as a Conservative, Mr. Dean served on the Kesteven County Council and was elected an alderman. He entered national politics in 1906, and in 1919 defeated the Rt. Hon. Herbert H. Asquith in the Eastern Fife, which the Liberal had represented in Parliament for 32 years. Mr. Dean returned to the House of Commons from the Holland and Boston division of Lincolnshire in 1924, the first Conservative to defeat a member of the Labor party there.

Deems, Edward Mark. American

Deans, Joseph Holton. American lawyer and trade authority, died in Washington, D. C., Feb. 1, 1929. Born in Goshen, Elkhart County, Ind., Apr. 10, 1858, he attended Balliol College, Richmond, Ind., and Northwestern University, Evanston, Ill., and was admitted to the Indiana bar in 1880. Moving to Chicago in 1888, he practiced law and became associated with various municipal and commercial activities. He was made president of the Windermere Company, vice president of the Civic Federation, 1912-14, director of the Chicago Legal Aid Society, 1912-13, and president of the Chicago Association of Commerce, 1914. He became vice president of the U. S. Chamber of Commerce the following year and chairman of the executive committee, 1916-19. In 1920 he was elected president of the organization. Resigning in 1921, he took part in the President's Conference on Unemployment in that year and was appointed by President Harding to the United States section of the Inter-American High Commission of the First Pan American Financial Congress, 1921-22. Besides belonging to numerous legal and commercial societies, Mr. Deans was vice president of the Illinois State Bar Association in 1910, and president of the Chicago Bar Association, 1909-11. He was made a chevalier of the French Legion of Honor.

Delacroix, Leon. Belgian statesman, died suddenly Oct. 15, 1929, at the age of 62, in Baden-Baden, Germany. He was attending a conference for the organization of the Bank for International Settlements. Until 1914 he was a lawyer, but after the World War he was an active participant in public affairs. At the request of King Albert, he formed a national union government composed of the three principal parties of Belgium, and served as premier for two years. After resigning from the premiership, he became Belgian member of the Reparations Commission. In 1920, as a member of the Brussels International Financial Conference, he presented the first concrete plan for the organization of an international clearing house for commercial exchange. For his work with Lloyd George in an effort to adjust the French and English differences over reparations settlement, he was decorated by King George with the Grand Cross of the Order of the Bath.

Delbruck, Hans.

Denby, Edwin

Denison Pender, Sir John. Denison See Pender, Sir John Denison Denison

Denison, William Emmett. American public official and lawyer, died in Chicago, Ill., Sept. 3, 1929. He was born Mar. 13, 1862, in Woburn, Mass., and received his legal training at the Chicago College of Law and Northwestern University. He was first with his father in the leather manufacturing business at Woburn, 1881-

84 In 1890 he began the practice of law in Chicago. He was five times elected alderman of the seventeenth ward of Chicago, 1892-10, was judge of the superior court of Cook Co., Ill., 1910-16, and justice of the Illinois Appellate Court, 1916-23. From 1923 to 1927, he was mayor of Chicago, attracting national attention by his war on crime in that city. After 1927 he was vice president and trust officer of the Bank of America in Chicago.

Devrient (devr'yan), Max. An Austro-German actor, died June 14, 1929, in Chur, Switzerland. He was born in Hanover, Germany, Dec. 12, 1857, was educated at the Royal Conservatory in Berlin, and studied dramatics with Heinrich Oberlander. His first appearance was in the Dresden Hoftheater in 1878 as Bertrand in *The Maid of Orleans*. In 1881 he appeared in the Ring-theater at Vienna. He signed a life contract with the Burgtheater in Vienna, and in 1920 became chief administrator of this theatre. His principal roles were Philipp II, Gessler, Talbot, etc. He was married to Alha Petrichow, and Rockness in Sudemann. He was a son of Winkler.

Dubois, Roy Floyd. An American biographer and educator, died in New York City, Dec. 3, 1929. He was born Mar. 12, 1887, in Portland, N. Y., and was graduated from Clark College in 1912, receiving the Ph.D. degree from Columbia University in 1921. In 1916 he became an instructor in English at Columbia University, and after 1925 taught extension courses there and was assistant professor of English at Hunter College. His last illness was realistic in treatment; see *Alison W. Tour* (1921), *Strenuous Americans* (1923), *John L. Sullivan* (1925), *Mohammed* (1926), *Martin Luther* (1927), *Charles H. H. An American music publisher*, died in New York, May 4, 1929. He was born in Boston in 1845. In 1865 he entered the publishing house of Oliver Ditson, of Boston, founded by his father in 1815, and two years later came to New York as manager of the branch, which after a few years became an independent firm as Charles H. Ditson & Co. On the death of his father in 1888, he became treasurer of the Boston house, and in 1907, president. In 1896 he founded *The American*, a monthly musical journal.

Dodd, Anna Bowman (Mrs. Edward William). An American author, died Jan. 29, 1929, in Paris, France. She was born in 1855. In New York she wrote for the  *Tribune* and the  *Evening Post*, but in the early nineties she moved to Paris. She wrote for the most part on French historical and political subjects. Her first and most famous book was *In and Out of Three Normandy Inns* (1892). She also wrote *Cathedral Days: A Tour in Southern England* (1887), *The American Husband in Paris* (1901), *In the Palaces of the Sultan* (1903), *In and Out of a French Country House* (1910), *Herzog France* (1915), *Up the Seine to the Butte-Fleury* (1920), *Talleyrand: The Training of a Statesman, 1754-1834* (1927). For her services during the World War, she was decorated by the French Government.

Donnelly, Reuben P. An American publisher, died in Chicago, Ill., Feb. 25, 1929. He was born in Brantford, Ont., Canada, in 1864, he attended the University of Chicago, joining the Chicago Stock Exchange, he became president of a financial company, later becoming a partner of Knight Dunneley & Co., members of the New York Stock Exchange. After his brokerage firm failed, June 18, 1905, Mr. Donnelly returned to Chicago and entered the publishing business, in which his father was engaged. He was vice president of R. R. Donnelly & Sons Co., and of the Reuben H. Donnelly Corporation, printers of the telephone Red Book, positions which he held until his death. He was elected president of the Associated Advertising Clubs of America in 1920.

Dorgan, Thomas. An American cartoonist, died May 2, 1929. He spent his boyhood in San Francisco, Calif., and attended the schools there. He began his work in the art department of the San Francisco Bulletin, becoming chief artist in 1897. In 1901 he went to New York as political cartoonist for the New York Journal. He was best known, however, for his sports cartoons, especially for his drawings of jockey Philip.

Draeger, Rear Admiral Franklin Jeremiah. American naval officer, died in Washington, D. C., Jan. 30, 1929. Born in Yates, N. Y., Mar. 4, 1846, he was graduated from the United States Military Academy in 1868. Entering the Navy, he was successively promoted, until he retired with the rank of rear admiral, Dec. 10, 1906. After serving at various posts, he was commissioned inspector of torpedo boats, 1888, and inspector of ordnance, 1882-92. He next did special duty at the Chicago World's Fair, 1893, and in the same year was made commandant of the Boston Navy Yard, serving until 1894. He was executive officer of the Oregon, 1896-97, and he commanded the Navy Yard at Mare Island until 1900. He then commanded the *Culson*, 1900-01, and was in charge of the naval station at Cavite, 1901-03, returning to his former post at Mare Island, 1903-05. His final commission was that of commander of the *Wacon-*

*son*, from which he retired in 1906. Admiral Drake served as technical expert at the Hague Tribunal, 1913-15, and in the operations division of the Navy, 1918-20.

Dubois, Cardinal Louis Ernest. Duffield, Walter Geoffrey. Duke, Benjamin Newton.

Duncan, John. A Scottish architect, died Oct. 18, 1929, at Highland Road, N. J., at the age of 78. He designed the tomb of General Grant on Riverside Drive in New York City. His work includes the Brooklyn Arch at the entrance of Prospect Park in Brooklyn, N. Y., the Trenton Battle Monument at Trenton, N. J., and buildings and civic groups in Havana and Cuba. He was a member of the American Institute of Architects and the Architectural League.

Dundas, Lawrence, First Marquess of Zetland. An English statesman and sportsman, died Mar. 11, 1929, in Yorkshire. He was born Aug. 16, 1844, and was educated at Harrow and Trinity College, Cambridge University. In 1872-73 he was a member of Parliament for Richmond, Yorkshire. He was Lord in Waiting to Queen Victoria, from 1880 and, from 1889 to 1902, he served as Viceroy of Ireland. In 1897-06 he was mayor of Richmond. Lord Zetland succeeded to the earldom of Zetland at the death of his uncle in 1873. He was created in 1892 Marquess of Zetland and Earl of Ronaldshay, Orkney and Shetland. In 1900 he was created a Knight of the Order of the Thistle. He was a retired lieutenant of the Royal Horse Guards, and, after 1894, an honorary colonel of the 1st Western Division of the Royal Artillery. Lord Zetland was well known as a sportsman and race-horse owner.

Dunne, The Rt. Rev. Edmund M. American bishop of the Roman Catholic Church, died Oct. 17, 1929, in Peoria, Ill. He was born in Chicago, Ill., Feb. 2, 1864, and was educated at St. Ignace College in Chicago and at Niagara University. He also studied abroad at the Seminaire de Fieffe and Louvain University in Belgium and the Gregorian University in Rome. In 1887 he was ordained a priest of the Roman Catholic Church. He was first assistant pastor of St. Columbkille's Parish in Chicago, 1890-98. In 1898 he founded the Italian parish, the Guardian Angel in Chicago, and while there, 1898-05, built a church and rectory. He was appointed chancellor of the Chicago archdiocese in 1905, and in 1909 was appointed and consecrated Bishop of Peoria, Ill.

Dunning, Carrie Louisa. An American pianist, died in New York, Sept. 8, 1929. She was born in Mount Morris, N. Y., in 1860, and studied with William Mason in New York and with Leschitzky in Vienna. While teaching her own children, she developed an original system, which gradually spread and became widely known as the Dunning System. At the time of her death, more than 3000 teachers in the United States and Canada had adopted the new method.

Dunville, Laet Col. John. British sportsman, died in London, Jan. 10, 1929. Born in Redburn, County Down, Ireland, in 1866, he was a retired private secretary to the Eighth Duke of Devonshire, 1890-1908, and was a sportsman for years, being master of the Cam bridge 1880-87, and master of the Meath hounds, 1911-13. His hobby was ballooning.

Duquesne, Eugene Joseph Aimand. French architect, died in Paris, in October, 1929, at the age of 61. Before going to the United States as professor of architectural design at Harvard University, Professor Duquesne was in charge of architectural work for the French government. He supervised the reconstruction work at Versailles in 1908. In 1914 he resigned his professorship at Harvard University and returned to France to give his services to the Government. He was awarded the Legion of Honor and the Grand Prix de Rome from the Institute de France in 1907.

Durand, Henry Strong. American physician, died in Paris, France, May 8, 1929, at the age of 67. He was born in Cincinnati, Ohio, and was graduated from Yale University in 1881. While in college he wrote the well-known Yale song, *Bright College Years*. He studied medicine at Yale and Harvard universities, and after serving as interne in the Massachusetts General Hospital, began practice in Rochester, N. Y., in 1884. There until 1898, during which time he invented a surgical bandage machine. With George Eastman, American camera manufacturer, he planned and gave to the city of Rochester the extensive Durand Eastman Park.

Durham, Earl of See Lambton, Frederick William. Durston, John Hurst. An American editor, died in Anacosta, Mont., Nov. 5, 1929. He was born Feb. 19, 1848, in Syracuse, N. Y., and was educated at Yale University, the University of Heidelberg, where he received the Ph.D. degree, and in Paris. He was instructor, then professor in Syracuse University, 1871-78, and edited the *Syracuse Standard* (1880-7), the *Anacosta (Mont.) Standard* (1889-1913), and the *Butte Daily Post* after 1913. He was the dean of newspapermen in

Montana, and the oldest active member of the Associated Press in point of service, his work covering a period of 50 years.

**Dwight, Edward Harris Coy** An American actress, died in New York City, Oct. 3, 1929. She was born in Kansas City, Mo., June 26, 1894, and was educated in the public schools there. She first appeared on the stage at the age of 16 as *Fuck in Midsummer Night's Dream* and she made her New York debut in *Jumping Jupiter* at the New York Theatre in 1911. It was as the creator of Sadie Thompson in the play *Rain* that she was best known.

**Karl John Arthur** An American Baptist clergyman and editor, died May 5, 1929. Born in Bathville, Scotland, May 6, 1866, he went to the United States in 1883, and was graduated from Des Moines College in 1892, later attending Rochester Theological Seminary. He was ordained in the Baptist ministry in 1887, serving as pastor in Guthrie Center, Iowa (1887-89), in Pilot Mound, Iowa (1890-91), in Greece, N. Y. (1892-95), in Waterloo, Iowa (1895-1906), and in Chicago, (1906-11). He became president of Des Moines College in 1911, but returned in 1921 to the active ministry, being pastor in St. Paul, Minn., from 1921 to 1923. In the latter year he became editor of *The Baptist*.

**Eddinger, Rear Admiral Edward Walter** Eddinger, Walter, an American actor, died in Pittsburgh, Pa., Jan. 8, 1929. Born in Albany, N. Y., July 14, 1881, he appeared on the stage at an early age and was the first to play the part of Little Lord Fauntleroy, in 1898. Although he continued in numerous other roles, Mr. Eddinger attended the Columbia and the Hamilton institutes in New York City, and entered Columbia University with the intention of becoming a mining engineer. He returned to the stage, however, and repeated his early success, in such plays as *Officer 666* (1913), *Seven Keys to Baldpate* (1915), *Captain Apple Jack* (1922), and *And so to Bed* (1928).

**Edinburgh, Bishop of See Walpole, The Rt Rev George Henry Somerville**

**Edwards, Albert See Bullard, Arthur** Edmendorf, Dwight Lathrop American lecturer, died in New York City, May 6, 1929. He was born in Brooklyn, N. Y., May 13, 1859, and was educated at Princeton. For 15 years he was a teacher of the deaf and after 1897, was a lecturer. He traveled widely in Africa, Asia, and Europe. Having an interest in photography, he went to Cuba during the Spanish American War, where he took many pictures of Theodore Roosevelt and the Rough Riders. He wrote *Lantern Slides How to Make and Color Them* (1894), *A Cameo Grande* (1912).

**Elverson James** An American newspaper publisher, died Jan. 21, 1929, in Philadelphia, Pa., where he was born in 1869. He attended schools in America, Paris, and Berlin. Returning to the United States, he solicited advertising for his father's paper, the Philadelphia Inquirer. He later worked in various positions, acquiring an intimate knowledge of the details of publishing before he assumed the presidency of the paper at his father's death in 1913. Mr. Elverson encouraged the building of the \$15,000,000 Art Museum in Philadelphia in 1928. Always affiliated with the Republican party, he was particularly influential in his support of Herbert Hoover's presidential campaign. He served as lieutenant colonel on the staffs of Governors Daniel H. Hastings, William A. Stone, Edwin S. Stuart, and John K. Tener.

**Eschkuth, Mathilde** of a German writer of popular books, died Feb. 1, 1929. Her works, chiefly of a religious nature, were published under the pseudonym Mathilde von Eschen. They include *Mädchenheute* (1899), *Auf die Wege nach Erkenntnis* (1902), *Frühling, Blumen spiel für Kinder*, *Parasol und Faust, eine Studie*.

**Eustis, John Edward** An American lawyer, died in New York, June 21, 1929. Born in Jameick, N. Y., Jan. 17, 1847, he served in Company M of the 20th New York Cavalry during the Civil War, 1864-65, after which he attended Wesleyan University, Middletown, Conn., graduating in 1867. Three years later he was graduated from the Dwight Law School, New York, and on being admitted to the bar, commenced a practice in New York which he continued until his death. Mr. Eustis was also secretary director of the Babcock and Wilcox Company, and the Pelham Road Elevating Company, and director of the Manhattan Gas Company. Active in public affairs, he served as school trustee of the twenty-fourth ward of New York (1882-85), school inspector (1895-96, school commissioner (1896-99), park commissioner of Bronx Borough (1902-04), and public service commissioner of the first district of New York (1907-14). Mr. Eustis was trustee of the New York Skin and Cancer Hospital and of Wesleyan University.

**Faber, Leslie** English actor, died in London, Aug. 5, 1929. He was born in Newcastle on Tyne, Aug. 30, 1879, and was educated abroad. He first appeared on the stage in 1898 as a member of the F. R. Benson's Company,

and he made his first London appearance with this company in 1900 at the Lyceum Theatre, where he played the Duke of Wexfordland in *King Henry V*. He went to New York in 1906, appearing at the Hudson Theatre in *The Hypocrites*. Except for the World War period, a part of which he spent as a prisoner, he played alternately in the United States and in England for the remainder of his life.

**Faich, Theodor** A German diplomat and consular official, died in Dresden, Sept. 9, 1929. He was born in Hohenstein Bz., July 18, 1859, and in 1892 entered the German consular service. After serving the Foreign Office in Berlin, he went as acting consul to Madrid. He served as consul in Montevideo, Havana, Rio de Janeiro, Paris, Athens, Barcelona, and in New York. At the time of his retirement in 1924, he was Minister to Venezuela. In 1928 he published *Before America's Entry into the World War*, an attack upon German methods of propaganda during the war.

**Fant, John Clayton** An American college president, died Nov. 8, 1929, in Columbia, Miss. He was born near Union, Miss., Jan. 15, 1870. He was graduated from Emory and Henry College in 1889, studying later at the University of Mississippi and at New York University. He was principal of schools in Newton, Miss. (1889-93), superintendent of schools in Water Valley, Miss. (1895-96), and in Meridian, Miss. (1896-1910). From 1910 to 1920, he was professor of secondary education for Mississippi and at the same time dean of the school of education at the University of Mississippi. In 1920 he became president of the Mississippi State College. With Mrs. Fant, he wrote *Fant's History of Mississippi*.

**Farnam, William Whitman** A former treasurer of Yale University, died June 28, 1929, in New Haven, Conn., where he was born April 6, 1841. He was graduated from Yale in 1866, received the J. D. degree from the University in 1868, and the LL. B. degree from the University in 1871. He served as fellow of the Yale corporation (1875-89) and as treasurer (1888-99). He was a member of the New Haven park commission from 1880 until 1914.

**Farnum, Dustin** Faulkner, John Nicol Faulkner, Charles James An American lawyer and former United States Senator, died Jan. 17, 1929, near Winchester, W. Va., where he was born Sept. 21, 1849. He attended schools in France and Switzerland, and returning to the United States, he studied at the Virginia Military Institute in 1862. Being at the academy during the Civil War, he served with the Cadet Corps, the Battle of New Market, he later became a Cavalry Breckinridge and General Wise in the Confederate Army. Graduated from the University of Virginia in 1868, he was admitted to the bar in the same year, and practiced in Martinsburg until 1880, when he was appointed judge of the thirteenth judicial circuit of West Virginia. Elected to the United States Senate, he took office in 1887, and served until 1899, being active in the successful struggle against the Force Bills, intended to give voice to Southern Negroes. He also participated in the British American Joint High Commission (1898). Besides being a permanent chairman of the Democratic State Commission (1888-92), Senator Faulkner was chairman of the Democratic Congressional Committee in 1894, 1896, and 1898.

**Fauntleroy, Lieut Col John Champion** British sportsman, died in Luton, England, Dec. 4, 1929. He was born May 30, 1872, and was educated at Rossall School and Balliol College, Oxford. He joined the Indian Civil Service in 1892 and at the opening of the World War entered the British Army, where he served as lieutenant colonel and general staff officer of the Second Intelligence Staff in 1917. In 1918 he went to the United States on a war mission and he returned as an attaché to the British Embassy in Washington (1919-20). He became a commissioner for the Asiatic Division, India, in 1920, but retired in 1925 to give all his time to game hunting. His trophies included many rare Asiatic mammals. The American Museum of Natural History contains many of his specimens and, because of the expedition made to India in 1923 by him and Arthur S. Vennay, the Museum has collected one of the most complete exhibits of Asiatic fauna in the world. Colonel Fauntleroy was decorated by the Government of India for his services. He was made aide de camp to the King in 1922.

**Fawcett, Dame Millicent** English leader of the woman's suffrage movement, died in London, May 5, 1929. She was born June 11, 1847, in Aldbourne, Suffolk, England. She was always allied with women's causes, beginning when, as the wife of Henry Fawcett, a Cambridge professor, she aided him in his efforts to extend university education to women. With her sister, she was also associated with the movement to open the medical profession to women. The work for which she is chiefly known, however, is the political enfranchisement of women. She wrote and lectured for the cause and was recognized as one of its most important, if conservative, leaders. In addition to books on political economy and woman suf-

fringe, she wrote several biographies, mostly of women, and an autobiography, *What I Remember* (1934). In 1925 she was elected a Dame of the Order of the British Empire.

Ferran, Jaime A. Spanish bacteriologist, died Nov. 22, 1929, in Barcelona, at the age of 77. For many years he worked to develop a serum against typhoid and tuberculosis. His anti-cholera serum brought him wide

Fine, S. American engineer, died in Buffalo, N. Y., 1929. He was born on a farm near Springfield, N. Y., and remained there until he was 20, part of the time teaching in a rural school. After working as a surveyor for the Erie Railroad, he turned to bridge building. He was a member of the Union Bridge Company, which, before its sale to the American Bridge Company in 1900, constructed the cantilever bridge over the Hudson at Poughkeepsie and the Hawkensbury bridge in Australia. He was connected with the Underground Exploration Corporation, in which he was engaged in the exploration and development of copper mines in Chile.

Finch, John Burchard. American preparatory school headmaster, died July 24, 1929, in Princeton, N. J., at the age of 63. In 1868 he became headmaster of the Princeton Preparatory School and remained there until retirement in 1918. He was the brother of the late Henry Burchard Fine, dean of the department of science, Princeton University.

Finlay, Robert Hannaford, Viscount of Nairn. Finnegun, The Rev. Hugh American scholar, died in Milwaukee, Wis., Nov. 26, 1929. He was for 20 years chaplain of Marquette University and for 13 years, a missionary in Montana and Oregon. He also served as pastor in Detroit, Mich., as science teacher at St. Ignace College (later named Loyola University) in Chicago and as the second president of Creighton University in Omaha, Neb.

Finty, Tom Jr. An American journalist and lawyer, died in Dallas, Tex., Apr. 26, 1929. He was born at Xenia, Ill., Oct. 1, 1867. Commencing work in a general office in 1880, he held various positions. While a court stenographer in 1892, he commenced the study of law and was admitted to the bar in 1894. Subsequently becoming a specialist in oil law, he joined the Galveston (Tex.) Tribune as a reporter in the same year, later becoming city editor. In 1897 he transferred to the A. H. Belo Corporation publishers and served as city editor of the Galveston News until 1909, a political editor of the same paper and of the Dallas News, 1901-13, and from that time until his death, as editor of the Dallas Journal and editorial executive and legal counsel for the corporation. He was made a director of the firm in 1919. Mr. Finty wrote *The Farmer and the Cule* (1908), *The Prudential System of Texas* (1909), *Anti-Trust Legislation in Texas* (1915), *Texas Home-Site Exemption Law* (1918), and an analysis, *Texas Educational Survey* (1921).

Fiske, Innes.

Fitzhugh, William M. An American geologist and mining engineer, died in San Francisco, Calif., May 18, 1929, at the age of 75. He was graduated from the University of California and became soon after city surveyor of San Francisco. As an assistant to the California State engineer he surveyed many roads in the vicinity of Yosemite National Park. He went to Central Asia and Mexico in a search for mineral wealth, but with little success. Going to Wyoming, however, he discovered oil and had an important place in the oil and mining industry there for 40 years. In 1911 he retired because of ill health and returned to San Francisco, where he spent his remaining years collecting works of art.

Flinn, John Joseph. American editor and lecturer, died in Glencoe, Ill., Nov. 27, 1929. Born Dec. 5, 1851, in Clonmel, Ireland, he moved to the United States and after a public school education, began work at 21 as a reporter. In the same year, he became night editor of the St. Louis Globe and was afterward staff correspondent for the *Globe Democrat* in the Missouri Legislature and the Constitutional Convention. He was appointed in 1882 United States Consul in Chemnitz, Saxony, where he served for two years, during which time he contributed a series of humorous letters to the *Chicago Morning News*. He was associate editor of the *Chicago Daily News* for seven years, later becoming managing editor for the *Chicago Mail* and the *Chicago Times*. From 1898 to 1908, he was editorial writer on the *Chicago Inter-Ocean* and, from its founding in 1908 to 1914, editorial writer for the *Christian Science Monitor*. While with the *Monitor*, he began lectures on Christian Science and in 1921 was appointed a member of the Christian Science Board of Lectureship. During 1911-14 he was reader for the First Church of Christ, Scientist, in Winchester, Mass.

Flinn, Frank Putnam.

Ford, Marshall Ferdinand.

Fodor, Stephen A. Hungarian engineer, died Nov. 5, 1929, in Budapest, Hungary, at the age of 73. Mr.

Fodor was a friend of Thomas A. Edison, becoming acquainted through a telephone improvement which Mr. Fodor made. He was made chairman of the Compagnie Continentale Edison and supervised electrical developments in Russia, Belgium, and Holland.

Folwell, William Watts.

Forbush, Edward Howe. An American ornithologist, died in Westport, Mass., Mar. 8, 1929. He was born in Quincy, Mass., Aug. 24, 1858. He was director of the ornithological division of the Massachusetts Department of Agriculture, 1894-1908, he was made State ornithologist in June of the latter year, serving until 1915. Mr. Forbush belonged to several scientific organizations, and was one of the founders of the Massachusetts Audubon Society. He wrote and lectured frequently on ornithology. Mr. Forbush's published works include: *The Gypsy Moth*, with Charles Henry Fernald (1896), *Useful Birds and Their Protection* (1907), *Gamer Birds*, *Wild-Foot and Shore Birds* (1911), *Birds of Massachusetts and Other New England States*, vol. 1, *Water Birds*, *Marsh Birds and Shore Birds* (1925), and *Land Birds*, from *Bob White to Quackles* (1927).

Forepaugh, Charles. American circus owner, died in West Berlin, N. J., July 17, 1929, at the age of 91. With his brother, Adam, Charles Forepaugh owned and operated Forepaugh's American Circus, a popular show in the last quarter of the nineteenth century. They began as horse traders, bringing with them the horses they owned, the brothers, at the end of the Civil War, joined O'Brien's Circus. Later they bought this circus and Terry Malley's twelve cage menagerie, which together formed Forepaugh's American Circus. Charles Forepaugh was a hon. trainer, claiming to be the first man to stick his head into a hon's mouth, a feat which he accomplished in 1871. The brothers retired about 1890 and their circus became Forepaugh & Sells Brothers.

Foster, Dr. An American physician, died Sept. 16, 1929, in Stamford, Conn., at the age of 59. He was graduated from the University of Kansas in 1886 and from the Yale Medical School in 1890. In 1900 he entered the New Haven Hospital as an intern, and the following two years was an intern at the Manhattan Eye and Ear Hospital, where he continued as a member of the staff until a short time before his death. In 1901 he opened an office in Stamford, Conn. Dr. Foster was an eye, ear, throat, and nose specialist, with an office also in New York. A Democrat, he took an active part in the political life of his district. He was twice elected State senator and was a member of the Stamford Board of Public Safety.

Foster, Irving Lyssander. American professor of Romance languages, died in Philadelphia, Pa., June 1, 1929. Born July 6, 1870, in Washington, D. C., he received A. B. and A. M. degrees from Brown University and studied also at the University of Leipzig and the Sorbonne. In 1894 he returned to Brown University as an instructor in French, leaving there to become an instructor in modern languages at Pennsylvania State College, where he became professor of Romance languages in 1905. Professor Foster was the coauthor of several books on the study of French, one of them a war manual, *Practical French* (1917).

Fowski, Ellen Thierneycroft (Mrs. A. L. Felkin).

Francis, William T. United States Minister to Liberia, died July 15, 1929, in Monrovia, Liberia. He was born in St. Paul, Minn., and was graduated from St. Paul College. In 1912 he began the private practice of law and in 1927 he was appointed by President Coolidge Minister and consul general to Liberia. He was the only Negro to hold the position of Minister in the United States Foreign Service.

France, Joao Figueira. A Portuguese statesman, died in Lisbon, Portugal, at the age of 74. A monarchist, he was actively opposed to the Republican party in Portugal. In 1908 when King Carlos and the Crown Prince were assassinated, he was head of the cabinet and virtual dictator. He died shortly after this, and on his return to Lisbon in 1910 was arrested for possession of papers during his lesson as he was granted an amnesty, but did not reenter public life.

Frankel, Harry Crawford.

Fraser, Harry Herbert. American theatrical manager, died in New York City, June 4, 1929. He was born June 23, 1880, in Peoria, Ill., leaving the public schools of Chicago at the age of 15. He went on the road as an advance theatrical agent. He became a producer with the play, *Uncle Jack Perkins*, in 1902. Later he made a fortune in musical comedies, his most successful one being *Vo Vo, Annette* (New York 1924, London, 1925). He managed and built the Cort Theatre in Chicago and the Longacre in New York. Mr. Fraser was also a baseball manager, being owner and president of the Boston American League Baseball Club.

Freemantle, Admiral Hon. Sir Edmund Robert.

Fuchs, Emil.

Galloway, Thomas Walton. American biologist, died in New York City, July 16, 1929. He was born Nov. 2, 1866, in Columbia, Tenn. Following graduation from

Cumberland University in 1887, he became professor of natural history at Blair College. After two intervening years of graduate study at Harvard, he went to Missouri Valley College as professor of biology, 1891-1902, and dean, 1899-02. From 1902 to 1915, he was professor of biology at James Millikin University and, from 1915 to 1919, professor of zoology at Beloit College. In 1919 he became associate director of the department of education of the American Social Hygiene Association. As a professor, he had published textbooks on biology and, as a director of the American Social Hygiene Association, he continued the publication of books on social subjects. These later books include *See Factor in Human Life*, *The Dramatic Instinct in Religious Education*, *Sex and Social Health*, *Parenthood and the Character Education of Children*.

Gamba, Cardinal, Archbishop of Turin. Italian Roman Catholic churchman, died Dec. 26, 1929, in Rome, at the age of 73. In 1901 he was elected Bishop of Biella, and in 1923 became Archbishop of Turin. He was created a cardinal in 1924.

Gamblerale, Luigi. Italian professor and translator, died May 16, 1929, in Agnone, Italy, at the age of 90. He translated the poetical works of Walt Whitman into Italian.

Garber, Daniel A. An American engineer, died in Washington, D. C., Dec. 4, 1929, at the age of 69. After serving an apprenticeship in the building trades, he became a contractor in 1889. In 1904 he was made president of the North Eastern Construction Company of New York, Baltimore, and Winston Salem, N. C. He was the first president of the Associated General Contractors in 1911, and later became general manager. Among the buildings with which his name is associated are the administration, hospital, and entrance buildings on Ellis Island, N. Y., the original group of buildings for the College of the City of New York, and the McComas Street Terminal, the first unit in Baltimore's port development.

Gard, Warren. An American lawyer, died Nov. 1, 1929, in Cincinnati, Ohio. He was born in Hamilton, Ohio, July 2, 1873, and was graduated from the Cincinnati Law School in 1894. The same year he was admitted to the bar and from 1898 to 1903, was prosecuting attorney of Butler County, Ohio. From 1907 to 1915, he was a judge of the court of common pleas in the second judicial district of Ohio. He was a Democratic member of Congress from the third district of Ohio during 1913-21, and during the World War was a member of the House judiciary committee. After 1921 he resumed his law practice in Hamilton.

Gaquet, Francis Aidan, Cardinal.

Gates, Frederick Taylor.

George, Duke of Leuchtenberg. A Russian nobleman, died Aug. 9, 1929, at his estate near Lake Ohern, Bavaria, Germany. He was born in Rome, Dec. 10, 1872. In the World War he was a member of the Russian General Staff, and during the revolution of November, 1917, in Russia, he was a leader in raising a national militia to oppose the Bolsheviks.

Gerardy, Jean.

Gibbs, Louis D. An American jurist, died in Watkins Glen, N. Y., Mar. 1, 1929. Born in Germany in 1880, he was taken as a child to New York, where he attended public schools. After having graduated from the New York Law School in 1906, he practiced in the Bronx and was active in the Democratic party. As a member of the New York State Legislature in 1913, he was influential in making the Bronx a separate county, and in 1914 he was elected first judge of the new county. He was elected to the State Supreme Court in 1924, serving until his death.

Gibson, The Rev. Frank Markey, American Protestant Episcopal minister, died in Baltimore, Md., Sept. 24, 1929. He was born in 1857, in Bedford Springs, Pa., and was graduated from Dickinson College in 1877 and in law from the University of Maryland in 1879. Before entering the church, he practiced law from 1879 to 1883. In 1884 he was ordained a priest in the Protestant Episcopal Church. He was curate of the Emanuel Church of Baltimore (1883-85), rector of the Church of Holy Innocents, Baltimore (1885-86), and of the parish in Elkridge, Md. (1886-93). Moving to Washington, he was curate of St. Paul's (1893-96), St. Andrew's (1896-97), and Trinity (1897-1904). From 1904 to 1912, he was a rector in Westminster, Md., leaving that position to edit the *Maryland Churchman* (1912-14). At the time of his death, Dr. Gibson was librarian of the Maryland Diocesan Library.

Gibson, Maj. Gen. Sir John Morrison.

Gifford, Harold. An American ophthalmic surgeon, died in Omaha, Neb., Nov. 28, 1929. He was born in Milwaukee, Wis., in 1857, and was graduated from Cornell University in 1879, receiving the M.D. degree from the University of Michigan in 1882. He began practice in Omaha as an ophthalmic and aural surgeon in 1886. He was professor of ophthalmology at the University of Nebraska and ophthalmic and aural surgeon to the Methodist Hospital in Omaha.

Dr. Gifford contributed many articles to textbooks, journals, and reviews. He was widely traveled and shortly before his death made a trip to British Guiana to study the eyes of snakes and birds for the New York Zoological Society.

Gilbert, Alexander. American banker, died Dec. 20, 1929, in Plainfield, N. J. He was born Aug. 10, 1839, in Elizabeth, N. J., and worked as a boy in the iron foundry of Tuttle & Bailey in Brooklyn, N. Y. In 1863 he became cashier of the Market and Fulton National Bank of New York, in 1890 vice president, and in 1897 president, holding the latter position until 1917. Mr. Gilbert was also director of the Irving Bank-Columbia Trust Company, New York, and of the City Building, and Gardiner Building. He was secretary of the New York Association in 1894-95 and president in 1896-97. He was a delegate to the Republican National Convention of 1892 and a presidential elector in 1908.

Gilbert, Charles Allan. American painter, died in New York City, Apr. 20, 1929. He was born Sept. 9, 1873, in Hartford, Conn. After attending the public schools there, he studied at the Art Students' League in New York and the Julian Academy in Paris. His illustrations, many of them humorous, appeared in the leading magazines, and his landscapes and figures were exhibited at various times. During the World War, he spent much of his time camouflaging ships. At one time he was interested in motion pictures, inventing a combination of animated drawings and living actors. His published drawings are *Overheard on the Whittington Family*, *Portfolio of Heads*, *Collection of Heads as Color*, *Separate Drawing in Color*, *Women of Fiction*, *All is Vanity*, *A Message from Mars*, *The Honeymoon*.

Gillilan, James. Treasurer of the United States under Presidents Hayes, Garfield, and Arthur, died in Colchester, Conn., Apr. 8, 1929, at the age of 93. He was educated at Williams College and entered the U. S. Treasury Department in 1847, becoming a clerk through the administrations of Polk, Taylor, and Fillmore, and part of that of President Grant, in whose administration he became cashier of the United States. Appointed by President Hayes as treasurer, he served from 1878 to 1883. At this time he was also Sinking Fund Commissioner for the District of Columbia.

Goldberger, Joseph.

Golder, Frank Alfred.

Good, James William.

Goodenough, George Alfred. American educator, died Sept. 29, 1929, in Urbana, Ill. He was born in Davison, Mich., May 1, 1868, and was graduated from the University of Michigan Agricultural College in 1891 and from the University of Illinois in 1900. He was instructor in mechanics at the Michigan Agricultural College (1891-93), text book writer for the International Correspondence Schools (1893-95), instructor in mechanical drawing at the University of Illinois (1895-97), and in 1897 to the International Correspondence Schools as editor (1897-99). He was assistant professor of mechanical engineering at the University of Illinois (1899-1906), associate professor (1906-11), and professor of thermodynamics (1911-14). Professor Goodenough attracted popular notice by his decisions as chairman of the Western Conference faculty committee on athletics and head of the Big Ten eligibility board.

Goodrich, Frank. American educator, died in New York City, Apr. 29, 1929. He was born Apr. 21, 1846, in Bryden, N. Y. After graduation from Yale in 1869, he studied at the universities of Leipzig, Heidelberg, Berlin and Halle. After teaching German at Yale during 1887-91 and 1893-94, he went to Williams College as professor of German and European history 1894-1903, professor of German history, 1904-24, and, after 1924 professor emeritus. He edited *Prevtich's German Reader* (1894) and *Goethe's Gotz von Berlichingen* (1898).

Gordon, The Rev. George Angier.

Goritz, Otto.

Golo, Count Shmipei.

Gonnin, Sir Lomer.

Gottmann, Hermann.

Gram, Gregers. Winther Wulfsberg.

Grant, Ulysses Simpson. American lawyer, second son of President Grant, died Sept. 25, 1929, at Sandberg Lodge, near Los Angeles, Calif. He was born in Harvard, Ohio, July 22, 1852, and was graduated from Harvard in 1874 and in law from Columbia University in 1876. He practiced law in New York until 1893, when he moved to San Diego, Calif., and continued his practice there. Mr. Grant was active in California politics, being a delegate-at-large to the Republican National Convention of 1896 and of 1900 and a presidential elector at-large in 1904 and 1908.

Greeley, James Thornton. An American physician and surgeon, died Aug. 29, 1929, in Nashua, N. H., where he was born July 18, 1862. He was educated at the College of Hyacinthe in Canada, Dartmouth College, Massachusetts Institute of Technology, and the Uni-

versary of Maryland, from which he received the M.D. degree. He did his postgraduate work in medicine at The Johns Hopkins Hospital with Jean Louis Faure in Paris, with Dr. Israel in Berlin, and in hospitals in London. In 1893 he began the practice of medicine in Nashua, serving as city physician in 1897, physician for Hillsboro Co. from 1896 to 1900, and member of the state board of Medical Examiners from 1897 to 1912. After 1902 he gave his attention to surgery of the abdomen. He also devoted much time to the improvement of surgical and medical appliances and to research work in surgery. During the Spanish-American War, he was major and surgeon with the 1st New Hampshire Volunteer Infantry, and in 1918-19, with the American Red Cross in France and Palestine. He was the inventor of the Givley hypodermic unit used by surgeons of the Allied Armies during the World War.

Green, Alice Sophia Amelia  
Greene, Warwick An American executive, died in Boston, Mass., Nov. 18, 1929. He was born Dec. 18, 1874, in Washington, D. C., and was graduated from Harvard in 1901, receiving the law degree from that university in 1905. From 1910 to 1915, he directed the Bureau of Public Works in Manila, P. I., and in 1916 became director of the War Relief Commission for the Rockefeller Foundation. With the entrance of the United States into the World War, he joined the air service, having the rank of major (1917-18), then lieutenant colonel (1918-19). In 1919, he was chief of the relief mission to Finland, Estonia, Latvia, and Lithuania. Mr. Greene was president of the New England Oil Refining Company.

Greiner, Richard German pacifist died in Berlin, Jan. 1, 1930, at the age of 76. He was one of the founders of the German Peace Society and, accusing Germany of responsibility for the World War in 1914, he was forced to escape to Switzerland to avoid imprisonment. While he was there, his book, *L'Accuse*, was published, receiving wide attention in the allied countries, and in the United States.

Griest, William Walton American member of the House of Representatives, died Dec. 5, 1929, in Mount Clemens, Mich. He was born in Christiansburg, Pa., Sept. 22, 1858, and was graduated in 1876 from Millersville State Normal School. He was editor of the *Lancaster Inquirer* (1885-99) and chief clerk in the county commissioner's office, Lancaster County, Pa. (1897-99), secretary of Commonwealth of Pennsylvania (1899 to 1901), and a Republican member of Congress from Pennsylvania's tenth district (1903-29). He was also president of lighting and street railway companies from 1901 to 1927.

Gutiérrez, José Gutiérrez Former President of Bolivia, died Feb. 21, 1929, in Antofagasta, Chile. Before his election to the presidency of Bolivia in 1917, he was Minister of Finance and president of the Chamber of Deputies. He served as President of Bolivia from 1917 to 1921. He was one of the founders and a director of the Banco de la Nación Boliviana.

Hahn, William Wesley  
Hahmann, Baruch Hugo von  
Hadden, Briton An American publisher, died Feb. 27, 1929, in Brooklyn, N. Y., where he was born Feb. 18, 1898. He was graduated from Yale in 1920, and began newspaper work on the *New York World*, and later, on the *Baltimore News*. In 1923 with several of his associates, Mr. Hadden started a weekly news magazine, *Time*, which in six years attained a circulation of over 200,000. During that time, he alternated each year with Henry R. Luce in the positions of editor and publisher. While at Yale, Mr. Hadden was active in the Reserve Officers' Training Corps, and he was subsequently commissioned second lieutenant in the Field artillery.

Haines, Lann American writer on the science of government, died in Washington, D. C., Oct. 9, 1929. He was born in Waseca, Minn., in 1876, and was graduated at Hamline University. He became a reporter in Appleton, Wis., and later wrote political articles for a Minnesota news syndicate and two houses in the Minnesota Legislature. In 1911 he went to Washington, D. C., as a newspaper correspondent, and from 1914 to its suspension in 1927, he edited *The Watchlight* on *Conscience*. Mr. Haines belonged to the school of La Follette progressives. He organized in Washington the National Voters League for the study and improvement of government and wrote several books on the national government, the best known of which is *Your Servants in the Senate*.

Hall, The Rev. Charles Mercer American Protestant Episcopal clergyman, died in Hartford, Conn., Nov. 28, 1929. He was born in New York City, Dec. 24, 1864, was a student at the General Theological Seminary in New York from 1888 to 1891, and received the M.A. degree from Mt. Stephen's College in 1903. Ordained in 1891, he became a missionary and rector of St. Barnabas Church, Camden, N. J., going in 1893 to New York as curate in the Church of the Beloved Disciple. He

became curate of St. John's Church and vicar of the Church of the Holy Cross in Kingston, N. Y., in 1884, and from 1885 to 1913 was rector of the latter church. He was rector of St. Mary's Church in Asheville, N. C., during 1914-25, and during 1925-26, acting chaplain to the Bishop of Western North Carolina in 1925, after which time he was rector of Trinity Parish, Bridgeport, Conn. Mr. Hall wrote *The Life of a Christian* (1907), *Calvary Every Day* (1907), *The Little Calvary* (1913), *Extra Liturgical Use of the Blessed Sacrament* (1920).

Hamilton, William Angus An American college dean, died in Richmond, Va., Mar. 14, 1929, at the age of 53. He was graduated from Harvard University, subsequently studying law at Cornell University and at New York City, where he practiced law in New York City, he entered the United States Army from which he was retired with the rank of major. In 1925 he became dean of the school of economics and business administration at the College of William and Mary.

Hammond, Caleb S. American publisher of maps, died Dec. 14, 1929, in Garden City, Long Island, N. Y., at the age of 62. He was born in Rush, N. Y., but as a young man went to New York and founded a map publishing business in Brooklyn under the company name of O. S. Hammond & Company.

Hampton, Herbert  
Hank, Parker Douglas An American banker, died in New York City, Nov. 12, 1929. He was born Aug. 12, 1858, in Fairfield, Conn., and was graduated from Princeton University in 1879. From 1879 to 1887, he represented the firm of F. Ogorza's Sons in the South-American trade. In 1887 he became head of the firm Handy & Harman, bankers and dealers in bullion and specie, and when the firm was incorporated in 1905, he was elected president, holding that office until 1927, when he became chairman of the board. In 1910 Mr. Handy was made a life trustee of Princeton University. He served in the 7th Regiment, N. G. N. Y.

Hanna, Philip C. An American consul, died in San Diego, Calif., Feb. 17, 1929. He was born in Waterloo, Iowa, June 27, 1857, and attended public schools. He entered the consular service in 1891 and, while consul at La Guaira during the Crespo Revolution, the Venezuelan Government requested his recall but the United States endorsed his position by sending the White Squadron to his support, and Mr. Hanna retained his post there until 1894. He was later stationed at Trinidad, W. I. (1897) and at San Juan, P. R. (1897-98). Appointed Consul General to Mexico Nov. 1, 1899, he organized relief work after the Monterey and North Mexican flood of August, 1908. When the United States troops landed at Vera Cruz in 1914, he was impressed by the Huerta government on the charge of sympathizing with the revolutionists. Mr. Hanna maintained special official headquarters at San Antonio, Tex., 1910-19, before his resignation from the service. He lectured on Latin America and international subjects. He was honored by various Mexican cities, decorated with the Yucatán Order of the Independence, and made honorary Consul of Venezuela.

Hannauer, George  
Hansen, John Morrison American railroad official, died Dec. 13, 1929, at La Rochelle, France. He was born in Butler County, Pa., in 1861 and was graduated from the Western University of Pennsylvania (now the University of Pittsburgh). He became a draftsman in the Schoen Pressed Steel Company, and later chief engineer. On the merging of the company with the Pressed Steel Car Company, he was made chief engineer of the new concern and afterwards assistant to the president. In 1903 he organized the Standard Steel Car Company and became its first president. Although he resigned this office, he remained chairman of the board of directors until his death. He was also a director of the Baldwin Locomotive Works and president of the American Railway Car Institute. With Charles T. Schoen, he designed the first steel freight cars used in commercial service in the United States. They were first used on the Bessemer & Lake Erie road in 1896. During the World War, Mr. Hansen was in Washington as a member of the Council of National Defense. In this position he assisted in the ordering and designing of 100,000 freight cars for the United States Railroad Administration and he supervised the designing of 14,000 freight cars which the United States Government sent to France for the use of the American Expeditionary Forces during the World War.

Harding, John An American banker, died in New York, Jan. 4, 1929. Born in Philadelphia, July 31, 1863, he entered banking in 1883 and subsequently became a senior partner in his father-in-law's firm, Charles W. Baird & Co. He retained this position until Jan. 1, 1919, then becoming a special partner. He was chairman of the board of the American Railway Express Company and a director of the American Exchange Trust Company, the American Express Company, the American Gas & Electric Co., the American Metal

Company, the New York, New Haven & Hartford Rail road, the Southern Pacific Company, and the U S Industrial Alcohol Company

Hartwood, Earl of New Lascelles, Henry Ulrick

Hartman, Sir Huldebrand Aubrey

Harris, Kenneth American journalist, died Dec. 20, 1929, in Miami Fla., where he had gone from his home in Chicago. He was born in England in 1864. During the Spanish American War, he was a correspondent for the Chicago Record. He succeeded George Ade on the Chicago Daily News as conductor of a column called "Stories of the Streets and of the Town." Mr. Harris contributed stories to the Saturday Evening Post and was the author of a book *Half a Million Blue Eyed Beauties* and a volume of short stories, *Meet Mr. Slegg*. Harris, Nathaniel Edwin American lawyer and a former Governor of Georgia, died Sept. 21, 1929. He was born in Jonesboro, Tenn., Jan. 21, 1846. He enlisted in the Confederate Army in 1862, serving during part of the Civil War on the staff of the Army of northern Virginia. He was graduated from the University of Georgia in 1870. In 1872 he was in the State of Georgia, Ga., from 1874 to 1882 he was in the State of Georgia, Ga., and in 1912 he served as judge of the superior court on the Macon circuit. He was a member of the Georgia House of Representatives (1882-86) and of the Georgia Senate (1894-96). During 1915-17 he was Governor of Georgia.

Harrison, Charles Castus

Harrison, (Lovell) Buge

Hartold, Cyril Guy English naturalist and explorer, died Feb. 1, 1929, in New York City. He was born in England, but for several years before his death he lived in the northwestern part of North America, where he made collections of birds and small mammals. Articles about these discoveries he published in *The Auk* and other scientific journals. As a contributor to the Sanford collection of North American birds, he was associated with the American Museum of Natural History in New York City.

Hartshorn, John William

Hart, Louis Pulwin American lawyer and former Governor of Washington, died in Tacoma, Wash., Dec. 4, 1929. He was born in High Point, Mo. Jan. 4, 1862, and was educated in the public schools. He studied law and was admitted to the bar in 1881, beginning to practice in California. Mr. Hart moved to the State of Washington in 1891, continued his practice there, and was elected Lieutenant Governor of Washington in 1912. He was reelected in 1916, and in 1919, on the death of Guvenio Laster, succeeded to the governorship. On the expiration of this term, he was elected to the office, serving from 1921 to 1925, when he retired from public affairs. During his years as Governor, Mr. Hart brought about a reorganization of the State administrative code.

Hart, William R. American educator, died in Santa Barbara, Calif., Oct. 20, 1929, at the age of 76. He was born in Greene County, Pa. As a member of the faculty of Massachusetts Agricultural College, he established a department for training teachers of agriculture. In 1924 he moved to Santa Barbara, where he became a member of the school board and was an organizer of the city's playground system.

Hart, William Canadian industrialist and public official, died Apr. 1, 1929, in Kew Beach, Ontario. He was born in County Middlesex, Ontario, in 1847, and was educated at Christian Brothers School and Reginald College.

Hart, William Canadian industrialist and public official, died Apr. 1, 1929, in Kew Beach, Ontario. He was born in County Middlesex, Ontario, in 1847, and was educated at Christian Brothers School and Reginald College.

Hastings, Thomas American educator, died in Baltimore, Md., Apr. 6, 1929. Born in 1850 in Hohenzollern, Germany, he moved to America at the age of 16. As a member of the Sulphur Society, he received his advanced education for the priesthood in Paris, where the headquarters of the society are located. For 45 years, he taught at St. Charles College, a Catholic seminary in Catonsville, Md.

Hawley, James H. American lawyer and former Gov.

Hawley, James H. American lawyer and former Governor of Idaho, died Aug. 1, 1929. He was born in Dulough, Iowa, Jan. 27, 1847, and in 1862 moved to Idaho, where he engaged in mining. He was admitted to the Idaho bar in 1871, and at the time of his death was senior member of the firm, Hawley & Hawley. In 1870-71 he was a member of the Idaho House of Representatives, and in 1874-75 of the Idaho Senate. From 1879 to 1881, he was district attorney for the second district in Idaho, and from 1884 to 1887, United States Attorney for the State. He was Mayor of Boise in 1904-05 and Governor of Idaho in 1911-13.

Hayne, William Hamilton An American poet, died in Augusta, Ga., Jan. 8, 1929. He was born in Charleston, S. C., Mar. 11, 1856, and was tutored privately. He first

published poetry in 1879, and continued to contribute to various periodicals until his death. In 1892 he published *Swain Lyrics and Other Verses*.

Hayter, Brander General Ross John Finnis A Canadian soldier, died in London, England, Dec. 17, 1929. He was born in Toronto, Canada, Feb. 28, 1875, and was educated at Dover College and Upper Canada College in Toronto, and at the Royal Military College in Sandhurst. In 1895 he entered the British Army. During the South African War (1900-02) he served with distinction as aide de camp to the King. In the World War he was with the 1st Canadian Tunnelling Battalion from 1914 to 1919, rising from brigade major of the 10th Infantry Brigade to a brigadier general of the General Staff in 1918. In recognition of his services he was made a Companion of the Distinguished Service Order in 1915. From 1919 to 1923, he was at General Staff Headquarters, Western Command, Chetani, England, from 1923 to 1927, he was in command of the Poetopore Brigade Area in India, and in 1929 he was put in command of the 5th Infantry Brigade at Aldershot, England. He was also aide de camp to the King in 1929.

Heard, Dwight Bancroft American business man and publisher, died Mar. 14, 1929. He was born in Boston, Mass., May 1, 1869, and was educated in the public schools. He entered business with Hibbard, Spencer, Bartlett & Co., a wholesale hardware firm in Chicago, remaining until 1894. Going to Arizona, he entered the investment and loan business and, subsequently, besides holding the presidency of the Dwight B. Heard Investment Company, and several other companies, was president and publisher of the Arizona Republic.

Helden, John Calder American chemical engineer, died June 3, 1929, in Providence, R. I. He was born Dec. 22, 1862, in Colgate, Wis., and was graduated from Brown University in 1885. From 1885 to 1887, he was a chemist and dyer in the National and Providence Worsted Mills and Silver Spring Bleachery, following which he was resident chemist, technician, and chemist with William J. M. Allen & Company and with the Casella Color Company (1887-1904). He was again a technician and chemist with A. Klipstein & Company (1904-09), vice president of F. E. Attau & Company (1909-10), vice president and general manager of the Helden Process Company (1910-17), and of the Federal Dye and Chemical Corporation (1915-17). At the time of his death, he was president and general manager of the Dyeing Process Corporation and vice president of the Helden Sugar Process Corporation. Besides his executive positions, Mr. Helden practiced independently as a chemical engineer and consulting chemist. He was an expert on explosives and during the World War supervised their manufacture for the Ordnance Department.

Heller, Maximilian American Jewish rabbi, died in New Orleans, La., Mar. 30, 1929. Born Jan. 31, 1860, in Prague, Bohemia, he was graduated from a gymnasium in Prague in 1879, and then moved to America, where he received degrees from McMillan University and Hebrew Union College, both in Cincinnati, Ohio. From 1884 to 1886, he was associate rabbi of the Zion Congregation in Chicago, leaving there to go to Houston, Tex. In 1887 he went to New Orleans, where he was rabbi of the Sinai Temple until 1927. Rabbi Heller was also professor of Hebrew and Hebrew literature at Tulane University in New Orleans from 1912 until his death. In 1898-97 he edited the *Jewish Ledger* of New Orleans, and from 1902 to 1914 he was a leader writer for the *American Israelite* of Cincinnati.

Helmolt, Hans Ferdinand

Henderson, Bernard William

Henderson, Theodor Sommer American Methodist Episcopal bishop, died in Cincinnati, Ohio, Feb. 11, 1929. Born in Milburn, N. J., May 14, 1868, he attended the Centenary Theological Seminary, Hackettstown, N. J., 1885-88, and was ordained to the ministry from Wesleyan University, Middletown, Conn., in 1890, and from the Drew Theological Seminary, Madison, N. J., in 1895. He was ordained into the Methodist Episcopal ministry in 1894, and subsequently served as associate pastor of James Church, Brooklyn, N. Y., 1894-96, and as pastor in Flushing, 1896-98, of the Simpson Church, Brooklyn, 1898-1904, of the East Side Parish, New York, 1904, and of the First Baptist Church, New York, 1905-06. He was then secretary of the General Conference Commission for Aggressive Evangelism, and in 1908 he was assigned to Hanson Place Church, Brooklyn. He was consecrated resident bishop for Ohio and Kentucky May 21, 1912, a post which he held until his death.

Henderson, The Rev. W. J. English Baptist educator, died in New York City, Jan. 1, 1929. He was born in New York City, Jan. 1, 1856, and was educated in the public schools. He entered the ministry of the Baptist Church in 1878, and served as pastor of the First Baptist Church, New York City, from 1878 to 1881. He was then secretary of the General Conference Commission for Aggressive Evangelism, and in 1908 he was assigned to Hanson Place Church, Brooklyn. He was consecrated resident bishop for Ohio and Kentucky May 21, 1912, a post which he held until his death. Bishop Henderson was elected to the Wesleyan University, and Ohio Northern University. The honorary D. D. degree was conferred on him by Allegheny College in 1909, and the honorary LL.D. degree by Lawrence College, 1912, Nebraska Wesleyan, 1912, Connecticut Wesleyan, 1921, and Ohio Northern University, 1925.

died May 1, 1929. He was born Sept. 10, 1848, in Poplar, England. He studied for the ministry in Rawdon College, Leeds, was ordained in Birmingham in 1868, and after preaching there until 1872, accepted a pastorate in Coventry, where he served 21 years. In 1893 he was made president of Bristol Baptist College, a post from which he resigned in 1922, remaining emeritus president. Dr. Henderson wrote many articles in religious magazines and newspapers, and was author of *Lectures of the Great Life*.

Henri, Robert  
Henry, Prince of Prussia (Heinrich Albert Wilhelm)  
Henshaw, Frederick William American judge, died in San Francisco, Calif., June 8, 1929, at the age of 71. He was graduated from the University of California in 1879. In 1894 he became associate justice of the Supreme Court of California, but resigned in 1917 to give his time to war work.

Hensley, Major William Nicholas, Jr. American army officer, died Mar. 21, 1929, in Rochester, Minn. He was born in Columbus, Mo., Oct. 18, 1861, was graduated from the U. S. Military School in 1905, and was commissioned second lieutenant of cavalry. He was promoted through the grades to the rank of major of the Regular Army in 1920. In 1917 he organized the division of the National Guard in the Philippines, having the rank of colonel and chief quartermaster. In 1918-20 he was colonel of the U. S. Air Service and, in 1918-19, commander of the Army Ballroom School in Pasadena, Calif. In 1921 he was appointed commander of the U. S. Air Station at Mitchell Field, on Long Island, N. Y. Having graduated from the Army War College in 1926, he was assigned to Fort Sam Houston, San Antonio, Tex., as air officer of the 8th Corps Area. Major Hensley had the distinction of being the first American to make a non-stop flight from America to Europe, going in 1919 as an observer on the return trip of the British dirigible R 34.

Heibette, Maurice  
Herrick, Myron B.  
Higgins, Charles M. American ink manufacturer, died Oct. 21, 1929, in Brooklyn, N. Y., at the age of 75. He went to the United States from Ireland as a youth and became head of the Charles M. Higgins Company, manufacturers of a drawing ink which he developed. For a time he was treasurer of the Anti Vaccination League of America.

Hildreth, Samuel O. An American trainer of horses, died Sept. 24, 1929, in New York City. His first knowledge of horse racing was gained from his father, a Kentuckian, who raced horses at meets throughout the Middle West at the close of the Civil War. At the age of 15, the younger Hildreth became a jockey in Fairbury, Kan., but soon owned and raced horses of his own in the West. He quickly gained a reputation for successful training of horses. After years of racing his own horses and training for others both in the United States and in France (1910-11), Mr. Hildreth became trainer in 1917 in the Rancocas Stable of Harry F. Murphree. Here he trained Zev, the winner against the English horse, Papyrus, in an international match race at Belmont Park in 1923.

Hill, Arthur Turnbull American landscape, marine, and portrait painter, died Nov. 24, 1929, in East Hampton, N. Y. He was born in New York City, Apr. 26, 1868, and studied art under his father and George Inness, and at the Brooklyn Institute. He first exhibited at the National Academy of Design, New York, in 1895. His paintings are in the National Gallery of Washington, D. C., the Brooklyn Museum, and the National Art Club of New York. He was marine (amateur) under the United U. S. Shipping Board Emergency Fleet Corporation in 1918-19. To the *Artists' and Writers' Almanac* (1922), he contributed "War." Inness and George Waldo Hill.

Hill, Henry Wayland American lawyer, died in Buffalo, N. Y., Dec. 6, 1929. He was born in Isle La Motte, Vt., Nov. 11, 1853, and was graduated from the University of Vermont in 1876. He taught in Vermont and New York from 1877 to 1887, and in 1884 was admitted to the New York bar. He was a member of the New York Constitutional Convention in 1894, and from 1896 to 1900 served in the State Assembly. During 1901-10 he was State senator. At the time of his death he was president of the New York State Waterways Association. Mr. Hill owned a library of rare books, and was a student of Horace and a contributor to the bibliophile edition of the *Odes and Epics of Horace*. He was also the author of *The Development of Constitutional Law in New York, An Historical Review of Waterways and Canal Construction in New York, Waterways and Waterways of the State of New York*, and articles on large canal construction in the official *History of New York from Cleveland to Hughes*.  
Hillis, New :  
Hines, Col.

Hines, Col. New York City official and an officer in the New York National Guard, died May 8, 1929, in New York. He was born in Nyack, N. Y.,

Aug. 21, 1860, the son of a builder, whom he succeeded as head of a building firm. He was in business upon appointment to the office of Superintendent of Public Offices and Buildings. In 1891 he enlisted in Company 1, 7th Infantry, the National Guard. With the rank of lieutenant-colonel, he accompanied the 106th Regiment to France during the World War. He was commissioned colonel, commanding the 105th Field Artillery, in 1918.

Hirschberg, Michael Henry An American jurist, died Mar. 17, 1929, in New York City, where he was born Apr. 12, 1847. He was in a private office, was admitted to the bar in 1868, and was appointed special judge of Orange County in 1875. Becoming district attorney in 1889, he served for three terms. He was elected justice of the Supreme Court of New York in 1896, on the Republican ticket, being reelected in 1910 with the endorsement of both parties. Governor Theodore Roosevelt appointed him to the Appellate Division Second Department in Brooklyn, 1910, and Governor Odell made him presiding judge in 1904. Judge Hirschberg retired from the bench, Jan. 1, 1918, and from Jan. 12, 1918, until his death, he served in the Newburgh Courthouse as official referee of the ninth judicial district.

Hitchcock, Raymond An American comedian, died Nov. 25, 1929, in Los Angeles, Calif. He was born in Auburn, N. Y., Oct. 22, 1865, and lived there until he was 19, taking part in amateur performances, given in the Auburn Academy of Music. In 1891 he had a minor role in *The Brigand*, played by the Carleton Opera Company. His first successful part was that of Bulwer Brady in *Chimney's Hunt* in which he appeared on Broadway in 1893. He became popular as an actor in Gilbert and Sullivan operas. In 1901 he played the role of King Dodo, which he called his greatest part. He appeared for the first time in England in the title role of *Mr. Manhattan* in 1916. His first *Hitchy Koo* performance was given in 1917. He also entered the moving pictures, starting in *Red Heads Preferred* and *Money Talks*. He was playing in Chicago, *Your Uncle Dudley* in May of 1929, when a severe heart attack forced him to retire from the stage.

Hodges, Maj. Gen. Harry Foote United States Army engineer, died Sept. 21, 1929, in Lake Forest, Ill. He was born Feb. 27, 1860, in Boston, Mass., and was graduated from the U. S. Military Academy in 1881. He was assigned to the Corps of Engineers and was on river and harbor duty from 1881 to 1888. Following this, he taught engineering at West Point, 1888-92, and then returned to river and harbor and fortification duty until 1898, when he was sent to Porto Rico. In 1901 he went to Cuba as chief engineer of the Department of Engineers, and in 1902 he was appointed chief of engineers of the U. S. Army. From 1907 to 1917, he was with the Isthmian Canal Commission, where he distinguished himself as to win the thanks of Congress and advancement to the rank of brigadier general. During the World War General Hodges commanded the Tenth Army of the U. S. Army, and in 1921 he was given the Distinguished Service Medal. In 1921 he was given the rank of major general of the Regular Army. He was retired in 1922.

Hofmannsthal, Hugo (Hofmann) von  
Holland, Joseph W. American professor of surgery, died at sea Sept. 2, 1929. He was born in Queen Anne's County, Md., in 1870, and was educated at Washington College and the University of Maryland, subsequently becoming senior professor of surgery at the latter institution.

Hollenheit, Heiman American engineer and inventor, died Nov. 17, 1929, in Washington, D. C. He was born in New York City in 1864 and graduated from the school of mines of Columbia University (1879). From Columbia, he received also the Ph.D. degree. In the same year, he patented his invention, an electric tabulating machine, which is used by the United States and other governments in tabulating census returns and for other accountancy purposes. The machine won the gold medal of the Franklin Institute of Philadelphia as the most outstanding invention of the year.

Holt, Arno  
Honey, Frederick Robertson American educator, died in Hartford, Conn. Mar. 9, 1929, at the age of 81. From 1872 to 1890, he was instructor of mechanical drawing and descriptive geometry in Sheffield Scientific School and lectured on perspective in the art school at Yale University. He also taught perspective for 18 years in the art school of Smith College and was an instructor at Trinity College from 1890 to 1911, when he retired.

Hooker, Henry Daggett An American horticultural chemist, died Oct. 20, 1929. He was born in Brooklyn, N. Y., Jan. 27, 1892, and was graduated from Yale University in 1912, receiving a Ph.D. degree in 1915. He was assistant in botany at Yale University in 1914-15 and instructor from 1915 to 1918. In 1917-18 he was assistant physiologist at the United States Bureau

of Mines. He was assistant professor of horticulture at the University of Missouri in 1919-20 and associate professor after 1920.

Horne, Gen. Henry Sinclair, First Baron of Surkoka. Lieutenant-governor, died Aug. 14, 1929, at St. John's, N. B. Wick, Calcutta. He was born Feb. 19, 1861, and was educated at Harrow and the Royal Military Academy in Woolwich. In 1880 he was commissioned in the Royal Artillery, where he was rapidly promoted. He served as major in the South African War (1899-1902) and in 1912 became Inspector of the Horse and Field Artillery with the rank of brigadier general. At the beginning of the World War, he was sent to France as artillery commander of the 1st Corps, and in 1915 he was put in command of the 2d Division. In that year, he went to Egypt to assume charge of the defense of the Suez Canal, but was recalled in 1916 to command the 15th Corps in France. Later in 1916, Lord Horne succeeded to the command of the 1st Army and was promoted to the rank of general. After his army was demobilized in 1919, he was made chief officer of the Eastern Command, which he held until 1923. In 1926 he was retired. He was created Knight of the Grand Cross of the Bath and first Baron of Surkoka, both in 1919.

Hotchkiss, Horace Leslie. American financier, died in San Antonio, Tex., May 10, 1929. He was born in Auburn, N. Y., Mar. 27, 1842, and was educated at the Auburn Academy. He served in the U. S. Navy during the Civil War, taking part in the Battle of Mobile Bay. In 1867 Mr. Hotchkiss, with three others, organized the Gold & Stock Telegraph Co. and he became its treasurer. It was this company which put into operation the ticker system in the Stock Exchange. He was an organizer in 1871 of the American Railway & Express Company, and in 1875 he assisted in developing the Exchange Telegraph Company in London, of which he became a director. Mr. Hotchkiss bought a seat in the New York Stock Exchange in 1874 and remained in the brokerage and banking business until 1902. From 1886 to 1891, he was treasurer of the Nicaragua Canal Construction Company, being active in securing the concession to build the canal, and losing heavily when the project failed.

Howard, Katherine Lane. An American author, poet, and illustrator, died in Cincinnati, Ohio, July, 1929, at the age of 69. She was born in New York and was educated at Bryn Mawr College. Her Howard's *A Child's Book of Verse* was used as a reader in English schools. She illustrated some of the bird books of the naturalist Audubon.

Howe, Earl of See Curzon, Richard George Penn. Howland, Emily. American educator, died June 29, 1929, in Sherwood, N. Y., where she was born Nov. 20, 1827, of Quaker parents. Miss Howland was active in the anti-slavery campaigns before the Civil War. After the war she opened schools for Negroes in Northumberland County, Va., remaining there several years. In 1842 she assumed financial management of the Sherwood Select School in Sherwood, N. Y., a position which she kept until it was made a public school in 1927, at which time it was renamed the Emily Howland School. Miss Howland was known as an advocate of woman suffrage, temperance, peace, and education. In 1926 the University of the State of New York conferred upon her the degree of doctor of literature in recognition of her educational and humanitarian services.

Hübner, Charles William. American librarian and poet, died Jan. 3, 1929, in Atlanta, Ga. He was born in Baltimore, Md., Jan. 16, 1835, and was educated in the public schools there, going later to study in Germany. He moved throughout the Civil War in the Confederate Army, and after the war moved to Atlanta. From 1869 to 1919, he was assistant librarian in the Carnegie Library in Atlanta. Mr. Hübner was a poet and historian, the author of *Historical Souvenirs of Luther* (1872), *Modern Communism* (1880), *Representative Southern Poets* (1906), *A Sheaf of Sonnets* (1917), *Poems of Faith and Consolation* (1927), and others. In 1928 the Poetry Society of the South named him poet laureate of the South.

Huefneld, Baron Ehrenfried Günther. A Prussian nobleman, organizer of the first westward flight across the Atlantic, from Ireland to Labrador, in 1928, died in Berlin, Feb. 5, 1929. He was born in 1892 in Königsberg, East Prussia. During the World War, the German Foreign Office sent him to Constantinople and Sofia on confidential missions. As German vice-consul at Maastricht, he received the Kaiser and the Crown Prince of Germany when they fled to Holland. On Apr. 12, 1928, with Captain Hermann Koehl, pilot, and Commandant James Fitzmaurice, copilot, he set out from Dublin, Ireland, in the airship *Benz*. Because of unfavorable weather, they were forced to land on Grensey Island, off the coast of Labrador, April 13. On the forced landing so damaged the plane that they were unable to go farther in it. Canadian and United States planes were sent to their relief, and in one of these they flew to New York. There, and in other cities of the United

States, they were given an enthusiastic welcome. The Distinguished Flying Cross was conferred upon them by President Coolidge. Baron Huefneld was a poet and a dramatist. His *Hagen of Troje* was acted in Bremen in 1927, and *The Dread of Good Luck* in Dresden in July, 1928.

Huffington, John C. An American marine painter, died May 3, 1929, on his houseboat in Rowayton Harbor near Norwalk, Conn., at the age of 65. His first marine pictures in oil and water colors received notice, and one of his paintings was hung in the National Academy of Design in New York. His works that followed, however, failed to attract attention until several years before his death, when Miss Anne Morgan, sister of J. Pierpont Morgan, became interested and aided their sale.

Huggins, Brig. Gen. Eli Lundy. American army officer, died Oct. 22, 1929, in San Diego, Calif. He was born Aug. 1, 1842, in Schuylers Co., Ill. In the Civil War he served in the 2d Minnesota Infantry and the 1st Minnesota Artillery. He was graduated from the Artillery School in 1872. Transferred to the Cavalry in 1879, he rose from the rank of captain to that of brigadier general in 1903, in which year he retired. He saw service in the Indian campaigns, receiving the surrender of Rain in the Face, a member of General Custer, and was awarded in 1894 the Congressional Medal of Honor for distinguished service. In the Spanish American War, he served as colonel of the 8th U. S. Infantry.

Huggins, Miller J. An American baseball manager, died Sept. 25, 1929, in New York City. He was born in Cincinnati, Ohio, Apr. 19, 1879. As a young man, he played baseball at St. Paul, Cincinnati, and St. Louis. From 1913 to 1917, he was manager of the Cardinals in St. Louis. He was assistant athletic director at the Pelham Bay Naval Station in 1918, helping to organize recreational sports programmes for enlisted navy men. The same year he became manager of the New York Yankees and under his direction this baseball team won world championships in 1923, 1927, and 1928.

Hume, Robert Allen. American Congregationalist missionary, died in Brookline, Mass., June 24, 1929. He was born Mar. 18, 1847, in Bombay, India. After graduation from Yale University and the Yale and Andover theological schools, and after teaching two years in the United States, he was ordained in the Congregational ministry in 1874 and went to India as a missionary. In 1901 for public service in India, he was presented with the Kaiser's Hind Gold Medal by Queen Victoria. He was the Hyde lecturer on foreign missions at the Andover Theological Seminary, 1904-05, and author of *Missions from the Modern View, An Interpretation of India's Religious History*.

Hupp, Frank Le Moine. An American specialist in the treatment of cancer, died in Wheeling, W. Va., Dec. 30, 1929, at the age of 64. He was graduated from Washington and Jefferson College and, in 1889, from the College of Physicians and Surgeons, Columbia University, New York. He began practice in Wheeling and at the time of his death was a member of the staff of the Ohio Valley General Hospital there. Dr. Hupp was a charter member of the first board of governors of the American College of Surgeons.

Hurd, George Arthur. An American banker, died Nov. 15, 1929, in New York City, where he was born Aug. 20, 1869. He was graduated from Yale University in 1890, and from the law school of Harvard University, in 1893. From 1895 to 1903, he was resident agent of the United States Mortgage and Trust Company, at Seattle, Wash., and in 1903-05 assistant secretary. He returned to New York as vice president of the Mortgage Bond Company in 1905, becoming president of that firm in 1910. During the World War, he was a member of the American Defense Society and also of the Committee for Armenian Relief.

Hurlbut, Byron Satterlee. American professor, died in Cambridge, Mass., Dec. 19, 1929. He was born in Lowell, Mass., Dec. 30, 1865, and was graduated from Harvard in 1887. He entered the English Department of Harvard in 1890, became an assistant professor in 1901, and after 1906 was professor of English. From 1902 to 1916, he was also dean.

Ivey, Robert Stewart. Innoue, Marquis Katsunosuke. Japanese financier and diplomat, died Nov. 3, 1929, in Tokyo, Japan. He was born in 1861, and sent abroad to be educated by order of the Government of Japan. He spent three years studying in Europe and seven years in England. He was envoy to Berlin (1906-08) and Ambassador to Great Britain (1913-16). He succeeded to his title in 1915, being the adopted son and heir of his predecessor. Marquis Innoue wanted the Tientsin-Hankow Railway in the interest of Manchurian industry. He was a director of the South Manchurian Railway, and a protagonist of the open door in Manchuria.

Inouye, Fleet Admiral Viscount Ryokei. Admiral in the Japanese Navy, died in Tokyo, Mar. 22, 1929. He

was born in 1846 and was graduated from the U S Naval Academy in the class of 1881, being among the earliest Japanese students there. Viscount Inouye was wounded in the bombardment of Kagoshima by a British squadron in 1891. He served in the Sino-Japanese War of 1894-95, and was promoted to the rank of admiral in 1908 and of fleet admiral in 1911. He was created a baron in 1887 and viscount in 1907.

Isaac, John Jayson. An American engineer, died Apr 26, 1929, in San Francisco, Calif. Born in Richmond, Va., Oct 6, 1848, he attended the University of Virginia during 1867-70. He was a draftsman in the maintenance of way department of the Southern Pacific Railroad from 1875 to 1885, when he was made assistant superintendent of bridges and buildings, becoming acting superintendent in 1890, second assistant engineer of the maintenance of way department in 1891, and assistant engineer in 1900. He became consulting engineer of the Union Pacific and Southern Pacific systems in 1905, but in 1913, on the dissolution of the merger of the two lines, he resigned, to be consulting engineer of the Southern Pacific. He retired in 1923. As a bridge engineer, Mr Isaac was responsible for the construction of the Sacramento River Bridge of the Southern Pacific and a number of viaducts in Washington.

Jackson, Roscoe B (radbury). An American automobile manufacturer, died at Mentone, France, Mar 19, 1929. Born in Ionia, Mich., Jan 10, 1879, he was graduated from the engineering school of the University of Michigan in 1902. He started work as assistant superintendent of the Olds Motor Works, Lansing, Mich., in 1904, becoming assistant to the general manager in 1905 and chief manager in 1906-07. He then joined, as general manager, the R. Thomas Motor Company, of Buffalo, N. Y., moving to Detroit. He aided in the organization of the Hudson Motor Company in 1909, becoming general manager of the firm, he was made president in 1921, which he held until his death.

Jacobs, Aletta. Dutch physician and suffragist leader, died Aug 10, 1929, at The Hague. She was 80 years old. When 30 years old she began the practice of medicine, being the first woman to do so in Holland. In 1894 Dr Jacobs was instrumental in founding in Holland the Woman's Suffrage Society. With Jane Addams she made a tour of Europe in 1915 and later established the Women's International League for Peace and Freedom. She also worked with Mrs Carrie Chapman Catt for the cause of woman suffrage and in opposition to militarism. She visited the United States in the interest of her work in 1915, 1924, and 1925.

Jarnesfeld, Takamune, Makiko. An American surgeon and author died Aug 30, 1929. He was born in Orange, N. J., Dec 4, 1851, was graduated from the College of Physicians and Surgeons at Columbia University in 1875 and took post graduate work at The Johns Hopkins University in 1892-93. During 1874-75 he was an interne in the Charity Hospital, Blackwell's Island, N. Y., and from 1875 to 1877, interne and house surgeon in the New York Hospital of Relief. He practiced in Cold Springs, N. Y., in 1877-82 in Georgetown, Colo., 1884-92, and then in Denver. Colo. Dr Jarnesfeld was professor of gynecology and abdominal surgery at the University of Colorado from 1894 to 1897 in the medical department of the University of Denver, 1897-1911, and returned to the medical department of the University of Colorado in 1911. In 1917 he was retired as emeritus professor. He served as first lieutenant in the Medical Reserve Corps of the U S Army (1913-17), major in the Medical Corps (1917-18), and lieutenant colonel 1918-19. He was the author of many articles published in medical journals and wrote *The Healing Gods of Ancient Civilizations* (Yale University Press, 1925).

Jenkins, Stephen Rice. Canadian general surgeon, died Sept 15, 1929, in Charlottetown, Prince Edward Island. He was born in Charlottetown on Nov 12, 1858, and was educated in Peter's School, King's College, and the University of Pennsylvania, where he received the M.D. degree in 1881, following which he was interne in the Philadelphia Hospital for a year. Returning to Charlottetown in 1885, he practiced medicine there from 1885 to 1925. He was on the staff of the Charlottetown and the Prince Edward Island hospitals. From 1885 to 1919, he was medical officer of the 4th Regiment, C. G. A., and in 1915 he was the medical officer in charge of the Military Hospital, Halifax.

Jenk, George Charles. American author, died in Auburn, N. Y., Sept 13, 1929. He was born Apr 13, 1850, in London, England, and was educated in England before coming to America in 1873. He began his newspaper career in Pittsburgh with the *Pittsburgh Press*, going to New York in 1884 where he served as New York correspondent for the *Dispatch* and *Gazette Times* of Pittsburgh, dramatic critic, short story contributor to *Harper's* and playwright. He was the author of *The Story of the Johnstown Flood* (1890), *The*

*Olman* (1910), *The Deserters* (1911), and *Stop Thief* (1913). Mr Jenks was popularly known as the creator of Diamond Dick, the perfect detective, who was the hero of some 25 of his stories in the early part of the century.

Jenks, Jeremiah Whipple. Jhalawar, H. H. Maharaja Rana Sir Bhawanji Lugh Bahadur of a Prince of India, died suddenly on board the steamer *Devi* near Bombay, in April, 1929. He was born in 1874 and was educated at Mayo College, Amere. Well known in scientific, artistic, and educational circles in the West, he introduced in his state many reforms, among them urban municipal self government, and the creation of a bicameral legislature on a broad electoral basis. During the World War, he organized weekly lectures for the information of his subjects. He did all in his power to promote cordial British Indian relations.

Johann II, Prince of Liechtenstein, Mik'as-shin Ruler of the principality of Liechtenstein lying between Austria and Switzerland, died in Troppau, Czechoslovakia, Feb 11, 1929, at the age of 92. He was born in Moravia, Czechoslovakia, and in 1858 began his reign, one of the longest in European history. Liechtenstein, one of the smallest independent states of Europe, became unique in other ways under the rule of Prince Johann, "the Good." After the army was abolished in 1868, there was no military service. The wealthy monarch bore the cost of all public buildings, and the necessity of taxes for a Diet of 15 members elected by direct vote was adopted, but at the request of his people, Prince Johann continued as ruler. He lived the life of a recluse, giving elaborate entertainments in his palace at Vienna, but rarely himself appearing at them. A connoisseur of art, he gave his collection of 8000 pictures to Austria a few years before his death. He was succeeded by his brother, Prince Francis I.

Johnson, Cornelius. An American Indian chief, died in Buffalo, N. Y., Jan 1, 1929, at the age of 99. He was chief of the Iroquois Tribe and also an actor. His stage name was Chief Blackie.

Johnson, Jackson. An American shoe manufacturer, died in Daytona Beach, Fla., Jan 28, 1929. He was born in La Grange, College, Ala., Nov 12, 1859, and at the age of 19, entered the mercantile business in Mississippi. Moving to Memphis, Tenn., in 1892, he aided in the organization of Johnson Cartrights & Rand Co., being president of the concern for five years. At that time, the company was entirely New England, and was centered in New York and Massachusetts.

Johnson, Robert. A shoe manufacturer, died in New York City, N. Y., Jan 1, 1929, at the age of 99. He was president, at St Louis Mo. His company absorbed other firms and merged into the International Shoe Company, with Mr Johnson serving as chairman of the board from 1913 until his death. He was also a trustee of Washington University.

Jones, Edward T. An American aeronautical engineer, died in September, 1929. He was educated at Cornell University and taught there for a time, after which he gained practical experience in aviation at McCook Field. At the time of his death he was chief engineer of the Wright Aeronautical Corporation.

Jones, E (nest) Lester. Jones, Henry Arthur. Jones, Richard J. An American industrialist and advocate of the adoption of Esperanto as the international language, died Jan 9, 1929, in Northport, Long Island, N. Y., at the age of 55. He was married and had one daughter. He was a member of the Esperanto Society of the Pittsburgh Steel Corporation. With his wife he founded the first free school of Esperanto in the United States at Lithopolis, Ohio. In 1927 he was a delegate to the International Esperanto Congress at Edinburgh.

Jones, The Rev. Dr Robert Ellis. American Protestant Episcopal minister, died in Greenfield, Mass., July 19, 1929. He was born in New York City, Mar 18, 1858, and was graduated in 1879 from Williams College. In 1879-80 he was a student at the Virginia Theological Seminary, and in 1894-95 he studied in Berlin and Heidelberg. Before coming to America, he was a topographer for the U S Geological Survey. Ordained a minister in 1884, he became rector of St Luke's, Kalamazoo, Mich., going from there to Columbus, Ohio, in 1889. From 1894 to 1897, he was senior curate of Grace Church in New York City. In 1897 he became president of Hobart College, where he was until 1902. In 1905 he was made rector of the Cathedral of the Divine, and served in that capacity until his death.

Josephthal, Louis Maurice. American naval militia officer and banker, died in New Rochelle, N. Y., May 28, 1929. He was born Oct 7, 1868, in New York, and was educated at the College of the City of New York. He was one of the organizers of the Naval Militia of

the State of New York in which he enlisted as a seaman in 1891, becoming in 1917 paymaster general and commodore. In 1918-19 he served in the U. S. Navy, but returned to the New York Naval Militia as commodore and chief of the bureau of Naval Militia. Later he was appointed commander of the Militia, with the rank of rear admiral. From 1900 to 1910, Mr. Josephthal was senior member of the firm Albert Loeb & Co., after which he joined the firm Josephthal, Louchbom & Co. After 1916 he was senior member of Josephthal & Co., stock brokers of New York City.

Jouet, Cavalier Hargrave An American chemist, died Mar. 29, 1929, in Roselle, N. J. He was born Nov. 7, 1860, in Elizabeth, N. J., and was graduated from Columbia University in 1882. From 1882 to 1897, he was a chemist with various companies and then became instructor in chemistry in the Newark Technological School (1897-99), assistant in analytical chemistry at Columbia University (1897-1900), lecturer (1900-01), tutor (1901-10), and instructor (1910-12). In 1913 he entered the New York Department of Health.

Jung, Sir Chandra Shumshere General His Highness, Nepal Taradhiak Maharaja An Indian in Nepal, India, in November, 1929, at the age of 67. In 1901 he was appointed Prime Minister of Nepal, and held the office until his death. He held the rank of general in the British Army. He was married to Julia Nield. An American lawyer and former representative from Illinois in Congress died Dec. 5, 1929. He was born Apr. 27, 1849, in Rudolfs, Denmark, and attended the Real (Royal) School there. Moving to the United States in 1880, he was first in the publishing business in Chicago, Ill. He was graduated from the law department of the Lake Forest University in 1888, was admitted to the bar of Illinois in 1899, and began the practice of law in Chicago. From 1898 to 1914, he was a member of the U. S. Senate and during 1907-11 he was assistant attorney of the Sanitary District of Chicago. He was sent as a delegate to the Sixty-fifth and Sixty-sixth Congresses (1917-21). By appointment of President Harding, he served as collector of customs for the port of Chicago in 1921-22, after which he resumed the practice of law there.

Kasimbazar, Maharaja of, Sir Manindra Chandra Nandy An Indian public official and philanthropist, died in November, 1929, in Calcutta. He was born in 1860. A liberal in politics, he had a seat in the Bengal Legislative Council in 1910 and was elected to the Imperial Legislative Council in 1915. After 1921 he was a member of the Council of State. He was president of the Bengal Landholders Association in 1918-20 and of the British Indian Association at Calcutta in 1922-23. He was owner of vast estates in Bengal and the United Provinces, he used much of his wealth for the promotion of education and the arts and sciences. He was founder of a chair in history at the Benares Hindu University and one of science in Sir Jagadis Chandra Bose's Laboratory in Calcutta. He published *Upasana*, *Part 8 Panika*, *The Indian Medicinal Plant*, *History of Indian Philosophy*, *Great Sanskrit Grantha*, *Part 10 of Sri Mathnigraha*, *Fundamental Unity of India*, *History of Indian Shipping and Maritime Activity*. In 1915 he was created Knight Commander of the Indian Empire.

Katzenbach, Frank H. American judge, died Mar. 13, 1929, in Trenton, N. J. He was born in Trenton, Nov. 7, 1868, and was graduated from Princeton in 1889. In 1891 he was admitted to the New Jersey bar and began practice in Trenton. He was councilman at large in Trenton from 1898 to 1900, and mayor of the city from 1902 to 1905. In 1920 he was appointed associate justice of the Supreme Court of New Jersey.

Kearse, The Most Rev. James John Keefe, Daniel J.

Keenan, Frank American actor, died Feb. 24, 1929, in Hollywood, Calif. He was born in Dubuque, Iowa, Apr. 8, 1858. Following his appearance on the stage in Boston in 1880, he was for some years with the Boston Museum Stock Company, later he went to New York, and then toured the United States. He often played Shakespearean roles. Other plays in which he appeared were *Hearts of Oak*, *A Texas Steer*, *A Poor Relative*, *The Warrens of Virginia*. He was also a director, and when moving pictures became popular, he gave a part of his time to acting for the screen.

Knightley, C. S. English-American actor, died Aug. 14, 1929, in New York. He was born Nov. 10, 1875, in Wellington, New South Wales, Australia, and was educated in the grammar schools of New South Wales and of Victoria. He began the study of law in Adelaide, South Australia, but gave it up to go on the stage. He played first with a traveling company in Australia, and in 1890, toured the colonies with Albert Norman. His first London appearance was in 1902, when he played Max in *Magda*. In 1906 he toured with his own company, playing *His Stoops to Conquer* and *The School for Scandal*. Coming to America in 1908, he appeared at the Lyceum in New York in the rôle of Count André de

Juving in *Love Watches*. Thereafter, he played alternately in New York and London, though, in the latter part of his life, he was identified with the American stage. He preferred the parts Holapuri in *Henry IV* and Mercutio in *Romeo and Juliet*.

Keith, Minor Cooper American capitalist, died in West Islip, Babylon, N. Y., June 14, 1929. He was born in Brooklyn, N. Y., Jan. 19, 1848, and educated in public schools. He was in the lumber business until 1870, when he bought a cattle ranch in Texas, remaining there two years. In 1872 he joined with his brother in the construction of a railway in Costa Rica, and after his brother's death, he continued the enterprise, financing it personally. Having previously started and developed a banana plantation in Central America, in 1899, with Andrew W. Preston, Mr. Keith organized the United Fruit Company. He was president of the International Railway of Central America, the Atlanta & St. Andrews Bay Railway Co., the St. Andrews Bay Lumber Company, and the Guatemala Central Railroad Company.

Morishita, Toshiki A Japanese scientist, died in New Haven, Conn., July 3, 1929. A resident of Tokyo, he was graduated from the university there. In 1927 he entered the department of bacteriology at Yale University where he was pursuing research work in micro organisms, especially those associated with the decay of the teeth at the time of his death.

Moss, McKenzie An American judge, died in Washington, D. C., June 12, 1929. He was born in Christian Co., Ky., in 1866. He was a member of the Fifty-Seventh Congress (1901-03) from Kentucky. From 1910 to 1921 he was circuit judge of the 8th judicial district of Kentucky, and became general counsel of the Treasury Department in 1921. He was Deputy Commissioner of Internal Revenue for a short time before he was appointed Assistant Secretary of the Treasury by President Coolidge in 1921. In the latter capacity, he was interested in prohibition enforcement, going to Ottawa, Can., in 1923 as leader of an Ameri-

can delegation to arrange a treaty with Canada in regard to liquor and narcotic smuggling. In 1926 he was appointed judge of the Court of Claims by President Coolidge.

Mottet, The Rev Dr Henry American Protestant, died June 20, 1929, in Great N Y. He was born May 20, 1845, and was brought to the United States. He was graduated from the College of the City of New York in 1869 and from the General Theological Seminary, New York, in 1873. Hobart College conferred upon him the degree of doctor of sacred theology in 1892. He was ordained a deacon (1873) and a priest (1879). From 1873 to 1879, Dr Mottet was curate of the Church of the Holy Communion in New York City, and was rector from 1879 to his death. He was interested in Christian unity, and did much in an unofficial way to promote the movement. During the World War, he organized and conducted one of the most popular soldiers' and sailors' clubs and was on the commission of the Federal Council of Churches.

Murray, The Hon. George Henry  
Murray, The Most Rev John Gardner

Murray, Thomas E. An American electrical engineer and inventor, died July 1, 1929, in Wickapogue, Long Island, N Y, at the age of 68. He was one of the organizers of the New York Edison Company and the United Light and Electric Power Company, and until his resignation in 1928 he was vice chairman of the board of directors of the New York Edison Company. He designed the electrical power plants that supply New York City. His researches and inventions were not confined to electricity. His inventions, more than 1100 in number, include a process for welding metal to glass, a welding process to increase the speed in automobile industry, and processes that facilitated the manufacture of munitions during the World War. For his electrical discoveries and safety appliance inventions he received the Longworth medal of merit from the Franklin Institute of Philadelphia.

Muslin, Ovide  
Muthesius, Karl  
Nairn, Viscount of See Finlay, Robert Bannatine  
Naudy, Sir Manindra Chandra See Kaumbhar, Maharaja of

Nebhat, Bey Turkish Minister of Education, died in Turkey, Jan 2, 1929. He had been an important influence in the modernizing educational work of the Republic, dying shortly after the Government decreed that the Latin alphabet should replace the old Arabic one.

Nehrer, Fred An American professor of chemistry, died in Princeton, N J, Dec 10, 1929. He was born in Troy, N Y, Apr 30, 1867, was graduated from Princeton University with the B A degree in 1889, and was a fellow at the University of Chicago during 1896-98. He was chemist for the United States Fish Commission in 1890, and in 1891 went to Princeton University as an assistant in chemistry, becoming an instructor (1892-98), assistant professor of organic chemistry from 1898 to 1903, and professor after 1903. During 1903-14 he was professor and director of chemistry at Princeton. Professor Nehrer cooperated with the Bureau of Mines in war-gas investigations in 1917-18.

Nehrling, Henry American horticulturist and ornithologist, died Nov 23, 1929, in Orlando, Fla. He was born in Howard's Grove, Wis., May 9, 1853, and was graduated from Teachers Seminary, Addison, Ill., in 1873. In 1887-90 he was deputy collector and in spectator of customs in Milwaukee and, from 1890 to 1901, was secretary and custodian of the public museum there. He then devoted himself to investigations in ornithology, botany, and horticulture. He was a collaborator in the Bureau of Plant Industry of the U S Department of Agriculture, and contributed to English, German, and American scientific journals. He was the author of *Die Nordamerikanischen Vogelwelt* (1891), *Our Native Birds of Song and Beauty* (2 vols., 1893, 1896), *Die Amaryllis* (1908).

Neumann, Franz  
Niblack, Rear Admiral Albert Parker, USN  
Nicholas (Nikolai Nikolaevitch), Grand Duke  
Nichols, Charles Lemuel An American physician and antiquarian, died in Worcester, Mass., Feb 19, 1929, where he was born May 29, 1851. He was graduated from Brown University in 1872, and from the Harvard Medical School in 1875, receiving the A M degree from Brown in the same year. He practiced at Worcester from 1878 until his death, becoming trustee of the Western State Hospital. Dr Nichols belonged to several historical associations and was secretary for the foreign correspondence of the American Antiquarian Society. He was also a member of the board of fellows of Brown University, and received the Litt D degree from that institution in 1918. He wrote *A Bibliography of Worcester, A List of Massachusetts Almanacs, and Isaac Thomas, Printer*, with a bibliography.

Noziman, Daniel C An American archaeologist and

art dealer, died Jan 10, 1929, in Newark, N J. He was born in Vienna, but came to America in 1886. With William Hayes Ward, he made archaeological excavations in Mesopotamia. He also conducted an expedition sent out by the University of Pennsylvania to the site of Babylon, where he found many specimens of ancient glass now in the University Museum of Art in New York.

Norris, William American actor, died in Bronxville, N Y, Mar 20, 1929. He was born June 15, 1872, in New York City, and was educated in the schools of San Francisco. He made his first professional appearance with George Lederer's Stock Company in 1892. He appeared in many plays, among them *Children of the Ghetto* in which he made his London debut, *Francesca da Rimini*, *Tom Jones*, and *Maytime*. He joined the Cosmopolitan Productions Company to play in motion pictures in 1922, was in *White Wings* (1926), and made his last appearance in *A Connecticut Yankee*. Northbrook, Second Earl of (Francis George Bar ing) A former member of British Parliament, died Apr 12, 1929, near Winchester, England. He was born Dec 6, 1850. He was aide de camp to his father when the latter was Governor General of India (1873-76), and was a lieutenant in the Rifle Brigade and Grenadier Guards from 1880 to 1885, was a Liberal member of Parliament for Winchester, and from 1886 to 1892 a Liberal Unionist for North Bedford. It was as an agriculturist and a stockowner that Lord Northbrook was best known, being closely associated with the Royal Agricultural Society and other organizations of this kind. He had a noble art collection, including Van Dyke portraits, some of which he sold to an American collector in 1927, at the reputed figure of £100,000.

Nourse, Edward Everett  
Ouba, Siegfried

Quinn, Edmond T.  
Kudosiavoff, Vassil

Raiberts, Baron Flammus. A former cabinet official and lawyer of France, died Dec. 17, 1929, in Nice, where he was born in 1862 and where he practiced law. In 1920 he served as Minister of War, and, from 1922 to 1924, he was Minister of Marine.

Ransom, Jeno  
Ransom, Leo. An American lawyer and judge, died June 1, 1929, in St. Louis, Mo. He was born Apr. 19, 1844, in Wadern, Prussia, but went to the United States in early childhood. During the Civil War, he served in the Union Army, enlisting as a private in the 1st Missouri Volunteer and being mustered out as major of the 36th Missouri Infantry. He was admitted to the St. Louis bar in 1867, and served as attorney for the city school board from 1880 to 1890. He was judge of the probate court of St. Louis during 1895-99, after which he resumed his private law practice. He was commander in chief of the Grand Army of the Republic in 1900-01.

Ras, Samuel  
Ras, Sir (Charles) Hercules

Reich, Leon. A Polish Zionist, died Dec. 1, 1929, in Lwow, Poland, at the age of 56. He was born in Dnobyts, and attended a school at Sambor, later studying law at the Lemberg University. He also studied at the Ecole Libre des Sciences Politiques in Paris. In 1905 he became vice president of the Zionist organization in Galicia, and edited the Zionist paper *Der Arbeiter* during 1905-08. He later edited the *Almanach Zydzowski*, an illustrated Jewish almanac. In 1912 he was elected a member of the executive committee of the International Zionist Congress, holding the position until his death. He

was made president of the Zionist organization for Israel in Poland in 1920, and in 1922 was elected to the same position where he concluded the so-called Polish Jewish under-

standing. He was a vice president of the Committee of at the Peace Conference in Paris (1919-20), during which time he published *The Question of the Minorities in Eastern Europe*, a compilation.

Reid, John Dowsley A Canadian senator, died Aug. 26, 1929, in Prescott, Ont., where he was born Jan. 1, 1859. He was graduated from Queen's University in medicine, but did not practice. A Conservative, he represented Grenville in the Canadian House of Commons from 1891 to 1921. From 1911 to 1917, he held the portfolio of Minister of Customs, and from 1917 to 1921 he was Minister of Railways and Canals. He was appointed to the Canadian Senate from the Province of Ontario in 1921.

Rind, Robert  
Réti, Richard A Czechoslovakian chess player, died in Prague June 5, 1929. He was born May 28, 1849, in Práznok. In 1920 he won the prize in the international chess tournament held in Gothenburg, Sweden. He also played at London in 1922, winning sixth place, in New York in 1924, and at Moscow in 1925. He wrote *Die neuen Ideen im Schachspiel* (1922), an authoritative book on the playing of chess, and *Meister des Schachbretts* (1928).

Revelstoke, Baring, John, Second Baron of  
Reynolds, Horatio M. An American educator, died Oct. 3, 1929, in New Haven, Conn. He was born in Wakefield, N. H., Apr. 17, 1857, and was graduated from Yale University in 1880. He returned to Yale University in 1881 as tutor, becoming in 1888 assistant professor of Greek. He was appointed Tufts professor of Greek language and literature in 1893, and in 1922 became emeritus professor.

Rice, The Rev. Dr. Edwin Wilbur An American editor, died Dec. 3, 1929, in Philadelphia, Pa. He was born July 24, 1811, in Kingsboro (now Gloverville), N. Y., and was graduated from Union College, Schenectady, N. Y., in 1834. During 1855-57 he was a student at the Union Theological Seminary, New York City, and was ordained in the Congregational ministry in 1860. Union College conferred on him the honorary D. D. degree in 1881 and the Litt. D. degree in 1914. He was a Sunday-school missionary in St. Louis, Mo., and La Crosse, Wis., from 1859 to 1864. Joining the American Sunday School Union, he became superintendent in Milwaukee (1864-70), assistant secretary and assistant editor in Philadelphia (1871-78), editor of periodicals (1878-79), editor of periodicals and publications (1879-1915), and after 1915, honorary editor. Dr. Rice was author and editor of many books and pamphlets on religious subjects. After his nineteenth birthday, he wrote an autobiography, *At Ninety* (1922) and *After Ninety Years Story of a Nonagenarian and the Educators He Has Known* (1924).

Richardson, Charles Williamson An American nose, throat, and ear specialist, died in Boston, Mass., Aug. 25, 1929. He was born in Washington, D. C., Aug. 22, 1861, and received an M.D. degree from Columbian University (now George Washington) in 1884 and from the University of Pennsylvania the same year. From 1891 to 1924, he was professor of laryngology and otology at George Washington University, and after 1924 emeritus professor. Dr. Richardson lived and practiced in Washington, and during President Coolidge's administration was specialist for the White House. In 1917-18 he was director of the section of defects of hearing and speech in the office of the Surgeon General. He contributed to Posey and Wright's *Diseases of the Eye, Ear, Throat, and Nose* (1907) and to Mosser and Kelly's *Handbook of Practice and Procedure* (1910).

Rickard, George Lewis (Tex) American professional boxing promoter, died at Miami Beach, Fla., Jan. 6, 1929. He was born in Kansas City, Mo., Jan. 2, 1871, and spent his childhood on a cattle ranch. As a young man he went to Alaska and for several years lived in the gold mining districts there. He became increasingly interested in professional boxing in the United States, arranging in 1906 the bout between Joe Gans and Battling Nelson at Goldfield, Nev. In 1920 he became manager of Madison Square Garden, sports center in New York City. He was promoter in 1921 of the heavyweight championship match between Jack Dempsey and Georges Carpentier at Jersey City, witnessed by 80,000 people with gate receipts of \$1,562,422. In Chicago, in 1927, 120,000 persons paid about \$2,500,000 to see the fight between Gene Tunney and Jack Dempsey, also promoted by Rickard.

Ridgway, Robert  
Riggs, Robert Baird An American chemist and educator, died in Minneapolis, Minn., Aug. 1, 1929. He was born in Hazelwood, Minn., May 22, 1855, and was graduated from Beloit College in 1876, receiving the Ph.D. degree from the University of Göttingen in 1883. During 1884-87 he was chemist with the United States Geological Survey. He was professor of chemistry at the National College of Pharmacy in 1886-87, and at Trinity

College from 1887 until 1920, in which year he retired. Riley, The Most Rev. Charles Owen Leaver, Arch bishop of Perth, Anglican churchman, died June 23, 1929, in Perth, Australia. He was born May 26, 1854, and was educated at Owens College, Manchester, and at Caius College, Cambridge. Ordained in 1878 to the curacy of Bierley, Yorkshire, he went in 1880 to Holy Trinity, Bradford, and in 1882 to Lancaster. He was bishop of St. Paul, Australia, from 1885 to 1897, and was appointed Bishop of Perth, a diocese of 84,000 square miles in West Australia. In 1911 he was raised to the rank of archbishop and the same year was appointed chaplain general of the Commonwealth Forces. During 1916-22 he was chancellor of the University of West Australia.

Riley, Franklin Lafayette An American educator, historian and author, died Nov. 10, 1929, in Lexington, Va. He was born Aug. 24, 1868, near Hebron, Miss., and was graduated from Mississippi College in 1889, receiving the Ph.D. degree from Johns Hopkins University in 1896. He was president of Holman College for Young Women in 1896-97, and professor of history at the University of Mississippi from 1897 to 1914. After 1914 he was professor of history at Washington and Lee University and head of the department. In 1902 he organized the Mississippi State Department of Archives and History, and until 1914 served as a trustee, during the World War Dr. Riley lectured in army camps, and in 1919 was professor of American history in the A. F. F. University in Beauvo, France. He wrote *Colonial Origins of New England Senators* (1896), *Spanish Policy in Mississippi after the Treaty of San Lorenzo* (1897), *School History of Mississippi* (1900), *Extinct Towns and Villages of Mississippi* (1902), *The Mississippi River as a Political Factor in American History* (1910), *Our Republic: A Grammar School History of the United States* (1910), joint author and publisher. He also edited 14 volumes of publications of the Mississippi Historical Society and 1 *Political History of the South* (South in the Building of the Nation series). He was literary editor of the *Literary Digest* and *Literature* (15 vols.), associate editor of the *World's Oratorical* (10 vols.) and editor of *General Robert E. Lee after Appomattox* (1921).

Robb, James Alexander A Canadian statesman, died in Toronto, Nov. 11, 1929. He was born in Huntington, Quebec, Aug. 10, 1846, and was educated at Huntington Academy. In 1908 he was elected to the Liberal in the Canadian Parliament and was re-elected thereafter until his death. He was Minister of Trade and Commerce in 1921-23, Minister of Immigration and Colonization in 1923-25, acting Minister of Finance in 1924-25, and after 1926, Minister of Finance. He served in 1918 as the Liberal party's chief whip and became a member of the Privy Council in 1921. He was appointed to the Canadian Senate in 1912 and made Conservative leader of the Upper House in June, 1926.

Rosster, William Sidney.  
Ryhmer, Cornelius.

Sackett, Henry Woodward. An American lawyer died Dec. 9, 1929, in New York City. He was born in Enfield, N. Y., Aug. 31, 1852, and was graduated from Cornell University in 1875, studying law at Columbia University the following year. Admitted to the New York bar in 1877, he became a law clerk in the office of Cornelius A. Runkle, whom he succeeded as counsel for the *New York Tribune* in 1888. From 1888 to 1894, he was a member of the law firm of Sackett & Bennett, and at the time of his death, was senior member of Sackett, Chapman, Brown & Cross. He specialized in the law of libel, lecturing and writing in that field as well as practicing. In addition to being at one time law editor and contributor to the *Herald Tribune*, he wrote *The Law of Libel for Newspaper Men*. He lectured at the School of Journalism of Columbia University and was a special lecturer at the College of Law of Cornell University.

Sauger, Oscar.  
Sajous, Charles Euchariste de' Medici.  
Sajous, Louis Theodoric de' Medici. An American physician, died Jan. 1, 1929, in Philadelphia, Pa., where he was born Dec. 1, 1846. He was graduated from the University of Pennsylvania in 1906, and in 1909 received a medical degree there. He also studied pharmacology at the University of Geneva and became associate professor of pharmacology at Temple University,

Philadelphia. Subsequently, he was successively instructor and assistant professor in endocrinology at the University of Pennsylvania, was associated with his father, Dr. Charles E. de' Medici, professor of endocrinology, in research work in that field. With him also, he edited the *Sajous' Analytical Cyclopaedia of Practical Medicine* (1898-1925).

Salus, Hugo. A Czechoslovakian poet and physician, died Feb. 1, 1929, in Prague. He was born in Ceslaup, August, 1866, and practiced medicine in Prague. His volumes of poetry include *Gedichte* (1898), *Esigen* (1900), *Ernte* (1903), *Glockenklang* (1911), *Das neue Buch* (1920), *Klarer Klang* (1922), *Helle Traume* (1924), *Die Harle Gottes* (1928). He also wrote *Novellen des Lyrikers* (1904), *250 Buchlein für Kinderlose* (1909), *Schwache Helden* (1910), *Keelen und Sinne* (1911), *Die achene Barbara* (1922).

Sanders, General Otto Laman von.  
Saurail, Maurice Paul Emmanuel.  
Sayre, Reginald Hull. An American surgeon died May 29, 1929, in New York City, where he was born Oct. 18, 1859. He was graduated from Columbia College in 1881, receiving the M.D. degree from New York University-Bellevue Hospital Medical College in 1884. From 1885 to 1890 he was assistant professor of surgery in the Bellevue Hospital Medical College of New York City. In 1890 he became lecturer and orthopedic surgeon in the New York University-Bellevue Hospital Medical College, in 1897 adjunct professor of orthopedic surgery, in 1898 clinical professor, and, after 1910 professor of orthopedic surgery. After 1911 he was also assistant attending surgeon at Bellevue Hospital in New York City. Dr. Sayre edited the department of orthopedic surgery in *Annals of the University Medical Sciences* (1890-96) and wrote *Immediate Reduction of Dislocation after Tenotomy* (1887).

Schaff, Moritz.  
Schrenck Notzing, Baron Albert von. A German physician and neurologist died in Munich Feb. 12, 1929. He was born May 18, 1862, in Oldenburg. He was interested in metaphysics and in psychic phenomena, especially in hypnotism. His books include *Materialisationsphänomene* (1914), *Physikalische Phänomene des Mediumismus* (1920), *Experimente der Fernbewegung* (1924).

Schure, Edouard.  
Schurig, Arthur.  
Scott, Geoffrey. An English scholar and architect died in New York City, Aug. 14, 1929. He was born in England in June 1885 and was educated at Oxford University. In 1909 he went to Italy, living in Florence and designing private houses and gardens. At Oxford he wrote *English Architecture* and in 1914 he published *The Architecture of Humanism*. He went to the United States in 1914 to edit the Boswell manuscripts, discovered at Malahide Castle and bought by Col. Ralph H. Isham. The six volumes of this work that had been published were of great interest to students of James Boswell in that they threw a new light on Dr. Johnson's biography and the death of Mr. Scott before the completion of the work as considered a distinct loss to Boswell scholarship.

Sergeant, Sir David Maurice. An English physician and poet died Jan. 12, 1929, at the age of 99. He left Cambridge University in 1852 for the gold mines of Australia and was forced to work intermittently at various manual occupations. He returned to Cambridge, and later completed his medical course at Guy's Hospital, London. After serving in the medical department of a steamship company, he practiced at Camberwell, becoming senior officer of the Camberwell National Reserve. Sir David received the M.D. degree from the University of London in 1896, and in 1922 he was knighted for his patriotic poetry.

Servais, Garrett Putnam.  
Seesums, The Rt. Rev. Davis, Bishop of Louisiana. A bishop of the Protestant Episcopal Church died Dec. 24, 1929, in New Orleans, La. He was born in Houston, Tex., July 7, 1858, and was graduated from the University of the South in 1878. He was ordained a deacon and a priest in the Protestant Episcopal Church in 1882, in which year he was rector of Grace Church in Galveston, Tex. During 1883-87, he was assistant and rector of Calvary Church in Memphis, Tenn., and he was rector of Christ Church in New Orleans from 1887 to 1894. In the latter year, he was consecrated Bishop of Louisiana.

Seydoux, Charles Louis Auguste Jacques. A French diplomat and publisher, died May 26, 1929, in Paris. He was born Dec. 30, 1870, and was educated at the Ecole des Sciences Politiques, later studying law at The Hague and at London. He was secretary of the Commerce Service, he was secretary in Athens and in Berlin, and at one time had the rank of Minister Plenipotentiary. He was also Assistant Director of Political and Commercial Affairs in the French Foreign Office. He contributed political articles to newspapers, writing a number of articles for the New York *Herald Tribune* and

contributing regularly to *Le Petit Parisien*. As an economist, his advice was sought by French leaders. During the World War, he studied blockades, and was later concerned with the economic sections of peace treaties, especially with reparations. Because of ill health, he retired in 1926.

Seymour, Admiral of the Fleet Rt Hon Sir Edward Hobart

Karp, Dallas Lore

Shattuck, Frederick Cheever

Shaw, Mary An American actress, died in New York City, May 18, 1929. Born in 1860 in Boston, Mass., she made her first appearance on the stage there in 1878. She went to New York in 1881, playing in Sheridan's *School for Scandal*. Her best known roles were Mrs Warren in Shaw's play, *Mrs Warren's Profession*, and Mrs Arling in Thesen's *Ghosta*.

Shugrue, Martin J. An American economist and educator, died Apr. 4, 1929, in Brookline, Mass., at the age of 39. He was born in Colchester, Conn., and was graduated from the University of Michigan. In 1914 he entered the department of economics at the Massachusetts Institute of Technology. With David R. Dewey, he wrote *Banking in the United States*.

Sidi, Mohamed el Habib, Bey of Tunis. Ruler of Tunis a French protectorate of North Africa, died Feb. 11, 1929, at the age of 71. He ascended the throne in 1922. He was succeeded by his cousin, Sidi Ahmed Sifon, Sir Clifford

Simkins, William Stewart. An American lawyer, educator, and soldier, died in Austin, Tex. Feb. 27, 1929. Born 1851, he joined the U. S. Army in 1870, and was promoted to major in December, 1880, with his entire class at the Military Academy of South Carolina, later was commissioned first lieutenant in the Confederate artillery and served through the Civil War.

During the reconstruction period, he was an important officer in the Ku Klux Klan. Admitted to the bar in 1870, he practiced at Monticello, Fla., 1870-73, at Corsicana, Tex., 1873-85, and at Dallas, Tex. 1885-99. He was then appointed professor of law at the University of Texas, where he remained until his death. The University of the South conferred in him the D.C.L. degree in 1913. In addition to his books, *Simkins on Equity* (1901) and *Simkins' Contracts and Sales* (1905), he wrote *Simkins on Administration of Estates in Texas* (1908), *A Federal Suit in Equity* (1909), *A Federal Suit of Law* (1912), and *Tule by Limitation in Texas*.

Singer, Sir Moses. A British sportsman, died in London, June 24, 1929. He was born in Yonkers, N. Y. July 25, 1863, the son of Isaac Merritt Singer, inventor of the Singer sewing machine. Educated at Cambridge University, he became a naturalized British subject in 1900 and in 1920 was knighted. He was a certified sergeant, holding an eighth license issued by the British government. He was also a pioneer in cycling and motorcycling, and a well known vachman. In 1881 he began the breeding and training of horses.

Sherrett, Hon. Sir Charles Perrin. An English jurist, died at sea, Feb. 15, 1929. He was born Sept. 2, 1863. Admitted to the New Zealand bar as barrister and counsellor, 1884, he became King's counsel in 1907. He was president of the New Zealand Law Society, 1918-26, and in the latter year was made Chief Justice of New Zealand, remaining in that post until his death. Sir Charles served as chairman of the Royal Commission on the Administration of Western Samoa, 1927. He was created a Knight Commander of St Michael and St George in the same year.

Skoda, Baron Karl von. A German munitions manufacturer, died Jan. 11, 1929, at the age of 51. He was general director of the Skoda Steel Foundry and Munition Works in Pilsen, Czechoslovakia. During the World War, the 30.5 centimeter howitzer constructed by his firm was largely employed by the German artillery.

Sloggett, Louis-Gustave. A British army surgeon, died Nov. 27, 1929, in London. He was born Nov. 24, 1857, at Stoke Newington, and in 1881 entered the Royal Army Medical Corps, where he was promoted to the rank of colonel in 1903, surgeon major general in 1908, and lieutenant-general in 1914. He served on the Italian frontier from 1884, in the Sudan from 1897-98, and from 1899 to 1903. He was in British Africa. From 1911 to 1914, he was Director of Medical Services in India, and from 1914 to 1918, he was Director-General of the British Army Medical Services. In the course of his military service, General Sloggett was often mentioned in despatches and received numerous decorations, including that of Grand Officer of the Legion of Honor from France, Commander of the Order of Leopold, First class, from Belgium, and the Croix de Guerre from both France and Belgium. He was created Knight Commander of the Bath in 1915 and Knight Commander of St Michael and St George in 1917. From 1921 to 1928, he was colonel commandant of the Royal Army Medical Corps.

Slosson, Edwin Emory

Smareghia, Antonio

Smart, Rt Hon Sir Thomas William

Smith, Gerald Birney. An American educator and author, died Apr. 4, 1929. He was born in Middlefield, Mass., May 3, 1868, and was graduated from Brown University in 1891 and from the Union Theological Seminary in 1898. He also studied at the universities of Berlin, Marburg, and Paris (1898-1900). He was tutor in Latin at Oberlin Academy in 1891-92 and instructor in mathematics and modern languages at Worcester Academy in 1892-93. In 1902 he was ordained in the Baptist ministry, and during 1903-04 he was an instructor in systematic theology at the University of Chicago, assistant professor in 1904-06, associate professor of dogmatic theology during 1906-11, and professor of Christian theology after 1913. He was the Nathaniel William Taylor lecturer at Yale University in 1912 and the Earle lecturer at the University of California in 1920. He received the D.D. degree from Brown University in 1909. Ordained in the Universalist ministry in 1869, he held pastorates in New York State before he became pastor of the Church of the Messiah in Philadelphia in 1879. In 1920 he was made pastor emeritus of the Church of the Messiah. He was president of the Universalist General Convention in 1890. Admitted to the Arkansas bar in 1903. He was one of the speakers at the World's Parliament of Religions in Chicago in 1893. In 1921 he published *The Image of God*.

Tuft, Charles Phelps  
Tazgari, Thomas  
Tanna, Baron Giehl  
Tannmann, Otto  
Thompson, Sir Edward Manville  
Tillman, John Newton An American politician and former university president, died Mar. 4, 1929, in Fayetteville, Ark. He was born in Springfield, Mo., Feb. 11, 1859, and was graduated from the University of Arkansas in 1880. Admitted to the Arkansas bar in 1883, he was circuit clerk of Washington County in 1884-88, a member of the State Senate in 1888-92, prosecuting attorney for the fourth judicial district during 1892-98, and judge of that district from 1900 to 1905. During 1905-12 he was president of the University of Arkansas. In 1915 he was elected to represent the third district in Congress. He retired in 1928.

Tingley, Katherine  
Titus, Lydia Yeamans An English actress, died Dec. 31, 1929, in Los Angeles, Calif. She was the daughter of Annie Yeamans, an Australian actress, and was the widow of Frederick J. Titus. In 1900 she was popular in vaudeville shows, her pictures and her singing of *Sally in Our Alley*. King Edward VII. gave the actress a gold bangle, on which the first notes of the song were written in diamonds. During the last 10 years of her life, she played character parts in motion pictures. She was cared for during her last illness by the Motion Picture Actors' Relief Association, to which she had given \$5000 on retirement from the stage.

Tondorf, Francis Anthony An American seismologist and educator, died Nov. 29, 1929, in Washington, D. C. He was born July 17, 1870, in Washington, D. C., and was graduated from Woodstock College in 1893, receiving the Ph.D. degree in 1914 from Georgetown University. In 1904 he assumed direction of the Seismological Observatory at Georgetown University, and in 1929 was elected head of the department of physiology there. Dr. Tondorf was an authority on earthquakes, doing research in epicentres and microseisms. He was also a contributor to scientific journals.

Toole, Joseph Kemp A former Governor of Montana, died Mar. 11, 1929, in Helena, Mont. He was born May 12, 1851, in Savannah, Mo., but moved to Montana in 1870. Admitted to the Montana bar in 1872, he began the practice of law in Helena and, from 1872 to 1876, was district attorney for the third judicial district. He was several times a member of the Montana Territorial Legislature, was a member of the Montana Constitutional Convention in 1884, and served in the Forty-Ninth and Fiftieth Congresses (1885-89). On the admission of

Montana as a State to the Union in 1889, he became the first governor, 1889-93, and was again governor from 1901 to 1909.

Toni, Cardinal Eugenio, Archbishop of Milan A Roman Catholic prelate, died in Milan, Italy, Jan. 7, 1929. He was born in Busto Arsizio, a district of Italy, in 1864. In 1922 he was created cardinal and made Archbishop of Milan.

Tout, Thomas Frederick  
Trevor, Norman An American actor died Oct. 30, 1929, in Norwalk, Calif. He was born June 23, 1877, in Calcutta, India, and was educated there at St. Xavier's College. He became known as an athlete, winning in 1900, as a member of the British Olympic team in Paris, the medal and the bronze statue for the best physique of the athletes represented. He first appeared on the stage in 1907, when he played in *The Stronger Sex*, at the Apollo Theatre in London. He joined the Play Actors the following year, and in 1909 toured with his own company. He went to the United States in 1914. He first appeared in New York in *The Elder Son*. In 1916 he played opposite Maud Adams in Barre's *A Kiss for Cinderella*, and in 1918 he became joint manager, with Cyril Harcourt, of the Coney Theatre. After 1920, he gave his entire time to acting for the motion pictures.

Trombetti, Alfredo An Italian philologist, died July 6, 1929, in Venice, at the age of 61. Aided by monetary grants from the Italian Government, he spent 30 years in research in an effort to read the Etruscan language. He studied inscriptions in tombs and on works of art and at the International Congress of Linguists meeting at The Hague in 1928 he lectured on his discoveries. He believed that he was near a solution to the mystery of the lost Etruscan language.

True, Tada, Umeko A Japanese educator died Aug. 17, 1929, in Kamikura. She was born in Tokyo in 1865, the daughter of the agriculturalist Tada Sen and she was one of the five Japanese girls sent in 1871, by the Imperial Government to study in the United States. She remained in the United States until 1882 and on her return to Japan taught in the Perseus School and lectured in the Women's Higher Normal School. She went again to the United States in 1889 and was graduated from Vassar College in 1892. In 1901 she founded the Joshi Eigaku Gaku (Girls' English School) in Tokyo.

Tucker, Theodore  
Tuke, Henry Scott  
Turner, Edward Raymond  
Tyler, John Mason  
Tyson, Lawrence Davis

Underwood, Oscar (Wilder) Underwood, William Lyman An American naturalist and educator, died in Belmont, Mass., Jan. 28, 1929, where he was born Mar. 4, 1864. He left school in 1880 to enter his father's concern, the William Underwood Company, manufacturers of canned goods, of which he subsequently became a director. He commenced lecturing in Boston on natural history subjects in 1890. Appointed lecturer in the biological department of the Massachusetts Institute of Technology in 1900, he remained at that institution until his death, lecturing and writing on the bacteriological problems of the canning and preserving industries, the extermination of mosquitoes, the gypsy and brown tail moths, and on numerous forms of wild animal life. He was the author of *Wild Brother and Wilderness Adventures*.

Van der Stucken, Frank  
Van Slyke, Elizabeth Johnson A Canadian physician, died in New York City Feb. 16, 1929. Born in Montreal, the daughter of William and Margaret Van Johnson, she married in 1902 the Rev. Everett Van Slyke, who died in 1909. She was at first from the New York Hospital Training School for Nurses in 1883, and from the medical school of Buffalo University in 1887. While in Buffalo, Dr. Van Slyke was superintendent of the training school of the High Street General Hospital. She practiced in New York and supervised for 10 years the clinic in the dispensary of the University of New York for Women and Children. Dr. Van Slyke was medical editor of the *Scientific American* and served for a time on the advisory board of the School of Applied Design for Women.

Vasilev, Alexander Vasilevitch A Russian mathematician, died in Moscow, U. S. S. R., Oct. 6, 1929. He was born in Kazan, July 2, 1853, and was graduated in 1874 from the University of Petrograd, after which he lectured at the University of Kazan on the theories of function, numbers, and probability. In 1879 he studied in Berlin and Paris. As professor emeritus at the University of Kazan, he lectured there from 1890 to 1907, when he became a lecturer at the University of Leningrad. He was the first mathematician in Russia to emphasize the importance of the theory of groups. The French government bestowed upon him the title Officer de l'Instruction Publique. In addition to textbooks on mathematics, he wrote *Space, Time, Motion*, a historical

cal introduction to the general theory of relativity, and *The Acquisitions and Enigmas of the Philosophy of Nature*.

**Victoria, Victor Clarence**  
Victoria, Princess of Prussia. Second daughter of the Emperor Frederick of Germany and the Princess Royal of England, a granddaughter of Queen Victoria of England, and a sister of the former Kaiser Wilhelm II of Germany, died Nov. 13, 1929, in Bonn, Prussia. Born at Potsdam, Germany, Apr. 13, 1866, she was married in 1890 to Prince Adolph zu Schaumburg-Lippe, and after his death in 1916, continued to live at the Schaumburg Palace in Bonn. In 1927 she was married to Alexander Zoubkoff, a young Russian refugee, 21 years of age, who incurred many debts. In 1928, after taking part in a brawl in a Berlin place of entertainment, Zoubkoff was banished from Germany as an undesirable alien. At the time of her death, Princess Victoria was living in comparative poverty and was seeking a divorce from her husband.

**Voorhees, James D.** An American obstetrician, died in Santa Barbara, Calif., July 30, 1929. He was born in Morristown, N. J., May 21, 1869, and was graduated from Princeton University in 1890, receiving the medical degree from the College of Physicians and Surgeons, Columbia University, in 1893. After serving as an interne in the Presbyterian Hospital, New York City (1894-96) and of the New York Hospital (1896), he became resident physician at the Sloane Maternity Hospital in New York City from 1897 to 1900. He taught in the College of Physicians and Surgeons from 1897 to 1920, becoming in 1915 associate professor of obstetrics. After 1920, Dr. Voorhees was consulting obstetrician at the Sloane Hospital for Women. He was also consulting obstetrician at Green which Hospital in New York City after 1910, the Southwestern (N. Y.) Hospital after 1919, and the Overlook Hospital in Summit, N. J., after 1920.

**Vrooman, John Wright.** An American banker and lawyer, died in Herkimer, N. Y., Nov. 24, 1929. He was born in Herkimer Co., N. Y., Mar. 28, 1844. A volunteer in the U. S. Navy during the Civil War, he was present at both attacks on Fort Fisher. In 1866 he was admitted to the New York bar and practiced in Herkimer, N. Y. He was chief clerk of surrogate's court, Herkimer County, during 1868-78, deputy clerk of the New York Assembly in 1876-77, and secretary of the New York Senate in 1877-78. Before 1890 he was a banker at Herkimer, and, after that year, was in the same business in New York City. From 1889 to 1891, he was Grand Master of the Masons of New York.

**Wacker, Charles Henry.** An American manufacturer, died Oct. 31, 1929, in Chicago, Ill., where he was born Aug. 29, 1856. He was educated at Lake Forest (Ill.) Academy and in Stuttgart, Germany. In 1880 he established with his father the mailing firm, F. Wacker & Son, later Wacker & Herk, New York City, of which he was president from 1884 to 1901. He was made chairman of the Chicago Plan Commission in 1909, and under his leadership a unified city plan was developed and the lake front of Chicago was made a beautiful avenue. In 1927 he resigned from the commission because of ill health. Wacker Dwyer on the Chicago River, was named in recognition of his work.

**Wade, Frank.** An American lawyer and penologist, died Apr. 10, 1929, in Buffalo, N. Y., where he was born Dec. 14, 1865. Graduated from Cornell University in 1889, he was admitted to the New York bar in 1892 and practiced in Buffalo until his death. After 1910, he was a member of the New York State Commission of Prisons and, after 1907, a member of the New York State Probation Commission, serving as president in 1917. He drafted the child abandonment law and the adult contributory delinquency law sections of the penal law.

**Wakeman, Maurice.** An American physician, died Mar. 2, 1929, on board steamship between the Azores and Southampton, England. He was born in New York City, Mar. 30, 1897, and was graduated from Yale University in 1919, receiving the medical degree there in 1923. In 1924-25 he was on the staff of the Presbyterian Hospital in New York City and in 1925 was appointed an instructor in the medical school at Yale University. He was also an associate physician in the New Haven (Conn.) Hospital. Dr. Wakeman, in 1928, was granted a leave of absence from Yale University to study the chemical pathology of yellow fever in Africa. As a member of the International Health Board of the Rockefeller Institute, he went to Lagos, Nigeria, where he contracted yellow fever, of which he died on his return voyage.

**Waldo, Leonard**  
**Walker, Henry Oliver**  
**Walpole, The Rt. Rev. George Henry Somerset,** Bishop of Edinburgh. Scottish Anglican bishop, died in Edinburgh, Mar. 5, 1929. He was born in 1854 and educated at Cambridge. He went as a tutor to the Scholastic Canonial in Truro, Cornwall, 1877-82. During 1882-89 he was incumbent of St. Mary's Cathedral at Auckland, New Zealand, and also warden of St. John's Cathedral, 1889 to 1896. He was professor of dogmatic theology in the General Theological Seminary, Durham, from 1896 to 1903; principal of Hede College, Durham. He was then appointed examining chaplain to the Archbishop of York, 1903, and rector of Lambeth, 1904-10. In 1906-10 he was honorary canon of Southwark. After 1910 he was Bishop of Edinburgh. Bishop Walpole was the author of a great number of books on ecclesiastical subjects. He was the father of Hugh Walpole, the English novelist.

**Walsh, Stephen**  
**Warburg, Aby.** A German educator, died Oct. 28, 1929, in Hamburg, where he was born June 13, 1866. He studied at the universities in Bonn, Munich, and Göttingen. In 1891-95 he lived in Italy, where he was in the art of Florence, and from 1897 to 1902, he made a study of the art of the Pueblo Indians in the southwestern part of the United States. In addition to his work on the faculty of the University of Hamburg, Professor Warburg established the Warburg Library in Hamburg, where are kept the many volumes which he collected on Indian art. He also wrote *Die Jottrellische Geburt der Venus und Frühling, Bild und Wort und Florentinisch Burgert, Heidnisch antike Wassung im Wort und Bild zum Luthers Zeit*.

**Ward, James R.** A British American physician and lecturer, died in New York City, Sept. 27, 1929. He was born on the Mount of Olives in Palestine, Aug. 22, 1846, the son of the British Consul in Jerusalem. He studied at Oxford University, at the Sorbonne, and at the universities of Heidelberg, Vienna, and Naples. Going to Paris, he was for three years private secretary and physician to the Emperor Eugénie. On returning to Palestine, he studied the Oriental languages, and later succeeded his father as consul in 1880. He went to the United States, where he lectured on the Orient. He became an American citizen in 1922.

**Ward, William Breining.** American wholesale baker, died in New York, Feb. 6, 1929. Born in Pittsburgh, Pa., Feb. 9, 1844, he was graduated from the Wharton Business School, University of Pennsylvania, in 1905. In 1906 he entered the New Maryway Company, Pittsburgh, a chain development of the bakery shop established by his grandfather in New York City, in 1849. Elected treasurer and director of the Ward Bread Company in 1908, he organized additional companies in Ohio, Indiana, and Illinois in 1912. He acted as the manager in 1921 of the United Bakers Corporation, with a capital of \$10,000,000, which acquired many baking concerns in the Middle West and South. Resigning as chairman, Mr. Ward bought the outstanding stock of the Ward Baking Company in 1924, and reorganizing the firm as the Ward Baking Corporation, was elected president, subsequently becoming chairman of the board at the time of his death. Mr. Ward was president of the Ward Baking Corporation, having been reelected Dec. 20, 1928. He was a trustee of Syracuse University.

**Warden, Florence (Mrs. Florence James).** An English novelist, died Mar. 11, 1929. She was born May 16, 1857, in Hanworth, Middlesex, the daughter of C. W. Price. She married Mr. James in 1887, but remained best known by her pen name. During 1875-80, she was a governess, and from 1880 to 1885 she was on the stage. Her published works include *The House on the Marsh*, *A Prince of Darkness*, *A Witch of the Hill*, *Ralph Ryder of Brent*, *Those Western Gales*, *A Pass age through Bohemia*, *The Inn by the Shore*, *Tom, the Mad Son of Geoffrey*, *The Grey Moth*, *Lullaby*, *The Grey Moth*, *Lullaby*, and *Patched Up Again* (Plays).

**Warner, Worcester Reed.** An American manufacturer, died June 25, 1929, in Eisenach, Germany. He was born in Cummington, Mass., May 16, 1846, and after attending a school where he learned construction, he traded from 1870 to 1880, he was with Pratt & Whitney Co. at Hartford, Conn., meanwhile studying astronomy and experimenting in the building of telescopes. In 1881 with Ambrose Swasey, he established the Warner & Swasey Co., later Warner & Swasey, Inc., in Cleveland, Ohio. Manufacturers of machine tools and instruments of precision, they designed and constructed the 36 inch telescope for the Lick Observatory, the 40 inch one for the Yerkes Observatory, and the 72 inch reflecting telescope for the Dominion Observatory of Canada at Victoria, B. C.

**Warren, Francis Emory**  
**Warren, William Fairfield**  
**Watson, John Isaac**  
**Watson, Henry.** An American judge, died Dec. 7, 1929, in Montpelier, Vt., at the age of 78. Born in Bradford, Vt., he entered a law office there and in 1877 was admitted to the Vermont bar. He became attorney for Orange County in 1886, and was elected to the

State Senate in 1892. For 30 years, he served in the Vermont Supreme Court and, after 1917, was Chief Justice.

**AREA AND POPULATION** On Jan 1, 1928, the total area was 12,602 square miles, exclusive of water, population, according to the census of 1920, 6,865,314, according to the communal lists for Jan 1, 1928, 7,925,938, density per square mile in 1927, 605.1. According to the figures for 1927, 47.63 per cent of the population, or 3,585,645, were inhabitants of towns of 20,000 or more, the remainder being classified as rural. The average number of births from 1924 to 1928 was 178,515 and of deaths, 73,613, leaving an annual excess of 104,902. The birth rate per thousand was 23.9 and the death rate, 9.8. The emigration, mostly to North America, was 3340 in 1927. The largest cities with their populations in 1928 were Amsterdam, 743,402, Rotterdam, 577,605, The Hague, 425,120, Utrecht, 151,651.

**EDUCATION** Elementary education is free and compulsory between the ages of 7 and 13, the cost being shared by the state and the communes. Public elementary schools in 1925-26, 3694 with 15,655 teachers and 484,264 pupils, private elementary schools numbered 3740, with 18,369 teachers and 592,508 pupils, public infant schools, 238, with 1112 teachers and 36,154 pupils, private infant schools, 1324 with 3085 teachers and 123,896 pupils. For higher education, there are the four public universities at Leiden, Utrecht, Amsterdam, and Groningen, with totals of 408 members in the faculties and 6755 students. Besides, there are a technical university, a private university, navigation schools, commercial schools, schools for working people, etc.

**PRODUCTION**, ETC. Agriculture and animal husbandry in the Netherlands are highly intensive. There were 2,201,000 acres of arable land in 1927, or about 26 per cent of the total area, 3,145,000 acres of permanent meadow, and 618,000 acres of woods and forests. Of 210,000 farmers in the Netherlands in 1928, 182,000 had small holdings of from 2 to 49 acres and only about 200 cultivated more than 250 acres. Crops were abundant in 1928, due to unusually good weather, but the prices received were low. The area and production of the leading crops in 1928 were as follows: Wheat, 148,000 acres, 7,335,000 bushels, rye, 485,000 acres, 17,333,000 bushels, barley, 70,000 acres, 4,494,000 bushels, oats,

377,000 acres, 24,802,000 bushels; potatoes, 443,000 acres, 142,011,000 bushels, sugar beets, 161,000 acres, 2,300,000 metric tons, flax, 39,000 acres, 30,865,000 pounds of fibre. The average acreage devoted to bulbs is 13,580 and exports of bulbs in 1928 were valued at \$17,173,000. Butter production rose to 188,025,000 pounds in 1928 and cheese production to 291,357,000 pounds. In 1921 there were 2,063,000 cattle, 1,519,000 swine, 668,000 sheep, 272,000 goats, and 384,000 horses in the country. The normal poultry stock is estimated at 15,000,000 and about half of the annual egg production, valued at 70,000,000 guilders, is exported (the guilder, or florin, has a par value of \$0.4020).

The fisheries in 1927 engaged 5169 vessels of all kinds and the herring catch was valued at 11,275,237 guilders.

The coal industry, which is of increasing importance, produced 10,700,000 tons in 1928, or 15 per cent more than in the previous year. State-owned mines produced 70 per cent of the total. The average number of workers employed in the industry was 34,113. Lignite production in 1928 totaled 197,000 metric tons, salt, 41,800 metric tons. Industry in general experienced a favorable year in 1928, particularly rayon and wool. Conditions in the diamond industry were more stable. The shipbuilding industry in 1929 comprised 108 concerns employing 33,000 workers. New vessels launched in 1928 totaled 166,754 gross tons. Orders were more numerous than at any time in the preceding six years. The number of unemployed persons in unemployment insurance societies at the end of 1928 was 38,116, as compared with 44,185 the year previous. In 1927 there were 295 distilleries, 9 sugar refineries, 12 beet-sugar factories, 12 salt works, 190 breweries, and 3152 tobacco factories.

**COMMERCE** Both imports and exports increased in 1928, as compared with 1927, the imports rising to \$1,078,929,000 from the 1927 figures of \$1,022,346,000 and the exports to \$798,446,000 from \$761,974,000 in 1927. The excess of imports was normal and was balanced by the returns on foreign investments and the earnings of Dutch shipping. The value of the leading import commodities was Coal, coke, briquets, \$47,180,000, machinery, other than electric, \$46,173,000, electric machinery, \$18,969,000, iron and steel, \$69,647,000, linseed \$30,224,000, pine lumber, \$20,725,000, wheat, \$28,821,000, corn, \$51,029,000, green coffee, \$22,450,000, hides and skins, \$20,344,000, chemicals and medicines, \$20,015,000, cotton, \$19,975,000. Leading exports included Cotton piece goods, \$40,964,000; butter, \$35,382,000, cheese, \$32,281,000, coal, coke, briquets, \$32,382,000, fresh vegetables, \$27,681,000, diamonds \$23,655,000, machinery, \$23,731,000, vegetable oils, \$49,704,000, eggs, \$24,924,000. The value of both imports and exports again increased in 1929.

The bulk of the Netherlands' foreign trade was carried on with Germany and the United Kingdom. Germany furnished 27.2 per cent of the imports in 1928, Belgium, 11.2 per cent, the United States, 9.9 per cent, the United Kingdom, 9.6 per cent, and France, 4.5 per cent. Of the Dutch domestic exports in the same year, 23.5 per cent went to Germany, 22.3 per cent to the United Kingdom, 8.7 per cent to Belgium, 6.2 per cent to France, and 3.5 per cent to the United States (excluding reexports of diamonds). Imports from the United States in

creased in value from 224,000,000 florins in 1928 to 251,000,000 florins in 1929, while exports to the United States increased from 61,000,000 to 66,000,000 florins. Foodstuffs and live animals constituted 24.7 per cent of the total imports and 40.5 per cent of the exports by value, raw and partly manufactured goods, 35.9 per cent and 10.3 per cent; manufactures, 39.1 and 40.4; unclassified goods, 0.3 and 2.8 per cent, respectively.

The Netherlands government at the beginning of 1929 discontinued its system of credit insurance for export transactions which had been in operation for the preceding six years.

**FINANCE.** The estimated ordinary expenditures of the Netherlands government during 1929 totaled 593,624,000 florins and the estimated ordinary revenues, 601,110,000 florins, leaving a surplus of 8,186,000 florins. Preliminary returns indicated that the surplus would be much larger than anticipated due to unexpectedly large revenues. In 1927 the actual ordinary expenditures, according to provisional returns, was 571,107,000 florins and the revenues 627,456,000 florins, leaving a surplus of 53,349,000 florins. The proposed budget for 1930 estimated ordinary receipts at 621,122,000 florins and expenditures at 611,982,000 florins, leaving a surplus of 9,140,000 florins. Including extraordinary revenues and receipts, the budget figures for 1928 were receipts, 651,581,000 florins, expenditures, 821,480,000 florins, deficit 169,899,000, for 1929 receipts, 645,950,000, expenditures, 782,872,000 florins, deficit, 136,922,000, for 1930 receipts 648,893,000, expenditures, 708,735,000, deficit, 59,842,000.

The public debt on Jan. 1, 1929, totaled 2,824,304,000 florins (\$1,135,370,000), of which 2,788,765,000 florins was funded and 235,530,000 florins was floating debt. This was 165,927,000 florins less than on the same date in 1928.

**COMMUNICATIONS.** In 1927 vessels in the foreign trade entering Netherlands ports totaled 21,710 of 33,716,000 net registered tons and vessels clearing totaled 21,870 of 33,637,000 net registered tons. The movement of shipping in and out of the port of Rotterdam in 1929 reached 21,316,000 tons in 1929, or 800,000 tons more than in the previous year. The Dutch merchant marine on June 30, 1928, consisted of 1290 vessels of 100 tons or over with a gross tonnage of 2,816,703. In 1929 due to low freight rates, 10 out of 14 Dutch shipping companies failed to pay dividends.

The railway lines of the country, which had 2284 miles of line in 1927, were owned by two companies, in each of which the government had a controlling interest. In 1927 the railroads carried 52,286,000 passengers and 20,361,000 metric tons of freight. Gross receipts amounting to 162,217,000 florins (\$65,065,000). Receipts in 1928 were substantially higher despite a reduction in rates. In the same year the civil air lines covered 5965 miles and carried 17,765 passengers, 77,381 pounds of mail, and 1,517,051 pounds of freight. In 1929 civil aviation experienced an increase of 13 per cent in passenger traffic, of 20 per cent in freight and of 25 per cent in mail business, and of 64 per cent in parcel post.

**GOVERNMENT.** Executive power is vested in the sovereign and legislative power conjointly in the sovereign and the Parliament, which is called the States-General and consists of two houses. The upper house is composed of 50 members,

elected by the provinces, and the lower house of 100 deputies, elected directly. The sovereign, Wilhelmina Helena Pauline Maria, was born Aug. 31, 1880, and succeeded to the throne on the death of her father, Willem III, Nov. 23, 1890, and was crowned Sept. 6, 1898. The cabinet in 1929 was as follows: Premier and Minister of Finance, Dr. D. J. de Geer; Foreign Affairs, F. B. van Blokland (appointed Mar. 30, 1927); Interior and Agriculture, Dr. J. B. van Kan; Justice, Dr. J. Donner; Colonies, Dr. J. C. Koningsberger; War and Marine, J. M. J. H. Lambou; Public Works, Dr. H. van der Vegt; (the latter, interim); Labor, Commerce, and Industry, Dr. J. R. S. de Brinne; Instruction, Science, and Arts, Dr. M. A. M. Wavink.

**HISTORY.** The year 1929 was an uneventful one for the Netherlands. The election of a new lower chamber of the States-General resulted in no striking changes in the strength of the respective parties. Partly as a result of compulsory voting the electoral vote totaled 3,380,217 as compared with 3,085,862 in the election of 1925. The two leading parties, the Roman Catholic State party and the Socialists, increased their respective votes proportionately, the former polling 1,001,574 as against 883,333 in 1925, and the latter 804,818 as against 706,689 in 1925. The Communist vote was split, the orthodox wing receiving 37,622 votes, as against 36,258 in 1925, while a secession wing secured 29,860 votes. The composition of the chamber following the election, with the former figures in parentheses, was as follows: Roman Catholic State party, 30 (30), Socialists, 24 (24), Anti-Revolutionists, 12 (13), Christian-Historians, 11 (11), Liberty Leaguers, 8 (9), Democrats, 7 (7), State Reformers, 1 (1); Peasants, 1 (1), Communists, 1 (0), Roman Catholic Populists, 0 (1), Middle Class Parties, 1 (0).

**NEUMANN, FRANZ A.** distinguished Czech composer and conductor, died in Brunn in February, 1929. He was born in Prieau, Moravia, June 16, 1874. After being graduated from the Leipzig Conservatory he was assistant conductor in Karlsruhe and in Hamburg, then conductor in Kassel, Linz, and Reichenberg. In 1904 he became conductor in Frankfurt where he remained 15 years. Upon the establishment of the new Czech National Opera in Brunn, in 1919, he was called as first conductor, and in 1925 was made director. At this theatre, he conducted the premieres of almost all of Janacek's operas. His own compositions consist of several choral works, chamber music, two ballets, and the operas, *Die Brautwerbung* (Linz, 1901), *Lehelis* (Frankfurt, 1910), *Herbststurm* (Berlin, 1919), and *Beatrice Carraces* (Brunn, 1922).

**NEVADA.** POPULATION. According to the fourteenth census, the population of the State Jan. 1, 1920, was 77,407, and no subsequent estimate had been made. Capital, Carson City.

**AGRICULTURE.** The following table gives the acreage, production, and value of the principal crops in 1928 and 1929.

Crop	Year	Acreage	Prod Bu	Value
Hay	1929	369,000	848,000 *	\$9,470,000
	1928	368,000	733,000 *	8,309,000
	1929	5,000	850,000	1,275,000
Potatoes	1928	6,000	840,000	714,000
Wheat	1929	16,000	404,000	520,000
	1928	18,000	482,000	590,000

\* Tons

**MINERAL PRODUCTION** A sharp increase in the mineral output of the State as a whole occurred in 1928, and was conspicuous in the cases of the product alike of gold, silver, copper, and zinc, while that of lead decreased slightly. The rise in copper production was the most significant. There were produced in 1928, 158,786,883 pounds of copper, in 1927, 120,259,276 pounds. The average mine value for 1928, moreover, was 14 1/2 cents, as against 13 1/2 cents a pound for 1927, when the copper production had attained the total value of \$15,753,965. The quantity of gold produced was, for 1928, 175,157.79 fine ounces and for 1927, 150,346.16, that of silver, for 1928, 5,481,547 fine ounces and for 1927, 5,397,179, that of lead, for 1928, 15,747,414 pounds and for 1927, 15,784,818, that of zinc, for 1928, 6,796,713 pounds and for 1927, 6,344,523. The total value of the year's product of the above five metals was for 1928, \$31,033,776, for 1927, \$23,322,589. Gypsum was the only other mineral produced regularly in excess of \$1,000,000 of yearly value, and of this there was produced the quantity in 1927 of 327,363 short tons and in 1926 of 350,972 tons, in value, \$1,484,171 for 1927 and \$1,527,235 for 1926. The total value of the State's mineral product was, for 1927, \$26,753,295, for 1926, \$27,613,212.

The value of gold, silver, copper, lead and zinc mined in Nevada increased to about \$31,302,000 for 1929, according to a preliminary Federal estimate. There were decreases in the output of all metals except lead and zinc, though the value of the copper output increased. Gold output was about \$3,251,000 for 1929. The Nevada Consolidated Copper Company continued to be the largest producer of gold in the State. A merger of the principal producing mines in the Comstock district placed them under the Suto Coalition management. The silver production was about 4,783,000 ounces in value about \$2,447,000.

Copper output decreased to about 131,967,000 pounds for 1929, but the value increased from \$22,878,271 to about \$23,622,000. The lead output increased to about 16,467,000 pounds for 1929, in value, about \$1,046,000. Zinc recovered from ore mined in Nevada increased to about 14,082,000 pounds for 1929 in value, about \$936,000.

**TRANSPORTATION** The total number of miles of railroad line in operation on Jan. 1, 1929, was 2122.66. There were built, in 1929, 17.82 miles of additional second track.

**MANUFACTURES** According to the Federal biennial Census of Manufactures published by the Department of Commerce in 1929 and dealing with operations in 1927, there were in the State, in 1927, 116 manufacturing establishments. These employed 2419 wage earners, whose wages for the year totaled \$3,915,185. Materials and supplies used in production cost \$11,440,437. Manufactured products attained the combined value of \$26,815,907.

**EDUCATION** The main objectives of the policy of the State Department of Education in 1929 were the attainment of a codification of school laws, a teachers retirement law, and an enlargement of the Board of Education. There were in the public schools of the State, in the academic year 1927-28, 16,586 pupils, of whom 13,304 were in the elementary grades and kindergartens and 3292, in the high schools. There were in use 322 schoolhouses, and of this total the one-room

schoolhouses numbered 212. The salaries of teachers averaged \$1532. Expenditures for public-school education in the academic year 1928-29 were current, \$1,905,740, total, including interest and outlay, \$2,519,695.

**CHARITIES AND CORRECTIONS** The care of the State prison rested in 1929 with an ex-officio Board of State Prison Commissioners, another ex-officio board controlled the State Orphans' Home. The State Board of Health included a division of child welfare. There was also a Board of Commissioners for the Care of the Indigent Insane. The State Institutions were State Orphans' Home, Carson City, Nevada Hospital for Mental Diseases, Reno, Nevada State Prison, Carson City, School of Industry, Elko.

**LEGISLATION** The State Legislature held a regular biennial session, convening in January. The chief matters of deliberation were those contained in the message of Governor Balzar, setting forth the policy of the administration and recommending an annual appropriation of \$5000 for the State's Colorado River Commission, which sought to enter into an agreement with Arizona and California regarding the development of the Colorado River Dam, the effort to reduce State taxation and expenditure, and the construction in the course of the year of 187.9 miles of gravel-surfaced highway and of 5 1/2 miles of the highway connecting Elko and White Pine counties.

**POLITICAL AND OTHER EVENTS** Nevada took an active hand in the contest among the adjoining States over the disposal of the power to be derived from the projected Federal dam on the Colorado River. After conferring with the representatives of California and Arizona, Nevada, through its Colorado River Commissioner, George W. Malone, submitted to the Secretary of the Interior a tentative offer, on November 12, to purchase through the Boulder Canyon Power Company, a State corporation formed for the purpose, from one-third to all of the power generated by the dam at 175 mills the kilowatt-hour. Prehistoric Indian or other aboriginal relics were discovered by anthropologists of the University of California in a cave among the Humboldt Mountains, and were ascribed to a period about 1000 B.C. The number of divorces granted by the State in 1928, under the influence of an amendment of the law, facilitating divorce for outsiders, was reported by the Department of Commerce as 2529, as against 1853 in 1927. Marriages performed in Nevada totaled 4168 for 1928 as against 2398 for 1927. This increase was attributed to the change in the marriage law of California, which had rendered Nevada a place of pilgrimage for those seeking to enter matrimony.

**OFFICERS** Governor, Fied B. Balzar, Lieutenant-Governor, Mervyn Griswold, Secretary of State, W. G. Greathouse, Controller, Edward C. Peterson, Treasurer, George B. Russell, Attorney-General, M. A. Diskin, Superintendent of Public Instruction, Walter Anderson.

**JUDICIARY** Supreme Court, Chief Justice, Edward A. Ducker, Associate Justices, Ben W. Coleman, J. A. Sanders.

**NEVADA, UNIVERSITY OF** A coeducational State institution of higher education in Reno, Nev., founded in 1874. There was an enrollment of 932 students for the autumn term of 1929, of whom 536 were men and 396 were women. These were distributed among the various departments

of the university as follows: Arts and sciences, 619; normal school, 51; engineering, 183; agriculture, 46, and home economics, 33. The summer session of 1929 had a registration of 132. There were 74 members on the faculty. The productive funds of the university amounted to \$335,100 and the income for the year, to \$586,924. The library contained 50,200 volumes. President, Walter E. Clark, Ph.D., LL.D.

**NEW BRUNSWICK** (brūnz'wīk). One of the Maritime Provinces of Canada, lying east of Maine and south of the province of Quebec Area, 27,085 square miles, population, according to the census of 1921, 387,876; estimated June 1, 1929, 419,300. In 1927 births totaled 10,483, deaths 4879, and marriages 2881. The capital is Fredericton, with a population in 1921 of 8114. The largest cities with their populations in 1921 are St. John, 47,166, and Moncton, 17,488. The chief industries are agriculture, mining, manufactures, fishing, and lumbering. In 1927 the area planted to field crops was 889,277 acres and the value of the produce was \$18,413,500. The gross value of other leading products in the same year was: Farm animals, \$3,249,000, dairy products, \$8,702,000, poultry and eggs, \$1,744,000, fruits and vegetables, \$1,070,000, furs, \$457,000. The livestock census in 1928 showed 53,159 horses, 116,530 milch cows; 107,932 other cattle; 156,616 sheep, 71,568 swine, and 854,621 poultry. The value of the fishery output in 1928 was \$4,996,898, a 13 per cent increase over 1927. The province possesses various minerals including iron, gypsum, coal, building stone, antimony, copper, and manganese. The only active mining, however, is in coal and gypsum. The coal output in 1927 amounted to 171,177 short tons. In 1927-28 the total exports of the province amounted to \$71,521,545 and the imports for consumption, to \$25,227,984. The value of forest products exported totals over \$30,000,000 annually. In 1925-26 there were 1941 miles of railways open for operation. The province is under a lieutenant-governor appointed by the Governor-General of Canada, and a legislative assembly of 48 members elected for five years. As a result of the election held in August, 1925, the political grouping in the Assembly was as follows: Conservatives, 35, Liberals, 12, Independent, 1. Lieutenant-Governor in 1929, W. F. Todd, Prime Minister and Attorney-General, J. B. M. Baxter, Secretary-Treasurer, A. J. Leger, Agriculture, Lewis Smith, Public Health and Labor, Dr. H. I. Taylor, President of the Executive Council, L. P. D. Tilley; Lands and Mines, C. D. Richards, Public Works, D. A. Stewart, Minister without Portfolio, E. A. Reilly. The province is represented by 10 members in the Canadian Senate and 11 in the House of Commons. See CANADA.

**NEW CALEDONIA**, kāl'e-dō'n'ya. A French colony, comprising the island of New Caledonia, the southernmost of the Melanesian Islands, lying between 20° 1' and 22° 20' S latitude and 161° 30' and 144° 40' E longitude, and the following dependencies: Isle of Pines, Wallis Archipelago, Loyalty Islands, Huon Islands, and Futuna and Alofi. The island of New Caledonia has a length greater than 248 miles and an average width of 31 miles. Area, 8548 square miles. Population, according to the census of 1926, 57,630, of whom 14,983 were free, 1281 of convict origin, and 27,490 Melanesians and Polynesians. Capital, Nouméa, with 9336 inhabitants in 1921. No

convicts have been sent to the penal settlements on Nou Island since 1896. Coffee, copra, cotton, manioc, corn, bananas, tobacco, and pineapples form the principal agricultural products. The mineral resources are said to be very rich and varied, comprising cobalt, chrome, nickel, iron, and manganese, all of which are abundant, also antimony, mercury, silver, gold, lead, copper, and cinnabar. In 1925 the value of mineral exports was 4,019,334 francs. The other leading exports include coffee, copper, copra, guano, and preserved meats. The chief imports are wine, coal, flour, and rice. In 1927, 129 vessels of 198,019 tons entered, and 133 of 190,825 tons cleared, the ports of New Caledonia. Imports in 1927 amounted to 154,771,189 francs and the exports, 87,195,849 francs. About two-thirds of those that entered were French. There is a narrow gauge railway from Nouméa to Paita, about 20 miles long. In 1929 six German companies were awarded contracts for the construction of new harbor works, warehouses, and a hydroelectric plant and sewage works at Nouméa. The work was to be finished within 40 months and was to cost 65,000,000 francs, to be credited on repayments account. The colony is administered by a governor assisted by a privy council, made up of officials, and by an elected council-general. Governor in 1929, M. Guyon, who was appointed in 1925.

**NEWCOMB**, H. SOPHIE, COLLEGE FOR WOMEN. See TILMAN UNIVERSITY.

**NEWFOUNDLAND**, nū'fūnd-lānd'. A large island in the northeastern part of the Gulf of St. Lawrence, forming one of the British dominions. Area, 42,734 square miles, population, according to the census of 1921, 259,358, estimated in 1928, 268,178. Labrador, the most easterly part of North America, is a dependency of Newfoundland. It has an area of 120,000 and a population, in 1927, of 4054. Capital of Newfoundland, St. John's, with a population in 1928 of 57,641. Other towns, with their populations in 1921, were Bonaville, 4025, Harbor Grace, 3825, Carbonear, 3320. Between 1924 and 1928, the average annual births totaled 6953 and the deaths 3853, leaving an annual excess of births of 3100. Immigrants in 1927 numbered 13,687 and emigrants 16,765. The schools, practically all of which are conducted by the various religious bodies, numbered 1139 in 1926, with a total attendance of 59,088.

**PRODUCTION**. Agriculture, fishing, mining, lumbering, and manufacturing are the principal industries. In 1921 there were 188,000 acres of farm land, 89,000 acres of improved land, and 9,600,000 acres of forests. Hay, potatoes, turnips, and cabbage are the chief crops. In 1928 the codfish catch totaled 121,599,000 pounds and the number of seals caught, 227,022. While the codfish catch was smaller than in previous years, it sold for approximately \$3,000,000 more than the 1927 catch and was a leading factor in the prosperity which in 1928 succeeded two years of depression. The 1929 codfish catch was estimated at 10 per cent less than for 1928. The output of mines and newsprint plants reached record levels during 1928. Iron-ore output totaled 1,547,900 short tons, as compared with 1,495,800 in 1927. In 1929 the iron-ore output declined to 1,516,999 tons, valued at \$2,503,048. Newsprint production in 1928 was 184,900 tons valued at \$13,581,000, and pulp-wood exports amounted to 48,000 cords, valued at \$558,000.

Commerce Domestic exports for the fiscal year ending June 30, 1928, totaled \$32,677,000, or 9 per cent more than in 1927, while imports amounted to \$27,637,000, as compared with \$25,814,000 in 1927. Preliminary returns for the calendar year 1929 placed exports at \$36,200,000, or \$3,500,000 more than in 1928, and imports at \$29,000,000. Imports from Canada totaled \$11,800,000, from the United States, \$9,900,000; and from the United Kingdom, \$6,200,000 (an increase of \$1,200,000 for the year from Great Britain). Fishery products constituted about one-half of the total trade in 1928, other leading exports being iron ore, newsprint, pulp-wood, and furs. Imports consisted mainly of staple foodstuffs and finished manufactures. The United States, Canada, and the United Kingdom took most of Newfoundland's exports and furnished the bulk of the imports.

FINANCE For the fiscal year ending June 30, 1928, government receipts totaled \$10,000,000 and expenditures, \$10,741,000, not including the cost of operating the state railways, which carried over an unliquidated deficit of about \$800,000 from the previous year. The total debt at the end of 1928 was \$79,500,000, including a £2,000,000 loan floated in London during the year. The expenditure items in 1927-28 included Debt service, \$3,842,000, public charities, \$1,116,000, posts and telegraphs, \$1,171,000, education, \$668,000, of customs, \$668,000, military and naval pensions, \$627,000, all other, \$2,422,000.

COMMUNICATIONS In 1928 there were 974 miles of railway line, of which 905 miles were state owned. The mileage of telegraph and telephone wire in 1927 totaled 7500 and 12,000, respectively. Vessels engaged in the foreign trade which entered the ports of the island in 1927-28 numbered 1796 of 1,598,810 net registered tons, vessels cleared numbered 1329 of 1,501,003 net registered tons.

GOVERNMENT Executive power is vested in a governor, assisted by an executive council of not more than 10 members, and legislative power, in a council of not more than 24 members, and an elected house of representatives of 40 members. Women have the franchise. Governor and commander-in-chief in 1929, Sir John Middleton, appointed in August, 1928. The Ministry constituted in November, 1928, was composed as follows: Prime Minister and Minister of Justice, Sir R. A. Squires, Colonial Secretary, A. Barnes, Finance and Customs, P. J. Cashin, Posts and Telegraphs, W. W. Hallyard, Ministers without Portfolios Sir W. F. Coaker, Dr. A. Campbell, F. G. Bradley, Dr. H. M. Mosdell, P. J. Lewis, T. K. Cook. Other Ministers not in the cabinet were Marine and Fisheries, H. B. C. Lake, Public Works, R. Hibbs, Agriculture and Mines, F. J. Downey.

HISTORY An earthquake off the southern coast of Newfoundland on November 18, 1929, caused a tidal wave which swept the southern shores of the island, known as the Burn Peninsula, in some places to a height of 100 feet, causing the loss of 28 lives and damages estimated at \$1,000,000 to villages along the shore. See LARADOR, EARTHQUAKES, and GREAT BRITAIN, under History.

NEW GUINEA, *gîn'c*. An island of the East Indies, the third in size in the world, ranking after Australia and Greenland Area, variously estimated at from 310,000 to 335,000 square

miles, population estimated to be slightly below 1,000,000. It is divided under Australian, Dutch, and British control, the distribution being as follows. The northeastern portion, constituting the former Kaiser Wilhelmsland, to Australia, the western part, to 140° E longitude, to the Dutch East Indies, the southeastern part is the British colony of Papua. See DUTCH EAST INDIES, GERMAN NEW GUINEA, and PAPUA.

NEW HAMPSHIRE. POPULATION According to the Fourteenth Census, the population of the State on Jan. 1, 1920, was 443,083. The estimated population on July 1, 1928, was 456,000. The capital is Concord.

AGRICULTURE The following table gives the acreage, production, and value of the principal crops in 1928 and 1929.

Crop	Year	Acreage	Prod. Bu.	Value
Hay	1929	477,000	679,000 *	\$9,091,000
	1928	475,000	665,000 *	9,281,000
Potatoes	1929	11,000	1,826,000	2,922,000
	1928	12,000	1,656,000	1,325,000
Corn	1929	14,000	574,000	631,000
	1928	14,000	580,000	672,000

\* Tons.

MINERAL PRODUCTION The total value of the mineral product of the State was \$3,447,105 for 1927, for 1926, \$4,144,645. The chief component of these totals was furnished by stone, chiefly of high grade, of which the State quarried in 1927 178,300 short tons and in 1926 148,250 tons. The value of stone quarried was \$1,584,262 for 1927 and \$1,908,284 for 1926. No other mineral product attained \$1,000,000 in total value for either year. The clay products of the State had a total value of \$811,626 for 1927 and \$881,997 for 1926. The output of sand and gravel came next in value (\$653,214 for 1927). The minor products were feldspar, mica, and mica.

FINANCE State expenditures of the year ended June 30, 1928, as reported by the U. S. Department of Commerce, were for maintenance and operation of governmental departments, \$7,173,076 (of which \$584,868 was for local education), for interest of debt, \$71,023, for permanent improvements, \$2,229,104, total, \$9,473,803 (of which \$4,446,510 was for highways, \$2,879,409 being for maintenance and \$1,567,101 for construction, the chief part of the heavy highway maintenance charge having been entailed by flood damages of 1927).

Revenues for the year 1929 were \$8,877,022. Of these, property and special taxes formed 38.6 per cent, departmental earnings and remuneration for officers' services, 8.6, sale of licenses, 43.7 (including gasoline taxation of \$1,495,741). The State's funded debt of June 30, 1928, was \$2,054,636 outstanding, with no material offsetting sinking funds. On a property valuation of \$667,977,686 were levied in the year State taxes of \$2,965,492.

TRANSPORTATION The total number of miles of railroad line under operation on Jan. 1, 1929, was 1169.39. There was no reported construction of additional line in 1929.

MANUFACTURES According to the biennial Census of Manufactures published by the U. S. Department of Commerce in 1929, there were in the State, in 1927, 1028 manufacturing establishments. These employed 65,482 wage earners, whose wages for the year totaled \$72,803,397. Materials and supplies used in manufacture

were of the total value of \$182,106,373. The manufactured products attained the value of \$327,528,366.

**EDUCATION** It was reported by the State Board of Education in 1929 that since and including the winter of 1924 no public school of the State had shortened its academic period on account of winter difficulties to less than the 36 weeks prescribed by the law of 1919. Commissioner of Education Butterworth stated in the *Journal* of the National Education Association that the total school costs of the State ran lower for 1929 than for 1928 or 1926, and attributed this fact to increased educational efficiency and not to reduced standards. The number of children between the ages of 5 and 16 years in the State on September 30, 1928, was stated as 91,660. The number of pupils registered in public and private schools, somewhat higher, was 97,429. Those in public schools numbered 71,521. There were 1513 in kindergartens, 64,390 in elementary and 12,767 in high schools. Expenditure for public-school education in the academic year 1928-29 totaled \$7,960,224.

**CHARITIES AND CORRECTIONS** The name of the central State organization dealing with the State institutions of care and custody was changed by the Legislature in 1929 from the State Board of Charities and Corrections to the State Board of Public Welfare. The administration of the system of mothers' aid was transferred to its jurisdiction. The board exercised various powers with regard to dependent children, the deaf, the dumb, and the blind. It consisted of five appointed and two ex-officio members, including the Governor. The institutions for the care or custody of individuals maintained by the State were State Hospital (insane), Concord, Laconia State Industrial School, Manchester, State Prison, Concord, Soldiers' Home, Tilton, State Sanatorium (tuberculosis), Glencliff.

**POLITICAL AND OTHER EVENTS** The State Public Service Commission occupied a prominent place in the year's political activity. At the behest of the Legislature it investigated the service of the Boston & Maine Railroad in the State and rendered a report favorable to the system's relations with its employees. The report was of interest because of the apprehension in New Hampshire that the railroad might undertake to abandon some additional sections of its mileage within the State's borders. Governor Tobey named S. H. Bridges, vice chairman of the Republican State Committee, in May to be chairman of the Public Service Commission. The Governor's Council rejected the nomination, and twice again when it was later presented, again rejected it, thus bringing about a deadlock in the situation. The city of Berlin, New Hampshire, suffered severe damage, estimated at \$500,000, from a storm of the character of a tornado, on May 5, and from a fire caused by lightning.

**OFFICERS** Governor, Charles W. Limmer; Secretary of State, Enoch D. Fuller; State Treasurer, Henry E. Chamberlain; Attorney-General, Ralph W. Davis; Commissioner of Education, Ernest W. Butterfield.

**JUDICIAL** Supreme Court Chief Justice, Robert J. Peaslee; Associate Justices, John E. Allen, Thomas L. Marble, Oliver W. Branch, Leslie P. Snow.

**NEW HAMPSHIRE, UNIVERSITY OF** A co-educational State institution of higher learning

in Durham, N. H., founded in 1866 in Hanover, N. H., as part of Dartmouth College, transferred to Durham as State College in 1893, and made the State University in 1923. It consists of a college of liberal arts, a college of agriculture, and a college of technology. The 1929-30 enrollment was 1551, of whom 1065 were men and 486, women. The summer session had a registration of 345 students. The faculty numbered 112. The endowment amounted to \$1,118,702, and the income for the year totaled \$1,506,842. The fund accruing under the millage law of 1925, which provided an annual amount equal to one mill for each dollar for the assessed valuation of the State, amounted in 1928-29 to \$654,850. This, together with income from other sources, was sufficient for the maintenance of the institution and for the gradual construction of a complete physical plant in accordance with a comprehensive plan for the development of the university. In 1919 the construction of the new chemistry building, Charles James Hall, was completed at a cost of \$480,000. The library contained 64,000 volumes. President, Edward Morgan Lewis, LL.D., Litt D.

**NEW HEBRIDES**, *Néhele-d'œ*. A group of islands in Melanesia, including the following: Uvea, Espiritu Santo, Malakula, Efate or Sandwich Island, Epi, Erromanga, Taïna, Kolua or Erromanga, and Aniwa. The group is under the joint administration of France and Great Britain, according to conventions of February, 1906, and Mar. 18, 1922. The interests of British, French, and natives are guaranteed, the conditions of land holding in the islands are fixed, and the regulation and recruitment of labor provided for. The area is approximately 5700 square miles and the population about 60,000, of whom in 1927, 200 were British and 720 French. Many missionary schools have been established, chiefly by the Presbyterian faith. The land for the most part has not been cleared, but large tracts have been settled in the interior. The area under cultivation is planted chiefly with coconuts, cacao, cotton, and coffee. Bananas, oranges, and all tropical fruits grow well. Trade is chiefly with Sydney and New Caledonia. The imports in 1928 amounted to 38,184,562 francs and the exports were valued at 49,355,472 francs, of which about one-fourth were British. The chief imports are provisions, clothing, metals, and furniture, and the chief exports are corn, copra, coffee, cotton, coconuts, and cacao. The joint revenue in 1927 was 3,017,711 francs and expenditure, 2,220,479 francs. British revenue in 1927 amounted to £620 and expenditure to £12,688. Direct steamship communication has been established with France, via Tahiti and Panama. British High Commissioner, in 1929, Sir Eyre Hutson; French High Commissioner, M. Guyon; British Resident Commissioner, G. A. Joy (acting); French Resident Commissioner, M. d'Arbousier.

**NEW JERSEY POPULATION** According to the Fourteenth Census, the population of the State on Jan. 1, 1920, was 3,155,900. The estimated population on July 1, 1928, was 3,821,000. The capital is Trenton.

**AGRICULTURE** The agricultural table gives the acreage, production, and value of the principal crops in 1928 and 1929.

**MINERAL PRODUCTION** The greater part of the total value of the mineral production of the State continued to be contributed by its clay products. These attained, however, for 1927 a

Crop	Year	Acreage	Prod Bu	Value
Potatoes	1929	50,000	6,032,000	\$9,651,000
	1928	57,000	9,120,000	4,680,000
Hay	1929	259,000	388,000 *	7,002,000
	1928	263,000	479,000 *	6,928,000
Corn	1929	183,000	6,588,000	6,654,000
	1928	181,000	6,968,000	6,759,000
Peaches	1929	2,600,000		2,990,000
	1928	1,825,000		2,194,000
Sweet potatoes	1929	15,000	2,100,000	2,940,000
	1928	15,000	2,175,000	2,610,000
Wheat	1929	62,000	1,178,000	1,449,000
	1928	60,000	1,200,000	1,488,000

\* Tons

smaller value, \$43,073,377, than that for the active year 1928, which was \$47,512,514. Zinc production mounted in 1927, reaching for that year 95,895 short tons, as against 80,629 for 1926. The output of stone, totaling 2,870,880 short tons for 1927 and 2,315,450 for 1926, had a value, for 1927, of \$4,334,526 and for 1926 of \$3,589,119. The iron mines of the State, formerly important, resumed in 1928 the moderate rally in production that they had made in 1926. There were shipped from the mines in 1928, 350,616 long tons of iron ore with a value of \$1,357,877, as against 202,720 tons in 1927, with a value of \$860,393. The industry in the production of hy-product coke that had sprung up adjacent to some of the large communities of the State about held its own in 1928, producing 903,177 short tons, as against 906,321 in 1927. The total value of the mineral products native to the State was \$71,064,418 for 1927, for 1926, \$77,065,713.

**TRANSPORTATION** The total number of miles of railroad line under operation on Jan. 1, 1929 was 2297.02. There were built, in 1929, 126 miles of additional third track.

**MANUFACTURES** According to the *Manual Census of Manufactures* published by the United States Department of Commerce in 1929, there were in the State, in 1927, 8312 manufacturing establishments. These employed 408,093 wage earners, whose wages for 1927 totaled \$570,308,502. Materials and supplies used in manufacture cost \$1,956,597,097. The manufactured products attained the combined value of \$3,417,450,248.

**EDUCATION** The chief educational changes of the year, as noted by State Commissioner of Education Morse in the *Journal of the National Education Association* were the prolongation of the normal-school curriculum from 2 to 3 years, and of the music, commercial, and physical education curricula from 3 to 4 years. The creation of a State Board of Regents by legislative act was designed to provide a clearing house and general means of correlation for the educational activities. The school-age population of 1929 was estimated at 1,634,372. There were enrolled in the public schools of the State 770,879 pupils. Of these, 346,889 were in primary, 242,624 in grammar, and 107,765 in high-school grades. The current expenditure of 1929 for public-school education was \$70,501,448. The yearly salaries of teachers averaged \$2007.

**CHARITIES AND CORRECTIONS** The central authority for the care of dependents, defectives, and delinquents rested in 1929 in the Department of Institutions and Agencies, organized in 1918. Its duties included coordinating all branches of State welfare work, shaping social policies, and supervising the respective institutions. Its directing body was a Board of Control whose members were the Governor, ex officio, and 8 appointed non-salaried members. The State institutions, with

their resident populations of Dec. 1, 1929, were Graystone Park State Hospital (insane), 3711, Trenton State Hospital (mental), 2596, State School for the Feeble-Minded, Vineland 1072, State Colony for Feeble-Minded Males, New Lisbon, 466, State Colony for Feeble-Minded Males, Woodbine, 391, North Jersey Training School (females), Totowa, 345, State Village for Epileptics, Skillman, 1025, Sanatorium for Tuberculous Diseases, Glen Gardner, 397, State Prison, Trenton, 1603, State Prison Farm, Leesburg, 215, New Jersey Reformatory (males), Rahway, 631, New Jersey Reformatory (males), Annandale, 216, New Jersey Reformatory (women), Clinton, 187, State Home for Boys (delinquent), Jamesburg, 650, State Home for Girls (delinquent), Trenton, 239, Home for Disabled Soldiers, Kearny, 85, Home for Disabled Soldiers, Sailors, and Marines, and their Wives and Widows, Vineland, 172. The Annandale reformatory was opened in 1929 to provide industrial and vocational training and social rehabilitation for minor offenders between the ages of 16 and 30 years. A prison-farm colony at Bordentown and a State Hospital for Mental Diseases at Hillsdale were under construction.

**LEGISLATION** The 153d Legislature of the State of New Jersey convened on January 8 in regular annual session and adjourned July 2. It opened the way for a social experiment by the passage of the measure designed to enable Newark and the Prudential Life Insurance Company to carry out their housing plans. This act gave cities power to condemn, at the expense of a private inventor, unsafe and insanitary dwellings, for the benefit of housing projects approved by the cities' governing bodies. A companion act permitted domestic insurance companies to invest not beyond 5 per cent of their resources in housing projects thus created. A number of statutory governmental bodies were brought into existence. One of these was a Board of Regents, charged with the duty to determine the needs of the State with regard to higher education. Another was a State Water Policy Commission. A Women's and Children's Bureau with a woman for its head was created as part of the State Department of Labor. The juvenile court system and the probation laws underwent revision. Primary elections were eliminated in municipalities having government by manager. Supervision of the safety of moving-picture houses, theatres, and grandstands was vested in the commissioner of labor, with regard to territory where no local building supervision existed. A series of measures for the regulation of banks and insurance companies was passed. The maximum legal interest on small loans was reduced to 1½ per cent a month, from 3 per cent. The Legislature took steps to cause the State legal forces to bring suits against other States in three matters. Of these, one was the under-water boundary between New Jersey and Delaware. The others concerned disputes with New York over New York's contemplated diversion of water from the Delaware River and over the system of free lightening in New York Harbor, which New Jersey wished to force railroads to abolish, for the advantage of its own harbor frontage. The State Civil Service Commission was abolished as a means to expel the commissioners, and a new Commission was created in its place.

The Wise Act regulated the use by public utilities of bridges taken over by the State Highway

were of the total value of \$182,106,373. The manufactured products attained the value of \$327,528,366.

**EDUCATION** It was reported by the State Board of Education in 1929 that since and including the winter of 1924 no public school of the State had shortened its academic period on account of winter difficulties to less than the 36 weeks prescribed by the law of 1919. Commissioner of Education Butterworth stated in the *Journal* of the National Education Association that the total school costs of the State ran lower for 1929 than for 1928 or 1926, and attributed this fact to increased educational efficiency and not to reduced standards. The number of children between the ages of 5 and 16 years in the State on September 30, 1928, was stated as 91,660. The number of pupils registered in public and private schools, somewhat higher, was 97,429. Those in public schools numbered 71,521. There were 1513 in kindergartens, 64,390 in elementary and 12,767 in high schools. Expenditure for public-school education in the academic year 1928-29 totaled \$7,060,224.

**CHARITIES AND CORRECTIONS** The name of the central State organization dealing with the State institutions of care and custody was changed by the Legislature in 1929 from the State Board of Charities and Corrections to the State Board of Public Welfare. The administration of the system of mothers' aid was transferred to its jurisdiction. The board exercised various powers with regard to dependent children, the deaf, the dumb, and the blind. It consisted of five appointed and two ex-officio members, including the Governor. The institutions for the care or custody of individuals maintained by the State were State Hospital (insane), Concord, Laconia State School (feeble-minded), Laconia, State Industrial School, Manchester, State Prison, Concord, Soldiers' Home, Tilton, State Sanatorium (tuberculosis), Glencliff.

**POLITICAL AND OTHER EVENTS** The State Public Service Commission occupied a prominent place in the year's political activity. At the behest of the Legislature it investigated the service of the Boston & Maine Railroad in the State and rendered a report favorable to the system's relations with its employees. The report was of interest because of the apprehension in New Hampshire that the railroad might undertake to abandon some additional sections of its mileage within the State's borders. Governor Tobey named S. H. Bridges, vice chairman of the Republican State Committee, in May to be chairman of the Public Service Commission. The Governor's Council rejected the nomination, and twice again when it was later presented, again rejected it, thus bringing about a deadlock in the situation. The city of Berlin, New Hampshire, suffered severe damage, estimated at \$500,000, from a storm of the character of a tornado, on May 5, and from a fire caused by lightning.

**OFFICERS** Governor, Charles W. Tobey, Secretary of State, Enoch D. Fuller, State Treasurer, Henry E. Chamberlin, Attorney-General, Ralph W. Davis, Commissioner of Education, Ernest W. Butterfield.

**JUDICIARY** Supreme Court Chief Justice, Robert J. Peaslee, Associate Justices, John E. Allen, Thomas L. Marble, Oliver W. Branch, Leslie P. Snow.

**NEW HAMPSHIRE, UNIVERSITY OF** A co-educational State institution of higher learning

in Durham, N. H., founded in 1866 in Hanover, N. H., as part of Dartmouth College, transferred to Durham as State College in 1893, and made the State University in 1923. It consists of a college of liberal arts, a college of agriculture, and a college of technology. The 1929-30 enrollment was 1551, of whom 1065 were men and 486, women. The summer session had a total of 345 students. The faculty number 111. Endowment amounted to \$1,118,702, and the income for the year totaled \$1,506,842. The fund accruing under the millage law of 1925, which provided an annual amount equal to one mill for each dollar for the assessed valuation of the State, amounted in 1928-29 to \$654,850. This, together with income from other sources, was sufficient for the maintenance of the institution and for the gradual construction of a complete physical plant in accordance with a comprehensive plan for the development of the university. In 1919 the construction of the new chemistry building, Charles James Hall, was completed at a cost of \$480,000. The library contained 64,000 volumes. President, Edward Morgan Lewis, LL.D., Litt.D.

**NEW HEBRIDES**, *hēl'vri-dōz*. A group of islands in Melanesia, including the following islands, Espiritu Santo, Malekula, Efate or Sandwich Island, Epi, Erromanga, Tanna, Fotuna or Kionnan, and Aneityum. The group is under the joint administration of France and Great Britain, according to conventions of February, 1906, and Mar. 18, 1922. The interests of British, French, and natives are guaranteed, the conditions of land holding in the islands are fixed, and the regulation and recruitment of labor provided for. The area is approximately 5700 square miles and the population about 60,000, of whom in 1927, 200 were British and 720 French. Many missionary schools have been established, chiefly by the Presbyterian faith. The land for the most part has not been cleared, but large tracts have been settled in the interior. The area under cultivation is planted chiefly with coconuts, cacao, cotton, and coffee. Bananas, oranges, and all tropical fruits grow well. Trade is chiefly with Sydney and New Caledonia. The imports in 1928 amounted to 38,184,562 francs and the exports were valued at 49,355,472 francs, of which about one-fourth were British. The chief imports are provisions, clothing, metals, and furniture, and the chief exports are corn, copra, coffee, cotton, coconuts, and cacao. The joint revenue in 1927 was 3,037,711 francs and expenditure, 2,220,479 francs. British revenue in 1927 amounted to £620 and expenditure to £12,688. Direct steamship communication has been established with France, via Tahiti and Panama. British High Commissioner, in 1929, Sir Eyre Hutson, French High Commissioner, M. Guyon, British Resident Commissioner, G. A. Joy (acting), French Resident Commissioner, M. d'Arbousseier.

**NEW JERSEY. POPULATION** According to the Fourteenth Census, the population of the State on Jan. 1, 1920, was 3,155,900. The estimated population on July 1, 1928, was 3,821,000. The capital is Trenton.

**AGRICULTURE** The accompanying table gives the acreage, production, and value of the principal crops in 1928 and 1929.

**MINERAL PRODUCTION.** The greater part of the total value of the mineral production of the State continued to be contributed by its clay products. These attained, however, for 1927 a

Crop	Year	Acres	Prod Bu	Value
Potatoes	1929	50,000	6,032,000	\$9,651,000
	1928	57,000	9,120,000	4,560,000
Hay	1929	254,000	358,000 *	7,052,000
	1928	263,000	479,000 *	6,926,000
Corn	1929	183,000	6,588,000	6,654,000
	1928	181,000	6,968,000	6,759,000
